

CONTENTS VOLUME XIV—1890.

EDITORIAL.

	PAGE.		PAGE.
American Way	583	Newport Through French Glasses	1071
Andrew Carnegie on Best Fields for Philanthropy	104	New York Press	199
An Important Ohio Statute	585	Numbering the Slaves	679
Another Czar in the Saddle	961	Ohio Legislature	677
Annual Slaughter	582	Organization and Federation	196
Anthracite Coal Mined	976	Our Civilization	865
Austin Corbin	97	Parties	972
A Voice from Old England	107	Pecuniary Compensation	772
Beau Brummel's Idea	976	Petroleum and Natural Gas	776
Brakemen's Unhappy Lot	1069	Philadelphia and Reading Railroad	7
Buddhism's Teaching	1065	Pompous Officials	7
Canadian Labor Reformer	195	Population of United States	100
Chicago and the World's Fair in 1892	3	Prizes for Corn	777
Collecting Extra Fare	395	Railroading and Prohibition	198
Corbin in Clover	394	Railway Construction and Foreclosure Sales	676
Currency and Population	392	Relation of Railroad Employés to Railroad Opera-	
Death of Dogs	776	tion	289
Do We Want Industrial Peace	193	Republic of Brazil	5
Education vs. Illiteracy	769	Required for Burial	1071
Eighteen Hundred and Ninety	1	Retrospective and Prospective	1058
Eight Hour Movement	580	Robert Garrett	295
Electrical Magic Lantern	393	Spider and the Fly Business	196
Electricity and the Horse	976	Standard of Living	974
Employer No Right to Confiscate	7	Stealing Statistics in the United States for 1889	773
Facts About Trusts	389	St. Louis Culture Club	874
Facts Relating to Railroads	777	Strikes for Eight Hours in 1886	295
Facts Worthy of St. Peter	1071	Strikes in New York	394
Fast Time on Vandalla	108	Suffering for Food	106
Federation Going On	392	Suppression of Trusts	107
Growing Importance of Labor Topics	968	Supreme Court and the Co-Employé Question	490
Helen Campbell and Her Book	395	Temple of the Gods	492
Higher Education of Woman vs. Marriage	577	The American Boy	771
Hon. Chauncey M. Depew as a Labor Orator	1059	The Cardinal and the Emperor	393
Illinois Steel Co. and its Club House	493	The Common Laborer	293
Improvement in Railway Management	484	The Government and Railroad Employés	487
Imprisoned in Bismarck's Land	874	The Great Cod of the Yankees	1069
Inter State Commerce Commission	481	The Great Point	1071
Is a Wrong Done to One the Concern of All	586	The Reason Why	775
Jay Gould and George Jay Gould	1065	The Vanderbilts	199
Knights of Labor and the Farmers	6, 777	The Wages System	1062
Labor Day	673	The World's Millennium	588
Labor Leader	679	To Assist Striking Miners	106
Labor Statistics	1067	To Prevent Strikes	483
Locomotive Engineers and Federation	965	To Remove a Wrong, Agitate	967
Looking Backward 2000—1887	101	Trains Passing on Single Track	494
Loyalty of Employées	970	United States Senate	677
Machine and the Man	870	Vagaries of a Statistician	873
Machinery the Handmaid of Labor	871	Watered Stocks	583
Measures Agreed Upon by International Labor		We are Going to Fly Like Birds	1070
Congress	104	W. E. Gladstone on Labor	675
Mrs. Leonora Barry	399	What Can We Do for Working People	291
Multipled Horrors for Europe and America	868	What is a Scab	293

ESSAY.

	PAGE.		PAGE.
Abolishment of Poll Tax	13	Poverty and Promotion, <i>Erastus</i>	109
A Winter Night, <i>Geo. W. Hall</i>	202	Promotion of the Fittest, <i>A. H. Tucker</i>	200
Chickens vs. Children	104	Railroad Men in Politics, <i>Tim Fagan</i>	790
Dead Men's Brains, <i>Uncle Silas</i>	495	Relation Between Labor and Capital, <i>G. H. Whitney</i>	
Eternal Fitness of Things, <i>J. E. Phelan</i>	9	ney	112
Federation, <i>Frank Wallon</i>	12	Relics of Barbarism	404
Heroism of Women, <i>Francis Whitman</i>	202	Round House Sermon, <i>Rev. Polisher, Dec Dec.</i>	10, 589
Kindness, <i>Old Reliable</i>	9	Saving the Kearsarge, <i>G. H. Hansen</i>	114
Kissing Mother, <i>An Engineer</i>	204	The Church and its Mission, <i>J. B. Shrew</i>	778
Labor's Right to the Earth, <i>Joseph Dana Miller</i>	779	The Brakeman's Story, <i>Edith Bradford Grover</i>	781
Man, <i>Deo Gratias</i>	977	Then Said I, Lord, How Long, <i>A. Picket</i>	978
Men Who Succeed and Why, <i>Thos. Pray, Jr.</i>	497	True and False Success, <i>G. H. Whitney</i>	203
Nepotism, <i>Tim Fagan</i>	680	Uses and Abuses of Fiction, <i>G. H. Whitney</i>	296
Organized Labor, <i>Tim Fagan</i>	875	Why the Boys Don't "git thar," <i>Uncle Silas</i>	403

INDEX.

MECHANICAL.

	PAGE.		PAGE.
A Brotherhood Hospital	705	Locomotive Equalizing Beams	881
Absence of Lead	410	Locomotives for Heavy Passenger and Fast Freight	1076
Admission of Steam	299	Locomotives for the St. Clair Tunnel	1078
Admitting Air to the Fire	792	Locomotive Link Motion Problem	305
Agitation and Agitators	712	Lubricator	683
A. H. Tucker "Hollers" Enough, <i>A. H. Tucker</i>	309	Master Mechanic's Association	881
Air over the Fire	684	Measuring a Safety Valve	116
Air to the Fire	502	Momentum	213, 507
Amboy Division Eccentric Strap, etc, <i>Eccentric</i>	310	Momentum to help up Grades	300
Amboy's Imps, <i>A. H. Tucker</i>	600	More Valve Motion	598
Amount of Steam	213, 507	Moving Wheel	301, 411
An Explosion	880	Mr. Sinclair on Locomotives at Paris	301
A Puzzle	795	New Jersey as a Railroad State	880
Arch Bar	596	New Locomotive Shops at Horwich, England	221
Are Cylinder Heads Blown out While Running Shut Off	298	No Changes Involved by Change of Diameter	504
Art Work in Iron, Drivers Slipping, etc.		Old Ideas Concerning Steam Railroads	417
<i>W. E. Lockwood</i>	14	Piston Motion	597
Boiler	683	Piston Position	414
Boiler Braces	683	"Polly," <i>alias</i> Prof. Hartman	18
Boiler Pressure	116, 595	Position of Piston in Cylinder	110
Boiling Point	683	Power of Steam	299
Birmingham, Eng.	713	Problem of the Moving Wheel	218
Briggs on Locomotive Service	794	Proportions of Slide Valves	1075
Broken Eccentric Straps	502	Pump Displacement	501
Building in 1889	1078	Pump Lift	684
Car Coupling	1075	Pump Suction	505
Changing Size of Cylinder	599	Queries and Suggestions—	
Changing Size of Wheel	504	From <i>Vacuum</i> , 407, 419, 500, 601, 681, 682, 701, 876, 1074	208, 601, 878
Coal Issued	684	From <i>Eccentric Strap</i>	882
Cold Air in Fire Boxes	502	From <i>A. H. Tucker</i>	793
Comparison of Horse and Steam Force.		From <i>F. A. McGinly</i>	794
<i>L. A. Wilson</i>	117	From <i>W.</i>	25
Comparison of Power and Speed	221	From <i>A. Duncan</i>	24
Condensation of Steam in Large Cylinder	683	From <i>A. T. Conkling</i>	120
Counter Balancing	413	From <i>Boliver</i>	214
Cross Head Guide and Pin Movement	19	From <i>Fred Taylor</i>	215, 405, 418, 591
Cylinder Contents	412	From <i>Uncle Silas</i>	219
Cylinder Heads Blown out Running Shut Off	503	From <i>Amboy Division</i>	219
Cylinder Heads Breaking	117	From <i>William E. Lockwood</i>	302
Direct and Indirect Motions	117	From <i>E. P. C.</i>	303
Displacement of Pump Plunger	414	From <i>L. L. C.</i>	304
Does Change in Cylinder Involve other Changes	218	From <i>J. L. S.</i>	408
Drawing as an Elevator	792	From <i>O. R. and N.</i>	408
Drawing Water over 34 feet	301	From <i>A. A. L.</i>	419
Drivers Slipping	298	From <i>Elder</i>	420, 606
Dr. Wilson as an Interviewer	19	From <i>Evanston</i>	499
Dr. Wilson on Steam	501, 596	From <i>Thomas Pray, Jr.</i>	506
Dr. Wilson Reviewed	117	From <i>Harvey E. Pulver</i>	506
Eccentric Blade	1077	From <i>Buckeye</i>	511
Engineering Ignorance	301	From <i>Jack</i>	512
Evaporating Power of Boilers	1075	From <i>M. J. N.</i>	514
Examination	513	From <i>F. E. and M. V.</i>	515
Evolution of the Locomotive, <i>Wm. E. Lockwood</i>		From <i>Balance Valve</i>	515
Expired Railway Patents,	24, 135, 219, 302, 420, 516, 601, 983, 1073	From <i>Cowboy</i>	516
Firing	413	From <i>R. L. G.</i>	516
Firing with Little Fuel	503	From <i>Heavy Weight</i>	594
Further Answering A. H. Tucker, <i>Wm. E. Lockwood</i>	217	From <i>F. H. H.</i>	599
Fusee	301	From <i>T. Reece</i>	600
Hammer Blow	301, 685	From <i>J. A. Hancock</i>	606
Hints on Firing, <i>Thomas Reece</i>	303	From <i>E. L. Sub.</i>	606
How the Horse-power Unit was Established	414	From <i>B. A.</i>	607
How to Explain the Action of Steam	504	From <i>Subscriber</i>	682
How to Key an Engine	411	From <i>A. A. Lindley</i>	685
Horse Power	596	From <i>F. J. Hill</i>	686
Horse Power in Boilers	117	From <i>Wm. Weller</i>	1073
Horse Power in Cylinders	117	From <i>Pan Handle</i>	514
Increasing Speed	598	Reply to Questions	17
Indicator Diagrams	415, 595, 792, 881	Return of Eccentric Strap	
Injector	503, 684, 792, 981	Review of the Reviewers, <i>L. A. Wilson</i>	210, 306, 503, 784
Injector Working by Air	413	Rocker Arm Problem	685
Imp Jacked Up, <i>Amboy Division</i>	512	Running Engines with Different Crews	1076
Journal of the Franklin Institute	1073	Running Hot in Back Gear	503
Keying a Locomotive	503	Safety Valve Measurement	300
L. A. Wilson's questions, <i>Fred J. Hill</i>	216	Seams of Boilers	683
Lead	410, 413	Setting an Eccentric	501, 683
Learning about Valve Motion	502	Slide Valve Proportions, <i>Robt. Grimshaw</i>	981
Length of Eccentric and Slide Rods	504	Slip of the Link Block	981
Light Firing	881	Slipping Drivers	115, 216, 598, 599
Locomotives at the Paris Exposition	219	Slipping of Wheels Without Steam	505
		Slipping on Down Grade	24

INDEX.

MECHANICAL—Continued.

	PAGE.		PAGE.
Slipping When Shut Off	298	Throw of Eccentric	117, 410, 502
Smokeless Combustion	683	To Find Heating Surface	505
Spring Breaks Down	298	Topics before Master Mechanics Association	1075
Springs Breaking	213	Traction Power of an Engine	15
Squaring the Circle	418	Tractive	299
Steam	683	Tucker vs. Lockwood	20
Steam Distribution	783	Twenty Years with the Indicator	216, 301
Steam Power	115	Vacuum on Dr. Wilson	501
Steam vs. Horse Power	213	Vacuum on Evaporation	596
Supply of Steam	300	Uncle Silas on Horse Power	116
Table of Train Speeds, <i>Robert Grimshaw</i>	1074	Valve Motion	408, 597, 880
The Cross Head Movement, <i>Amboy Division</i>	302	Valve Position	412
The First Locomotive	1072	Velocity of Steam	1076
The Fusee Signal	23, 214	Velocity of Steam, Vacuum	92
The Fusee Signal, <i>W. H. Bigelow</i>	218	Water Supply	604
The Imp of the Cylinder, <i>Amboy Division</i>	304	Watt's Horse Power	300
The Imps	684	Wee Wahoo	508
The Starting Force of Horse and Steam, <i>L. A. Wilson</i>	20	Welcome to E. S.	29
The Wheel Question	502, 506, 792	What Is Horse Power, <i>Uncle Silas</i>	2
Thirty-ton Fire Box	792	Wheel Fulcrum	597
Throttle Wide Open	20	Work done by Locomotive	415

WOMAN'S DEPARTMENT.

	PAGE.		PAGE.
A Fragment, <i>Alice O. Darling</i>	799	Correspondence—	
Alone, <i>Mrs. Nellie Bloom</i>	34	From <i>M. E. J.</i>	800
A Lost Eden, <i>Annie Robertson Noxon</i>	34	From <i>Claude</i>	800
Ambition, <i>Kittie Wadden</i>	422	From <i>A Reader</i>	801
An Alleged Fake	228	From <i>Eva Carol</i>	801
An Explanation, <i>W. F. S.</i>	33	From <i>Fanny E. Rourke</i>	690
A Parting Tribute, <i>Mrs. Nellie Bloom</i>	1082	From <i>Pearl S.</i>	690
A Plagiarism Exposed	798	From <i>Pansy</i>	691
A Plea for Bachelors	222	From <i>Annie L.</i>	691
A Sacrifice for Pa, <i>Bessie Morgan</i>	609	From <i>Fireman's Mother</i>	691
A Tribute, <i>Mrs. Nellie Bloom</i>	528	From <i>H. B. M.</i>	692
A True Ghost Story, <i>Bessie Morgan</i>	123	From <i>Nora Bull</i>	517, 692
A Welcome to Spring	319	From <i>Mamie Gutney</i>	694
A Woman in It	425	From <i>F. M. Fortune</i>	694
A Word About Marriage	608	From <i>Farmer's Daughter</i>	694
Bounty for Fathers	312	From <i>Bea</i>	611
College Women Choose Good Husbands	228	From <i>C. W. M.</i>	611
Correspondence—		From <i>A Fireman</i>	128, 612
From <i>A Fire Boy's Friend</i>	34	From <i>M. E. B.</i>	612
From <i>Irene</i>	31, 987	From <i>Mrs. G. F. Rood</i>	613

LOCOMOTIVE FIREMEN'S MAGAZINE.

VOL. XIV.

JANUARY, 1890.

No. 1.

OFFICIAL ORGAN OF THE

Brotherhood of Locomotive Firemen.

Entered at Terre Haute Postoffice as second-class matter.

PUBLISHED ON THE FIRST DAY OF EACH MONTH AT
TERRE HAUTE, INDIANA.

TERMS:—ONE DOLLAR PER YEAR IN ADVANCE.

ADVERTISING RATES given on application to
W. N. GATES, SOLE AGENT,
10 Public Square, Cleveland, Ohio.

COMMUNICATIONS should be addressed to
LOCOMOTIVE FIREMEN'S MAGAZINE,
TERRE HAUTE, INDIANA.

EUGENE V. DEBS, . . . *Editor and Manager.*

EIGHTEEN HUNDRED AND NINETY.

"Oh Time! thou beautifier of the dead,—
Adornor of the ruin—comforter
And only healer when the heart hath bled—
Time! the corrector when our judgments err,
The test of truth, love—sole philosopher."

—Byron.

"Time, the tomb-builder, holds his fierce career,
Dark, stern and pitiless."

—Prentice.

"The greatest schemes that human wit can forge,
Or bold ambition dares to put in practice,
Depend upon our husbanding a moment."

—Rowe.

Byron makes Time a "philosopher," Prentice makes him a "tomb-builder," and Rowe makes the "schemes" and "ambitions" of men, dependent upon "husbanding a moment." Of them all, Rowe is the most practical. The real question is, not what Time is, or what it can do, but rather, what we can make it do, or, perhaps, more properly, what can we do with Time?

The year 1890 is here. The almanacs have declared it, and the bells welcomed his com-

ing. Instead of the question "What are you going to do about it?" we inquire, what are you going to do with 1890? What use will you make of him, or it? Does some one answer "What's the use of fooling with the new year? He is like all his predecessors, a "tomb-builder," and he will go right along building tombs, as other years have done." But, the fact is, Time isn't constantly engaged in building tombs. He builds many other things. He is something more than a funeral director. Some people seem to think that Time built the universe, its suns and systems. Be this as it may, it required time to build them, and it is held that the work of building worlds is still progressing. But we are not disposed to be fanciful. Time is to some "dark, stern and pitiless," because he condones no mistakes; he exacts penalties and sees to it that they are paid. Therefore, the fewer mistakes men make, the better it is for them.

The year of our Lord, 1890, will confer upon the members of our great Brotherhood many opportunities to better their condition. In saying this, we do not make a mistake. It is the record of all the years since God planted his garden, eastward in Eden, and made Adam a horticulturist. Men complain because they have not been favored with opportunities to advance their welfare. Shakespeare said—

"There is a tide in the affairs of men,

That, taken at the flood, leads to fortune;

Omitted, all the voyage of their life

Is bound in shallows and in miseries."

"The trouble is, not that men do not have opportunities, but that they do not avail themselves of them,—permit them to pass

unutilized. There is no mistake about the "tide;" it comes,—the opportunity appears. The demand is, vigilance; without it, the "tide" is not taken "at the flood," the opportunity is not seized, and hence the complainings.

During 1890, as the flood tide sweeps by, many men will be in the "swim," and will be borne on to fortune. The opportunity will be grasped by those who realize the fact that

"The means that heaven yields must be embraced,
And not neglected; else, if heaven would,
And we will not, heaven's offers we refuse."

And having refused them, or neglected them, croakings, complainings are futile. Time will not stop to listen. He will inexorably pass sentence, inflict the penalty, and from his decrees there is no appeal. If a man will be idle when he should work, the mildest penalty is rags and hunger. The list of penalties could be indefinitely extended, and those who read, may at their leisure, fill up the blanks.

If such things apply to individuals, with equal force they are applicable to organizations of individuals, and hence, to the Brotherhood of Locomotive Firemen. Let us ask if, during the year 1890, Time is to build its tomb? dig its grave? hang crape on the doors of its lodges? When, as living men go by, and note surroundings, shall soliloquize

"Creeping where grim death is seen,
A rare old plant is the Ivy green."

Such is not the conclusion of the *Magazine*. We do not hesitate to believe that during 1890 a flood tide wave is to sweep along ready to bear the Brotherhood on "to fortune," and in so far as the *Magazine* is concerned, we propose to be on the alert and to take the "tide at the flood." All the railroad Brotherhoods, we conclude, will be watching for the tide. In fancy we see them camped along the banks of the stream, and mark you, the Brotherhood of Firemen, and the Brotherhoods with which it is federated, will be the first in the swim, and it will do beholders good to see

"Our bonny boats with yielding sway,
Rock gently on the tide."

No flag at half-mast, no cry of distress, life-boats all ably commanded, ready for whirl-

pools and rapids, and the open sea, destined for the port of Fortune, however winds may blow.

Is that fanciful writing? Is not our Brotherhood a ship, as was the "Union" in the splendid fancy of Longfellow? Does not federation make it a Union ship? May we not quote Longfellow, and apply his thrilling words to our Union ship? May we not say,

"Sail on, O Union, strong and great."

And add,

"Our Brotherhood, with all its fears,
With all its hopes of future years,
Is hanging breathless on thy fate?"

May not Brotherhood firemen exclaim, as they look upon their ship,

"We know what Master laid thy keel,
What workmen wrought thy ribs of steel,
Who made each mast, and sail, and rope.
What anvils rang, what hammers beat,
In what a forge and what a heat,
Were shaped the anchors of our hope."

Thousands of Brotherhood firemen are to-day asking themselves, what has 1890 in store for our Brotherhood? They survey their sturdy ship; they recount her voyages, the storms she has encountered. Storm-tried sailors are these veterans; bronzed and battle-scarred. With the contempt that a lion views a mouse, they turn away from men who croak and scheme and plot, and contemplating the symmetry, strength and beauty of their ship, shout—

"Sail on, nor fear to breast the sea!
Our hearts, our hopes, are all with thee."

And she is going to "sail on" in spite of the cowardice and croakings of some, or the seditious plots of others.

The Brotherhood of Locomotive Firemen, during 1890, will have opportunities to increase its strength and its influence, which it will neither neglect nor underestimate.

The *Magazine*, the official organ of the Order, in a spirit of fidelity to principles and loyalty to authority, will, during all the months of 1890, champion the interests of the Brotherhood of Locomotive Firemen.

Scorning tyranny, arrogance, duplicity, sneaks and knaves, it will defend the Brotherhood when attacked and maintain its honor, welfare and good name, as it has ability, and in any sense, that the flag of the Brotherhood may be intrusted to our keep-

ing. It shall not be trailed in the dirt, nor be hauled down, and never will it fly more defiantly than in the time of battle, and in the thickest of the fight.

On the first day of the new year, the *Locomotive Firemen's Magazine* will appear in a new dress, out and out. Its pages will be set in new type, and its new cover, will make it a *chef d'œuvre* of the printing art.

By steady advances, the *Magazine* has secured a front place in the list of organized labor publications. It is in demand by men of the highest ability, not only in the ranks of labor, but men who are accredited statesmen and philanthropists.

Pusillanimous men of the Austin Corbin type will be excoriated as they deserve, and men, employers, who treat employés with the consideration due American citizens, will find the *Magazine* prompt and prudent in its acknowledgments.

Labor organizations will find in the *Magazine* an earnest friend, ready and willing to help as opportunities offer, and the principle of federation will have no more devoted advocate. And if such things mean taking the "tide" which "leads to fortune," then, indeed, will the *Magazine*, with the Brotherhood of which it is the organ, reach the goal.

What more? This. During 1890, there will be multiplied opportunities for members of our Brotherhood to banish enmities and cultivate friendship, to bestow charities, to speak kind words and help the unfortunate. There will be brothers to bury, widows to console and orphans to help. Only the strong can lead the infirm and lift up the fallen. As opportunities come to do good, to exhibit courage, to champion the right and strike down the wrong, let us embrace them, and 1890, when he makes his report, will not fail to give credit where credit is due. Time is autocratic, and inexorable, but he is honest and truthful; he may be a "beautifier of the dead," but he gives the living opportunities to build and beautify homes, to build character and reputation, that defies even his corroding breath and destroying teeth.

We welcome 1890 as we have welcomed some of his distinguished predecessors, possibly with more than usual *éclat*, for among the events that are to come during his reign will be the Second Biennial Convention of

our Brotherhood. It is to be a notable opportunity for the Brotherhood to deliberate for the good of the Order. And, in closing this article, freighted with New Year greetings to all, we can do our brothers no greater service than by inviting them to renew with us their pledges of fealty to our Brotherhood. This done, we need not fear the summons that sooner or later must come to all, and with duty done, when it comes, we may hope, unappalled, to wrap the drapery of our couch about us and lie down to pleasant dreams.

CHICAGO AND THE WORLD'S FAIR IN 1892.

The *Locomotive Firemen's Magazine* votes "early and often" for Chicago as the site for Christopher Columbus World's Fair, A. D., 1892.

Just why the western world has permitted four hundred years to come and go before appropriately celebrating an event that makes hyperbole blush because it can't do the subject justice, is something that even a Chicago newspaper has not yet explained, and we are inclined to be of some service to the press of that great city in a matter that is confessedly of no little importance.

In this connection it is not required to be particular in reciting history relating to the birth, education and exploits of Christopher Columbus. He was a man who had the courage of conviction. He believed in going west far more than Horace Greeley ever did. He was a path-finder on the pathless sea; a hustler from way back, who, were he alive to-day wouldn't linger in any of the old towns on the Atlantic coast, but would be found, we are satisfied, a citizen of Chicago, where there is probably more energy, more enterprise, more of the get up and go than can be found in any city on any continent or island in the world—just the kind of a city, just the sort of people that would have challenged the admiration of such a restless spirit as Columbus possessed, where every third man is a Ferdinand and every second woman an Isabella. If in all Europe there had been such a city as Chicago, Columbus would not have been detained a week in arranging for his voyage

of discovery. The cash would have been supplied and the fleet would have sailed eight or ten years before it did cut loose from its moorings in the harbor of Palos, and the vessels would have been much larger, too.

It occurs to us as quite probable that the grand celebration of the 1492 event which made the great American Republic, the pan American Congress, the revolution in Brazil, the city of Chicago—to say nothing of some minor achievements—possible, has been postponed four centuries to permit the star of empire to move west, to develop the wonderful resources of the Republic and to give Chicago opportunities to distance all rivalry in the way of growth, and to be accepted as preëminently the right place to hold the 1892 World's Fair.

Manifestly, the greatest blessing secured to the human family by the discovery of the western half of the world by Columbus, was the establishment of the Republic of the United States of America. Upon this branch of the subject we could write much more than we have space to print, but it does seem prudent to say, all things considered, that the only country on the face of the earth to properly celebrate the 400th anniversary of the discovery of America is the United States of America. We regard that much as settled. It is also conceded that the proper thing to do is to hold a World's Fair, or Exposition. That question is also settled and out of the way. The only other question now up for discussion, is, where shall this grand celebration be held? As we have remarked we vote "early and often" for Chicago, and just here we desire to say our vote is based on the present, if not the "eternal fitness of things."

We are advised that numerous great buildings, requiring the expenditure of millions for their construction, must be erected. Chicago will raise the money. Those who remember how, some years ago, she got up out of the ashes in a way to make the old Phoenix bird blind with envy, would stake their last dollar that Chicago will solve the money problem. Indeed, Chicago has already solved the problem.

We are told that the Government of the United States will be required to make an

appropriation to aid in making the celebration something more than a success, something worthy of the wealth, prosperity and wide domain of the Republic, worthy of the intelligence and liberality of 65,000,000 of free and independent people. The appropriation will be made, and in making it Congress will designate the place where the money shall be expended. Already the counting of votes has begun, and in the final vote we believe Chicago will bear off the prize. Why? Because she has more friends in and out of Congress than any other candidate. The geographical position of Chicago helps her. The Central States, Northwestern States, States west of the Mississippi river, are for Chicago. California, Oregon and Washington are for Chicago, The South is for Chicago, most of it, and these States will cast more votes for Chicago than for any other city. Such is our judgment and conviction, and time will determine whether or not we are mistaken.

But we are not done with the subject. It were needless to say that cities contending for the great prize are influenced by pecuniary considerations, the winner will be immensely benefitted, directly and indirectly, but there are 60,000,000 of people outside of these cities who have a right to be heard, and who will be heard through their representatives in Congress. They care little about local ambitions and prejudices. They want this World's Exposition held where the largest number of the American people can witness it with the least possible expense, with the least possible sacrifice of time and money. Now, we ask our readers to consult the map of the Republic. It will be observed that the city of New York is on the extreme eastern boundary, while Chicago is central, or approximately central, and this centrality is of incalculable importance to millions of people. The city of New York is in no sense as convenient to the people of the United States—the great bulk of them—as Chicago, nor is it a city as distinctly American as Chicago. If it has more wealth it has less enterprise. It puts forth the claim of being a seaport with a splendid harbor, and insists that European countries will not care to send their wares inland a thousand miles to an International

Exposition. Europe makes no protest of that sort, and when European exhibitors note the highways that converge upon Chicago they will not hesitate to ship their exhibits to the great central metropolis of the country with a population of more than one million. Besides, Europeans want to see the great west; its mighty rivers and inland seas. They know all about New York, and in visiting Chicago they will have grander conceptions of our country, its resources and its progress than can be witnessed elsewhere on the continent.

Moreover, we would have the World's Great Exposition at Chicago because we would have it where the greatest possible number of workmen would be able to witness the triumphs of labor, of skill and invention. European kings and queens, autocrats and titled dukes will have nothing to exhibit. It will be a workingman's Exposition throughout, and it should be called The World's Workingmen's Exposition, and if the 12th day of October, 1892, is to be the day fixed for starting the wheels in motion, we would have a workingman touch the key; not a lawyer, not a doctor, nor a millionaire, not some National or State official, but a workingman, the representative of the men who will have fashioned and built the buildings, the machinery, and whose skilled and unskilled work made the Exposition possible. Should this be done, this very rational thing, Chicago might become a city to which the eyes of workmen throughout the world would turn with feelings akin to those with which the followers of Mohammed regard the sacred city of Mecca.

THE REPUBLIC OF BRAZIL.

The readers of the *Magazine* who read the papers need not be told that the Empire of Brazil no longer exists, and that a Republic has taken its place in the family of nations. But it does not follow that the *Magazine* should be silent in regard to an event which is well calculated to make Kings and Emperors, together with titled dignitaries of less consequence realize that the "divine-right"-to-rule-sham, has few more winning cards to play, and that the time is rapidly approaching when, by the fiat of the people, the entire brood and breed, will be required

to step down and out, and fortunate will it be for them if they go like Dom Pedro, late Emperor of Brazil, with their heads on their shoulders.

Brazil has an immense territory. The United States and territories exclusive of Alaska, contain 3,057,407 square miles, while Brazil contains 3,430,000 square miles. The United States, with Alaska, contains 3,574,791 square miles, or 144,791 square miles more than Brazil. Russia in Europe, contains 2,115,000 square miles and China proper, 1,419,978 square miles, hence, it is seen that Brazil may claim to be the largest Republic in the world—and larger by many thousand square miles than either Russia or China. The total area of South America is only 7,202,459 square miles and Brazil embraces 927,541 square miles more than one half of that continent. The population of Brazil is probably about 15,000,000; the latest census makes it about 12,000,000. Except a small area in the extreme southern portion, Brazil is within the tropics—in the torrid zone—and necessarily enjoys a warm climate. It is claimed that Brazil was discovered January 20th, 1500, or 390 years ago. The country has been in the hands of the Dutch, the English, the French and the Portuguese, finally remaining in possession of the latter. In 1825 Brazil declared its independence of Portugal, and in 1831, Dom Pedro II, then a boy 5 years old became the rightful heir to the throne, and at the age of 15 years began his reign. As such things go, his reign was prosperous. Everybody has a kind word for Dom Pedro. The drift of events was against him. The American idea north or south is against kingly rule. There were nine Republics in South America, and their influence was such as to make imperialism in Brazil untenable—and now, with the exception of three small colonies, the entire continent is under the sway of Republics.

The population of Brazil is not the kind to rush things *a la* the great North American Republic. The Brazileiros, or native Brazilians, born of Portuguese parents, are said to be indolent, inheriting the peculiarities of idleness and inertness of their progenitors. The early Portuguese settlers intermixed with the Indian women, then the

negroes came, and another mixed breed resulted, and these mixed breeds have intermixed, and now the population consists of Portuguese, Mulattoes, mamelucas—White and Indian, Cufuzo—Indian and Negro, Curiboco—Cufuzo and Negro, Xiboro—Cufuzo and Negro. The 2,000,000 slaves are now all free, and if such a population can be transformed suddenly into valuable citizens of a Republic, then indeed, may it be said, that the age of miracles has been revived. But Brazil has concluded to try it on, and the change, without special commotion, would indicate that the Brazilians have the courage of conviction, and Dom Pedro, by quietly abdicating gave high proof of statesmanship. Too old to do much fighting in any cause, he was powerless to resist events, and wisely took his title and cash and left for some country to spend the remnant of his days in quiet, befitting his years. A scholar and a philosopher, a student and a devotee of science, he is far better off than in attempting to maintain a rickety throne. There are now no crowned heads on this side of the Atlantic; no kingly sceptres; neither throne nor crown. The "divine right" to rule, has gone, to appear no more forever.

The far seeing men of Europe say that within fifty years, every country in Europe will be a Republic, including Russia and Turkey. Manifestly England is thinking in that line. Victoria can't live forever. The Prince of Wales is said to be already an old man. The next in line is the Prince of Cuffs and Collars, and it is already decided that he don't fill the bill. In Germany, if occasion offers—and it may offer when old Bismarck hands in his checks—Emperor William may find it advisable to go a gunning for other game than men who have resolved to be free. Even old Spain hears the tramp of coming events and may at any time declare for a Republic. What do such movements teach the workingmen of the United States? In this boasted land of freedom are there not places where men rule with a more despotic sway than ever characterized the reign of Dom Pedro of Brazil? In the United States, where workingmen have the ballot, they are subjected to degrading curses such as Dom Pedro never in-

flicted. When will such autocrats abdicate? It will be when workingmen have the courage to decree by the omnipotence of the ballot, that the laws of the land shall no longer tolerate such robbers.

THE KNIGHTS OF LABOR AND THE FARMERS.

Never more distinctly have coming events cast their shadows athwart the pathways of thoughtful men, than at present. The uprising of the toiler and the tax-payer is phenomenal. The declaration that "history repeats itself" is not more trite than true. But the unrest that now pervades the ranks of workingmen in the United States is a new departure. Men will seek in vain for its parallel in the past. We do not mean to be understood that the present is the beginning of agitation on the part of workingmen to better their condition. That is an old story. It began before the dawn of the present century. We apprehend that some seed was sown in the far away days, when history was scarcely better than fable. It may suit some people to trace the growth and development of ideas that have led up to the present condition of things, but our purpose at this writing is to deal with current events, and point out as best we may, their logical sequences.

We are called upon to witness now, as never before in the history of nations, organization of workingmen. Labor in all of its departments is organizing, and as time goes by it is noticeable that these organizations exhibit a steadily increasing intelligence. Purposes are more sharply defined, methods are characterized by more wisdom and tact. There is a more acute discernment of the end in view. There is larger intellectual grasp, and the promise of ultimately securing redress for wrongs could scarcely be more flattering.

In this work of organization for bettering conditions, the farmers of the United States have become conspicuously prominent. They have felt the oppression of trusts, syndicates, combinations and monopolies, which acting under the sanction of law and a corrupt judiciary, promise at no distant day to wreck them and reduce them to the condition of serfs.

In the first place the farmers, organized what was called the "National Grange." Then came the "Farmers' Alliance." Following this was the "Farmers' Union," and then came the "Agricultural Wheel." At one time the "National Grange" had thirty-two States in line, with 20,000 subordinate granges and a membership of 800,000. It now has a membership of about 200,000. There is another farmers' organization known as the "Farmers' Mutual Benefit Association." These various organizations having a membership of above 1,000,000 federated in the city of St. Louis in December last. That they should have done this was logical. Acting separately they could accomplish little; together they are strong. Federation means harmonious action. If there are bad laws, it means their repeal. If there are vicious, corrupt law-makers it means their retracy to private life. If there are corrupt judges, it means that in due time they shall be stripped of their ermined robes and be removed to obscurity. This farmers' movement means that a large majority of the "4,500,000 farmers" of the country will become members of the "Farmers' Alliance" for the purpose of bettering their condition.

It is not required that we should set forth more particularly the objects the "Farmers' Alliance" has in view, but this may be said that the supreme idea is to fight monopolies and secure for themselves their rightful share in the profits of their products, and in this, they are at once in harmony with every toiler in the land.

Taking this view of the subject it is not only not surprising, but rather in consonance with the logic of common sense that at St. Louis there should have been an alliance formed between the Farmers' Alliance and the great Order of the Knights of Labor. What more natural than that the food producers, and the food consumers should act in harmony. The Knights of Labor and all workmen regardless of name or occupation, demand honest law-makers and righteous laws. All toilers are opposed to combinations by which labor is robbed and oppressed and degraded, and the federation of the Knights of Labor with the Farmers' Alliance has cheering significance. It means the coming together of

men who seek the highest welfare of society. It means the triumph of the right. It means the furling of factional battle-flags. It means the federation of all the organizations of workmen. Federation is the shibboleth of workmen. The signs of the times are encouraging. The trend of the mind-forces of the country is in the right direction. The demand is work, watch and wait.

WE see it stated that an important point has been decided in the Eighth District Court of New York. President Morrison, of the National Progressive Carpet Weavers' Union, brought suit in behalf of a female weaver in a silk mill for wages withheld as a fine for damaging goods. The Judge decided for the plaintiff, holding that an employer had no right to confiscate any employes, no matter how incompetent, and that his sole remedy was in a discharge. Such decisions indicate pretty clearly that justice is not quite dead in this country.

A PAPER whose editor is an observing man, is led to remark that "a great many acquire \$2.00 worth of pomposity and arrogance with a \$100 public office." The pompous, arrogant officials, or more properly "bosses," are sometimes seen along the tracks of said railroads--and when they become numerous, that particular road usually loses money and goes into the hands of a Receiver.

THE Philadelphia & Reading Railroad, the Devil-fish of the Anthracite coal regions, it is charged has fraudulent possession of coal lands valued at \$20,000,000. The charge is doubtless true. It is doubtful if it has honest possession of any property, and it is well known that its debts are more than four times in excess of its assets.

THE Pennsylvania Railroad is prospering and has recently ordered 5,000 cars in addition to its present rolling stock which will cost \$3,000,000.

THE Locomotive works at Altoona, belonging to the Pennsylvania R. R., have the capacity to turn out 500 locomotives a year.

Kindness.

"A word in kindness spoken,
A motion or a tear,
Can heal a heart that' broken
And make a friend sincere."

KINDNESS is one of the purest traits that finds a place in the human heart. It gives us friends wherever we may chance to wander. Whether we dwell with the savage tribes, or with civilized races. Its influence never ceases. Started once, it flows onward like the little mountain rivulet, in a pure and increasing stream. To show kindness it is not necessary to give large sums of money or to perform some wonderful deed. Kindness makes sunshine wherever it goes. It finds its way into the hidden chambers of the heart, and brings forth golden treasures which harshness would have sealed up forever. It is the water of Lethe to the laborer, who straightway forgets his weariness borne of the burdens and heat of the day. Kindness is the real law of life; the link that connects earth with heaven; the true philosopher's stone, wherewith we purchase contentment, peace, and love. Would you live in the remembrance of others after you shall have passed away? Write your name on the tablets of their hearts by acts of kindness, love and mercy. We should not permit ease or indulgence to contract our affection and wrap us up in a selfish enjoyment; but we should accustom ourselves to think of the distress of others, and how to best relieve them. Kindness is the very principle of love, an emanation of the heart, it encourages us all in our intercourse with our fellowmen. Kindness does not consist in gifts, but in generosity of spirit. Men may give their money and withhold their kindness; but the kindness of true sympathy is never without beneficial results. How easy it is for one benevolent man to diffuse pleasure around him, and how truly is one fond heart a fountain of gladness, making everything in its vicinity to freshen into smiles. In the intercourse of social life it is by little acts of watchful kindness recurring daily and hourly—it is by words by gestures, by looks that affection is won. He who neglects these trifles, yet boasts that whenever a great sacrifice is called for he shall be ready to make it, will rarely be loved. The likelihood is he will he will not make it, and if he does, it will be much rather for his own sake than for his neighbor's.

Little kindnesses are great ones. They drive away sadness and cheer up the soul beyond all common appreciation. They are centers of influence over others which may accomplish much good. When such kindnesses are administered in time of need they are like "Apples of gold in pictures of silver," and will long be remembered. A

word of kindness in a desperate strait is as welcome as the smile of an angel, and a helpful hand-grasp is worth a hundred fold its cost, for it may have rescued for all future the manhood of a man. Good and worthy conduct may meet with an unworthy or ungrateful return; but the absence of gratitude on the part of the receiver cannot destroy the self-approbation which recompenses the giver. Could they but know the inward peace which requites the giver for a kindly act, even though coldly received by the one to be benefitted, they would not hesitate to let the kindly feelings have free expression. Kindly efforts are not lost. Some of them will fall upon good ground and return a hundred fold; they will bear fruits of happiness in the bosom from whence they spring. The noblest revenge we can take upon our enemies is to do them a kindness. To return malice for malice and injury for injury will afford but temporary gratification, and our enemies will only be the more bitter against us. But to take the first opportunity of showing how superior we are to them by doing them a kindness, or by rendering them a service, is the nobler way; the sting of reproach will enter deeply into their souls, while unto us our triumph will be rendered complete. A more glorious victory cannot be gained. It speaks words of comfort to the despondent, urged on by a benevolent heart it loves to cheer, console and invigorate the man of sorrow. Kind words do not cost much. They never blister the tongue or lips and no mental trouble ever arises from them. Words of kindness fitly spoken are both precious and beautiful; they are worth much and cost but little. Kind words are like the breath of the dew upon the tender plant, falling gently upon the drooping heart, refreshing its withered tendrils and soothing its woes. And when the heart is sad and, like a broken harp, the chords of pleasure cease to vibrate, how acceptable then are kind words from others. Kind words are like jewels in the heart, never to be forgotten, but to cheer by their memory a long and sad life. While cruel words are like darts in the bosom, leaving scars that will be borne to the grave by their victim. Speak kindly at all times; it encourages the downcast, cheers the sorrowing, and awakens the erring to an earnest resolve to do better, and gives them strength to keep them. Always leave home with kind words; for they may be the last. Kind words! What are they? They are a healing balm to the wounded heart. When the soul is overwhelmed with sorrow, and when hope's brightest prospects are withered, they are a fertile spot in life's desert. When the heart is burdened with the ills of life how soon a few kind words will diminish that burden! They are more valuable to the

friendless and afflicted and by them more highly prized than the most costly gems that ever decked a monarch's brow. Kind words to the angry, for a "soft answer turneth away wrath, but grievous words stir up anger." Kind words to the aged; for they have endured enough of life's ills; they will sink past scenes into the soft, peaceful lap of forgetfulness. Kind words to children; for they will cause a smile so full of joy and gratitude that it will lighten their faces like a sunbeam. Kind words for all! for they will cost nothing but what they will bountifully repay. For they are like a spring of water on a hillside—spreading beauty around, nourishing the beautiful flowers of friendship and love, causing them to grow and expand their foliage, imparting their fragrance to all around till transplanted to a heavenly clime, where they will bloom in perpetual vigor and unfading beauty forever.

Old Reliable.

The Eternal Fitness of Things.

THOSE who think with reasoning judgment can always know that there exists, apparent to all minds an eternal fitness of things; that in order to do our part in the social sphere without undue violence matters must be conducted according to this eternal manner of doing that which is right.

As firemen, we take place and assume duties with an object—first, of making a living, or earning enough of the wherewith to enable us to support self and family with at least the necessities of life, and as many of the luxuries as taste and means may warrant.

Are we always to remain firemen? Or are we to be simply time servers in light of gaining our daily bread, and caring not whether the morrow, calling us to advance in line of promotion, finds us wholly unfitted for the new field?

Better by far to remain where duties fitted to our energies, or lack of energy, than advance into a field where proper talents must be exercised or failure stamps all efforts, past and present.

Of all men the most interesting to contemplate are those who (wallow as crocodiles catching flies,) feeling that the world owes them a living, regardless of the total lack of energy or effort to earn all that may be received. In either illustration the most active member displayed seems a combination of tongue and jaw. We know that there are thousands of young men—and elderly ones, too, for that matter—daily seeking the right path and wishing to learn all pertaining to the eternal fitness of things. In this matter, look the world over and we find but few masters and untold thousands of students seeking the proper knowledge. We are all learning, and be the craniums covered with hair whitened by age and care,

or standing out, illustrating the electricity and energy of youth, daily experience sheds its harvest of facts, seasoned with learning or knowledge gained.

We have seers in our midst, as of old men who, with acute mental vision and a bright gift of nature, at once grasp the principles of truth and right and unfold the same in all enhancing attraction to the student world.

Such talent also abounds within the secret confines of the councils of organization, and plays its part in a God-fearing manner, ever counseling wisdom and moderation, and always discerning the eternal fitness of things.

We also find the false prophets, laboring along loaded down with deluded fancies and misguided conceptions of facts, only exceeded in degree by the ardor of their enthusiasm. The diversity of human talent and never ending friction, constantly manifesting its presence in daily contact with people and conditions, renders a common ground necessary for agreement and consideration in protecting at least the rights and privileges of the majority.

Herein we must consider the eternal fitness of things. Show me a successful fireman in all that the term implies. Watch him at work on his engine. If he is blessed with a reliable engineer and a good engine we may watch every movement and note each action compelling a desirable result. He does not put coal in the fire box simply because there is a supply on hand and a fire box to receive it. The successful fireman's mind on duty at once must encompass the likely condition and amount of water in the locomotive boiler, must know just what effect the last scoop full of coal may have exerted on the body of water in the boiler. His views must be modified by the action, or probable action, of the engineer in feeding water to the boiler and using the product of the water and fuel in form of steam. The fireman's mind, to insure successful work, must encompass all conditions pertaining to the engine, the common or probable practices of the engineer, coupled with an idea of the weight of the train hauled, and the condition of grades and roadbed, with stops and varying circumstances taken into consideration. Of course it takes brains to make a successful fireman, and a man with brains and perseverance enough to make a successful fireman is bound to make a successful engineer.

The eternal fitness of things demand that all matters be conducted with as little friction as possible. You can never find a successfully working machine in form of a locomotive, or otherwise, giving good results unless all parts fitted with an intelligent plan in fitting and metal used, with a view toward avoiding friction and insuring harmony and smooth work.

The fireman who desires successful results to follow honest effort must bear this principle in mind, and aim to practice it in line of duty and daily life: never force anything, but accomplish a purpose with the least possible force consistent with attaining proper results.

You will never find a competent mechanic forcing a piece of work together with an idea that it may prove all right. The nicely adjusted bearings, fitted at all points with an idea of accommodating opposing parts, will go in direction of successful work, while all haphazard work will eventually return to condemn the loose methods of those responsible for them. In mechanic, or fireman, or engineer the principle is the same. Honest methods insure honest work—honest effort gains its ultimate reward as surely as night follows day.

The machines constructed according to principles of mechanical law are not unlike the controlling influences in daily life. The great unwritten, but ever potent, laws bear down with unerring precision, and woe be to all who run against the inevitable.

As employes of the railroad companies or citizens of a common country, our duty should be in harmony with the well-being of self and the requirements of the common good.

As citizens of a common country, as part of the people who make the laws, we are subject to our own direction. The railroads are subject to the laws of the country, hence subject to the requirements of a majority of the people.

The law for hanging in event of murder was instituted because the majority of mankind object to being murdered, and we may depend on it that whatever else may be directed against the welfare of the majority shall find a similar penalty.

The great unwritten laws, standing ever for the will of the majority, superior to all else, and bringing forth in detail the magnificent machine of public opinion, can be depended on always for exercising proper judgment and insuring wholesome justice.

Never so far forget the eternal fitness of things that the comfort of the majority should be disturbed simply to insure disaster to the minority.

J. E. Phelan.

A Roodhouse Sermon.

BY REV. EMERY POLISHER, DEE, DEE.

MY brethren, I'm going to preach to you to-day under 140 pounds pressure, dry steam and an open throttle. I'm loaded for ba'r, coyotes and wild cats. Come right up front, my brethren, and don't be hanging about the door, so you can slip out when the hat goes round for dues and assessments. A brother who won't pay, may be likened to a railroad company that don't supply its

engineers with oil to keep their machines in running order. Such corporations go to the everlasting bow wows.

The congregation will now sing that beautiful hymn found on page 342, composed by that spiritually minded poet and brother, Shandy Maguire, or some other singing evangelist:

"I want to be a fireman and with the firemen stand,
I want to be a fireman with lots of pluck and sand,
I'm going to be promoted, and the boys must understand.

I'll stick to my Brotherhood when the throttle's in my hand."

"I want to be a fireman, whose courage will not flicker,

I want to be a fireman, nor croaker nor a kicker,

I want to be a fireman, who never touches liquor,

A fireman of the Brotherhood known to be a stickler."

"Oh yes, I am a fireman, who is not color-blind;

Oh yes, I am a fireman who will not lag behind,

I'll keep up with the procession, and I'll get there,

Ell.

And when the breezes blow, then my banner shall fly."

Let us pray. "O thou Great M. M., wilt thou deign to deal justly with the boys under Your exalted command? Wilt thou reward merit, and temper all thy edicts with mercy, make the lay-offs and suspensions short, and turn a deaf ear to spies and spotters and sneaks, who rob men of their good name with as little compunction as a nigger robs a chicken coop or a vagabond dog sucks eggs? O thou great M. M., wilt thou everlastingly sit down on scabs, and seek to exact labor, so that workmen may have three square meals every day, good clothes, and decent shelter? O thou great M. M., wilt thou sometimes remember that thou too art an employe, that thou too art human, that thou too will be required to hand in thy checks and retire to where the woodbine twineth, and the whangdoodle mourneth? If thou doest rightly thou wilt have a harp, instead of a horse-fiddle, have a crown instead of a second-hand old tile, and sing like a mocking-bird instead of croaking like a tree toad throughout all the cycles of eternity.

My brethren: You will please sing on page 216, the song beginning—

"The federate train is on the rail.

Hurrah, Hurrah.

'Twill reach the station without fail.

Hurrah, Hurrah.

Victory is the station's name.

The watchword is "fair play."

The signal lights are burning bright

And we've got the right of way,

Hurrah, Hurrah.

My brethren, the next thing in order is the text. I could preach without a text,

but texts are fashionable. Some folks don't catch on without a text. It don't make much difference where the text comes from so it has some common sense in it. Sometimes one word answers the purpose. Suppose, my brethren, I should tell you my text is "Stand?" Not stand still like a post, nor stand around like a tramp, but stand firm, stand your ground, don't flicker nor waver, nor retreat, back out, nor back down, but stand like a brave man to your convictions. Stand by your rights, stand by the truth, by justice. Men who stand are the world's heroes. The men who crawfish, who abandon lodge and brotherhood, and obligations, are the world's nincompoops.

Suppose, my brethren, I tell you my text is "Stickability?" A great many persons lack stickability. Initiate them, put the regalia of the Order on them, and they will cavort around for a while, and in a short time they are gone. They didn't stick. Like a damaged postage stamp, they had no adhesive qualities. They are the men who are afflicted with sore toes, sore eyes and sore heads, or they are troubled with wind-colic. They don't stick. Stickability isn't in their make-up, but they have what is called gullibility, and could easily be made to believe that the bark of a dog could be made to tan its hide; or that grasshopper hops are just the thing for making beer. When such a man is dead his epitaph should be—

"Here lies a man who had no stickability.
He has gone where, in all probability,
Furnace fires are kept going with natural gas,
And tanks of ice water are unpleasantly scarce."

Suppose, my brethren, I tell you my text is: "If ye have faith as a grain of mustard seed you shall remove mountains."

There is a little more of it but I've got enough for my purpose. The world generally reverses the proposition. Men sigh and pray for faith as big as a mountain, that they may remove a mustard seed. That class of men go on sighing and praying all their days but they don't remove anything. They bump against a gopher hill and think it is Pike's Peak, or Mount St. Elias, or Chimborazo. If they had faith in their legs as a grain of mustard seed, they would step over it, or they would take a spade and level it down. An African sand crab has so much faith in itself, that it will go once a year to the sea coast, if it has to climb the mountains of the moon, or leave its shell on the way to bear testimony to its indomitable perseverance. A man who has faith in himself will have faith in any cause he espouses. He will have faith in his fellow man. The men who founded the Brotherhood of Locomotive Firemen, had faith in themselves, and the men who have carried forward the Brotherhood until it covers the

continent, had faith in themselves, and they have removed mountains, or have gone over them. I tell you, my brethren, that some men's minds are like a jungle—pathless, without a clearing, briars, thorns, vines, weeds, brush, where there is no clearing for the sunlight of truth, and the men haven't faith enough in themselves to clear up as much as would grow a butter bean or a morning glory. There are others whose minds are like localities where pathways lead to chasms and precipices, and their possessors are forever standing and shivering on their brinks. There are others whose minds are filled with bogs and fogs and frogs. They haven't faith in themselves nor in others, nor in anything. They grope, they hesitate, they shrink and shudder.

"The shirt-tail of progress they straddle and holler whoa.

They are never ready to board the train when the signal is "go."

And faith, as a mountain would be of no avail,

To men, who, were the world a pig, would want to be its tail.

Brother Cylinder Head will please take up a collection for the heathen, in the benighted land of Pennsylvania, while the congregation sing the missionary song on page 76—

"From every cab and roundhouse, from the center to the sea—

Of our country, where our starry flag proclaims that men are free.

Let the redeeming shout go forth, that freemen yet will rule—

When Corbin makes a workingman wear collars like a mule.

My brethren, the occasion has been pleasant to me. I feel it is good to be here. I may come again. Feel of yourselves often and see if you can stand. See if you have stickability, and note particularly, if your faith in the conquering power of organized and federated labor is as big as a grain of mustard seed. Now please sing our doxology:

I'm a Brotherhood man.

And don't you forget it.

I'm a Brotherhood man,

And I don't regret it.

I'm a Brotherhood man.

And I'm going to stay.

Because, do you see?

I'm built that way.

JOHN ALEXANDER, in the *Locomotive Engineer*, remarks that "Judas Iscariot was a detective, and the class that do the dirty work in strike times are very much like him—only worse. Judas, however, committed suicide—if I was a detective I should "go and do likewise," and those who employ detectives, the Judas Iscariots of the period, should also commit suicide.

Federation.

THE annual conventions of all railway labor organizations are over, and now, of all times, is there food for reflection for minds that think, and men that attempt to peer into the future and portray the destiny of the working masses. The Engineers' Convention, at Denver, discussed Federation in all its details, and eventually decided that the assistance of some other organizations was necessary, but my object at this time is to show the necessity of a still broader view.

For the purpose of illustration let us go back a few years in the history of the now famous Reading railway.

Before Austin Corbin's well laid schemes were well under way, the Reading employes were thoroughly organized and in a position to believe that they could demand and obtain justice. The issue finally came, and with it disastrous defeat to the men. In that struggle the Brotherhood of Locomotive Engineers saw fit to assist in the defeat of the Knights of Labor, and as might be expected, those same engineers are today the cringing, crawling slaves of their former colleagues in infamy. Most of them have renounced their organization at the command of the tyrant Corbin, but some, still baser than others, have hidden their honored badges and become double-dyed traitors, false to their Order, and also to their Master. Was there ever a better demonstration of the fact that all labor must work hand in hand to combat the combined power of soulless and tyrannical capitalists?

But instead of this, labor organizations quarrel among themselves as to who shall be mightiest, while railway magnates laugh and grow fat at the expense of both, or all, as in the case of Corbin.

Labor journals and societies howl and gnash their teeth over the fact that rich men have established in this free land a moneyed aristocracy or caste, and yet, with the unblushing inconsistency so common to the producers of wealth, they nourish in their midst this same demon of caste, the one thing that has been in all ages and nations the battle club of tyranny, and, consequently, the forerunner of downfall and ruin.

At the recent convention of the B. of L. E. at Denver, that august body once more declared that they are far above the level of the K. of L. Once more has the pitiful, but ruling minority of that organization declared themselves an exclusive and unique aristocracy in the laboring world. Let P. M. Arthur beware of the day when the worm turns upon its arrogant oppressor, when the hosts of the Knights shall meet him in battle array.

Not only does the warning apply to the

B. of L. E., but to three other great organizations that have become parties to a federation known as the "Supreme Council," that effectually shuts the doors on the K. of L. I am not, kind reader, a member of the Knights of Labor, but am simply trying to prove what should be a self-evident fact, that any class of men who are necessary to complete the working force of a great combination of capital, is certainly absolutely indispensable to complete the thorough organization of labor in an effort to maintain right and justice against tyranny and oppression. Those knowing the difference between an "axiom and an ax-handle" fully appreciate:

First, That all honest workingmen are equal regardless of the salary earned or the kind of labor performed.

Second, That in numbers there is strength if good generals are in command.

Third, that organization and federation is the only rational method of gaining this numerical strength and transforming it from a lawless mob into a powerful and well disciplined army.

The Knights of Labor have done a noble work in this direction. Their governing purpose has been and is now to organize all of the vast army of unorganized, to bring within reach of one controlling voice the multitudes of labor, both exalted and lowly, and to inspire all men alike with the noble purpose evolved in that grandest of all precepts, "An injury to one is the concern of all." The curse of all labor movements and of all strikes has been the unemployed and the unorganized. Earnestly and fearlessly have the K. of L. labored to remove both these dangers and by so doing make success more possible for other labor unions.

What has any organization in *train service* done to exalt them above the machinist or day laborer? Then why this ostracism? Simply because the demon of caste whispers, "I am better than thou." Surely not because federation with the Knights of Labor means *strike*, when the very fact of thorough and perfect federation entirely wipes out the possibility of a strike, or at least reduces it to the minimum. Why? Because railway managers will despair of using one organization with which to defeat another and consequently will lend a willing ear to fair and just proposals.

One great argument against federation with the K. of L. is that they are not organized in many places. Why are they not? On the Reading and the great Southwest systems they have been wiped out of existence by either the antagonistic or neutral attitude of other organizations. On many other systems of railways the argus-eyed officials fear them and are ever on the alert to crush in its incipency any attempt at organization.

But could this organization come in under

a glorious banner of Federation, protected and upheld in their efforts by all other railway Orders, how eagerly would they push forward in organization, openly and fearlessly, while the railway managers would stand aghast, realizing that the days of tyranny were over and that the workmen had learned the lesson of gigantic combination only too well, and would henceforth move forward to victory and freedom with one unbroken front. Is this anticipating the millenium? No; only hoping for the time when men, in whose anatomical make-up the brains were forgotten, shall be silenced and hissed into oblivion by intelligent and progressive minds.

The weak and cowardly in our ranks say that this scheme is too big for us to handle. In this age of gigantic schemes, trusts and combinations we must either keep up with the times or submit to be swept away in the never-ceasing current. We are, and always will be, in a terrible whirlpool of strife, caused by the tireless efforts of capital to pull wages down, and of labor to force them up, and if in this strife labor is worsted, we must admit it is a fault of the brains and not the muscle, for it is clearly a fact that the Creator must be more powerful than the created, consequently, as in the ranks of labor is found that magnificent force that builds nations and makes capital, so by the exercise of that creative force can they destroy one and control the other.

When railway corporations seek to defraud their employes or the public at large, they bury all differences of opinion and form pools and combines. When workmen wish to obtain justice at the hands of employers, they quarrel and fight among themselves, and like the two little boys, they hold each other while the master whips them both. Behold the spectacle and blush for shame, all ye workers.

Until this accursed sentiment of caste is forever crushed from our midst, we are slaves of the very power that we create, and until all labor organizations extend to all co-laborers the hand of everlasting friendship, organization is a farce and eternal defeat and humiliation will be our reward.

Frank Walton.

POCATELLO, IDAHO.

When a member of the San Francisco Brewers' organization wear Chinese made shoes, he is fined \$5.00. Cheap enough.

The Union Pacific railroad is immensely practical, when it offers any passenger on any train \$2,000, that will shoot a train robber. We wonder that some remarkably good shots are travelling over that road for the purpose of securing the money. The offer makes the train robber better game than buffalo.

THE *Laster* is out in a strong article for the abolishment of the poll tax iniquity, which exists in Massachusetts, not by constitutional right, but by a power usurped by the legislature of that state. This tax is \$2.00, and no man in Massachusetts is permitted to vote until he pays the tax. "Thus," says the *Laster*: "In Massachusetts the right to vote, the prerogative of a free man depends not upon the fundamental law of the constitution, but upon an annually recurring act of the legislature, laying a particular tax in a particular way." It has been held, and the miserable lie still has its advocates, that unless a poor man pays a poll tax, he pays no taxes at all, and it is assumed that only those who pay direct taxes, have any interest whatever in the welfare of society—the welfare of the state. "This argument," says the *Laster*, "is not true," as the demagogues who advance it well know. As well might they say that the duty upon every pound of tea imported into this country comes out of the importer's pocket. True, he pays the duty but he charges that duty to his customer. The retailer passes the burden along to the consumer who pays that and all taxes—so if a street is to be paved, a school built, a town lighted, the rich property holder may pay the bill, but it is the user of the street, school and gas who pays him back again with interest and in increased prices for food, clothing and rent. The consumer may be rich or poor. All men are consumers, and all men pay taxes direct or indirect and it may be safely believed that the shrewd trader or professional man does not pay more than his share. This is how he gets and keeps his riches. Let the workmen demand the right of suffrage independent of taxes and take steps to abolish the shameful power which sells their liberty every year at \$2.00 a head." The demand for the abolishment of such laws is well nigh invincible and workmen are waking up to the fact, and the *Laster* well says that "the only way to get labor laws passed is to show our legislators that we mean business. Our legislative committee should pick out such laws as they think will benefit the organization, if passed, and send a list of the same to each local union. If a committee from each local union would wait on the senator and representative from their district with such a list, he would think twice before he would vote against them." If workmen could once be made to understand their power when organized, and acting as a unit, they would, before the country celebrates the 400th anniversary of the discovery of America, have every unrighteous statute that does injustice to them wiped from the statute books of the country.

"Count that day whose low descending sun views from thy hand no worthy action done."

the wheel, the original of which was made by the Baldwin Locomotive Works, from which the pattern and castings were made by the Yale and Towne Manufacturing Co., 15 North Sixth street, Philadelphia. I have been favored with some castings before the "Bower Barff" rustless process has been applied; they are almost as fine as many works of art in bronze. After this process has been applied they assume a beautiful blue-black color, which gives an artistic tone and effect. Mr. Stanley M. Goodwin, General Manager of the Lehigh Valley railroad, says he has a piece of iron so treated which has been lying on his window-sill, exposed to storms for four years past, and yet, so far as he can see, it is as perfect and as free from rust as the day he placed it there.

The illustration is of a Baldwin standard "sixty-six inch driving wheel, one sixteenth natural size, scale, three-fourths of an inch to one foot, twenty-four inches stroke," and is the *exact size* to scale of the "locomotive driving wheel paper weights," which you have, and referred to. The use to which these may be put, is, that for a very reasonable sum, any fireman, engineer or mechanic desiring to build a model locomotive could use them as a commencement, and then they would be very useful to illustrate and demonstrate questions which may come up in these columns and discussed in Lodge rooms; if for this last named purpose, then they should be rustless-coated, if for machine work purposes then I prefer them uncoated.

ANSWERING 'W. L.' SLIPPING DRIVING WHEELS ON DOWN GRADE.

MR. EDITOR:—Why does a locomotive slip on a down grade without the use of steam? I am firing a Baldwin engine on a night express and very frequently this occurs, and so much so that the air has to be used to check the speed of the train before she stops slipping. Having never before heard of an engine doing this I would like to be enlightened by some of the contributors to the *Magazine*. Fraternally, W. L. Hudson, Ohio.—*Magazine*, October 1889, page 887.

The question is, "Why does a locomotive slip on a down grade?" If the question had been put, "Why don't she slip on a down grade?" then the question would have been fairly raised, for from what I shall say and quote, there are two sides to this question. From my standpoint I do not see how she can do otherwise, and that point I feel sure I shall maintain, after running the gauntlet and batteries of "Vulcan," "Vacuum," "Rauch," "Amboy Division," "Tucker" and my first and very good-natured opponent, "Eccentric."

In January, 1877, I first began to write on this question, and in five articles previous to May of the same year, having given four to

five years of study, off and on, to the question previous to the date named, the ground I then took I shall now try to maintain.

In 1877, May 1st, on the French Northern Railway, certain tests were made. M. Rabeuf made a communication to the French Academy of Sciences on these, stating that he had investigated a series of facts which led him to consider that sliding was a *phenomenon* much more general and *complex* than is generally supposed." In this test we had "a velocity of the coupled wheels of three hundred and three turns per minute," while "the actual rotation was three hundred and sixty turns in the same period. They slid, therefore, on the track, and hence the velocity of translation should have been over seventy-five miles per hour, when, in fact, it was only sixty-two."

"It averages, therefore, 20 per cent., so that its suppression, if possible, would result in considerable economy in consumption of fuel and wear and tear of rails and ties."

M. Rabeuf, in 1877, finds a slipping *phenomenon*, "complex and general," based on *tests* and "*facts*," and "assigns no cause for the *phenomenon*," and so reports to the French Academy of Sciences. For fuller data in this connection see *Magazine*, May 1887, see pages, 269 to 272, and June, 1887, pages 339 to 342.

I have always contended that when the counter-balance as shown, was at its upward limit, and just changing an upward *lift* to a downward *throw*, that this action "*by centrifugal lift and tangential throw*" would lift the driver from the rail, or at least ease its traction on the rail for an instant, and this, among other causes produce slipping. To me this is no "*phenomenon*," and my reasoning in relation thereto is only "*common sense*."

In February, 1881, "Engineer of Tests Cloud," of Pennsylvania railroad shops, Altoona, Pa., in his "Shocks on Railway Bridges," uses this language. Page 2, he says: "The speed is assumed at fifty miles per hour, and one revolution is considered commencing when the engine on right side is on first quarter; that is when the counter-weight on the same side is in its highest position. The curve "A" shows the boundary of the vertical components of the centrifugal force of 300 pounds additional counter-weight at a radius of twelve inches for one wheel on the right side of the locomotive, these components being laid down on a scale of one inch equals 3,200 pounds, from the line of normal pressure, below or above, according as they are directed upward or downward, and so *diminish or increase* the load of the wheel upon the rail. * * * *

Page 3. "It is needless to add that, for other speeds, this will increase or decrease with the squares of the speed, and, at sixty miles per hour, it will be 44 per cent. greater."

Page 5. "Good practice" keeps the counter-weight as low as possible, but on express locomotives the disturbances here shown frequently occur at each main wheel and rear wheel respectively at the same time. For each main wheel this is an increase of weight on the rail of 8,350 pounds above the statical weight frequently figured on in designing structures, and this increase is followed by a decrease below the normal of 4,250 lbs., making a variation of 12,600 lbs. which at 50 miles per hour, is repeated $4\frac{1}{2}$ times per second.

Page 5. "For each rear wheel it is an increase of weight upon the rail of 6,260 pounds, followed by a decrease of the same amount, making a variation of 12,520 lbs. $4\frac{1}{2}$ times per second at the same speed, and these variations on one rail are synchronous; i. e., are going through the same phase at the same time." * * *

NOTE.—*The class of locomotives to which Mr. Cloud here refers is class B, Pennsylvania R. R., No. 1 on the list named in the illustration, as shown within the counter-balance lines.*

Following this subject in the order of dates, we come to our own "Vulcan," who is astute and able, and he is as able as he is astute. We find him in a criticism in November Magazine, 1889, page 976, "*Slipping without using steam*," saying "as it ever takes power to overcome the adhesion, * * * he asks for further particulars in regard to his (W. L.'s) unique experience."

On this question, which is a most important one, I have to thank "W. L." for asking the attention of the Brotherhood thereto, and crave your kindly indulgence for the length at which I am treating it.

At the meeting of the Western Railway Club, held at the Phoenix Building, Chicago, October 15, 1889, President John Hickey, Manager L. S. & W. R. R. in the chair, the following interesting discussion relating to the slipping of locomotive driving wheels took place, when the subject of "Mr. Barnes' paper on Compound Locomotives" was under discussion. I quote from the *Master Mechanic*, November, 1889, page 193.

The President: "On our American locomotives we have much wear of tire, from what is called the imperceptible slip. I would like to ask Mr. Barnes, if he has any data relative to the wear of tire in compound and simple engines caused by slipping, or whether the fact of compounding has any influence on slipping engines."

Mr. Barnes: "In answer to your question, Mr. President, I would say that as the compound engine has more power at high speed it is probable the tire will wear more, because you will do more work. It is claimed by railway men that tires slip quite as much at high speed as at low speed. Whether this be true or not, I don't know. But if it is so, an increase of cylinder power at high

speed would produce a greater slipping of the wheel. No records have been kept that I am aware of showing the comparative amount of tire wear on simple engines.

Mr. Gibbs, C. M. & St. P.: "I think there should be an advantage in that respect on the part of the compound, for this reason, that the effort of the crank gear of the compound engine is more uniform than on a simple engine. In this way the turning movement is more uniform at the tire, and if the engine is properly designed, I think there is less tendency to slip with the compound than with the simple.

At the same time, the other question, as to design of the simple and compound, is not obviated."

Mr. Barnes: "I think Mr. Gibbs' point is very well taken."

The President: "You mean to say that the motion of the compound is more uniform during the revolution?"

Mr. Barnes: "Yes sir."

The President: "I think that must necessarily follow, and that would cure that part of the perceptible slip. It may also do away with many flat spots next to the crank-pin."

The writer would like to ask President Hickey if the many flat spots next to the crank-pin might not have been caused by the action of the counter-balance as herein illustrated and described?

So far, I have given science and practical experience for the slip of drivers, but I ought not to leave it without giving the tests of the Stevens School of Technology, Hoboken, N. J. Two graduates of that school with the best appliances known to modern science, fitted up a favorite class of Baldwin locomotives, running from Bound Brook to Jersey City on the N. J. Central R. R. known as class "Long Tom," to determine some slipping tests. According to their report there was no slipping of the drivers. It looks as though somebody is wrong—*who is it?*

Referring to the illustration and the imprint thereon within the counter-balance lines:

No. 1 is class B, Pennsylvania Railroad; builders, P. R. R., Altoona, Pa.

No. 2 is New York, New Haven & Hartford Railroad; builder, Baldwin, Philadelphia, Pa.

No. 3 is Philadelphia & Reading Railroad; builder, Baldwin, Philadelphia, Pa.

No. 4 is Atlantic City Line, P. & R. Railroad; builder, Baldwin, Philadelphia, Pa.

No. 4. This is a class of Wootton locomotives; builder, Baldwin, Philadelphia Pa.

No. 4. Known last summer as the *eighty minute fliers*.

No. 5 is class "J. W. Miller," New York, Providence & Boston Shore Line; builders, Rhode Island Locomotive Works, Providence, R. I.

No. 6 is the Strong Locomotive, "A. G. Darwin;" builder, Hinckley Locomotive Works.

These locomotives, saving No. 1, are recent very heavy high class locomotives for high-speed passenger service. A, is the bottom of the wheel in contact with the rail, and as I have heretofore and now contend is at rest.

B is the crank-pin hole, C the axle-hole, and D the top; the top portion containing the printed matter is the counter-balance; 1, is the *vertical base line* in both the crank-pin B and axle-hole C; 2 is the *parallel base line*, the dot where these two cross is the center. The arrows indicate the direction of the moving wheel, both of itself, and on and along the rail. Assuming for convenience, and to avoid fractions, that the train is running a mile a minute, then at A, the point in contact with the rail is *at rest*, at B, the *rotating* part, crank-pin, is carrying all *reciprocating* parts, parallel-rod, connecting-rod, cross-head, piston-rod and piston head with their attachments, at thirty miles per hour, these work in combination, reciprocating and rotating. Through the center of C, the speed is sixty miles per hour, while at D, the top is moving 120 miles per hour. A driving wheel 5 feet $8\frac{1}{2}$ inches in diameter, revolves $5\frac{1}{2}$ times in a second at the above speed. The counter-balance being in the average of distance and weight, between the upper limit of the crank-pin and D, about one-half way, is moving at say about 105 miles per hour. B, at its upper limit with all its attachments moving at ninety miles per hour. At this time D being now in contact with the rail, is at rest. The axis of motion being at that point on the rail, what must be the "centrifugal lift and tangential throw" of this lifting and throwing force at D, of from 864, 1,200, 1,268, 1,370, 2,174 and 2,480 lbs. in the counter-balances, and what the *whipping and back-lashing force* at B, with a maximum speed of ninety miles per hour, to a minimum of thirty miles, five and one-tenth times in a second, of these two mighty forces of steam and momentum, at thirty miles per hour for the one, against 105 at the same instant, rotating and reciprocating parts at *thirty* miles, controlled by rotating *only* at 105. Verily if this will not produce driver-slipping, what will? Just ask "Dave Hershey," the best mechanic and locomotive runner on the Philadelphia Division, Pennsylvania R. R. All "the boys" say so, and what they *all* say must be so.

In this connection it may be well to give what I am informed is the correct rule of counter-balancing, this will answer several personal inquiries, and several by letter.

The rule of class B, herein referred to was to counter-balance front and rear driver alike, the present rule is to assume that the

crank-pin on the front driver carries one-half the weight of connecting-rod next the pin, and the cross head the other, in addition it carries one-half of the weight of parallel rod, the additional weight of double sets of brasses and boxes, the extra projection of the crank-pin, to hold this extra load, the rear driver only carries one-half the parallel-rod and one set of boxes. The weight of these parts so carried as shown at B, are estimated, and *eighty-five* (85) per cent. of this estimated weight is carried as shown in the counter-balance. This I understand to be the rule of the well known English engineer Crampton, of 1852; at least he gave it to me as his, as late as 1885, when he was in attendance on the World's Electric Exhibition in Philadelphia. Nos. 1 and 6 fore and rear drivers are balanced by the old rules, the same height in each. Nos. 2 and 5 are counter-balanced according to the Crampton rule. I assume this is a new experience to "W. L.," for he says, "Having never before heard of an engine doing this," this seems strange to me, and I suggest he may have had an over counter-balanced engine, over cylindered by excessively large cylinders, or very high pressure, either one, or all in combination. Won't he please give us all the particulars for further consideration?

Truly yours,

WILLIAM E. LOCKWOOD.

LOCH AERIE, November 18, 1889.

Review of December Magazine.

The December issue of the *Magazine* is at hand, and that brings to mind the fact that our labors for 1889 are closed, and that these lines will be the commencement of another year's work. While some mistakes may have been made in the past, yet we dare to hope that the good resulting to our readers, from the study of this department, will greatly outweigh any possible shortcomings, and leave a handsome balance in favor of the department. Let us, therefore, work on, determined to do what we can in our humble way to make the pages for 1890 even more instructive and interesting than in the past, and thus help on one of the objects of the order as set forth in the preamble, "The elevation to a higher intellectual standing." Not satisfied with the achievements of the past, let us adopt the motto, "Excelsior," and as we climb the slippery heights of knowledge, let us still look up higher, and let our voices unite in a vigorous shout of "Excelsior."

"Eccentric Strap," after a prolonged absence on the other side of the axle has again, "turned up" on the "near side," and brings his train to a stop with a whistle and a shout in the December *Magazine*, and truly glad must all feel to see that "E. S." is still with us in the body, and also in the

spirit of a search for more and more knowledge. "E. S." tells us about the visit of "Westinghouse Instruction Car No. 1" to his locality, and the instruction which Prof. W. J. Hartman and his assistants were enabled to give to the employees of the G. C. & Santa Fé Railway by the use of the appliances provided. No doubt that many other localities will receive the Instruction Car with equal interest, and be benefited by its visit, for it is with the brake about as it was in many instances with the reverse lever—it is known as a fact that in certain positions it will make the locomotive move ahead or back—so with the brake valve handle, in one it applies brake, and in the other releases, but as to the "how and wherefor" a "blissful ignorance" prevails. The Instruction Car will no doubt do its allotted share in "dissipating the fogs" with which the subject is surrounded, and let in the light of true mechanical principles involved in its construction and management; in the meantime, while waiting for the car to come, the next best thing to do is to study the book issued by the Westinghouse Company, which they will send to any one interested enough in the brake to write to them for it. It is true that engravings are not as good to study from as the real machine, but a careful examination of cuts, in room alone and undisturbed, is often better for a student than the bustle and diversion necessarily a part of the more public exhibition of the machine in a car, surrounded by men, some of whom may be deeply in earnest, and others who may be only slightly interested and present more for the fun and novelty than from any intense desire for knowledge.

"POLY" ALIAS "E. S." introduces Prof. Hartman to us as our friend "Poly," who formerly had interesting articles in this department, and who from a position as fireman has worked himself up to engineer, polytechnic assistant, and now instructor in charge of the Westinghouse Instruction Car, thus showing that the avenues to advancement are not shut off to those who have the will to devote themselves to the study and mastery of the mechanical problems connected with their work, as Mr. Hartman did. "E. S." thinks some of our correspondents would have hesitated to enter the discussion of air-brake points had they known that they were opposing Prof. Hartman, but it is to be hoped that in discussing mechanical principles in these columns every correspondent will have the courage to give his convictions, no matter who may oppose; but, of course, it behooves every one to carefully examine the foundation of his convictions and see that they are founded on facts which cannot be denied. Prof. Hartman himself would no doubt rather have the opposition of an

earnest searcher after knowledge than the unquestioning acquiescence of an ignoramus, who accepts everything as so because Prof. Hartman says so, without bothering his brain to see whether it was common sense or correct principle.

TRACTIVE "Fireman" comes from the "Indian Territory" with a query on POWER OF AN traction which bothered him ENGINE. and which gives all hands a chance to do some tall thinking and figuring. "Fireman" says he has tried to calculate the tractive power of his locomotive, but cannot make her pull more than fifty-three 20-ton cars on a level, while she has pulled thirty-nine 20-ton cars up a 60-foot grade at 15 miles per hour. Let us analyze these statements and the figures as given. A nineteen inch piston has an area of $283\frac{1}{2}$ inches, subject to the action of the steam pressure. While the steam pressure on the boiler may be 150 pounds, yet the average pressure must be taken to calculate from, and it will depend on the throttle opening and cut-off what that shall be. Suppose we call it 70 pounds, which is about what may be obtained by a 12-inch cut-off. We would thus have $283\frac{1}{2}$ inches, subject to 70 pounds pressure per inch, or equal to 19,845 pounds on the whole surface. The piston moves 2 feet each way, or 4 feet to each revolution, which equals 79,380 foot pounds for one piston, or 158,760 foot pounds in the two pistons. The 52-inch driver, as given by "Fireman," would be 13.6 feet in circumference, and 158,760 foot pounds, divided by 13.6, would give a tractive force of nearly 11,700 pounds. So if it takes 11 pounds per ton, at 30 miles per hour on a level, the locomotive in question would pull 1,063 tons, equal to fifty-three 20-ton cars, as "Fireman" states. (I must have made a good guess on the average pressure and speed, which "Fireman" does not give, to come out so near alike.)

Now, let us examine the feat "Fireman" says his locomotive performed; that is, haul thirty-nine 20-ton cars up a 60-foot grade. The weight of these cars is 780 tons, which multiplied by the resistance per ton of 30 pounds, and the circumference 13.6, would require 318,240 foot pounds of energy for each revolution of the wheel, but as the pistons travel 8 feet to make a revolution, we divide 318,240 by 8, and find that we would have to have 39,780 pounds of pressure on the piston, or at the rate of a little over 140 pounds to the inch. I suppose it will at once be apparent that a mean effective pressure of 140 pounds cannot be obtained on the piston, with only 150 pounds on the boiler, and it is also apparent that 39,780 pounds far exceeds the adhesive limit, even if the whole 50 tons of "Fireman's" locomotive were on the driving wheels. It must therefore be assumed, that the thirty-nine cars of 20 tons

each were not pulled up the grade by the pull of the locomotive alone, but that they ran up in part by the momentum acquired before reaching said grade, as it is a general practice with all good engineers to approach heavy grades with heavy trains at as good a speed as possible. Perhaps if "Fireman" will review the case, he will find that this was done, and of course accounts for the fact of her "getting over the hill" with a greater load than would seem possible could be done by the actual tractive power and adhesion to be obtained by a locomotive of the dimensions given.

DR. WILSON ON STEAM. Dr. "Wilson" in his second paper does not propose to analyze steam, or its composition, nor how it is made, but how much can be made, and to get at it he *supposes* that we have a 10x16 engine, with 200 revolutions, and *supposes* a boiler 12 feet long and 3 feet in diameter, with a cubic capacity of 146,575 inches, and a *supposed* steam space one-tenth as large, or 14,658 cubic inches. Then he *says*: "Let us say this steam space can be filled in 15 minutes," and asks firemen to test how much steam they can make in a given time, by watching the gauge run up ten or twenty pounds, while standing still. Is this a test? Let the intelligent firemen answer.

CYLINDER CONTENTS. A 10x16 inch cylinder contains 1456.64 cubic inches, as the "Dr." says, and it would take 251,328 cubic inches to fill it half full 400 times during the supposed 200 revolutions, but what does this prove? It simply proves that the "Dr." started with a wrong *suppose* in the problem, by the *supposing* 14,658 cubic inches in 15 minutes as the steam producing capacity of his boiler. Now, let us reverse the figures, and let us see what the boiler has to do to supply the engine. As stated, it would take 251,328 cubic inches of steam for every minute's work, or 3,769,920 cubic inches for 15 minutes' work. Now, Forney's tables, as quoted by "Dr. Wilson," do give 179 as the volume of steam at 140 pounds, as compared with the water from which it was raised, and by this rule we would need 21,061 cubic inches of water every 15 minutes to convert into steam. This is only about one-seventh of the cubic contents of the boiler, and would equal not quite 6 inches deep, with an average of 30 inches in width, and the length of the boiler, for $120 \times 30 \times 16 = 21,600$ cubic inches. Now, let any fireman apply common sense to this, and see whether it holds good. A boiler, as above, with the engine running at 200 revolutions per minute for 15 minutes, would surely lower its water 6 inches in that time, unless more water was forced in, to take the place of that used, and if this is answered in the affirmative, it will upset all the *supposes* of the "Dr." Now, let us come to some-

thing real: Take a locomotive with an 18 inch cylinder and 24 inch stroke, cutting off at 9 inches. Now, as the piston area is $254\frac{1}{2}$ nearly, and is to be followed 9 inches, it would take $(354\frac{1}{2} \times 9) = 2,290$ cubic inches of steam for each end of each cylinder, or 9,160 cubic inches for each revolution of the wheel, which we will say are 5 feet in diameter, and thus would make about 336 revolutions to the mile, and if run at 20 miles per hour would make 112 revolutions per minute. We would thus need $(916 \times 112) = 1,025,920$ cubic inches of steam per minute, which would in its turn require 5,731 cubic inches of water. In a boiler, say 22 feet long, by an average of 43 inches wide at top of water surface, it would take just about a half inch in depth to equal 5,731 cubic inches, for $12 \times 22 = 264$ inches long, and 264 by 43 inches wide equals 11,452 square inches, which multiplied by $\frac{1}{2}$ inch deep $= 5,726$ cubic inches. No fireman or engineer will doubt that he will lose $\frac{1}{2}$ inch of water in running a minute with the supply shut off, so that probably enough has been said to show that "Dr. Wilson's" *supposes* were not warranted by facts, and that steam is generated much faster than his article would lead us to believe, for it is demonstrated daily by the thousands of locomotives, traversing the country in all directions, that they not only generate steam enough to fill the cylinders as often as required, but can even show a "white feather floating from the dome" in token of reserve energy. "Dr. Wilson" decries the *expansive* force of steam, and says it can only expand to $9\frac{1}{2}$ times its bulk, yet it is a matter of doubt whether there is any other substance that possesses a degree of elasticity of even one-half that of steam, and which does as much effective work at so small an *expense*. A locomotive with 18 inch cylinders, 24 inch stroke, 140 pounds boiler, and say a maximum of 120 and a mean effective pressure of 60 pounds on the piston, traveling at the rate of 20 miles per hour, with 5 foot drivers, would show nearly 415 horse-power and a tractive force sufficient to haul 1,052 tons on the level at 20 miles per hour. This is theory, but we see that locomotives can and do haul 100 "coal jimmies," weighing $3\frac{1}{2}$ tons (light) and having a load of 6 tons or over, thus making a train of 950 tons, and with locomotive, making about 1,000 tons, or, they haul 33 gondolas, weighing over 104 tons, and carrying 20 tons, thus bringing the loaded car to 304 or 31 tons, making the train itself over 1,000 tons. With such examples of power, long continued and steadily furnished right along, it is utterly impossible to make any one believe that steam does not possess expansive energy in a high degree, and that a great portion of it is utilized in its passage from the boiler through the cylinders to the air. As the latter part of "Dr. Wilson's" com-

munications deals in *supposed* holes and the *supposed* speed of steam issuing from it, for which no one has found any formulas, and on which even the "Dr." has to guess, it is probably unnecessary to follow up the subject, except to remark that indicator diagrams show no 70 pounds of back pressure, as opposed to the action of the newly admitted steam, and the best refutation for this is found in the trains which are pulled every day as above stated.

I see Friend "Tucker" is still persevering in the effort to have an answer to his questions as put to Mr. Lockwood, but it seems without success, but as Bro. Tucker already knows my opinion, both as expressed in the *Magazine* and by correspondence, it is not necessary for me to go into the subject further.

"Wm Gor" gives an incident in his railroad career, when he was caught with the throttle wide open and unable to shut off. This has happened here a few times, but I was never in the frolic but once while I was still a green fireman. Our throttle lever became disconnected inside the dome, and we were to all intents and purposes dead, with a heavy fire and full steam pressure on. This of course did not make much trouble, as we had just put away our train at the terminus of the road, but of course we were towed around to the shop, and while doing so, I had a good sweat getting out a lot of lump coal, which I had put in the fire-box, as we expected to start on the return trip at once.

Vulcan.

The Starting Force of Horses and Steam.

For work, five men are considered equal to one horse. And a load for a soldier is estimated at thirty pounds; this includes his knapsack, gun, and other accoutrements. And with this load he is considered capable of marching all day. But in starting on the march he could easily take up ninety pounds more and walk off with it, and at each step let a part of this drop away, when, after a short distance, only thirty pounds are left, and this is his constant load. In a former article, I demonstrated that the constant pull for the horse is 150 pounds; but the horse, like the soldier, can start with a much heavier load or pull than he can keep up all day long. Let us say, as with the soldier, he can start four times his constant load; then his starting force is 600 pounds of tension by which he pulls, and after a few steps the load is in motion and it is kept going by one-fourth what it takes to start it, so says "Vulcan;" and I will use as much of his philosophy as I can, and after a while will show him that in part, at least, he is wrong. Let us now examine the starting

force of steam. And to illustrate, we will use "Philadelphian's" 681.6 horse power locomotive, and the work to start a train of cars; and let the steam be 120 pounds to correspond with his 80 pounds in cylinder. To show what a locomotive can start, there should be no slack by either links or springs, but everything taut. Now, in starting, we will use the reserve force, as we did with the soldier and horse, and say that we can have the 120 pounds in the cylinder to start with; for what is to hinder, the locomotive is standing still, the throttle is thrown open, the steam rushes in until the cylinder is filled with steam at boiler pressure, unless the load starts sooner; but you cannot have boiler pressure in the cylinder at any other time. And as the maximum of one cylinder is the full force of the locomotive, therefore, we shall consider only one, for, when one is maximum the other is naught, and the maximum of one acting on a 12 inch lever (the crank) is equivalent to two acting on 6 inch levers. The advantage of two cylinders is, you can never be caught on a dead center, and the steam force remains constant and at the maximum at every point. For, as the push or pull of one diminishes from maximum to naught, the other increases from naught to maximum. Then, if there is 80 pounds pressure in the cylinder when the train is going twenty miles per hour, it averages that constantly for one cylinder only; therefore, "Philadelphian's" example is wrong, for it should not have been multiplied by that little figure 2, because this gives twice as many horses as belong there, even if all the other conditions are correct.

Let us now start, and every pound of force we can get is expressed thus: $283.5 \times 120 = 34,020$ pounds as a pull. If 33,000 pounds is the measure of a horse pull, then the locomotive is a little more than a one horse power. But if we exercise a little common sense and use the force a horse can exert as the measure, we find the locomotive equivalent to 56.7 horses for starting the load. "Vulcan" says the dinagraph shows that it only takes one-fourth as much force to keep the train going and to accelerate the speed to 50 miles per hour at the fifth mile; in other words, a pull of 48 pounds will start a ton, and 12 pounds will produce a speed of 50 miles. Then this engine can start a train of nearly 709 tons if it has 120 pounds of steam in the cylinder. And if "Vulcan's" dinagraph is correct, it only takes 30 pounds of steam in cylinder, or 8,505 pounds, to keep the train going. Now let the speed be that assumed by "Philadelphian," 20 miles per hour, then the piston speed is 496 feet. Now, a pull of 8,505 pounds exerted through a space of 496 feet in one minute's time gives 4,218,480 foot pounds of work, which would be the work of 127.8 horses. But if you take 56.7 horses, let each pull 150 pounds and

travel 496 feet per minute (the piston speed), the foot pounds of work would be the same as above. But while the piston has gone only 496 feet, the train has moved along the track 1,760 feet in one minute, while the horses going 220 feet per minute along the track would require eight minutes to go 1,760 feet; therefore, the steam has done about two and one-fourth times as much work as the 56.7 horses could. But let us refer back to the moving force 8,505 pounds which is to move 709 tons; let us say the locomotive is 59 of those tons, which is nearly one-twelfth, then the load it is to pull is 650 tons, taking 12 pounds of force to the ton, requiring 7,800 pounds of pulling force.

But as the horses furnish their own transportation, we have the whole of the 8,505 pounds to move the train. And as "Vulcan" informs us about 3 pounds per ton is sufficient to keep the load moving at $2\frac{1}{2}$ miles per hour, then the horses could take 2,835 tons; then let the cars average 25 tons each, then the locomotive can haul 25 cars, and the 56.7 horses could haul 109 cars. So you see it is hard to make *your rules* ("Vulcan's") to harmonize. But "Philadelphian" says the steam is always supposed to be two-thirds boiler pressure in the cylinder; then for one minute it would give $11,249,280$ foot pounds of work, and $11,249,280 \div 33,000 = 340.9$ horses; and this is what "Philadelphian" claims to be correct, for I only calculated for one cylinder, while his estimate is on two. But the steam has traveled only only 496 feet, while the load has gone 1,760 feet. But what can 340.9 horses do drawing a load along the rail, with a pull of 150 pounds per horse, going 220 feet per minute? and traveling 1,760 feet, which would require 8 minutes, thus $340.9 \times 150 \times 220 \times 8 = 89,997,600$ foot pounds, just 8 times as much as the steam, and takes 8 times as long; then if the locomotive can haul 25 cars 20 miles per hour, the horses can haul 200 cars $2\frac{1}{2}$ miles per hour, consequently deliver the same amount of freight in a given time. Then to get the horse power of the locomotive, we must divide 340.9 by 8 = 42.6. This cuts the steam down to one-eighth of boiler pressure instead of two-thirds. To illustrate, a man can carry 160 pounds, a boy only 20, but the boy is more active than the man, and can make 8 trips while the man goes one, at the end of one minute or one hour they have both done the same amount of work; then should the boy be estimated at the same horse power as the man? or only one-eighth as much? yet capable of doing the same amount of work, in consequence of quicker motion. Now, we found the starting force of this large engine to be only 56.7 horses. In starting, neither steam nor horses has the benefit of momentum, and suppose the steam and horses

are both doing the same kind of work, moving a train along the rail, the horses have a rate of travel of $2\frac{1}{2}$ miles per hour, the steam 20 miles—8 times as much, consequently 8 times as much momentum to help it along. Therefore, when the train is in motion, the steam is exerting only one-eighth as much force as the horse. Now, if a span of horses can haul a loaded car along the track, then this large engine might haul 20. That the above statements are correct, let any one watch the *feeble efforts* of this large locomotive to start the train it finally pulls with ease after it is in motion. Then, must you not come to the conclusion that 56.7 horses can start as big a load as this large (681.6 horse) locomotive? If so, can you prove that when in motion that the steam exerts any more than 14 horse force of 150 pounds each? This pull must be shown behind the locomotive, and be 16 ounces to the pound. But let us deal fairly with steam, for it has a great name, and that goes a long ways in this world. But he is an old blowhard, and has been loudly tooting his own praise for a long time. And like all others of his class, when it comes to hard work, he makes a big hurrah, and lets others do the work. And prick the swelling monster, and you find nothing but a puff of gas.

Now, the engine under consideration: the two cylinders have a capacity of 13,608 cubic inches, and the generally accepted theory is that the cylinder is filled half full or to the cut-off with steam at nearly boiler pressure, then expands to drive the piston head on to the end of the stroke; then for every revolution it will require 13,608 cubic inches of steam at boiler pressure. And as we have 124 revolutions per minute, the amount of steam required for one minute is $13,608 \times 124 = 1,687,392$ cubic inches. And steam at 120 pounds, for every cubic inch of water you have 212.5 inches of steam; then to make one minute's supply of steam it will require 7,888.4 cubic inches of water, or about 28 gallons, and 84 gallons for every mile, and 1,680 gallons every hour, or nearly 47 barrels of water.

Now, if the boiler is 15 feet long, 4 feet diameter, its capacity is 325,721 cubic inches, and one-fifth of this for steam space is 65,144 cubic inches. But you demand for one minute's use 1,687,392 cubic inches, which is nearly 26 times as much as your store house for steam contains, therefore, your supply on hand can only last the twenty-sixth part of one minute, or about 2.3 seconds. Did you ever make a boiler full of steam in $2\frac{1}{2}$ seconds? Did you ever raise your steam 10 pounds in $2\frac{1}{2}$ seconds? which is only $\frac{1}{18}$ of what you would have to do to keep up a supply. In other words, you would have to raise your steam 10 pounds in about two-tenths (.2) of a second. This you never did, and never can, therefore, you are not using

as much steam as somebody told you you were using.

Again, if the steam is used as claimed, to have one minute's supply on hand would require not only a little dome about the size of a barrel on the top of your boiler, but a *tank 75 feet long and 4 feet diameter*. But your boilers are not built this way. But should you use steam at 155 pounds pressure, it would require 36.37 gallons (or one barrel) of water to make one minute's supply of steam, and 2,182.5 gallons for one hour.

Now, if you use that amount of water and it is all made into steam, you have not more than 30 inches of steam for one inch of water at 120 pounds steam pressure. And to say you get more than this, is like the saloon keeper putting two gallons of whisky in a one gallon jug; this was thought to be a great strain on the jug. But would it not be a great strain on your steam chest to put 26 cubic inches of steam in one inch of space when it already has a strain of 120 pounds, and this would only be one minute's supply.

Then, where do you store your steam? I hear some of you say: "Oh, we use it as we make it." Then you can make it a great deal faster when running than when standing still, can you? "Yes, sir, as the steam is let out it makes room for more, and it generates faster." All right, you are now coming up to a station; the steam is shut off, brakes put on, now you are standing still; the fire is booming but the steam refuses to make, except slowly, because you won't let any escape; but the pressure is nearly to the escaping point at the safety-valve, and the steam rushes out whether you will or no. And from your theory, should now make the faster and keep on blowing off more and more. But, alas! the valve soon closes with a snap, and we have to wait a time before it again opens. What an accommodating thing a steam boiler is. Won't make steam only when you want to use it, and then at once with the same fire can make enormous quantities. Ain't this funny? Now we think it is about time the *Philosophers stand up* and explain how a barrel of water is converted into 212 barrels of steam at 120 pounds pressure in one minute, and get it (the steam) into a 7 barrel space, and can continue to make it for 10 or 15 minutes, and it all goes into this small space and is only crowded 120 pounds to the inch.

We have been talking about cubic inches of steam, and as the gauges are not made that way, but are marked in pounds, let us then look at steam from that standpoint. Let us suppose your steam registers on the gauge 140 pounds; you are stopped, with a good fire, and in one minute you have raised your steam to 150 pounds, that is, 10 pounds in one minute. Then you could make 150 pounds in 15 minutes, consequently you

could have 10 pounds for use every minute. But we are now running 124 revolutions per minute; there are 4 ports on the two cylinders, they are all to be opened every revolution, and $124 \times 4 = 496$ times. Now this 10 pounds of steam have to be divided into 496 parts, which gives about the 200th part of a pound for every time the port is opened.

But let us suppose you use it, as you know you do, because somebody told you that was the way to use it. Then every revolution would require about 30 pounds of your steam pressure, and 5 turns of the drive wheels would require your 150 pounds. Can you supply the demand?

It is very plain to my mind that somebody is wrong. Who will answer my questions and explain the mystery? I have given steam credit for all I can find it worth from pressure, but I think it has another and greater force than pressure if the engines were so constructed as to utilize it. But as I have never known an engine, only to use pressure, I have no suggestions to make. In these papers I have been trying to deal with things as I find them, and not to invent something new. However, I have an invention that showed in a test trial that an engine could be made to do seven times as much work with the same amount of steam, and did three times as much actual work. But I don't know that all the power was utilized. I have done more work with 35 pounds of steam than I could do with 60 pounds without my attachment.

Now let us sum up what we find in steam. You claim to use as a constant pressure as a pull for the engine $283.5 \times 2 \times 80 = 45,360$ pounds. (Then your dinagraph says this engine will haul 3,780 tons, 151 cars of 25 tons each, at the rate of 50 miles per hour.) This is about one-third more than I can find to start the load. To use this amount of steam would require to fill the steam space in the boiler in from 3 to 5 seconds, or as I have shown, to raise your steam 10 pounds in one-fifth part of a second, or raise it 30 pounds in one second. In other words, if you were standing still, your steam down to 120, you could raise it to 150 in one second. Have you ever done this?

Then let us exercise a little common sense, and say you can fill your steam space in the boiler at 150 pounds pressure in 15 minutes. Then let us use it so that it will last that length of time. Then if this space is equal to one-fifth of the whole boiler (we don't think it is that much) as we have been estimating it, then for a speed of 20 miles per hour, you have for use every time the port is open .02 of a pound, which takes out of the boiler $8\frac{1}{2}$ cubic inches of steam; and about .1652 of a pound requiring 72 cubic inches every second, and 10 pounds of steam requiring 4,337 cubic inches every minute; finally, 150 pounds of steam, 65,144 cubic inches every 15 minutes.

Now, this is equivalent to one port fully open all the time, and would make a constant pull of about 50 pounds against the piston, and when counted at piston speed, it is about three-fourths of one horse power. But when counted on the rail, nearly 3 horse power. Momentum does the rest. Common sense proof: Go to the street car loaded with 40 or 50 persons, drawn by two horses or mules; after starting, their traces are swinging loosely most of the time, the weight of the traces being almost sufficient to keep the car in motion as they trot along. Again, when running 20 miles per hour, shut off all your steam, and in 30 seconds the train will have gone 880 feet. Now start your load, use every pound of the steam you can possibly start, and can you get 22 feet in 30 seconds? If not, then when you are in motion, 20 miles per hour, the momentum is doing 40 times as much as the steam to keep up that motion.

L. A. Wilson.

ARGENTA, ARK.

[Concluded in next Number.]

What is Horse Power?

What is horse power? The November number, pages 978-980 has interested me. I am only an engineer but I own the title of M. D. and do not "wear it." Mr. Wilson's philosophy is all sound so far as I know, but when he asks why we should not use 150 instead of 33,000 pounds in "estimating the power of steam engines"—why not use 75, or 4,000, or any other unit? The simple fact, divested of all details, is that physicists of all countries have agreed upon certain units in order to facilitate computations, or they have measured the forces, resistance, etc., and they come so near to a constant result that they wipe out the minute differences and agree on something. Now, the force exerted is equal to 33,000 pounds lifted one foot high in one minute, and to "calculate the horsepower of a steam engine" we must multiply the speed in feet per minute by the actual pressure in pounds by the area the pressure is exerted upon, and divide that result by the unit, or the pounds per minute to make a horse power.

All these factors are easily attainable except the mean pressure, on the piston, and nobody, either book rules or anybody's guess, can tell what the fact is except the indicator. Given an indicator diagram, properly taken, and the data, and all the rest comes easy. But all the so-called rules quoted in the Doctor's article are guesses and suppositions, purely fictitious, so far as arriving at results go, as to mean effective pressure.

We can figure then an engine 6" x 6" (a 400 strokes, or 200 revolutions per minute, can or will, or may have a mean pressure of $\frac{1}{4}$, $\frac{1}{2}$, $\frac{3}{4}$, or any other proportion of boiler

pressure, but when indicated the realized mean pressure may be equal to our guess or it may be plus or minus, and this is exactly why engine builders "assume" and "suppose," or say "about," and it is why steam users so often figure out a certain mean pressure and a certain speed, etc., and then don't get the result, because the estimated pressure and realized pressure follow certain laws that require far more of a man's lifetime to learn than it does to get a diploma. As to the rest of his letter, he can assume "Spiritus framenti" to be "Pix liquida" if he likes, but people follow "horse sense" instead of such laws, to a great extent, and James Watt is still good authority on horse power, and no disrespect to the Doctor.

Uncle Silas.

The Fusee Signal.

Not long since a communication in the *Railroad Gazette* captioned "The Use of the Fusee Signal" came under my observation which is subjoined for information as well as inquiry. The communication, which is signed "Transportation," is as follows:

Having read all the accounts published by you of the Palatine Bridge collision on the New York Central & Hudson River Railroad, I am surprised that no mention has been made of the fusee signal. Rule 31, of the standard code, says: "A fusee is an extra danger signal, to be lighted and placed on the track at night, in case of accident or emergency." You will note that the fusee must be used "in case of accident or emergency."

Rule 31 of the standard code does not, in my opinion, go far enough and state specifically how the fusee signal should be used. To say the fusee must be placed on the track at night in case of accident or emergency, and not say under what circumstances it must be used and where to place it, leaves it discretionary with the brakeman what to do. Why should this be so?

The explanation is, I suppose, this: In your editorial of October 4 you say, "the Time Convention Committee doubtless recognized the difficulty of formulating a rule by which brakemen could be clearly instructed as to what action should be taken when a train slackens speed but does not come to a full stop, and they were perhaps warranted in promulgating this rule in this way. Each manager was left free to make amendments in any proper way, and the committee can claim with reason that they are not responsible for any dangerous omissions." Allow me to ask if the assembled wisdom of the Time Convention Committee recognized the difficulty of formulating a rule, will not a manager recognize the same difficulty? Brakemen or flagmen should "be clearly instructed as to what action should be taken when a train slackens speed but does not come to a full stop." I therefore offer the following as a substitute, or, if you please, an amendment to code rule 31:

Section 1. A fusee is an extra danger signal, to be lighted and thrown on the track, at intervals of five

minutes for five-minute fuses, and at intervals of ten minutes for ten-minute fuses, at night or in foggy weather, whenever the train is not making schedule speed, and is being followed by another train. A train finding a fusee burning on the track must come to a full stop, and not proceed until it is burnt out.

Sec. 2. The engineer of a forward train, finding that his train is not making schedule speed, when a train is known to be following in the same schedule, or who has to stop, must at once give the signal for brakes, when the flagman or brakemen must signal at once with fuses as provided for in Section 1 of this rule, until the train has slowed down sufficiently for the brakeman or flagman to get off, when he will proceed to protect his train, as provided for in rule 99.

Sec. 3. The engineer of a following train, finding that the forward train is slackening speed at any place, will, if his engine [speed] is under control, blow on and off brakes, so engineer and conductor of the forward may be assured of their safety, but if he is not satisfied that he can stop in time, he must continue to signal for brakes as a danger signal to the forward train.

The fusee signal is, in my opinion, the most reliable for night and foggy weather, and its great advantage over the lamp and torpedo is that it can be thrown from the rear of a train at any speed and will signal the following train without slackening the speed or stopping the forward train for the flagman to get off to protect his train, as provided for in rule 99. There is one thing that must not be lost sight of, the danger is in slackening speed or stopping the forward train for the flagman to get off. While this is done the following train, running at full speed, closes up on the forward train before the flagman can go back far enough to stop the following train. With the fusee signal slackening speed or stopping is not necessary until it is known that the following train is under control. This I provide for in the third section of the substitute or amendment I propose to code rule 31.

It appears from the foregoing that there is a danger signal called a Fusee, that is used on some railroads, and it seems that it might have all the merits of a torpedo without its disadvantages, for a torpedo once attached remains as a warning until some train comes along, it may be hours after the torpedo was placed there; while a reading of the above communication would seem to indicate the fact, that after burning five or ten minutes, as the case may be, the fusee would be extinguished, and allow the rear train to follow without the unnecessary alarm occasioned by a torpedo, which, however, does not give any information in regard to the preceding train, except the fact that it had been there at some time in the past, but how remote none can tell. Under these circumstances information on the fusee will no doubt be welcome to many of our readers, and any one giving it will be a benefactor to such of us as are still in the dark on that subject.

ALLEGHENY, PA., November 12, 1889.

MR. EDITOR:—I am not the editor of the *American Machinist*, but can verify "W. L.'s" statements in regard to a Baldwin engine, on night express, slipping on a down grade without using steam, and I don't think "W. L." was sleeping when he noticed it, for I am well acquainted with the engine, and have known it to be the case for several years, and have run the mate to the same engine which has slipped so badly (running thirty miles per hour), that I have had to shut off entirely, and she would still continue slipping for as much as a mile down grade, with the throttle valve shut. Now, I would like to hear some of our young mechanics' opinions on the subject, as it is important.

F. E. P.

BUFFALO, N. Y., December 11, 1889.

MR. EDITOR:—I address the Mechanical Department to obtain information relating to boilers and engines. If a boiler has sixty pounds of steam, what is the pressure to square inch of boiler: what is the pressure on the safety-valve and how do you get at the pressure of safety-valve. What I mean is this: how do you measure a safety-valve to get at the pressure.

If a pump has 20-inch stroke by 1½ inch bore and making sixty strokes per minute, how many gallons of water will it throw per minute.

What constitutes a horse-power in a boiler; is it not the heating surface of the boiler? Also, how many square inches are there to the horse-power of a cylinder?

An answer to the foregoing questions will oblige

A. T. Conkling.

Expired Railway Patents.

The following list of railway patents, furnished by F. B. Brock, Patent Attorney, Washington, D. C., expired during the month of December, 1889, and are now free to be used by anyone, viz:

Grain car—S. W. Wood.
Stock car—A. Welch.
Car washer—E. W. Leavens.
Car spring—J. B. Quirk.
Car axle box—W. G. Beattie.
Spark arrester and consumer—R. Grant.
Railway station water column—R. T. H. Stileman.
Car coupling—S. C. Bole.
Car brake—W. Nelson.
Car axle—G. W. Miltimore.
Snow plow—J. S. Munson.
Track clearer—P. I. Schopp.

Persons desiring copies of patents, drawings and specifications, can obtain the same for fifteen cents by applying to Mr. Brock, whose address is as above given.

MR. EDITOR:—Being desirous of securing information in my chosen calling I am emboldened to ask the following questions, viz:

First, What is an Eccentric Blade?

Second, What is the difference between a direct and indirect engine?

Third, How much throw has an eccentric got?

I have heard considerable discussion upon these propositions and concluded to submit them to the Mechanical Department as the best means of having them correctly answered.

A. Duncan.

Locomotive Notes.

The Chicago & Northwestern will soon let the contract for building twenty locomotives.

The Cincinnati, Jackson & Mackinaw has let the contract for building five new engines.

The Richmond, Va., Locomotive and Machine Works contemplate an enlargement of works.

The St. Louis, Vandalia and Terre Haute is understood to be in the market for five passenger engines.

The Ft. Wayne, Cincinnati & Louisville has ordered two freight engines of the Baldwin Locomotive Works.

The Rhode Island Locomotive Works have received an order for ten mogul locomotives for the Kansas City, Fort Scott & Gulf.

The Canadian Locomotive and Engine Company, of Kingston, Ont., is now working on orders for fifteen locomotives for various roads.

The New York Locomotive Works, of Rome, N. Y., shipped last week four passenger locomotives to the Rio Grande Western.

The Louisville, New Albany and Chicago has just received two of the consolidation engines recently ordered for the New Albany division.

The Schenectady Locomotive Works are building ten engines for the Chesapeake & Ohio for use on the mountain division of that road.

The Gulf, Colorado & Santa Fé has just received two new Baldwin locomotives for handling heavy business on the south end of the line.

The Brooks Locomotive Works, of Dunkirk, N. Y., has completed four large freight engines for the Lake Shore & Michigan Southern.

H. K. Porter & Co., of Pittsburgh, have completed a narrow-gauge shifting engine to be used in the United States Navy Yard at Washington.

The Central of Georgia will receive this week ten mogul and three switching engines from the Dickson Manufacturing Company, of Scranton, Pa.

The Kansas City, Memphis & Birmingham has received two passenger and four freight locomotives from the Rhode Island Locomotive Works.

The Baldwin Locomotive Works, of Philadelphia, are building several large passenger engines for the Southern Pacific for service on the Louisiana division.

Car Reports.

The Northern Pacific road has given out order for 3,000 freight cars.

The Union Pacific has been asking for bids on 1,000 box cars.

Five hundred box cars are being built by the Lima Car Company, of Lima, Ohio, for the Pennsylvania.

The Wrightsville & Tennille has received twenty new platform cars and other new rolling stock.

The contract for building 500 box cars for the Louisville, New Albany & Chicago, will be let in a few days.

The Harris Palatial Car Company is having a car built at the Wason shops, Brightwood, Mass.

It is reported that the Grand Trunk intends building 2,000 more freight cars for its Western divisions.

Armour & Co., of Chicago, are having 100 refrigerator cars built at the Pullman Car Works, at Pullman.

The Fort Wayne, Cincinnati & Louisville is soon to place an order for 400 freight cars.

The Central, of New Jersey, has recently added twenty-five new passenger engines to its equipment.

The Richmond & Danville railroad has made contracts since the beginning of the year, for building 2,100 cars.

Within the next thirty days the Lake Shore will receive 600 of the 1,000 freight cars recently ordered.

The Lebanon Manufacturing Company, of Lebanon, Pa., is building 200 gondola cars for the Huntington & Broad Top road.

The Ohio Falls Car and Manufacturing Company, of Jeffersonville, Ind., is employing 875 men, and the works are running day and night to complete orders.

The Pullman Car Company is building 200 refrigerator cars for the Merchants' Dispatch, and the same number for the American Refrigerator Company.

An order has been received by the Litchfield Car Works from the Kanawha Dispatch for 200 box cars, which are to be equipped with air brakes.

It is stated that the Philadelphia & Reading has invited bids for 3,500 coal cars, and it is expected that the orders will be placed this week.

The St. Charles Car Company, of St. Charles, Mo., this week shipped eight cabooses for the Rio Grande Western and four cabooses for the Mexican Central.

The Pittsburgh & Western has ordered 900 coal cars of the Indianapolis Car Works, and 600 of Pennock Bros., Minerva, Ohio, and will soon let 500 box cars.

The Indianapolis Car and Manufacturing Company has been awarded the contract to build 300 platform cars of 60,000 pounds capacity, for the Ohio & Mississippi.

The following roads are in the market for box cars: Buffalo, Rochester & Pittsburgh, Toledo & Ohio Central, and the Chicago & Northwestern.

The Missouri Pacific is having built, at the Pullman Works, five sleeping cars to run between St. Louis, Pueblo and Denver.

Woman's Department.

EDITED BY IDA A. HARPER.

Letters pertaining to Woman's work, such as education, temperance, home and fireside, and kindred topics, are solicited.

Correspondents are requested to write plainly, on one side of the paper only, and forward their manuscript so as to reach the Editor not later than the *tenth day* of each month, directing all communications for this Department to

MRS. IDA A. HARPER,
TERRE HAUTE, INDIANA.

THOUGHTS FOR THE NEW YEAR.

How rapidly the years fly when we begin to realize that in all probability we have left more milestones behind us than we are yet to pass on life's journey. We feel almost aggrieved at the frequency with which the anniversaries come around. Time seems to be hurrying us onward remorselessly when we fain would linger yet awhile. We were not ready so soon for the passing of the year. We wanted to rest by the wayside, to enjoy the days as they passed along, to hold the sweetness of the moments and quaff it slowly as one tastes the flavor of rare wine or takes long drawn breaths of delicate perfume. But the hours elude our detaining grasp like running water and flow onward with the stream. With glad eyes we see the rising of the sun, and lo! all at once it is noonday, and while we pause astonished at the rapid flight of time, behold the shadows gather and the sun has reached the western hills. The tasks we set out to do are unfinished, the leisure and the happiness we meant to enjoy have been swallowed up in the rush and pressure of duty. The promises of early youth are unfulfilled, the ambitions far from satisfied and the conviction gradually steals upon us that much we expected to accomplish must be left for other hands.

But whatever the melancholy thoughts that crowd upon us at this season of the year, we must not give them utterance, for it is an unpardonable sin to cloud another's sunshine. And, indeed, it must be an old and a sad heart that cannot extract some happiness from this period of gaiety and mirth. It is a time when we must lay aside all selfishness and find enjoyment in the delight of others. It requires a rare courage and self-denial to crowd back all the sorrowful memories that are connected with this season and to present to the world a smiling face and a ready assistance in all the mirth and merry making, but it is one of those moral victories which make stronger and better men and women. But when the festivities are ended and we have bravely done our part, then we may have our hour of solitude and retrospection. The little world about us has gone on its way rejoicing and

we have earned the right to withdraw for awhile from its endless requirements and enjoy the sweet luxury of being alone. The closing of the old year, the ending of another chapter in the book of life, call back much that has gone before. Stronger than ever is the imperishable memory of those who once marked time with us and by their very presence made the days and weeks and months all too short, and now that they are gone the counting seems a burden. But sadder still is the recollection of others beloved but now separated by oceans and continents, or by chasms which all eternity cannot bridge. They come to us as the old year dies, we can almost hear the rustle of their garments and feel the touch of their hands upon our own, outstretched and yearning. They go away after awhile and the chime of bells, the sound of a world awakening, bring the consciousness of a new year that calls us from the reveries of the past to the realities of the present.

Could the history of our readers be written, just the fragment that has transpired during the past year, what a volume it would make. Some pages would be illuminated with bright and beautiful pictures, others framed in borders heavy and black. Some would be written upon paper cream laid and rose tinted, others upon that of dull and leaden hue. These detached chapters would seem to show a grievous inequality in the good things of life, and yet when the great book is completed and the volumes are read, it will be found that there is a remarkable compensation. The lights and the shadows are wonderfully blended and yet they are distributed throughout the lives of all; and while there are a few exceptions, where all the roses seem to fall in one pathway and all the thorns in another, still will it be discovered that both blessings and evils enter into every life and each individual receives a measure of happiness and sorrow.

The rapid flight of time, which seems to bring the anniversaries closer together every year, admonishes us not alone that we must make ready for the day when we, like the old year must pass away forever, but even more forcibly that we must not neglect or defer the duties that crowd upon us as our time grows shorter. Even with our most conscientious efforts and careful endeavor we will long for yet a little respite to complete the unfinished tasks. We wish for all our readers a happy new year, and we hope that it may also be a useful year in which, through caring for others and fulfilling the many demands of a busy life, they may develop a noble character and find peace, contentment and happiness.

Miss Nellie Hunt, daughter of Garfield's Secretary of the Navy, who was Mrs. Whitney's private secretary, is now acting in the same capacity for Mrs. L. P. Morton.

We publish in this number a very acceptable communication from W. F. S., a gentleman who lives over the border. The editor does not believe in either women or men "flocking all by themselves" and she is very glad to hear from the opposite sex upon matters in which both are equally interested. We commend our correspondent's views to our readers for their consideration, and should they choose to reply we will ask them in this, as in all other instances, to write without prejudice and not to be governed entirely by their own personal experience but to discuss questions upon their merits.

We would like a series of letters from our readers on "Best Method of Managing a Husband." Let us have the opinions of both married and single, and if our masculine readers can throw any light upon the subject we will gladly make room for their letters. We hope to have a variety of ideas upon this important subject.

For Woman's Department:

THE COLONEL'S PROPERTY.

BY BESSIE MORGAN.

Author of "The Cap'n's Monnymint."

"This is the story, the lady old,
Dorothy's daughter's, daughter, told."

—O. W. Holmes.

So you think if I told you a story it would comfort you for losing the ball this Christmas eve. Then curl yourself up in a corner of the sofa, poor little girl, and let me think what it shall be about.

Listen to the wind in the chimney. That could tell us a story if only we could understand! A story of the old days when this place belonged to Colonel Warham, and Washington was his guest here. I don't know as you are as much interested in all that as I was when I was a girl; but the history of the house has been rather curious from first to last.

The first I knew of it was when I was about seventeen. I had just finished my studies. It was not thought necessary for young ladies to go through college in those days, my dear. But I had an excellent education in Boston, and then I came home to stay with my father and grandmother.

That house is standing still down in the village. You know the Walcott place, child; my name was Patience Walcott then, and there can be no vanity now in my saying that I was called handsome.

It was late in October when I came home, for I had been visiting some friends during the summer, and the very first night I heard them talking about this house that father had just bought, and some one said they were afraid he would be sorry he had had anything to do with it.

It was not exactly haunted, but no one had been able to live in it since Colonel Warham's heirs sold it out of their family. It had belonged to one person after another, but always with the same result.

It was confiscated Tory property in the first place, and presented to Colonel Warham for his services.

He was one of Washington's most valued officers, my dear. The house was good enough for him, but he did not leave any children, and 'twas not the same thing to his brother's family. They could not have the feeling about it his own son would have had.

So they took down the Colonel's portrait that Copple painted from the place where he himself had hung it, and his house was moved away down the hill and sold.

They meant to put another one up there more modern and imposing, but for some reason it was never built.

The man who bought the old house intended to put it in the village, but it was so large it was not easy to move, and when they had taken it half way there they could carry it no further.

It was a curious chance, but they set it just opposite the graveyard, where the Colonel was buried, and there it was standing when my father bought it. He thought the lonely situation had a great deal to do with its bad name, and that if he could get it moved it would be all right.

But my grandmother told me she couldn't believe it would be much use to try and do anything with it, unless it were to put it back on the top of Warham Hill, where it came from.

"It is a fine position for a house," she said. "The Colonel liked it especially, because he could see Boston away in the distance, I've been told. That was his native place, you know, and a city anyone might be proud to have come from."

We were talking together a little apart from the others by the fire—my grandmother and I, and just then my cousin, Frances Payson, came up and joined us.

"You were speaking about the Colonel. Patience," she said. "Do you remember his portrait? Tom Warham looks exactly like him, every one says."

I looked across at Mr. Warham, where he was laughing and talking with my cousins. He was the Colonel's great nephew, and had just come home from abroad, and then I looked back at Frances.

"I don't think so," I said, but I was shocked when she turned laughing and called to him:

"Mr. Warham, Cousin Patience says you are not like the Colonel's portrait?" and instantly he left the others and joined us by the fire.

"O, but I am!" he said. "She is mistaken! Please look at me again, Miss Patience!"

I looked at him but rather shyly, my dear, for he was a very handsome young man, and then I dropped my lashes without speaking.

"The dress would make all the difference," my grandmother interposed, "and the powdered hair, and its a long time since Patience has seen the portrait. You have every right to resemble your honored forefather, Mr. Warham, and I have no doubt you do. He was considered one of the handsomest men of his time," she added courteously, and the Colonel's gay young namesake put his hand on his heart and bowed low, but I turned away unconvinced.

I remembered the Colonel's portrait very well, and had always cherished in my heart a rather romantic sentiment for it. 'Twas impossible that an ordinary modern young man could be like it—particularly

Tom Warham, who only a short time ago was a great noisy school boy, with muddy boots and pockets full of apples and fishing lines, and nobody knows what—always playing ball and whistling enough to split one's ears.

I used to go often to see his mother, but I was a quiet little girl, and I considered him the most objectionable of his kind.

No, indeed! It was not possible for him to be like the Colonel, who stood in his tarnished gilt frame so stately and grand, with his powdered hair and lace ruffles and his grand, sweet smile. The Colonel was a hero, and he looked it, while his nephew—I glanced askance at him again, and found he was watching my face with much quiet amusement in his own, and coloring indignantly, I turned away.

I tried to persuade my cousin Frances to visit the old house with me next day, but she said the Colonel did not like what he considered intrusion, and she preferred not to displease him on his own ground, so I went alone.

I did not see any ghosts—perhaps because it was such a pleasant afternoon. The front yard was full of great drifts of gold and brown leaves, and all the world seemed to be full of sunlight. There was nothing dismal to me about the house either, though it was dusty and dilapidated enough inside. I went over it from top to bottom. It had a homelike feeling to me from the first.

The dining room was especially interesting, for the Colonel had had all the panels decorated with battle scenes from the Revolution—battles in which he had fought. Of course they were old-fashioned paintings, my dear, but they were very spirited.

I stayed there a long time looking at them. But when I reached home and told Frances where I had been, she was horrified, and threatened to tell my father and grandmother if I did not promise to keep away from there in future.

But I would not promise. I told her I was not afraid of seeing the Colonel; I only wished I might, and that shocked her more than ever.

She did not tell my father and grandmother, but she did tell my other cousins when they came in, in the evening with Tom Warham.

"I never heard anything so dreadful!" Frances cried. "She says she would not be afraid to go there at night. I never went there but once, and then it was in the middle of the day, and Aunt Sarah and Mrs. Fisher were both with me, and I was frightened to death, and Mrs. Fisher—she was thinking of taking the house, you know—she said she wouldn't for anything—she never had such a queer feeling anywhere before—just as if something was going to snatch at her from the dark corners and jump at her from behind every door."

Well, my dear, such talk as that made me quite out of patience. It was so preposterous. I could not help speaking out sharply.

"How perfectly ridiculous! Could you imagine General Washington hiding behind a door like a school boy for the sake of frightening a foolish woman? It is just as reasonable as to think Colonel Warham would do such a thing. He was a soldier and a chivalrous gentleman while he lived. Do you suppose seventy years in heaven would have made

him any less one? I would not be afraid to go to that house in the darkest night. If the Colonel's spirit was there at all, it would be for my protection and not for my hurt."

"In the Colonel's name—and as his namesake—allow me to thank you, Miss Walcott," said Tom.

But I did not want him to thank me. It had nothing to do with him what I thought of the Colonel.

"She's only talking; she wouldn't really dare go there after dark any more than we would!" Lucy Harris, another of my cousins, said.

But I lifted my head high in my scorn of their folly.

"I'll go to-morrow night as sure as I live."

"We'll go with you as far as the gate and wait while you go in," said they, for they didn't believe I'd dare when the time came.

I'll not deny that I had some very queer dreams that night, child, in which the Colonel largely figured. But they were not unpleasant dreams at all; quite the contrary: and when the next evening came I was all ready for my enterprise.

The girls insisted on going over before dark and leaving lighted lamps in the dining room and parlor, for fear I should fall over some of the rubbish that was scattered around. "It was enough to go there after dark," Frances said, "without going in the dark."

They went with me as they promised as far as the gate, asking me at every step if I did not want to turn back, and then I left them, one watching the house with frightened eyes, while the other was equally observant of the old graveyard opposite.

It was after ten o'clock, for we could not get away till the family had retired. Then we crept softly out and no one knew we came.

"Don't be long!" my cousins called after me, and I laughed and went on.

It was a frosty night and bright moonlight, but it would have been dark enough in the house if it had not been for our lamps, for very little light could get in through the heavily boarded windows.

I went into the dining room first, and looked at the Colonel's painted panels. They showed much better by the lamp light than they had in the dim daylight by which I had seen them before, but they were perfectly smothered in dust.

I went round the room slowly and looked at each one, and then I went to the library. I was not in the least afraid, any more than if I had been safely at home.

Could you imagine this room, my dear, with a dismal heap of ashes and soot on the hearth in the place of a fire! Great discolored patches of bare walls and ragged strips of paper hanging. The sofa you are lying on now, faded and dusty and worn, and all the other furniture to correspond. No carpet on the floor, but undistinguishable piles of rubbish in every corner, a smoky little lamp on the table, dimly lighting this cheerful apartment.

That was how this room looked, but I did not notice it all very particularly then, for I know you will think I was dreaming, my dear. There on the old rug, in front of the empty fire-place, with his eyes sternly fixed on the great bare spot where his portrait should have hung, stood the Colonel.

I was not frightened when I came to the house. I

had not been working on my imagination till I was ready to fancy anything. I had told the truth when I said I did not expect to see any ghosts. But there was the Colonel, plainly and undeniably, and I started at him with my eyes open to their fullest extent, till he turned towards me.

I shall always maintain that I was a very brave girl to have gone there at all under the circumstances, and I think I stood at the door longer than most people would have done. But when he turned and moved towards me, I take no blame to myself that I ran away.

I could not wait to remember all the good reasons for not being afraid of the Colonel. I might have been mistaken in his character. At all events, if he was coming after me, the only thing to do was to run.

But in my fright, I took a wrong turn in the passage: I was all in the dark, footsteps were following me, and I hurried faster and faster, till I stumbled over something and fell.

I can't tell if I struck my head or if it was from terror that I fainted. But when I opened my eyes I was back again in the library and lying on the very sofa where you are now, my dear. The lamp still smoked on the table, everything was as I had seen it last, but the Colonel—in his blue coat and bright buttons, with his powdered hair and lovely lace ruffles—was down on his knees beside me, looking as frightened as if he were the one who had seen the ghost.

With a cry of terror I started up, and would have fled again, but he caught my hands.

"Patience! Don't you know me? I thought, of course, you would in an instant. I never dreamed of frightening you; only of making you own I was a little like my uncle. *Patience!* Don't faint again!"

For I had shut my eyes and dropped back once more, dizzy, bewildered and angry: for it was only Tom Warham after all! But my dear, he was the very breathing image of the Colonel! There was no denying it, except, if anything, he was a little the handsomer of the two.

I was terribly angry at him. I would not listen to anything he was saying, but I could not help hearing it all the same. It was great nonsense. I should be ashamed to repeat it to you. But it told me a secret I had never dreamed of before.

I could not pretend to be faint for long, even to punish him, he sprinkled me so relentlessly with cold water in his anxiety to hasten my recovery.

I sat up and put him one side with all the dignity I could command.

"I will leave you to finish your masquerade at your leisure, Mr. Warham," I said. "No, thank you, I do not require your escort: my cousins are waiting for me outside."

"O, I beg your pardon, but they are not," said Tom. "They saw me as I crossed the street and took fright the first thing."

"You must indeed feel that you have performed a successful evening's work," said I, trying to look at him and speak scornfully. But it was not easy to do that, my dear: he was so very handsome, and so like the Colonel.

I drew my cloak coldly around me and turned away. (Of course he followed, and out in the moon-

light it was stranger than ever. He put on his cocked hat and walked along at my side, and I remembered my queer dreams of the night before, and felt as if I was moving in one of them still.

We did not converse. Having made all the apologies that were possible and having had them one and all disregarded and treated with scorn and contempt, and perhaps having some idea that I had scorned his declaration of an attachment as well, the Colonel's nephew had no more to say.

He did not seem in the least ashamed of himself or abashed by his unusual dress, but strode haughtily along, the moonlight flashing on his epaulets and gold buttons.

You can imagine the state of mind the girls were in when they looked out and saw us coming. They thought of course it was the Colonel's ghost, and when I came in they were almost afraid to speak to me.

I was angry at them for going off and leaving me the way they did, but they were so frightened they could not be blamed.

Well, my dear, my father was going to have the old house moved in spite of everything that winter, and because it was too large to move easily as it was, he had it sawn in halves. It did seem wicked to me. I was sure the Colonel would be angry.

And the night after that was done there came on such a storm as had never been seen in that part of the country. The wind blew a perfect hurricane, and the snow came down like a solid wall. It seemed as if we should be buried forever beneath it.

But it settled all chance of moving the Colonel's house that winter. I went as soon as the paths were broken to see what the storm had done, and I couldn't help thinking it looked as if the Colonel had been building fortifications to defend his property. It took but a slight effort to imagine the tall gate posts in their wrappings of snow, were Continental soldiers on guard before it.

While I was standing there, Tom Warham came up behind me, and as we talked I told him I thought it a shame to treat the poor old house so. No one should ever think of moving it, unless to put it back in its own place again.

"But do you think it is worth moving up Warham Hill?" Tom asked. "It has such a bad name nobody would care to live in it."

"That was only because the Colonel was angry," I said. "I like it better than any house I ever saw, and I'd rather live in it."

"All right," said Tom. "Don't forget you said so."

Well, my dear, the next thing I heard was that Tom had bought the Colonel's house of my father, and was going to move it back to Warham Hill in the spring. Everyone said he was crazy; that he could have built a new one for half the money it would take to get the old one in order. But Tom paid no attention to their advice.

It was wonderful how little trouble they had with the moving this time. People said it would fall to pieces as soon as they touched it, but they were mistaken. And when it was safely back in its old place, the workmen began on it. It took them all summer, but when they had finished, the old house was as

grand and imposing as in the days when Washington was entertained there.

It was said Tom Warham was going to be married, but no one knew to whom. Some said it was the rich Miss Grey, of Portsmouth, and others said it was Miss Lee, of Virginia, and others still affirmed that he was engaged to my cousin, Frances Payson, but of course we knew that was not true. But when his house was all ready to be occupied, he sent out invitations for a great party. All the first families were invited, from far and near, and many of the guests came out from Boston.

While I was dressing for the ball, my dear, I remembered that it was just a year since the night I went to the Colonel's house, all alone, to prove I was not afraid of him.

What did I wear to the party, child? My dress was pale blue crepe, made on blue silk, with pink roses. It was said to be very becoming. I had a great deal of color in those days.

The house was brilliantly lighted as we drove up to the door, and I couldn't help thinking of the smoky little lamp, that had lighted my way a year ago!

Tom stood beneath his uncle's portrait to receive his guests. He had hung it again in its place from which it had been taken, seventy years before.

And when the people were felicitating Tom, it seemed as if they ought to have congratulated the Colonel also, for having come back to his own again.

Then we went all over the house to see the improvements, and somehow I fell a little behind the others in stopping to look at an old portrait, and then I found Tom had waited beside me.

I was a little embarrassed, my dear, for we had not been on exactly easy terms, since that night, a year ago! But he did not wait for me to speak.

"Do you like the house as well as you used, Miss Patience?" he asked. "Remember you promised to live in it when it was moved."

"Oh, I don't think I did!" I said in a great hurry. "I only said, I should—I shouldn't be afraid."

"But I am, terribly afraid," said Tom. "Don't you think you are in duty bound to come and protect me?"

The music began soon after, and we went back to the parlors and danced, and Tom and I danced together, and presently everybody was congratulating him again, and this time I stood beside him under the Colonel's portrait.

They said we would be sure to have good luck here, forever and ever, for the Colonel's curse had changed to a blessing, when his house was restored to its place. And if the Tory to whom it first belonged, had left a curse, that also would be done away with now, for he was an ancestor of mine.

KISSING MOTHER.

To the Editor of *Woman's Department*:

How many young ladies of to-day would laugh at the absurd idea, as they express it, of kissing mother; but you cannot, dear girls, imagine how it will brighten her dear face.

Besides, you owe her a kiss or two. Away back,

when you were a little girl, she kissed you when no one else was tempted by your fever-tainted breath and swollen face. You were not as attractive then as you are now. And through those years of childish sunshine and shadows she was always ready to cure by the magic of a mother's kiss the little, dirty, chubby hands whenever they were injured in those first skirmishes with the rough world. And then the midnight kisses with which she routed so many bad dreams as she leaned above your restless pillow have all been on interest these long, long years.

Of course she is not so pretty and kissable as you are, but if you had done your share of work these last ten years the contrast would not be so marked. Her face has more wrinkles than yours, and yet, if you were sick, that face would appear far more beautiful than an angel's as it hovered over you, watching every opportunity to minister to your comfort, and every one of those wrinkles would seem to be bright wavelets of sunshine chasing each other over the dear face.

She will leave you one of these bright days. These burdens, if not lifted from her shoulders, will break her down. Those rough, hard hands that have done so many necessary things for you will be crossed upon her lifeless breast. Those neglected lips that gave you your first baby kiss will be forever closed, and those sad, tired eyes will have opened in eternity, and then you will appreciate your mother, but it will be—too late.

Kittie Wadden.

KEOKUK, IOWA.

[This is one of the most beautiful contributions that has ever appeared in the *Woman's Department*.—Ed.]

GALVESTON, TEX., November 16, 1899.

To the Editor of *Woman's Department*:

It is a wet, rainy, disagreeable day, just the kind of weather that raises a powerful inclination in my mind to sit in a nice, warm room and devote myself to some light occupation.

To-day I will try to help my sisters along by telling how I manage to keep a bright, cheerful home, set a good table, dress well and save money.

My husband receives a salary of \$20 per week, out of which I put \$10 away; the remaining \$10 I use for household expenses, incidentals, etc. Of course my family is small, only three of us; but even if there were four I could still get along. I find that putting \$10 away, absolutely out of my reach, in fact, is a good way to save it and is an extra incentive to make the remaining \$10 go as far as possible.

During the weeks my laundry, fuel, gas and other expenses fall due, I change my bill of fare for some thing plainer and cheaper, though when well cooked, equally good, and thus serve a double purpose, i. e., an agreeable change for the table and a saving of a good many cents.

I do not think the time spent in planning and contriving ways and means to save a few cents, is wasted, because my one aim and object in life is to make my home happy and help my husband along in the world, to do which I have to leave the conceits and frivolities of girlhood far behind me and turn my attention to the stern realities of life.

I do all my own work, make my dresses, trim my

hats, etc., and still have plenty of time for visiting, reading, writing and entertaining my husband.

Women, put your brains to work, make your household duties, prosaic and homely as they may be, as light and pleasant as possible. Have book and papers convenient, and when you feel dull and tired sit down and rest a few minutes and peep between the covers of what should be familiar friends. You will be surprised to find how much lighter and easier the work looks after a few minutes spent in this way. Your mind has been diverted into another channel, and the sense of gloom and depression has passed away. And, now, let me impress this one thing on your mind: *watch your pennies*. It will give your brains healthy exercise to be obliged to study out a means of making one cent go as far as two, besides insuring you a home and independence in your old age.

Economy is an old-fashioned habit our forefathers were wont to indulge in, and a habit somewhat looked down upon in this magnificent nineteenth century; but never mind that, practice it, and at the same time use the brains God gave you in making your home cheerful and attractive by redoubling your efforts to make your home neat, your meals well cooked and daintily served, and, by careful attention, to keep your clothes whole and shapely. Yours sincerely,

Ella Oscar Lee.

[In the name of the Woman's Department we thank our new correspondent for this very useful and sensible letter. We consider her a valuable addition to our circle.—Ed.]

ANNUAL BALL OF LODGE NO. 83.

To the Editor of Woman's Department:

Lodge No. 83, Ft. Worth, Texas, has again distinguished itself. Their third annual ball, given on Thanksgiving eve., was a splendid affair.

Some of the boys thought that I was not there, but it is never safe to bet where a newspaper reporter is or is not.

The hall was brilliantly lighted, not only with hundreds of gas jets, but from each four corners of the room shone forth a flashing locomotive headlight. The music was excellent and the company composed of as handsome men and beautiful ladies as were ever assembled together. The lovely dresses, glittering lights, perfume of flowers, sweet music and low hum of voices made a picture from Fairyland.

The grand march was composed of more than a hundred couples, among them the Mayor of the city and Grand Officers present. Also Master Isaac M. Dean, who looked regal in his Mother Hubbard pants.

The decorations were all that skilled elegance, lavish expenditure and good taste combined could make them. Beautiful pictures from the various Brotherhood Lodges adorned the walls. These were decorated with artistic taste and designs. Motives of B. of L. F., B. R. B. and O. R. C. were beautifully woven of evergreens and flowers. Even the pick and the shovel, hung with silken cords and hidden by lovely decorations until no gleam of cold steel could be seen by onlookers, was converted into an ornament of beauty. The boys seemed to under-

stand from this latter ornament that no thoughts of to-morrow was to intrude on the pleasures of the present and "all went merry as a marriage bell."

The ladies were beautiful and entertaining, making all the single men wish they were married and the married men—well, it isn't best always to finish every awkward thought. They all had a good time, just the same.

The supper was a royal banquet that did credit to the culinary artist preparing it. The table was decorated with all that ingenious taste and lovely flowers combined with nimble fingers and intellectual knowledge could suggest. Nothing was lacking. Ed Hartsell, who has a penchant for trying new dishes, having been a few trips up the Denver, through New Mexico, where if you do not try new things you sometimes fail to get any, but even Ed hadn't the courage to pitch into a beautiful complimentary cake sent by some business house, until some one more experienced called on him to do so. But the laugh was on Hartsell when the cry of "Rubber!" went round.

Many distinguished visitors from distant Lodges were present and vied with the home members in making the evening pleasant and interesting.

After supper dancing was resumed and the delightful measures of waltz, polka and quadrille were indulged in until the hours grew small and on towards morning eyes were as bright and feet as light as at the beginning. There was absence of the slightest confusion due to the most excellent management of the floor committee, Messrs. B. F. Page, C. T. Elliott, J. G. Madison, W. Colman, James Ahm, George Tucker and J. W. Cassell, each of whom was successful in his efforts to contribute to the enjoyment of all present.

Mesdames J. D. Bell and B. F. Page took charge of the ladies as they arrived and ushered them off into a spacious, warm dressing room where every comfort and convenience for refreshing the toilet was found.

The committee on arrangements were untiring, and are to be congratulated on the successful manner in which everything was done. They were: J. W. Cassell, J. J. Hank, Al. Griffin, B. F. Page, Nicholas Phaler, Master I. M. Dean, and Vice-Master Ed Hartsell.

The evening will never be forgotten by those present, but be remembered as one of the brightest, happiest and most enjoyable affairs ever attended.

The Brotherhood has many friends here, won by their zeal in living up to the mark as benevolent, sober, industrious men, worthy the respect and confidence of all. They have promised me a peep into their hall and if I go there I will tell you next time about the goat, if they let me see him.

Besides the boys mentioned Geo. Nash, John Russ, G. H. Brown, Pat Willis, Barney Davis, W. M. Collins and others were there, happy themselves and making others so. Also Mr. and Mrs. Barnes, Mr. and Mrs. Lee, Mr. and Mrs. J. W. Mathews, Mr. and Mrs. Sadler, Mr. and Mrs. J. S. Whilley, Mr. and Mrs. C. C. Murphy, Mr. and Mrs. Barwise, Mr. and Mrs. Collins.

I have taken more space than I intended, but hope you will pardon me this time and publish this for the sake of the boys.

Trine.

FORT WORTH, TEXAS.

GOODLAND, KAN., December 3, 1889.

To the Editor of Woman's Department:

I am a regular reader of your valuable and interesting *Magazine*, and I have not seen anything from our beautiful city or from Lodge 396 in a long time. I think some of the members ought to write, or else their wives should, and increase the Woman's Department and make it more interesting, for I know it would beat a novel.

Our Lodge here seems to be flourishing. Of course, we women folks know nothing only from outside appearances. Our town is building up fast and improving every day. There have not been many marriages but there has been great talk about coming weddings. It has been rumored nearly all summer till of late, that our worthy ex-Master, J. H. Shaw, was to enter the bonds of matrimony—three young ladies in Goodland and the Commercial House widow, in Phillipsburg. But it has passed and gone, and still we find him in single harness; wait till the clouds roll by, Joe. Bro. A. T. Keith has joined the church (with the expectation of being deacon.) Some one sadly mourned and missed him while he took a flying trip east. Bro. Geo. Seybrest (so they say) is thinking about taking a claim and building himself a little sod house. Bro. Heady and Engineer Ciss Taylor are doing a land office business in the west suburbs of Goodland. Can't say which is the solid man. Dame Rumor says Bro. Pringle is going to make a trip east and come back united. Mr. C. C. Southerland has built a handsome house on one of the hills in Colorado; one story under ground and half a story over ground, and is now advertising for one of the blessings of a home.

With many good wishes for the Lodge and its interests, I will stop.

Miss Mary O'Brien.

KANSAS CITY, MO., November 24, 1889.

To the Editor of Woman's Department:

I have been reading many interesting articles and letters and take great pleasure in reading the Woman's Department in your interesting journal and would like to express myself on some topics of interest which I hope will find a welcome in your columns.

What is womanhood? Is there any more important question for young women to consider than this? It should be the ambition of every young woman to possess a true womanhood. To be a woman in the truest and highest sense of the word is to be the best thing beneath the skies! Beauty and style are not the surest passports to womanhood. A woman's worth is to be estimated by the real goodness of heart, the greatness of her soul, and the purity and sweetness of her character, and a woman with a kindly disposition and well balanced temper is both lovely and attractive. She makes the best of wives and truest of mothers, and has a higher purpose of living than the beautiful. Beauty is a dangerous gift and has ruined its thousands. No gift from heaven is so widely abused by women as the gift of beauty. In nine cases in ten it makes her thoughtless, giddy, proud and vain. A beautiful girl is very likely to believe she was made to be looked at, and sets herself up for exhibition in every company which opportunity offers, and acting thus soon be-

comes good for nothing else. These facts long since have taught men to beware of beautiful women, and yet we say it need not be so. Beauty is lovely and has charms which ought to be used for good purposes, and girls with beautiful forms and faces, should cultivate a beautiful mind and heart. Young girls ought to hold a steady sway over their male associates, why do they not? Because their moral convictions are not regarded as solemn resolves to be true to God and duty come what may. You cannot live without having some sort of influence any more than you can without breathing. Beware then what kind of influence it is you are exerting. We want the girls to rival the boys in all that is refined and in all noble qualities of mind and heart. We want a girl to be gentle, kind and affectionate, having a sweet subduing and harmonizing influence of purity and truth wherever she goes. Let every young lady reflect seriously upon this subject and let her remember she is not designed to live for herself alone, but for a higher and nobler destiny, that of doing good to others and of making others happy. Young women would you be admired, would you be an ornament to your sex, a blessing to your race? If so cultivate this heavenly virtue. Wealth may surround you with luxury, learning or talents may win you admiration, but love and kindness alone can captivate the heart. Whether you live in a palace or a cottage these graces can surround you with perpetual sunshine making you and all around you happy.

Ella U., A Fireman's Sister.

SYRACUSE, N. Y., November 26, 1889.

To the Editor of Woman's Department:

Children tucked away and hubby's lunch put up. Well, really, I think that needs a new name quite as much as the Brotherhood, for certainly a pail that holds eight quarts can't rightfully be called a lunch. As I look over the columns of the *Magazine* from month to month I wonder where all the boys and their wives of Lodge No. 213 keep themselves.

How I wish the correspondents of the Woman's Department would write something of interest instead of praising those dear boys. It would certainly be a decided improvement. To be sure they are dear, very dear, judging from the fact we all have one, but just come with me a moment, and while those dear boys are trying to buzz Mr. Debs up to do away with the Woman's Department, I will tell you what a pretty little ornament I have just completed which is useful as well as pretty. I took three broom sticks, cut them so they were about the height of the window, crossed them, bought a small chipping bowl for twelve cents, fastened it to the top, bronzed the whole with old gold bronze, also bought one and one-half dozen common wooden dress moulds, small ones are the best. Line the inside of the bowl with electric blue plush. Cover the molds with plush and tack around the edge of the bowl with brass-headed tacks, or, if you prefer, bronze them instead of covering—either way is very pretty. Tie the sticks where they are crossed with pink and electric blue ribbon and you will be surprised to see what a pretty little ornament you will have at a very trifling cost.

Well, my letter is already too long. I know it isn't perfect. I never professed to be perfect, but when

I tell you it is my first I know you will feel kindly toward me and overlook mistakes, and if your patience is not entirely exhausted I may come again.

Mate, A Fireman's Wife.

[Yes, come again.—Ed.]

DODGE CITY, KANSAS, November 25, 1889.

To the Editor of Woman's Department:

It was with delight I read the suggestion in the *Magazine* that the ladies take some new topic for their letters. The Brotherhood ought to have energy enough to keep the *Magazine* posted as to their progress, and surely we, the wives and sisters of workmen, can find plenty to converse about of which we are better informed, and that will be of interest and help to one another.

Are we all trying how much good we can do and receive out of each day as it passes? Don't let us fall into that old worn-out rut of idle gossip. Should we know our neighbor's income—is it anything to us if they choose to spend it differently than we would ourselves? Surely such things ought to be beneath every true and busy woman's notice. And have we not enough to do? If our own house is in order is there not some tired mother we can give a lift? Have you not some old clothing lying in the garret useless to you that could be fashioned into neatly-fitting garments for those scantily-clad little ones across the street? If you have such garments don't let them leave the house in their dilapidated condition, if it be possible to make them over. What a boon it must be for an over-worked mother to have some little garments all ready for wear without costing her a thought, and if a boon to her, thrice blessed is the giver. Try it. I have often thought that the families of railroad men were considered too much of a nonentity by other people. Are we not a little to blame for this? Do we not let some trifling excuse keep us from the house of God? Should we not be the most zealous of all women in the Master's cause? Do we not have motives for a noble example?

What are we going to do for the little ones Christmas? How best make that "wee" bill do the work or supply the want of a large one. Have I been too prosy?

Sincere,

[No, your questions are to the point.—Ed.]

STOUCX CITY, ILL., November 27, 1889.

To the Editor of Woman's Department:

I have been a constant reader of the *Magazine* for some time, but in looking over the many letters I have never had the pleasure of seeing any from the Corn Palace City of the world. In regard to Lodge No. 64 I would say, although it has been very silent, it nevertheless is a success in every way, and does credit to its members and is an honor to the Corn Palace City. You bet the noble firemen, alias "diamond shovelers," are always on time, even if the coal is rather monstrous. I notice that advice is given them by a friend not to change their name; for my part the word fireman has more heroism in it than any other name applied to railroad employes connected with locomotives. In looking through the *Magazine* I find a number of splendid essays, and also some very nice poems, which do credit to the

composer, and especially to Mrs. Nellie Bloom and Mr. Shandy Maguire. I dare say that Shandy's poems are at times heartrending to good-natured husbands, of course, but to the fair wife they are too sweet for any use. Mrs. Nellie is a capital confessor, sensible in representing that women are non-inclined to such heart emotions as Shandy's are. But, once more rebuking Shandy, his poems are appreciated by all. Fearing that this, my first letter, may find a secluded corner in the waste basket, I will leave off and help get supper, not forgetting to wish a bright futurity to the B. of L. F.

Kitty, a Fireman's Sister.

[Why did you not tell us something about the Corn City.—Ed.]

MONTREAL, CAN., November 25, 1889.

Mrs. Ida A. Harper:

DEAR MADAM:—I see all, or nearly all of your correspondence is from ladies, and it is with fear and trembling (mental) that I've sent you this effort to defend some of our sex who are often blamed for what is really only the fault of a happy disposition.

My own dear wife says she wouldn't give a pin for a man who was afraid of the girls, or trust him either.

I shall be very happy to see these lines in your department if you deem them worthy. Thanking you as a brother for the noble part you take in our welfare, I remain dear madam,

Your humble servant,

W. F. S.

AN EXPLANATION.

I only ask a little space

For my persuasive powers.

There's not much room for rubbish.

In a *Magazine* like ours;

This is all addressed to ladies,

So rude men you must not laugh;

For I am so "English you know."

And really "can't stand chaff."

I want to air a subject,

Which although much talked about,

Has rarely had much thought bestowed,

On fairly working out:

'Tis in regard to flirting

That horrid, wicked thing;

Of which poor railroad men are oft

Accused, I'm going to sing.

That green-eyed monster jealousy,

Off plays an active part

And urges folks to say cruel words,

Which lacerate the heart;

The simple act of bowing,

Or throwing a little kiss,

Or even smiling at a girl,

When naught is meant amiss.

Is, by some, spoken of as sin.

And causes grievous strife;

Where only confidence should be.

Even twixt man and wife;

A secret now I will impart,

Into your private ear.

Some may believe me, some may smile,

And many doubtless sneer.

The man who wears a hard, cross face,

Often times acts a part.

The one who smiles at every girl,

Possesses a true heart.

And if you try to keep his love,

And make his home the best,

I'm sure to you, he will be true,

Don't bother for the rest.

W. F. S.

FORT WORTH, TEXAS, November 24, 1889.
To the Editor of Woman's Department:

As I have been an interested reader of your valuable magazine for the last twelve months, and having seen nothing from Trinity Lodge, No. 83, I will write a few lines in regard to it. I think the boys are all doing very well. Any way, I know of one member that never misses a meeting when he is in, and that is all I know about the Lodge, for, like the "Old 7" that he handles the black diamonds on, he is always on time when he doesn't strike a snow drift in Clarendon. I wish the Brotherhood every success, for the sake of one particular member of Trinity Lodge, No. 83.

A Fire Boy's Friend.

For Woman's Department:

ALONE.

Alone, with life's shadows around me,

Alone in the gloom of the night,

I sit in my loneliness dreaming

Of pleasures long hidden from sight;

And I sigh for the days of my childhood.

For those bright cherished years that are gone;

Those years that brought sweet, joyous gladness,

Intermingled with laughter and song.

Alone in the shadowy gloaming,

When all nature is silent and still,

Bright thoughts of the past come to cheer me,

And my heart with sweet ecstasy fill;

In a vision I see the old homestead,

With its walls so gloomy and gray—

But the light of the morning recalls me,

And the vision fades quickly away.

Alone, all alone o'er life's pathway,

I tread with faltering feet,

For the way is dark and dreary,

While a fear in my soul doth creep,

Lest I make a mistake in the turning,

Which leads to that land pure and fair,

Where the loved ones of childhood are waiting

To joyously welcome me there.

Mrs. Nellie Bloom.

WEST OAKLAND, CAL.

INDUSTRY.

A woman who, like Charles Dickens' Jenny Wren, made her living by dressing and repairing dolls, died in St. Paul lately. Hundreds of her little friends are mourning her loss.

If a woman wants to get into a carriage, a man thinks that is his affair, and opens the door for her; but if she wants to go to college, he says that isn't his affair, and tells her to build one for herself.

There are 62,000 women in America interested in the cultivation of fruit, and among them are some of the most successful orchardists in California. Last year one young woman made \$1,600 by raspberry culture.

One-third of the inhabitants of Oklahoma are women, many of them having gone to set up for themselves in business. One young woman from Arkansas City *walked*, to the new Territory when it was opened, slept all night on the ground, got a fine "claim," and raised delicious potatoes and corn on her farm, which adjoined one taken up by her father.

Miss Mary F. Seymour not only edits the *Business Woman's Journal* of New York, but directs the Union School of Stenography and Type-writing, and is said to conduct the largest type-writing business in the country. She is the author of "Practical Hints to Stenographers."

Eliza E. Bridgers, Wilmington, N. C., has patented a cornice and mantle protector, especially designed to protect wood mantles, lambrequins, etc., from heat and smoke, which is adjustable both in its top and side sections to fit any sized grate and mantle, to which it can be readily applied so that it will be firmly held.

Miss Lena Seigfried, of New Orleans, is a bird-hunter, living on her father's schooner, and is able to kill, clean and prepare more birds to the hour than any male hunter along the coast. In New Orleans more than in any other city we have women engaged in occupations unusual to the sex. Here are to be found women editors, merchants, florists, dairy farmers and manufacturers in great numbers, all earning good sums of money.—*New Orleans Picayune.*

Dr. Nannie St. Clair Stevens, of Wichita, Kan., has just been appointed by unanimous vote on the medical staff of the Wichita Hospital; in place of Dr. Schermerhorn, who leaves the city. This position is a desirable one, which a number of physicians in that city would feel honored to fill. Dr. Stevens is also Medical Examiner of the Penn Life Insurance Company, which receives women on equal terms with men. She is recording secretary of the State Equal Suffrage Association, and is very active in the work in her city, a fact which does not detract from her high professional standing.

A LOST EDEN.

How the fresh mold brings back to me,

Dear Soul, our own wee garden sprout;

Made dear ere ever we fell out,

Between the pine wood and the sea.

You planted rose and mignonette.

The dead leaves clipping with your shears,

And I—I planted life's regret—

Oft watered later by my tears.

How fast they grew, how well they thrive,

While glances kind met kind again;

How swiftly followed sun and rain

From heaven, on that enchanted grove.

But long ere fell October's leaf

Or hoar-frost had chilled the gentian's heart—

We two had found a sudden grief.

And learned, we thought, a way to part.

Like those first two, toward the east,

Outcast our garden left behind:

We went to seek that peace of mind,

Which of all needs had seemed the least.

I know not how you bear the weight

Of that sad burden on your breast:

But this I feel perhaps too late,

I long to find you, dear, and rest.

—*Annie Robertson Noron.*

It is said to have been a Boston woman who, on board a yacht, spoke of a motherly zephyr, meaning thereby a spanking breeze.

DOMESTIC.

The nice color of pies or biscuits is produced by wetting the upper surface with sweet-milk just before placing them in the oven.

Twisted straw rope makes the best covering for climbing roses and clematis, where they have to be protected through the winter.

It is impossible to do everything in the most thorough manner. She is the wisest woman who best judges what can be slighted.

Kitchen odors, not always agreeable, as in cooking certain fish, etc., can generally be abated by two or three pieces of charcoal placed in the cooking utensil.

Make kitchen holders and dish-cloths by the dozen during the lull which comes semi-annually in other sewing, but do not sit and bind, and quilt them beautifully as our grandfathers used to; their edges run together or sewed coarsely over, then quilted three or four times across on the sewing machine, is by far a more sensible way.

To the inmate of a sick room frequent changes in the position of the furniture are almost always pleasant. Change the pictures, too. Bring pictures from the other rooms and hang them on her walls in place of the ones she has looked at so long. It is just such little things as this that sometimes gives great comfort and pleasure to an invalid.

New Tomato Soup.—Take two quarts of tomatoes, one pound of beef, one onion, one cucumber, and three pints of water, two potatoes and a tablespoonful of chopped celery; boil the meat until it falls to pieces, boil the potatoes and onion and tomatoes together; then mash them through a colander and add to the meat and liquor, adding boiling water until the soup is of the proper consistency; let all boil for about five minutes, add a teaspoonful of flour, cayenne, salt and the celery just before pouring it into the tureen. Serve with croutons.

Scrambled Oysters.—One quart of oysters, one pint of milk, one tablespoonful of butter, and flour sufficient to thicken like cream; put the milk into a spider and heat to boiling; when about to boil add the oysters; as soon as they are boiling add the thickening with salt, white pepper and a tablespoonful of sage and a teaspoonful of tomato sauce; do not let the oysters boil long; remove from the fire and stir in the butter; toast some crackers, place them on a warm platter, moisten them a little with warm milk or water, place on each half cracker a large spoonful of oysters and pour the cream over and around them.

Veal Croquettes.—Chop veal very fine, mix a teaspoonful of flour in a half a cupful of milk; melt a tablespoonful of butter and stir the flour and milk in it and let it come to a boil; mix this thoroughly with the meat, form into balls or flat cakes; these can be prepared for breakfast the night before; place them on a platter and sprinkle a little salt and pepper on them and let them remain until morning; then beat one egg with two tablespoonfuls of milk, dip the meat balls in the egg, and then in cracker crumbs and fry brown.

EDUCATION.

Women are now admitted as students to the Wesleyan University. Six are in attendance this year.

Two women, Mrs. Brunchhorst and Mrs. Steineger, have been elected members of the Board of Education of the city of Bergen.

There are many indications that women will soon find a recognized and honored place in church work, even unto ordination and ecclesiastical office. Over sixty women have taken up the W. C. T. U. course of study for evangelists and deaconesses, under the instruction of Dean Alfred Wright.

Jane Meade Welch contributed an entertaining article to *Harper's Bazar* of September 14, on "Woman's Work at Chautauqua." She says: "Chautauqua is woman's work's epitome. There is hardly an occupation or a profession now open to progressive woman some phase of which may not be studied here."

The only colored man in the Georgia Legislature voted for the bill to establish a State Industrial School for Girls, although the benefits of the school are to be for white girls only. He is described as an elderly man, popular among the white members, and having the gentle and courteous manners acquired by many house-servants under the old régime. In giving this vote he showed himself at once more progressive and more magnanimous than many younger men.

Mrs. Ella Dietz Clymer, the President of Sororists, is a firm believer in women's clubs. She says: "I would advise every working girl to belong to a workingwomen's union. Women have been too much alone; they have lost confidence in themselves and are timid. Where women enter professions, I would advocate their belonging to clubs, for social intercourse, sympathy and appreciation are necessary to women."

Cooper Institute, New York, will no longer receive young women who desire to study phonography and the use of the type-writer, unless they pass an examination showing themselves to be fairly well educated and intelligent.

Dr. David Swing testifies to the value of the Chautauqua reading course. He says, among other things, that Chautauqua teaches the woman of thirty-five, who used to think herself fit only to sink back into the chimney corner, that her life may be just beginning.

The question of reappointment of women on the New York School Board was settled last week in the affirmative. Mayor Grant appointed Mary N. Agnew, but in the place of Miss Grace M. Dodge appointed Mrs. Clara M. Williams. Mrs. Williams is a graduate of the public schools and of the Normal College, and her appointment was desired by the alumnae of that institution.

"There are worse things in this world than being an old maid, and one is to spend your days pretending you're a proud and loving wife, when all the time you're dreading to know what piece of folly or wickedness your precious husband will commit next."

THE MAGAZINE.

Rejected Manuscripts are not returned unless accompanied with required postage.

Subscriptions must begin with the January, April, July or October number, and expire with the year.

Changes of Addresses of subscribers should be reported to us promptly to insure the safe delivery of the Magazine.

Contributors are required in all cases to give their real names, not necessarily for publication, but as a guarantee of good faith.

Subscribers failing to receive their Magazines will please notify us, giving name and location of Agent through whom they subscribed.

THE MAGAZINE AND ITS EDITOR.

"A word fitly spoken is like apples of gold in pictures of silver."

What more fitting time than January, 1890, for the Editor of *The Locomotive Firemen's Magazine* to have a personal talk with its readers?

For more than nine years *The Magazine* has been in our charge. It will afford us real satisfaction to have the Brotherhood compare No. 7, Vol. 4, with No. 1, Vol. 14. We should, were it possible, be delighted to go back to the beginning of our control of its pages, and review them all. Is it egotism to say this? Does it smack of vanity, of self commendation? We do not so regard it. We deem it rather an invitation to our brothers, our comrades, to revisit with us the pathways we have traveled together for nine years. They have led through many pleasant places—by flowery fields and dewy meads, by winding streams and sparkling fountains. We have marched together where the landscapes were of enrapturing beauty—by cottage homes and palatial residences. We have bivouacked with comrades, have been cheered by their fraternal greetings, and have shared their generous hospitalities. But this not all. Since we took charge of *The Magazine* we have tramped with our comrades over arid deserts and through dark defiles. We have clambered up mountain roads and walked beside yawning chasms. Nor does this tell the story. We have stood shoulder to shoulder with them in many a conflict, when the enemy, well equipped, was defiant and fierce, when many faltered, when some fled, and others turned traitors. These things are all recorded in *The Magazine*. *The Magazine* has been first, last, and all the years since we controlled its columns, a Brotherhood organ.

It has not flinched. It has not crawled. It never lowered the flag of the Brotherhood. It has never surrendered, nor retracted. Where the Brotherhood ordered it to stand there it has stood, and on its chosen vantage ground it stands on the first day of January, 1890.

For this are apologies demanded? Does the Brotherhood call a halt? Does the Brotherhood command that the victorious banners of the *Magazine* shall be furled or hauled down? Does it command that its martial music, its bugle call to the charge, its drum beat of victory, shall be hushed into silence or changed to a dirge? Does the Brotherhood command that its championship of FEDERATION shall cease, and that it shall whine like a whipped spaniel in the camps of its enemies? Does the Brotherhood of Locomotive Firemen command that the *Magazine*, shall have neither opinions nor convictions, or, if it has them, shall be without the courage to express them? Does the Brotherhood command that the *Magazine* shall be a limp, spineless thing, worthy only of contempt in lodges, divisions and assemblies, where brave men discuss labor topics?

So far, the Brotherhood of Locomotive Firemen has not issued such commands, nor any of them. It has seen the *Magazine* grow in excellence and influence; has seen its articles widely copied; has seen men of thought, of comprehensive grasp, beyond the boundaries of the order, purchase it, and has read the high commendations of contemporaries, who unhesitatingly placed it at the head of all similar publications in the country.

The Brotherhood of Locomotive Firemen has seen its *Magazine* extend a friendly hand to all Labor organizations, to all toilers seeking through organization to better their conditions. The Brotherhood has seen its *Magazine* rebuke aristocracy in labor ranks, and with becoming severity denounce the miserable heresy of "strict neutrality," when working men were writhing and groaning in the grasp of such devil-fish as Austin Corbin.

The Brotherhood has seen its *Magazine* on the war-path only when an enemy was to be hunted down; when lurking foes were to be driven from ambush and exposed; when the right was assailed; when justice and truth demanded that their professed votaries should come to the rescue. On such occasions the *Magazine* has responded with alacrity. For these things the Brotherhood of Locomotive Firemen has not yet demanded an apology, nor will it until Austin Corbin, the enemy of organized labor, and the less conspicuous enemies of federation, working on different but converging lines, achieve a victory for corporate greed and corporate autocracy. When this is done there will be little demand for courageous editors or courageous literature. Then the Lodge-rooms will disappear; then the Lodge-fires will have gone out; then labor will be, as some distinguished orators have termed it, "a commodity," like hides and tallow, and will be bought and sold, in what these po-

litical economists call "a labor market," and when this Chinese degraded level is reached, the world will look on and realize the extent and character of the victory the money power has achieved over workmen.

The Brotherhood of Locomotive Firemen has courage, independence, self-respect, and an unwavering faith in its ability to solve such problems as circumstances force upon its attention, and it demands that its *Magazine* shall not truckle, shall not, by cowardly evasion, subterfuge, prevarication, or by silence, permit the enemies of the Brotherhood, or the enemies of the *Magazine*, by direct assertion or by intimation, give the world to understand that our Brotherhood is asking permission to live.

The Brotherhood of Locomotive Firemen is not on its knees. It is not crawling. It is not a medicant. It is not a Lazarus at the rich man's gate. The *Magazine* has in the past responded to the chivalric courage of the order. It is responding now in the morning of the new year, and will continue in the same line until the Brotherhood otherwise orders.

Eugene V. Debs.

In Wilksbarre, there are street railroads, and conductors and drivers are paid \$1.00 a day, and a day means sixteen hours work, or 6½ cents an hour.

FRANCE is called the "land of cider," as during the last five years the average production has been 331,800,000 gallons, much of which comes to the United States as No. 1 champagne.

In another column will be found an able article on "The Eternal Fitness of Things," from the pen of J. E. Phelan, Esq., Division Superintendent of the Northern Pacific Railroad. Mr. Phelan has climbed, step by step, from the position of a locomotive fireman to the superintendency of one of the largest railways on the continent. His success is due to his own energy and perseverance, and his article should have a wide reading among men of the locomotive.

We are under obligations to the Hon. Charles F. Peck, Commissioner of the Bureau of Statistics of Labor for the State of New York, for a copy of Part III. of the sixth annual report of the Bureau, treating specially of strikes and boycotts. Also for a copy of the Proceedings of the Seventh Annual Session of the Chiefs and Commissioners of the Several Bureaus of Statistics of Labor of the United States. These reports contain a wealth of statistics and information, conveniently classified, and are highly complimentary to Commissioner Peck, who is widely known as one of the most thorough labor statisticians in the country.

THE B. OF L. E. JOURNAL AND VICE GRAND MASTER HANNAHAN'S DENVER SPEECH.

Vice Grand Master Hannahan, of the Brotherhood of Locomotive Firemen, in the performance of his official duties happened to be in the city of Denver during the session of the B. of L. E. convention. Brother Hannahan was not aware of the great honor that was in store for him. Paul was permitted to speak before Agrippa, and Vice Grand Master Hannahan was invited to appear in the presence of Grand Chief P. M. Arthur and address the B. of L. E. convention. He was not only invited, but he was escorted by a committee to the convention—into the hall and up to the rostrum. Then and there Vice Grand Master Hannahan was tendered an ovation. The convention at once arose and burdened the air with cheers. The applause was like the billowy thunder of the ocean, when his waves, tossing high their white caps, shake the rock bound headlands. For the nonce Hannahan was on top. The convention was transformed into a brass band, and played the grand old tune, "See the Conquering Hero Comes." The convention was one great fountain of joy—a Yellowstone Park of spouting geysers. A "twin brother" was on the stand, and a feast of "fat things" was in store for the delegates.

The furious storm subsided; all was serene. Hannahan was not confused. He did not lose his head. He was equal to the occasion. In speaking for the B. of L. E. he touched a responsive chord in the hearts of the delegates of the B. of L. E. Convention. They had been firemen too, and, as Hannahan spoke his burning words, a thousand dear memories of the far-away-days when they were men of the pick and scoop crowded upon them and they wondered why P. M. Arthur should be hostile to federating with the Brotherhood that Hannahan represented. Hannahan captured the convention. He even captured Grand Chief Arthur, who felt constrained to compliment Hannahan in glowing terms in the presence of the convention. Hannahan championed federation. His address glowed with fraternal feeling. He spoke for a Brotherhood that abhors aristocratic ideas in labor organizations, that despises "strict neutrality" when working men of any order are contending for their rights against heartless, grinding corporations, and he was applauded. He preached the gospel of the "brotherhood of man and the fatherhood of God," and the delegates in the Engineers' convention said Amen.

It is well to bear in mind that Vice Grand Master Hannahan did not thrust himself upon the convention. He sought no opportunity to address it. He was invited—invited by a committee of the convention, and, thus invited, he could not prudently

refuse the invitation. It was an incident in the proceedings of the convention which by its own unsought act was specially dignified—made important—but an incident which the *B. of L. E. Journal* totally ignores.

The editor of the *B. of L. E. Journal* could not find in two issues room for so much as a mention of Brother Hannahan's visit to the convention, and not one word of allusion to his masterful address. The committee on thanksgiving formulated thirty-eight separate and distinct thanks; they go so far as to return thanks for a "bootblack at their convention hall," but there is no word of recognition of Bro. Hannahan; no reference to his presence; no thanks for his address, which Chief Arthur lauded and magnified. Bro. Hannahan was invited to address the convention. This body appointed a committee to invite Bro. Hannahan into its presence, but the *B. of L. E. Journal* hasn't the space for so much as a "link" mention of the incident. There is a thank for a "porter" and a "bootblack" but no thanks for an address that Chief Arthur deemed worthy of unstinted eulogy. Such is the disposition of the *B. of L. E. Journal* when dealing with anything requiring a mention of the B. of L. F.

How stands the case with the *Locomotive Firemen's Magazine*? P. M. Arthur was the guest of the B. of L. F. convention at Atlanta. He, too, got an ovation. He, too, made a speech, and there was space in the *Magazine* to print every word of it, and to say a hundred pleasant things of him besides. We didn't overlook him. We didn't ignore him. We didn't treat him with silent contempt. No, that is not our style. Grand Chief Arthur was not invited to address the B. of L. F. convention that "bad feelings" might be created by ignoring him, as the *B. of L. E. Journal* has treated Bro. Hannahan with mute disdain. But the *B. of L. E. Journal* is true to its instincts. Hunt its pages from first to last, and a paragraph of ten lines will contain all reference it ever made to the B. of L. F., while the *Firemen's Magazine* has studiously sought to give prominence to the conventions of the B. of L. E. and from fraternal considerations has published the full text of Grand Chief Arthur's addresses.

Let it be understood that Brother Hannahan is not complaining. It may be that the "link" motion of the editor gave out just at the time Hannahan's speech was to be linked to the chain of thoughts which so frequently distinguish the "strict neutrality" of the *Journal*, at any rate, there was no place for "linked sweetness," long or short, for Bro. Hannahan. And yet, the links that bind the two great Brotherhoods together were strengthened by Brother Hannahan's address. It was full of the inspira-

tion of hope for that better day a coming, when the two Brotherhoods, under the guidance of men who believe in federation as a means of resisting wrong and securing the right, will march forward on parallel lines to victory.

It is estimated that "the amount of money taken out of this country by tourists and spent in foreign travel is much larger than most people imagine. Estimating the average expense of visitors at the Paris Exposition from America at \$500, the expenditure of the 80,000 travelers reaches the enormous aggregate of \$40,000,000. The amount will doubtless exceed \$40,000,000, and some place it as high as \$100,000,000." Many of these Americans go abroad for worthy motives and spend their money judiciously. They go to see and to learn, others go for pleasure, and for health, others still, the fool element, very numerous, to acquire habits of snobbery and to make the name of "Americans" ridiculous. There are others still, like Miss Caldwell, who go to Europe to "root about," as Bill Nye says, among the ruins of old families, for high bred paupers with a title to marry. It's a disease, like hog cholera or small pox, and will have to run its course in spite of all quarantine regulations.

The Pennsylvania Railroad system West of Pittsburgh, put into operation on the 10th of November last, a regulation that the headlights of all side-tracked engines shall be curtained at night. The purpose of this innovation is to enable engineers of approaching trains to more clearly distinguish switch and other lights and not be blinded and confused by the glare of the headlight. In conformity to the new rule, all engines are being provided with a curtain and spring roller, by means of which the headlight may be obscured readily upon the engine taking a side-track.

A DISPATCH says that "a car containing one moose, one antelope, and two deer for Austin Corbin, reached Claremont, N. H., yesterday, from Mandan, N. Dak. In a collision, one elk and one moose were killed and three deer escaped to the woods. Eight deer, three antelopes and one moose died afterward." It would seem to be proper for Austin Corbin to scour the wilderness for wild animals to populate his Russianized anthracite regions. No notice is made of securing a royal Bengal tiger, a regular man-eater—Corbin himself, answering every demand in that line of beast.

Efforts are being made to establish a cigar trust. It is likely to end in smoke.

AN OPEN LETTER TO P. M. ARTHUR, ESQ.

TERRE HAUTE, December 20, 1889.

*P. M. Arthur, Esq., Grand Chief B. of L. E.,
Cleveland, Ohio:*

DEAR SIR:—I address you this open letter from considerations which will appear as I proceed.

It is not my nature to be boastful, but in justice to myself it is becoming to say that I reverence age when it sits with becoming grace upon a man's visage, and its fruit is a generous recognition of proprieties and an experience which will not tolerate bigotry and egotism.

I make no apologies for my youth as compared with your years, since I am no more responsible for it than you are for your age, but I should hasten to apologize should I so far forget what is due under the code which regulates the conduct of gentlemen, as to attack a man, young or old, a real or supposed enemy, behind his back, or make any charge affecting his standing, in a deliberative body when he was absent, and therefore unable to meet his assailant on the spot.

If my readings are correct, if I have any comprehension whatever of the principles which govern the conduct of gentlemen in such matters, they scorn to attack a man from behind, or to assail him, call in question acts or motives when they know his absence affords them protection and immunity from merited rebuke and exposure.

Cowardice has no defenders in the ranks of honorable men, and in the case of denouncing a man in a public meeting, knowing him to be absent and beyond call, is an offense so at war with all things directly or remotely honorable, that the world will not permit the plea of old age to condone it unless it be in such instances where the infirmities of years are productive of mental feebleness and decay.

At the convention of the Brotherhood of Locomotive Engineers, held in the city of Denver, on or about the 26th of October last, I am credibly informed by a gentleman present that Grand Chief P. M. Arthur took the floor, and following complimentary reference to my colleagues, Brothers Sargent and Hannahan, and all the members of the Firemen's Brotherhood, continuing, said that "Until Mr. Debs retracted statements made in the Firemen's official organ against him, and the men he represented, he (Arthur) could not be his friend."

I am not informed in general nor in particular what statements have been made "in the Firemen's official organ" against Grand Chief Arthur, the penalty for which is the loss of his friendship and the gain of his enmity.

In declaring that you are no friend of mine, and as a corollary, my enemy, you vastly magnified the real or supposed offense,

which you must have had in your mind, in the opinion of those who heard you.

Now, I assure you, that I am not your enemy; on the contrary, I have been your friend: when after years of obstinate arrogance toward all other labor organizations, in an extremity brought about by your ideas of "exclusiveness" and "entangling alliances," you were compelled to abandon your lofty position and recognize other organizations of laboring men, the grand officers of the Firemen's order (I was no exception then), too magnanimous to humiliate you, gave you full credit for your change of heart and paid you a tribute of personal friendship in the hope of enlisting your cooperation for the good of all, and the *Firemen's Magazine* (April number, 1888, page 248) complimented you in terms that left no doubt as to its fealty to you and your interests.

In this, I have the advantage of you. My friendship for you has been of that type, which, while crediting you with all the virtues you possess, has, as it seemed proper, pointed out your mistakes, for your own welfare, mistakes that often aroused my compassion, but which never made me your enemy, however much applause, on certain occasions, in your absence, I might have won by declaring myself your foe until you humbly retracted any statements you might have made. I do not nurse nor cherish enmities. I do not vault into any arena, to designate persons by name, to tell the audience I am not their friend, or lay down a rule which they must follow to secure my friendship—my recognition and my fellowship. In this, you will observe, I differ widely from you. But what are the statements to which you refer, that prompted you at a great meeting in Denver, to make me a victim of your ill will? What is it that you want me to retract? Why does the Grand Chief wave his autocratic sceptre and declare that "Mr. Debs" shall "retract" certain statements, and that until the decree is obeyed, his friendship will be withheld? Again, I ask, what statements?

Does the Grand Chief, who is the Chief Editor of the *Engineers' Journal*, desire that the "*Firemen's Magazine*" shall pursue a course of cowardly silence, when the Brotherhood of which it is the organ, is insulted and assaulted? Does the Grand Chief propose to run both publications, the *Engineers' Journal* and the *Firemen's Magazine*, in the same rut? Does the Grand Chief propose that when he takes snuff, I shall sneeze? that when he prays, I shall say amen? and, that when this self-abasement is declined on the part of "Mr. Debs," the Grand Chief will forthwith inflict the penalty of withdrawing his friendship, and secure sympathy and applause, by removing bandages and plasters, and exhibiting his sore toes in pub-

lic meetings, and proclaiming that until "Mr. Debs" "retracts, these sores shall never heal?"

Had "Mr. Debs" been present, and permitted to reply, the Grand Chief would have been as silent as is the *Journal*, of which he is the chief editor, upon all vital questions relating to the welfare of working men. Had "Mr. Debs" been present, he would have demanded of Grand Chief P. M. Arthur to name his grievances against the *Firemen's Magazine* and its editor. What statements had appeared against Grand Chief Arthur which must be retracted, that "Mr. Debs" might bask in the sunshine of his friendship? I say, had I been present at the Denver meeting when you assailed me, and had been permitted to reply to your attack upon me, I would have made you then and there tell the meeting what statements you desired retracted. I did not have that privilege, and hence I address you this open letter.

The *Locomotive Firemen's Magazine* is always careful to be right, when, for the honor, dignity and independence of the Order of which it is the official organ, it arraigns any one who is openly or covertly its enemy, whether it be Austin Corbin, John Livingstone or P. M. Arthur. The *Locomotive Firemen's Magazine* has boundless contempt for hypocrisy in any and all of its guises. Pharisaism, with its entire brood of artifices, deceptions, tricks and double-dealings, finds no resting place in the *Firemen's Magazine*, and I do not hesitate to avow that in the past it has called to account P. M. Arthur, Grand Chief, and chief editor of the *Engineers' Journal*. The indictments of P. M. Arthur, which have appeared in the *Locomotive Firemen's Magazine*, were not made in the dark; not made in a meeting where P. M. Arthur could not be heard, but in a publication widely circulated, and regularly placed where P. M. Arthur could read and ponder every word, and if the allegations were not true, if they were false, why did the chief editor of the *Engineers' Journal* remain silent? Why did he wait for an opportunity, when he knew he was protected from exposure, to assault his man? The explanation is easy. It was because he was wanting in those essentials that scorn the semblance of foul play.

And now, let us get down to particulars. I aver that P. M. Arthur has declared that he never had, and that while he was Grand Chief of the Brotherhood of Locomotive Engineers, he never would coöperate with any other labor organization.

Is that one of the statements which you, in your Denver harangue, demanded that I should retract? Would it not be better for you to first deny the avowment? Will you do it?

I aver that you favored the law prohibiting a member of the Brotherhood of Locomotive

Engineers, who was a member of the Brotherhood of Locomotive Firemen, from representing his Division in a convention of the Brotherhood of Locomotive Engineers until he had ceased to be a member of the Firemen's order. Do you deny the charge? Is that one of the statements which you, in your Denver address, demanded that I should retract, to gain your friendship?

You favored the enactment of the law of your Order compelling engineers, members of the Brotherhood of Locomotive Firemen, to abandon their Order, that they might become members of the Brotherhood of Engineers. Is that one of the statements which, in your Denver speech, you demanded I should retract if I ever expected to realize your recognition as a friend? Do you deny the statement? Is it not true? Was it not such things as I have stated that produced the "ill-feelings" about which so much has been said and written, and for which you, more than any other man, more than all other men, are responsible?

You have been the uncompromising foe of federation, and as such you have done more to embarrass and postpone the federation of railroad employes than any other man—possibly more than all other men combined. Do you deny the charge? Do you plead not guilty? No, you do not. The great Brotherhood of which you are the Grand Chief, were you to deny the charge, would render a verdict against you in one minute. You are the recognized, implacable foe of federation. There is not a railroad corporation in the country that does not know you to be unalterably hostile to federation.

Are such statements included in the number which you demanded I should retract, when you assailed me and announced the withdrawal of your friendship?

Was it my criticism upon your appointment of a committee to settle the C., B. & Q. strike, which offended you? In that matter you totally ignored the Brotherhood of Locomotive Firemen, and I execrated you for your deliberate insult to that organization. If that is the grievance for which you demand an apology, say so.

In my absence, out of danger from a reply, your courage was equal to the occasion. You could attack with impunity. Locked in and guarded, applauded to the echo, you could cut and thrust, knock down and drag out and everlastingly annihilate an opponent a thousand miles away. A man of such courage ought to be equal to a demand in all regards fair. Engineers and firemen like fair play—all honorable men like fair play. And now, I challenge you to debate with me, at any time, before any audience, anywhere you may choose, any grievance you may have against me. I prefer the meeting should be open—free to all. You shall have an opportunity to state your griev-

ances and designate what I have written, the penalty for which you branded me as a slanderer before the convention of the Engineers' Brotherhood.

And when the discussion is ended, if you should be possessed of more magnanimity and less bigotry than now, if you should have a fuller comprehension of the rights of the Brotherhood of Locomotive Firemen and other labor organizations, their courage and independence, and power to resist degradation, no matter by whom suggested, you will be largely benefitted, and you may be assured that in your enlightenment and expansion no one will rejoice more heartily than myself.

I assure you that any eulogy that may at any time suit you to pass upon any of my fellow Grand Officers, even though it is done to give point to your malice towards me, will meet my hearty approval, but when you were assuring Brother John J. Hannahan of your distinguished respect and consideration for him, it was well for you that at least two witnesses were not present, for in that event your words might have blistered your tongue.

While I, with such ability as I could command, have supported every measure designed to advance the interests of organized labor, you have opposed every measure of reform that has been proposed—so far as I am informed—and what advance has been made by workmen, aside from such success as may have attended their own order, has been achieved in spite of your protests and opposition. Would you have me retract such statements, that I may receive your pardon? First, deny the statements. Do it in any way your pleasure may dictate, in a secret meeting, on the house top or in the *Engineers' Journal*, all I ask is that you put your denials in proper form and permit me to see them.

In closing this somewhat extended communication, permit me to urge upon your attention the propriety of pointing out the "statements" you wish me to retract to secure the boon of your friendship. After making the schedule you should deny each allegation. In doing this you create an issue. As the case now stands, I do not know what "statements" you refer to, or whether you admit or deny their truthfulness, and in the meantime permit me to congratulate the great Brotherhood over which you preside for having performed an act of justice at Denver which meets with my unqualified approval, and which I accept as an assurance that in spite of your influence other acts will follow until the Brotherhood of Locomotive Engineers shall be as renowned for the justice of its legislation and its sympathy with other labor organizations of workmen, particularly railroad employes, as it is for its wealth in numbers and skill, and

its importance in carrying forward the great enterprises of the age in which we live.

Respectfully yours,
Eugene V. Debs.

SENIORITY IN PROMOTION.

The question of seniority primarily relates to age, as between senior and junior. Incidentally, it may relate to rank, to position. In such connections, education, qualification, industry, ambition is not necessarily considered. A man may be a senior in years, and in employment, and still be less qualified for promotion than his junior in these regards.

We are every day confronted with the fact, in all of the avocations of life, that some men are active, industrious and ambitious, availing themselves of every opportunity to improve their minds, husbanding their time and money, mindful of the future and studiously and conscientiously preparing themselves for promotion, for an advance in their chosen field of endeavor. They bear in mind the trite motto that "there is always room on top," and they struggle to rise, and to use a phrase, they usually "get there." While this is true, it is equally veritable that there are others who are indolent, careless, improvident and unambitious. They squander their time and their money and are negligent of opportunities to educate themselves, and who seem to be oblivious of the fact that merit, now more than ever before, perhaps, is taken into consideration when the time comes for promotion.

In discussing the subject in hand, we shall indulge in no circumlocution, on the contrary, we shall be direct.

We have briefly outlined characteristics of two classes of workmen, found in every department of labor, and for that matter in every department of human endeavor, and as a matter of course the two classes are found in the ranks of locomotive firemen.

It goes for nothing to say that there are instances in which sturdy merit does not win the coveted prize. The rule is that merit does win in the long run, and the exceptions in this, as in all cases, demonstrate the correctness of the proposition.

As a rule, railroad corporations want men of unquestioned competency to fill every department, and in no department is the requirement of greater concern than in the moving of trains.

It is a fact which should have due weight with every fireman, that railroad officials study their employes with special reference to promotion, because responsibilities increase with every advancement, and it is at this point that merit assumes special prominence. It is also at this point that the claims of seniority are supposed to have preponderating weight. It may be said in the way of illustration, that a railroad official who has

the appointing power wants an engineer, and that the policy of the road is to promote firemen. Suppose there are twenty firemen on the road, that five have been in the employment of the road three years, five four years, five five years, and five six years. The five who have been in the employ of the road six years are the seniors of the other fifteen, hence, the claim that one of their number should be promoted. Manifestly, all things being equal, there can be urged no good reason why any one in the ranks below six years' service should be promoted over the seniors. Under such circumstances to disregard seniority smacks of rank injustice. It demoralizes the entire force. It is the worst thing that the official could do. It is suggestive of unworthy motives. It is a crushing blow aimed at honorable ambition. Firemen say, and are justified in saying, that the promotion was secured by dishonorable means; that the official had been influenced by considerations of the most vicious character, involving the manhood of the man promoted. They charge that the promoted man had secured his advancement by bribes, by sycophancy, by abject fawning, by lick-spittleism, and that the official, pleased with such selfish subserviency, had rewarded it by promotion. As a result, there is a feeling of resentment inseparable from an act of such flagrant injustice which begets enmity and contempt. Such an official is an enemy of the road that employs him, and he is an enemy of the men over whom he exercises authority. Let him remain long enough and he will demoralize his force and finally bankrupt the road. He is justly regarded as a poor, selfish creature, totally destitute of that integrity of character which should preeminently distinguish a man in his position.

That is one side of the case. But there is another side of the subject of still greater gravity. In the case under discussion seniority may mean nothing but mere years in the employment of the road—merely a question of time. The man who has been a fireman six years is the senior employé of the man who has worked only five years, and so on down. When the time comes for promotion there should be and there will be other questions asked besides those which relate to years. It is right and proper that such should be the case, and here we refer to the fact again, that the fireman who has been watchful, studious, honorably ambitious to succeed in his chosen calling, who has husbanded his time and his money, and who has established his reputation for intelligence, though he may have served but five years, or four years, or, indeed, three years, may be better equipped for the position of engineer than the man who has served six years and has neglected his opportunities to improve his mind and add to his store of

knowledge, and we hold that under such circumstances merit, and not seniority, should influence promotion.

If men aspiring to promotion are unable to comprehend the value of equipment in its largest and best sense, and rely solely upon seniority for advancement, they should be taught that something more is required, and this lesson they are likely to learn to their great disadvantage.

The question of promotion is one of great importance to locomotive firemen. It has been the purpose of this *Magazine* to contribute its full share of effort to influence firemen to prepare for promotion by forming habits of study and investigation, so that when the auspicious day arrived, and the road upon which they were employed needed an engineer, their qualifications would be equal to the requirement.

We hear it intimated that there are firemen who are opposed to seniority, and would have promotion from the ranks regardless of service. We do not suppose that railroad corporations will enact any iron-clad rule relating to promotion. It often happens in the army and in the navy that seniors are "jumped," while the rule remains that, all things being equal, merit, qualifications, character, etc., the senior is promoted. The fact that juniors experience unrest in view of remote probabilities of promotion is natural, and often leads to resignation; but when a junior of no greater merit than a senior is promoted the influence such an act exerts is such as to seriously jeopardize the interests of the road, because it is believed to be, or is known to be the result of favoritism, which is not only a disregard of the rights of seniority, but of all other proper considerations.

Taking a broad view of the subject, we come to the conclusion that seniority may be justly urged as a prior claim to promotion when qualifications are superior or equal in all regards to those of aspirants who have a less number of years of service to their credit.

FRANKLIN B. GOWAN.

On December 14, 1889, Franklin B. Gowan, at the time, a guest at Wormley's hotel, Washington City, shot himself and died instantly.

Franklin B. Gowan was a distinguished Philadelphia lawyer. He first engaged in "the business of mining coal," possibly as a digger—probably as an employer. He was then only twenty-two years of age. He preferred law, and achieved success in the profession. So great was his success as a lawyer that in 1862 he was elected district attorney of Schuylkill county, and soon afterwards was retained as counsel for the Philadelphia & Reading Railroad, and of the Girard Coal Trust. Manifestly, he was a man of great intellectual ability—for he

was twice elected President of the Philadelphia & Reading Railroad—a position now filled by Austin Corbin, the wretch who has “Russianized” the Anthracite coal regions of Pennsylvania, and who smells worse than did Cologne, when Samuel Taylor Coleridge

“Counted two-and-seventy stenches.
All well-defined and several stinks.”

Mr. Gowan was a rich man, though not a millionaire; was worth about \$300,000. He had many friends, and at the time of his suicide, was in Washington City to make a law argument before the Inter-state Commission.

Mr. Gowan was in the very prime of his mature manhood, being in his fifty-fourth year. He was not over tasked with work. He had an ample fortune—a beautiful home at Mt. Airyano—an affectionate wife and daughter. He was not in bad health so far as any one had heard. As a consequence, everybody was surprised to hear that Franklin B. Gowan had taken his own life. The last seen of Mr. Gowan was when taking his lunch at Wormley's hotel on the day of his suicide. He was then “cheerful,” but retired to his room and killed himself. His friends vainly try to find a reason for his rash act. They give it up.

Franklin B. Gowan was the inveterate foe of labor organizations. He was never more in his element than when using his great abilities in trying to crush them out. His policy shrouded many a workingman's home in gloom. He was relentless in his pursuit of workingmen who dared to assert their manhood. He was succeeded as President of the Philadelphia & Reading Railroad by Austin Corbin, and what he could not do, Corbin has done. The Anthracite coal regions are “Russianized.” It is the land of degradation, more deplorable, all things considered, than that of any tribe discovered by Stanley in his march through Africa. Was Gowan instrumental in bringing about the unspeakable degradation of Corbin's serfs? Did he set the ball in motion that has finally made the Anthracite coal regions, under Corbin, a land of hideous infamies? In the quiet of his retreat from the clamor of the busy world—where there was no friendly voice to cheer him, did he see the ghosts of workingmen upon whom his terrible power had fallen? Did he see women and children in the grasp of starvation pointing their skinny fingers at him and fixing the gaze of their sunken eyes upon him? Did he see them crunching in their cave dwellings, poor famishing victims of men as heartless as hyenas? Was it too much for him to fear? Was death preferable to such a life of agony? Did conscience assert itself, until the brain was wrecked, and the imprisoned soul demand-

ed that its prison house should be opened that it might depart from such environments? We could have wished the enemy of workingmen a less awful fate. But justice, paint it as we may, has penalties to inflict upon those who in the pride and pomp of their power make toilers their victims. The mills of the gods may grind slowly, but they grind surely and ceaselessly. Besides, there are more mills now than formerly. The workingmen are *federating* with the gods, and unless we are greatly mistaken there will be more suicides of those who use their power to make the world a desert for men who are ceaselessly toiling to make home bloom like the rose. Will such sneaks as Austin Corbin take warning before he, like his predecessor, shall become so weary of life as to end it with a bullet?

AMERICAN FEDERATION OF LABOR.

We have before us the address delivered by Samuel Gompers, Esq., president of the American Federation of Labor, held in Boston in December last.

President Gompers is one of the most brainy men now connected with the great labor movement of the times, and all that he says receives special attention. It is too early at this writing for the *Magazine* to give an intelligent synopsis of the proceedings of the convention, which we hope to do in our February issue, but in the absence of such a summary some extracts from the able address of President Gompers will, we believe, be interesting to our readers.

President Gompers, in the opening sentences of his address felicitously outlines the purposes of the organization over which he presides by saying:

To protect the innocent and young, to raise man and woman from the sloughs of poverty and despair to a proper appreciation of their rights and duties is worthy of our best efforts, our highest aspirations and our noblest impulses. Let us endeavor by the nature of our conclusions at this convention to add one more step in this direction, we shall be just so much nearer our goal, and make the final so much easier of attainment.

In pursuing his subject President Gompers refers to federation as follows:

The executive council have endeavored to secure the co-operation, and to establish fraternal relations with all labor organizations. During the year correspondence was opened and continued with representative men of labor in Europe as well as in this country, and with good results. *There is no doubt that had the Brotherhood of Locomotive Engineers thrown aside their policy of “isolation,”* which is unworthy of their grand organization, there would have been established a federation of all railroad workmen. That this is desirable, and would be advantageous to them as well as the entire body of people, I think, all observers will admit. That it will soon be achieved is my fervent hope.

We are in full accord with Mr. Gompers in relation to the power of federation to secure for workmen their rights, which have hitherto been ignored, and feel satisfied that at no distant day all railroad employees will adopt federation.

Referring to the eight-hour movement, President Gompers says:

When we met last year at St. Louis the combined forces and influences of the employing and speculative classes so thoroughly awed the working people into submission that every meeting night of labor organizations was but the repetition of the various notices of the reduction in wages, the imposition of obnoxious rules, the presentation of iron-clad obligations to sign away our right to organize for self-protection, propositions to increase the hours of labor—in a word, labor seemed to have no right, economic or political, that capital was bound to respect.

It was at this time that our proclamation to the world was made, to call the toilers of the country to the movement to enforce the eight-hour workday, May 1, 1890.

From that moment a change took place. Hope was instilled into the hearts and minds of the workers to supplant despair. The rallying cry of eight hours was sounded. The working people again stood erect in their manhood. The tide had changed.

I trust that the charge may not be made that we took a too optimistic view of the situation, or that the condition of labor is "satisfactory" to us. On the contrary, the very fervency of our advocacy of the movement to reduce the hours of labor, is the best evidence we can give that we are at war with wrong, and that our best efforts will be devoted to the eradication of every injustice and evil from which labor suffers.

My purpose in calling attention to the change in the situation is to refute the idle talk of failure and to assert that our movement has already been fraught with good results.

It has arrested the downward tendency of the labor movement. It has forced, to a marked degree, the public discussion of our proposition. We cannot afford, however, to rest upon the vantage ground, stimulated by our success thus far, we must be nerved for a renewed activity, an unbounded enthusiasm and an eminent practicability.

The following suggestions of President Gompers ought to be productive of such concert of action on the part of labor organizations as to secure success. He says:

The Government is about to undertake a census in 1890. I desire to call your attention to the omission in the present law of any provision to ascertain the number of the unemployed and the duration of such a lack of employment. I cannot persuade myself into the belief that the omission was not designed. The law for the census of 1880 contained the provision, yet the superintendent failed to collect or present the data as required. Every other interest of the country is to be rigidly inquired into, except the one upon which the future of the country more surely depends. A petition up-

on the question was prepared and widely circulated. I recommend that the matter may receive your careful attention with the view to demand an amendment covering the omission.

We are fully in accord with President Gompers in his suggestion of a Labor Congress. He says:

From present indications it is the intention to celebrate the 400th anniversary of the discovery of America by Columbus, by a world's fair in 1892. It seems to me that the time would be propitious for holding the first International Labor Congress in the United States. I therefore suggest that the Executive Council be authorized, as soon as the question is decided by Congress, to extend invitations and proceed to make arrangements for the holding of an International Labor Congress in the city selected for the exposition.

Manifestly, the workmen of America are waking up; are seeing their opportunities, are comprehending their importance, and have determined to make the most of them.

It was announced early in November last, that W. L. Scott, had written a letter to the people and property owners of Spring Valley, Ills., in which he howls like a spaniel, about the refusal of miners to accept the degradation of serfs. Among other things he says:

"The final decision of the men is that they will not sign any contract or be controlled by any rules. We have now patiently waited for six months in the hope that some fair and satisfactory arrangement could be arrived at which would place us on a similar basis with other mines in your state. It is not now a question of wages between the miners and our company, but is whether we can control the working of our mines by fair and just rules or no rules and government at all. It is to be hoped that no coal property located as the Spring Valley mines are and possessing the natural advantages they do can be made valueless by men supported by charity mainly contributed by persons whose interests are inimical to yours and to those of the Spring Valley company."

We notice in the *Chicago Tribune* of late date, the following:

When the letters asking Chauncey M. Depew for railroad passes were published a while ago, one from W. L. Scott was overlooked. This is the way Scott asked for a pass:

ERIE, PA., Sept. 25, 1886.

My Dear Mr. Depew:

I don't often ask for favors in the way of passes, but if I could get an annual pass, good until January 1, over the New York Central Railroad—and it would suit me better if I could get it from New York to Erie—in favor of Harry Butterfield, it would be of great advantage to me in my fight here in this district; and, although you are a Republican and I am a Democrat, we do not differ much in regard to our views in connection with corporate property, and I may be able to serve these interests, should I

pull through again. I am sure the pass would be used three times between now and January 1.

Yours truly, W. L. SCOTT.

Here is an exhibition of Scott, well calculated to acquaint the public with the fact, that he is essentially contemptible. While seeking to degrade working men, he plays the role of a base lickspittle; he seeks to barter his influence, if he gets a chance to exert it, for a railroad pass. He offers himself for sale, gets his price, a pass, and as opportunity offers will do what he can for "corporate property." He is another Austin Corbin, and is as destitute of Democracy as Hell is of ice water. Such are the sneaks who disgrace politics, and bring legislation into contempt. They should be stripped naked and lashed with whips of flame through the world. They should be made to climb a tree or take water, and we can do no better than to put John Livingstone on his track, and "sic him on."

Literary Notes.

Dion Boucicault, the veteran author, playwright and actor, contributes a paper to the January *Arcan* which will doubtless excite much criticism among the worshippers of Shakespeare. Mr. Boucicault, under the caption "Spots on the Sun," talks of some of the blemishes found in the works of Shakespeare. The article, although a criticism, is written in the best of spirit; the author at all times showing the profound respect he entertains for the greatest of dramatists. One point Mr. Boucicault emphasizes which, although well-known to Shakespearean scholars is not generally understood by those who have given little attention to the literature of the stage, and that is the fact that Shakespeare built up most of his dramas on the skeletons of plays then extant.

Though the Johnstown disaster occurred more than two months since, the interest of the public in so remarkable an event has not ceased to be active. H. S. Goodspeed & Co., of New York, have just issued a very complete and richly pictorial history of the event, which is a work of the deepest interest and power. No reader will care to lay aside this thrilling narrative unfinished. In the world's horrible records of evil wrought by the untamed forces of nature, few catastrophes have been more heart-sickening. The fearful loss of life, the vast waste of property, the great interruption to business, destroying the complex machinery which fed so many thousands and contributed to the interests of the whole land, are hard to match. Death and ruin take a thousand shapes, but rarely have they assumed a guise so horrible as that in which they rushed down on the people of Conemaugh Valley. The record cannot fail to be of perennial interest, and to stir the hearts of all who read it for the next generation to come, for such a catastrophe, mercifully comes but once in a century. If so often. Enough time has now elapsed to enable the proper verification of the facts to be made, and a careful and studied statement to be given to the public worthy of so startling a subject. Any hurried and haphazard

narrative of an event which stands so unique in our history, is far from doing it even partial justice. The author has given us in this book a record both vigorous and accurate, and every reader should have the work in his hands. The book is an octavo handsomely printed and bound, and contains 522 pages, embellished with forty-eight fine full page illustrations.

In our notice of the book recently published by Thos. Pray, Jr., of Boston, Mass., entitled "Twenty Years With the Indicator," we failed to state that the price of the volume is \$2.50, postage prepaid. The book has met with a flattering reception and is having a wide reading among railroad men. Orders should be addressed to Thos. Pray, Jr., Box 2728, Boston, Mass.

The *National Magazine* for January announces two new and valuable departments—"Biblical Literature" and "Pedagogy"—with Rev. J. C. Quinn, Ph. D., and J. S. Mills, A. M., President of Western College, as editors. Agricultural readers will be especially interested in the new "Institute of Agriculture," described in this number—a part of the University Extension System of the National University of Chicago, whose non-resident or correspondence under-graduate and post-graduate courses have met with such favor. Other articles are by Prof. E. A. Birge, of the University of Wisconsin, and eminent specialists. Published at 147 Throop street, Chicago, Ill. Subscription, \$1.00 per year. Sample copy, 10 cents.

Consider SCRIBNER'S MAGAZINE when you are deciding upon your reading matter for next season. The subscription rate is low—\$1.00 a year.

The standard of the *Magazine* is high.

Its spirit progressive,

The illustrations are interesting and of the best.

There is not space here to give even a summary of the new features to appear next year, but among other things there will be a NEW DEPARTMENT and ADDITIONAL PAGES, and groups of illustrated articles will be devoted to the following subjects:

African Exploration and Travel.

Life on a Modern War Ship (3 articles).

Homes in City, Suburb and Country.

Providing Homes Through Building Associations.

The Citizen's Rights.

Electricity in the Household.

Eriesson, the Inventor, by his Authorized Biographer.

Hunting.

Humorous Artists, American and Foreign.

There will be three serials.

Robert Louis Stevenson will contribute in 1890.

Each subject, and there will be a great variety this year, will be treated by writers most competent to speak with authority and interest. Readers who are interested are urged to send for a prospectus, 25 cents a number; \$1.00 for four months.

CHARLES SCRIBNER'S SONS,

743 Broadway,

New York.

The railroads of the country offer a rich field for the story writer, and one that has hitherto been very

little worked. That popular illustrated weekly magazine, *The Argosy*, having a regular circulation of nearly 100,000, has turned its attention to the subject, and announces a series of continued stories on railway life, from the pens of well known authors. "Check No. 2134," by Edward S. Ellis, is now appearing in its columns, and has attracted a good deal of notice. Being based on actual experiences, it is vivid and true to life in its incidents, besides being full of varied adventure, and having a strong and well developed plot. Every one who is interested in railroads, railroad men and telegraphers will find this a fascinating story. "Check No. 2134" will be followed by a story named "The Trainboy," by the famous author Horatio Alger, Jr., and *The Argosy* will then publish a third serial entitled "The tour of a Private Car," by Matthew White, Jr., beside other first-class serials and short stories. The marvel is how the publishers can afford to give so much for the price, each issue containing over 50,000 words, or as much as an ordinary \$1.00 bound book.

It is published by Frank A. Munsey & Company, 81 Warren St., New York, at \$4.00 per year, and can be obtained of newsmen each week for ten cents per copy.

THE ARENA.

We are in receipt of the *Arena* for December, a specially bright and attractive number, full of choice reading, placing it at once on a firm equality with the best publications of the kind in the country. We are particularly interested in the paper by George E. McNeill, on "The Democracy of Labor Organizations." Mr. McNeill says:

"Invested personal interests, whether political, religious, or industrial, are necessarily antagonistic to human progress. Evil, whether spelled with a capital D or not, insists that all changes, unless proposed by the defenders of existing conditions, are dangerous. The same cry of non-interference that protested against every step from serfdom and chattel slavery, now cries out against the larger liberty of labor; and when organized effort seeks relief or remedy, the organization is condemned as foolish, dangerous and tyrannical.

For some years past the attention of thinking people has been attracted to a consideration of the dangers that threaten our free institutions and industrial progress from the tyranny of organized capital, in corporations, trusts, and syndicates. To call off attention from themselves they raise the cry of the tyranny of labor organizations, and their salaried and otherwise enriched servants re-echo the cry."

Another paper that should have the widest possible reading, is that of Hudson Tuttle, on "A Threatened Invasion of Religious Freedom." The writer points out vividly what was done by the framers of the Constitution and the fathers of the Republic to guard against religious intolerance, and says:

"On this foundation the nation has grown for a hundred years, with a separation of Church and State, not as complete, however, as the founders intended, without a protest until the present reaction of the 'Reformers.' They would so amend as to 'place the usages in our government on an undeniable legal basis.' In the fundamental law of our nation, especially those which secure a proper oath and which protect society against blasphemy, Sab-

bath breaking and polygamy. 'The real meaning of this ambiguous tautology simply is that there should be constitutional recognition of laws which compel the observance of Sunday by attendance at church and an official *test oath*, that will exclude all but church members from office, and disfranchise them. It means a theocracy, a form of government which sad experience has taught to be the most cruel, narrow, utterly immoral, extortionate and tyrannical, possible to impose on a people.'

We heartily commend the *Arena* to the attention of the readers of the *Magazine*.

The factories of the Dueber Watch Case Manufacturing Company, and the Hampden Watch Company, at Canton, Ohio, are the largest in the world, and the only establishment where complete watches are manufactured upon the same grounds, in the same locality, and by the same firm. The great success of these two factories rests upon two well-known maxims, which have been successfully applied to the manufacture of the Dueber-Hampden watches, ever since the commencement of their business:

First: "What is worth doing, is worth doing well." No watch case or watch movement has ever been allowed to leave the factory unless complete in every particular, and with that excellence of manufacture and attention to detail which is characteristic of the Dueber-Hampden watches.

Second: "Honesty is the best policy." All watch cases bearing the name "Dueber," and their various trade-marks, have always been, are now, and always will be, exactly as represented. The purchaser of a watch, unless he is well posted in the different trade-marks and stamps which are printed upon the various styles and makes of watches sold by dealers throughout the country, is often at a loss to determine as to the quality and value of the watch he is buying, as very often the stamps and trade-marks are not always a guarantee that the watch is what they indicate; but we wish to say that the name "Dueber," and the trade-mark, an anchor on a shield, has never been placed upon any low karat watch cases, poorly constructed filed cases, or low quality of silver cases of any description. This is equally true of the trade-marks of the Hampden watches. In short these goods have never been manufactured with an intent to deceive the public in any way; and the well-known name, "Dueber," and the Hampden trade-marks on a watch has always been a guarantee throughout the trade for a genuine article and no attempt at fraud or chicanery. The Dueber-Hampden watches are manufactured from the very best material, by the most skilled workmen, in a thorough and workman-like manner and superior style. They have attained a National reputation and purchasers find the advantage of supplying themselves with an honest standard watch case and watch movement. Railroad men, especially, in buying a Dueber-Hampden watch, will be sure, if they purchase a Hampden watch which is stamped "Adjusted," that it is actually what it is claimed to be, and not simply adjusted in name only.

The splendid record which Dueber-Hampden watches have given upon many thousand engines, amongst multitudes of train hands, etc., throughout the United States, is the best evidence of their high and superior quality and the perfect satisfaction which they have given their owners.

The frontage of the factories where Dueber-Hampden watches are made, at Canton, Ohio, is 1,400 feet. The buildings are made of pressed brick, three and some five stories in height, filled with the finest and latest improved and most perfect watch and watch case making machinery ever made. The Dueber-Hampden Company do not make any of these so-called cheap watches which are advertised so extensively through the medium of catalogues, and through schemes of giving them away by grocers, tobacconists and soap dealers; but can always be found on sale with all first-class and reliable jewelers and watch-makers throughout the United States and Canada. If you wish to buy a watch buy a Dueber-Hampden. It is well known to railroad men that this journal is not inclined to deal in fulsome puffery of any article advertised in its columns, but at the same time it always gives us pleasure to note the progress that modest merit is sure to obtain.

The Brotherhood.

Correspondence concerning the Brotherhood is solicited for these columns.

Communications should be written on one side of the paper only, and forwarded so as to reach the Editor not later than the *fifteenth day* of each month

TAYLOR, TEXAS, November 13, 1889.

MR. EDITOR:—The discussion in regard to a change of name seems to be exciting general interest and I think it the duty of each and every member to personally investigate this matter so as to better prepare himself to render his verdict when the proper time arrives, which will be when instructions are given to the delegates to the next session of the Grand Lodge. The members of each Lodge should see that a delegate is sent who will carry out all instructions given him, and one who cannot be bluffed by braggadocio or wheedled by persuasion.

The following are some of the many reasons why I oppose the change of name:

The object in organizing the Brotherhood was "for the purpose of uniting locomotive *firemen* and elevating *their* social moral and intellectual standing, and for the protection of *their* interests and the promotion of *their* general welfare." The proposed change would defeat this object by assuming that *firemen's* interests were not paramount to those of *any other* calling and would leave a desire among a great many *firemen* to form an organization that they could call their own. I honestly believe that if we should desert the old name that there would be a sufficient number of dissenters to perpetuate the Brotherhood of Locomotive Firemen; that is, others would begin where we leave off. If this should occur the old Brotherhood would be encouraged by the B. of L. E. for the purpose of defeating a rival, and thousands of our members would secure a membership unless we pass a law similar to the one we have condemned others for enacting.

It has been advanced as a reason for the change "that we can protect our engineers" from the importunities of members of the B. of L. E. more effectually than under the present name. My judgment would lead me to believe that the result would be *directly the opposite*. While a pressure is now brought to bear upon B. of L. F. runners in a mild manner then it would be open warfare and I can't see why we would be in a better position to protect them than at present. Any extra engineer unpopular with the regular men has a very disagreeable way of making a living, and most of our runners are on the extra list.

Some say that to change the name would prevent our engineers from withdrawing to join the B. of L. E. This is absurd. If they join them now through admiration they would admire them none the less under the new name, and if they join at present through fear they would indeed then have reasons for their fright.

"What do we care for the B. of L. E.?" the gentleman from Battle Creek "remarks, and accuses those who "do care" of being "cowards," etc. I will ask

my "fire-eating" friend how he is going to defend himself from the malicious and secret attacks of the B. of L. E. should we become openly antagonized. Is he going to make a personal matter of it with the entire organization, or will he demand of the Master Mechanic his immediate discharge? There is only one way to down the engineers should we start an opposition order, and that is to seab on them, at which time you will find the writer "tending bar" or "slinging hash," with no idea of going to rail-roading again.

Last June I wrote a letter which was published in the August *Magazine* with the signature of "263." The results of the Denver Convention prove me no "false prophet" but still in the "opinion" of one "Frank Walton" in the October number, my letter has "exposed among her (the B. of L. F.) membership some of the *benighted ignorance* that is forever *standing in the way of progress*, and has been in all ages and will continue to be the *curse of organized labor*—the rock which has foundered so many *nobly planned efforts* for the emancipation of labor." Now, I believe that I love the Brotherhood of Locomotive *Firemen* better than does "Frank Walton," and if his letter in the October *Magazine* is an index to his character, will be far more beneficial to the Order, for such fanaticism as he exhibits in his writings would disrupt any organization if possessed of sufficient following. If he expects to crush opposition to his ideas by ranting, frothing at the mouth and tearing his whiskers he will be sorely disappointed, for the members of this Brotherhood have sufficient intelligence to distinguish logic from "jingoism."

He says that "when we become men we put away childish things" and classes the present name as being "childish." I will say this to "Frank Walton" and all others of his belief—that he may be a "man" (engineer), but there are several thousand "children" (firemen) left, who do not look upon the dear old name as being too "childish" to acknowledge, and demand that there *shall* be an organization that makes a *specialty* of "childish" (firemen's) interests regardless of what "men" (engineers) may say or think.

Many writers—including our worthy editor—say something about making the change by "putting it to a vote." Section 1 of the Constitution of the Grand Lodge says "that this body shall be known as the Grand Lodge of the Brotherhood of Locomotive *Firemen*," and section 76 says the constitution "may be altered, amended or repealed at a *meeting of the Grand Lodge*," and describes the manner in which the change may be effected. If we can not wait until September, 1890, for a new "figure head," section 10 explains how we can get it sooner. I believe that it has been estimated that a session of the Grand Lodge costs about forty thousand dollars, which would be "paying dear for a whistle."

Because I think that the Brotherhood of Locomotive Firemen "must and shall be preserved," some of "Frank Walton's" ilk will no doubt shout themselves hoarse with cries of "treason!" "treason!" "TREASON!" Who will say that it is treason to stand by the old name and the constitution? That same man would have proclaimed it treason to have stood by the old flag and the Union. Although born and raised in a "rebel" state I can see the great er-

ror of "secession," and so will "Frank Walton"—and others—realize that they have erred after their pet scheme is "no more;" but they are not the class of men to ever acknowledge it.

Now, I have a few words to say in regard to our worthy Editor's style of running the *Magazine*. Bro. Debs is a man whom I have always greatly admired for his intelligence and his every trait of character, except extreme radicalism and a lack of diplomacy. This organization owes a greater part of its past success to his able efforts in its behalf, but he should not permit his injured feelings to sacrifice the fruit of his labor—he should not tear down in a day what he has labored for years to build up. He will probably say that I am a LIAR when I intimate that our little differences with the B. of L. E. have, to a great extent, made this new move so popular, but from conversations with firemen who are in favor of the new name, I find that the majority of them expect to do for the B. of L. E. what the B. of R. C. is doing for the O. R. C., and no doubt the result would be the same if the federated orders were to encourage us.

On one occasion, some years ago, our Grand Master was transacting some official business with the late H. M. Hoxie, who, at that time, was general manager of the Gould system. Mr. Hoxie called Bro. Sargent's attention to the trouble that the firemen and engineers were having and cited the *Firemen's Magazine* as his source of information. He suggested that this journalistic warfare was very detrimental to all concerned. The suggestion probably had its effect, as we saw no more of it until the past year. From remarks that I have heard Bro. Sargent make, I believe that he still disapproves of too much of it.

A delegate to the engineer's convention at Denver, and a man who was in favor of federation and the repeal of all laws unjust to the firemen, told me that the greatest difficulty they had in accomplishing these purposes was in pacifying the intense ill-feeling that existed at the Convention against Eugene V. Debs.

Our worthy Editor classes members of my belief as "infrimities," and the reasons that we offer against the change he considers "rot," but still I am not going to be guilty of calling him "names." While he has penned many able articles in regard to "Russianizing" and "tyrants," "slaves," etc. he has so "Russianized" the columns of the *Magazine* that those who differ with him fear to express their views in the "Brotherhood" department, for they know full well the ridicule and abuse that awaits them. In fact, the *Magazine* is rapidly assuming the style of some political administration organ. If a correspondent agrees with the Editor he is complimented, flattered and encored, but he that dares differ on any subject is flayed with the editor's pen. If the "machine" is to be worked at the next Convention as it is now being done in the *Magazine*, the "managers" may bring all into line by the "crack of the whip."

W. S. Carter, of 263.

The foregoing communication, we submit in all candor, requires some remarks from the Editor of the *Magazine*. Manifestly, our brother, "W. S. Carter, of 263," expects us to notice what he says. As a part owner in the *Magazine* he claims the right to ma-

align its Editor through its columns. We could by virtue of our position, deny Brother Carter this privilege, but we prefer that his attack upon us should be published. We desire that the entire Brotherhood shall have the full text of Brother Carter's arraignment. The Editor of the *Magazine*, as its Editor, must stand or fall by the record he makes in its pages. His utterances, as printed, must be witnesses for him or against him on every charge that Brother Carter makes against him. The Editor of the *Magazine* does not claim to be immaculate. He does claim membership in the ranks of "perfectionists," but he is not conscious of ever having written or printed so much as one word that by any inquisition can be tortured into treason to the Brotherhood of Locomotive Firemen. If it can be found by Brother Carter, or by any other man, friend or foe, they are in duty bound to bring it forward—publish it—let it speak our condemnation. Let the one word be put on the rack, let it be broken on the wheel, apply the thumb-screw and red-hot pincers, and as the torture proceeds let Brother Carter and those who frame indictments against the *Magazine* gather around and with dilated nostrils and protruding eyes witness the exhibition, and when it is over, if victory has crowned their undertaking they shall be welcome to their felicity, or, should it be found that the *Magazine*, under our management, has studiously, persistently and with such ability as we could command, defended the Brotherhood, kept high advanced its flag, championed its interests, defended it when assailed, sought its highest good on all occasions, then let those who hoped and worked for a different verdict, unmolesed bury their dead and gather up their envenomed shafts, which, however deadly was their aim, failed to reach their mark and fell harmless at our feet.

The Editor of the *Magazine* is not insensible to generous words. When they come warm and strong from the heart of a friend, without an "if," or a "but," or a "proviso," they are welcomed as hosts welcome friends to firesides. Brother Carter in his "few words in regard to our worthy Editor's style of running the *Magazine*," takes occasion to set him up, that he may knock him down for his own gratification and the enjoyment of those who delight in such pastimes. We reproduce a few paragraphs that our readers may rejoice with Brother Carter or sympathize with us, as they may choose. Brother Carter says:

"Brother Debs is a man whom I have always greatly admired for his intelligence and his every trait of character EXCEPT extreme radicalism and a lack of diplomacy.

In the first place the Editor of the *Magazine* is "admired" for "intelligence" and every "trait of his character," and then

comes the exception—his “extreme radicalism and lack of diplomacy.” What is radicalism? Webster says: “Radicalism means root work; the uprooting of all falsehoods and abuses.” What then would “extreme radicalism mean?”

Now, for the editor's lack of diplomacy.” What is diplomacy? Mr. Webster says diplomacy is “the science or art of conducting negotiations between nations, particularly in securing treaties.” The Editor of the *Magazine*, at the Philadelphia Convention, was appointed a diplomat to visit the B. of L. E. Convention held in the city of New Orleans in 1885. He was furnished with the proper credentials. He represented the B. of L. F. The B. of L. F. had a grievance to present to the B. of L. E. in Convention assembled. The Editor of the *Magazine* makes no pretensions to skill in the science or art of diplomacy as practiced by envoys extraordinary and ministers plenipotentiary at the courts of nations, but at New Orleans, in modest, fraternal words, carefully chosen, to avoid offense, he patiently waited the pleasure of the B. of L. E. Convention and made known his mission, which was totally ignored and the only action taken by the Convention was to still further widen the breach between the two great Brotherhoods. In what regard did the Editor of the *Magazine* “lack diplomacy?” Was it expected—was it required that the representative of the B. of L. F. should tell the B. of L. E. in convention that the B. of L. F. was a “breeding-pen” for their Order? Would it have been diplomatic for the representative of the B. of L. F. to have told the B. of L. E. that the obnoxious laws enacted against the members of the B. of L. F. were in consonance with right, justice and fraternal good will? The Editor of the *Magazine* refrained from such a course. He silently departed to report proceedings to his Brotherhood. Time wagged on. At the Atlanta Convention of the B. of L. F., Grand Chief Arthur was the guest of the Brotherhood. He was honored and toasted and feted, and to cap the climax of fraternal good will, he was presented with a silver service. In all of this, call it “diplomacy” if you please, the Editor of the *Magazine* acted his humble part without any display of fireworks, and it was believed that at the Richmond Convention the courage, the fidelity, the fraternal spirit and the sacrifices of the B. of L. F. would win a victory in the interest of both of the great Orders. Did it? Nothing of the sort. It mattered not that Grand Master Sargent and Vice Grand Master Hannahan were present and spoke generous words. It mattered not that Grand Chief Arthur had been the guest of the B. of L. F. and had eaten salt with the Brotherhood—every hope, every expectation, every

longing desire of the B. of L. F. for honorable recognition was doomed to bitter disappointment.

Is it required that the Editor of the *Magazine* should say that the action or the non-action of the Richmond Convention created universal resentment on the part of the B. of L. F.? Brotherhood Firemen looked upon the course pursued by the Richmond Convention of the B. of L. E. as a sin of ingratitude—than which nothing is better calculated to arouse resentment in the minds of all honorable men—a sin so detestable that even tramps will not tolerate it.

After the Richmond Convention of the B. of L. E. closed its labors, (including the C., B. & Q. strike without consulting the Firemen's Brotherhood) the Editor of the *Magazine*, in full accord with the prevailing sentiment of Brotherhood Firemen, began the work of “uprooting” the abuses that had been piled upon the B. of L. F. He pointed them out. He commented upon them. He sought to arouse a spirit of independence and self-respect on the part of the members of the B. of L. F., and this is what our Brother Carter calls “extreme radicalism.” Would he stamp out a falsehood? Would he uproot an abuse? Would he stigmatize the B. of L. F. as a “breeding-pen?” Would he advise members of our Brotherhood to abandon it as soon as promoted? If not, why does he or any other member of the Brotherhood arraign the *Magazine* or its Editor for standing by the order in the days of its peril? Does he want the Brotherhood of Locomotive Firemen to go with a bowed head and bended back? Does he want it to crawl when it has a right to stand erect? Does he want it voiceless when it should speak? If not, why attack the *Magazine* and its Editor in the interest of an Order, which, as the *Magazine* has shown, for years sought to humiliate the Brotherhood of Locomotive Firemen.

And now, we quote another paragraph from the communication of our Brother Carter:

This organization (the B. of L. F.) owes a great part of its past success to his (the Editor of the *Magazine*) able efforts in its behalf, but he should not permit his injured feelings to sacrifice the fruit of his labor—he should not tear down in a day what he has labored years to build up.

Here is a covert charge that in some way our feelings are “injured,” and that to gratify our “injured feelings,” the *Magazine*, under our management, is engaged in pulling down the Brotherhood of which it is the official organ. The charge of our Brother Carter is of a character which bespeaks a purpose as foreign to friendship, of candor, of an honorable purpose, as Austin Corbin could desire to see in the pages of the *Mag-*

azine. It is destitute of every brotherly amenity.

Personally, the Editor of the *Magazine* has no injured feelings towards the great Brotherhood of Locomotive Firemen. No word, no intimation of such "injured feelings" ever escaped his lips, or appeared in print. Such an intimation is an unprovoked, gratuitous libel, a shameless perversion of truth, and whether an emanation from our Brother Carter's mind, or some beguiling enemy of the Brotherhood, it is nevertheless vulgar abuse, totally unworthy of any Brotherhood fireman who is not using his position and privileges to degrade the order. Brother Carter evidently realizing the character of his diatribe against the Editor of the *Magazine* says, "He (the Editor) will probably say that I am a LIAR," (the capitalization of "liar" is Brother Carter's) but he is mistaken. He may feel that he is a liar, he may adjudge himself a liar, a slanderer, a maligner, one who makes false accusations, but we will call him nothing of the kind. In that regard we leave Brother Carter to classify himself.

With regard to tearing down the Order, with feelings of conscious integrity we invite friends and enemies alike to scan the pages of the *Magazine*. There they are. Let the purblind critics come with microscopes, telescopes and eyeglasses and hunt for the "tear down" utterances of the Editor. Brother Carter is specially invited. He will find now and then a writer with the spine of a fishworm and the eyes of a mole, with the instincts of a rodent and the brains of a cockroach, pleading the cause of the enemies of the Order in the chirping notes of crickets, and when totally at sea for argument, will place on the stand Austin Corbin, John Livingstone or some other distinguished enemy of organized labor, and who hate the robust utterances of the *Magazine* as the devil is supposed to hate holy water. It is one year since the Richmond Convention adjourned, one year since the Atlanta Convention adjourned. During all these months Brother Carter would have it understood that the Editor of the *Magazine*, to soothe his "injured feelings," has been at work tearing down the Brotherhood of Locomotive Firemen. Now, behold! The *Magazine* advocated Federation. Three great Brotherhoods are in line under the federated flag. The *Magazine* denounced the obnoxious laws of the B. of L. E. with such ability as it could command—and at least one of the laws has gone glimmering. Are these things in the line of tearing down? •

If we had been inspired to work by "injured feelings," then indeed should we realize that great serenity of mind and soul had come upon us like a benediction as a compensation for our work. Tearing down!

Why, bless your eyes, Brother Carter, you do not see. We invite you to behold our Brotherhood. Walk around it, scan its towers and bulwarks, examine its foundations, and then point out where the *Magazine* has marred the grand and imposing structure for the unholy purpose of tearing it down. If you do not find a scar made by the Editor of the *Magazine*, but on the contrary find that when our noble Brotherhood was attacked and maligned, insulted and degraded by its enemies, the *Magazine* resisted the onslaught, you need not hang your head in shame and confusion, you need not commit hari kari, you need not go up an alley and kick yourself. No! Simply have the manliness to say you were in error and maligned a brother, who, with ceaseless effort, had sought to promote the welfare of the Order you profess to love. Another quotation from Brother Carter's communication:

A delegate to the Engineer's Convention at Denver, and a man who was in favor of Federation and the repeal of all laws unjust to the firemen, told me that the greatest difficulty they had in accomplishing their purposes, was in pacifying the intense ill-feeling that existed at the Convention against Eugene V. Debs.

As the story-writers say, "the plot thickens." Our Brother Carter is getting on swimmingly. Who, at the Engineers' Convention at Denver, entertained "intense ill-feeling against Eugene V. Debs?" What was the cause of this "intense ill-feeling against Eugene V. Debs?" Why not explain? Why not tell the whole story? Why not let the members of the B. of L. E. have the height and depth and breadth of our offending? The *Magazine* had exposed the humiliating wrongs done to the B. of L. E. by the B. of L. E. The *Magazine* had championed the cause of the B. of L. E. That is what was the matter, and that is all of it. Nothing less, nothing more. The feeling of the B. of L. E. was one of intense hostility to the obnoxious laws of the B. of L. E. The Correspondence Department is conclusive on that point. The utterances of courageous firemen glow and burn with vehement indignation at the insults offered by the B. of L. E. to their Order. The *Magazine* would have been recreant to every trust, a shameless traitor in the camp, had it done less than respond to the sentiments of the Brotherhood of which it was the official organ—and yet, in spite of this "intense ill-feeling against Eugene V. Debs," some things which the *Magazine* battled for were granted. The action of the Denver Convention triumphantly vindicated the *Magazine*, and we have a right to say that nothing succeeds like success. Our Brother Carter goes out of his way to ring in the paragraph last quoted, but we are obliged to him. He builded better than he knew. The informa-

tion he received and embodies in his letter demonstrates that the *Magazine* has stood by the Brotherhood—championed its interests. No wonder that certain members of the Order in Denver and elsewhere malign its Editor and seek to make capital for themselves.

"Our worthy Editor," says Brother Carter, "classes members of my belief as infirmities, and the reasons that we offer against the change he considers rot, but still I am not going to be guilty of calling him names. While he has penned many able articles in regard to Russianizing and tyrants, slaves, etc., he has so Russianized the columns of the *Magazine* that those who differ with him fear to express their views in the Brotherhood Department, for they know full well the ridicule and abuse that awaits them." We felicitate our Brother Carter upon his courage—at least he is not Russianized—he does not belong to the infirm—though he classes himself with the infirm—with those who write "rot" instead of reason. Brother Carter doubtless knows himself where he belongs—but that the columns of the *Magazine* are not "Russianized," our Brother Carter's letter fully demonstrates—as a philippic against the B. of L. F., its *Magazine* and the Editor of the *Magazine*, the enemies of the Brotherhood could desire nothing wherein the intention was more pronounced. If the men at Denver who entertained "intense ill-feeling against Eugene V. Debs," do not applaud our Brother Carter to the echo, they ought to be ashamed of themselves, as ought our Brother Carter for seeking to tickle their malevolent spirit and still further intensify their ill-feeling towards a man and brother, who, in the battle and in the storm, sought to defend the Brotherhood of which he is a member. When a Brotherhood fireman asserts that the B. of L. F. is, and ought to be a "breeding-pen," he writes "rot." When a Brotherhood fireman asserts that a member of the Brotherhood should be required to abandon it as soon as promoted, he is "infirm" to the verge of idiocy. When a Brotherhood fireman assails, directly, covertly or by innuendo, engineers who are members of our Order, who have for years supported its principles and policy, who have been true to every obligation, he shows that with him brotherhood ties are weak; that envy and jealousy have usurped the place of fraternal fellowship, and would inaugurate in the Order internecine war. Such theories the *Magazine* has opposed and will continue to oppose because they are evidences of a lack of mental force to grasp the problems that now challenge the best faculties of the Order. Only such vagaries are subject to criticism in the *Magazine*. If there are those whose hearts are full of envy towards engineers who are members of our Order we conclude they do not write their views for publication

because they are ashamed of them, rather than for fear of the flaying pen of the Editor.

We are in favor of candid, intelligent discussion, the more the better, and with final decisions based upon merit we shall be content.

LARAMIE, WYO., November 16, 1889.

Editor Firemen's Magazine:

In reading the letter of Bro. Cross, in the November number of the *Magazine*, I was both surprised and shocked to think of a member of our Brotherhood uttering such sentiments—sentiments which I consider both cowardly and degrading. Just think of it! The B. of L. F., a "breeding pen," for anybody. He also says that we cannot adjust the grievances of engineers! If the engineers are members of the B. of L. F., I don't see why we cannot. There are none too many engineers in the Brotherhood to suit me, and as long as they see fit to stay with us, we are in duty bound to stand by them and protect them. I wish also to say to the Brotherhood that I, as a fireman, will vote for a change of name as soon as I get a chance. I think that it would do Bro. Cross lots of good to mingle with U. P. firemen for a short time. And lastly, I will say that I hope that our members are not so much in fear of the editor as to withhold their views from the *Magazine*.

Geo. W. De Forest.

CHICAGO, December 9, 1889.

Editor Firemen's Magazine:

I have never attempted to contribute to the *Magazine*, but feel as though I would like to say a few words to the brothers about federation. I see by the last issue that some brother thinks the name of our Order ought to be changed, to which I heartily agree, providing we can bring about federation, which is necessary, I believe, if we ever expect to get and retain what is our due. In union is strength, and if union takes place between Firemen, Brakemen, Conductors and Switchmen then can we boast of strength, even though those men who consider themselves the aristocracy of labor do not wish to consolidate, but prefer to lean on their own oars. I say again, in ourselves we are weak, a fact well demonstrated in the C. B. & Q. strike, where, if we had had the support of the other organizations we would certainly have come out victorious in place of being so badly defeated. In my opinion the time is not far distant when the O. R. C. will be a thing of the past, and the Brotherhood of Railway Conductors (which is now comparatively in embryo) will reign supreme. I further believe they will soon see the necessity of the federation, and with a slight persuasion will fall into line to try and form one great body. Our brothers should consider this matter thoroughly and not withdraw from us as soon as promoted to the right hand side of the cab, but stay and help along the good work. Although I am not employed as a locomotive fireman now, my heart and soul are with them as well as all other organized labor, and I would like to see this federation chain consist of five great links: the Engineers, Firemen, Brakemen, Conductors and Switchmen, and be called the National Order of Railway Men, or some other suitable name.

M. D.

HAIL AND FAREWELL.

Another year has sped away,
 And yet, thank God, we are not clay.
 No church yard ghouls purloined our bones,
 Nor sculptors wrought our names on stones.
 Our wives—perhaps against their will—
 Instead of widows, wives are still,
 And may the Lord for many a year
 Ne'er let them shed a widow's tear.
 Come boys, who love my pious pen,
 Endorse my prayer, and say, "Amen."
 Eighteen hundred and eighty-nine
 No longer o'er our heads shall shine;
 'Tis eighteen hundred and ninety now,
 Another wrinkle on the brow,
 Another peg upon life's road,
 By which reluctantly we've strode,
 Mid sighs and groans, mid smiles and tears,
 Like many long departed years.
 And thus 'twill ever be, kind friends,
 Until life's weary struggle ends.
 Oh! who can tell how soon we'll sleep
 Within some grave both dark and deep?
 Ah! well, we cannot stay the years—
 I'll rhyme for smiles instead of tears.

Come Sargent, take my proffered fist,
 And let me feel how you can shake,
 I'd wrench yours off just at the wrist,
 But for your wife and Mabel's sake.
 What's this in the decanter here?
 Ha! ha! 'tis full of crimson juice!
 Come, fill the glass with honest cheer,
 And hang the man who does refuse
 To drink good health and future joy
 To those who toil within the cab,
 Drink deep to every stalwart boy,
 And never mind how critics blab.
 Here Debs, clasp hands, relax your brow,
 And let your genius rest awhile;
 'Tis not the time to ponder now
 On things abstruse; to-day we'll smile
 At all the venom'd stings of fate—
 Lord knows they're numerous enough—
 We've discord, envy, slander, hate,
 Each day to pierce us quantum suff.
 Here, drink this toast—'tis water, Gene,
 That sparkles brightly in my glass,
 And readers of the *Magazine*
 May know inside my lips don't pass
 A stronger liquid, just because
 I dare not trust my fevered brain
 To violate some social laws,
 Which bann full bumpers of champagne—
 "Here's may the year we enter on
 Our two great Brotherhood's restore
 To friendship, from our counsels gone,
 And lead us back to peace once more."
 Ah! well, old friends, each empty glass
 Bespeaks your wishes most sincere;
 Who knows but ere a month shall pass
 We'll say, "God bless this glorious year?"

Shandy Maguire.

A NUMBER of excellent communications have been crowded out of this issue of the *Magazine* for the want of space.

MEADVILLE, PA., December 1, 1889.

Editor Firemen's Magazine:

The fifth annual ball of Loyal Lodge, No. 207, Brotherhood of Locomotive Firemen, which took place in Library Hall, Thursday evening, November 21, was attended by about 125 couples, and was a complete success, socially and financially. Loyal Lodge has established a reputation in this city for managing dances, and all lovers of terpsichorean festivities look forward to the annual ball of the B. of L. F. The management on this occasion left nothing undone to insure success and a pleasant time. The ball room was profusely and beautifully decorated, with red, white and blue streamers, red, green and white lights, while here and there were appropriate mottoes of welcome to the other railroad Brotherhoods and friends. In front of the gallery which overlooks the ballroom, were placed two headlights, one on either side, while the center was occupied with a pick and shovel, crossed, an emblem of the Order. The programme opened with a march to the music of the famous Northwestern Orchestra, under the leadership of Prof. F. B. Nichols. During the march the music was stopped, and Capt. W. B. Best mounted the stage and in behalf of the lady friends presented Loyal Lodge with a handsome banner which was appropriately decorated with emblems of the Brotherhood. The reply of acceptance was made by Bro. Samuel First. Immediately following the surprise was the ball, which consisted of a well arranged programme, and it needs no words from the writer to say that it was one of the most enjoyable events of the season. The banquet was one of the most important features of the occasion, and was arranged by the ladies of the Order. Six long and two short tables were laid and laden with all the delicacies of the season. The success of the above is principally due to the efforts of Mrs. Wm. Sherwood, Mrs. Aaron Scowden, Mrs. Thomas Patton and Miss Hattie Moore. Taken all in all the fifth annual ball of the B. of L. F. was an event that will live long in the memory of those who were present, and the sixth annual will be anxiously looked forward to long before any arrangements have been made for it.

K. L. S.

The Land Question.

MR. EDITOR:—In reading the November issue of the *Magazine*, I noticed an article on page 968, captioned "Land," to which I desire to make reply. "By all things decent let us have reasons instead of rot to answer" is a quotation that comes in most opportunely in connection with the attack on Henry George's theories. To proceed: Abram, or Abraham, had all the land his eyes could survey given to him and to his seed for ever: that is for the nation which should be formed by his increase. Now instead of disproving Henry George's theory, this distinctly goes to prove it. The land was not given to Adam for speculation or for an inheritance to be handed down to his eldest son to the exclusion of his less favored relations, but to his descendants to dwell in. The land on the whole earth, not only of America or Ireland, is given by Divine Right to every one who requires to use it, and no amount of precedent can make it right for one man to have the power to tax

his fellows for a right to live. "In the sweat of thy brow shalt thou eat bread" was God's order to Adam. And there is no class that does not have to do so, in one form or another, except—those who live on rents (i. e. on a share of labor's earnings) collected by a right of gifts, or purchase from someone who had no more rights to give than they to receive. Since this is an indisputable fact, take a step farther and consider if there is anyone who can more justly be taxed for the maintenance of government and law-making, (without which titles would be useless,) than these speculators on land. As the gifted writer has taken for granted the truth of the Bible narrative, and the present one has done the same; it would be well to see if there is no word in support of Henry George's condemnation of great land holdings. By the mouth of Isaiah, God says, "Woe unto them that join house to house, that lay field to field, till there be no place; that they may be placed alone in the midst of the earth!" And Solomon says, "Much food is in the tillage of the poor, but there is that is destroyed for want of judgment."

A closer study of the works under discussion, would to a great extent alter the tone of the author of "land," and it is to be hoped it will strike him as having a thoroughness of purpose and an honesty of intent, which together with sound reasoning, can stand a greater shock than the quoted attack without flinching. Almost every utterance of this *Magazine* is in keeping with Henry George's principles, and it would seem more suitable for some organ of *monopoly*, some *stock gambling exchange*, or some land grabbing record, to throw sneers at his honest effort to solve the *greatest* problem of the age.

W. F. Stocker.

COVINGTON, IND., December 15, 1889.

Editor *Locomotive Firemen's Magazine*:

I see in your last number statistics furnished the *St. Paul Daily News* by Mr. S. S. Coffin, showing the vast number of men annually killed and maimed on "the rail." President Harrison, in his message, also notes the slaughter and the maiming for life of over 22,000 railroad operatives during the past year, mostly for the lack of automatic brakes and couplers on the cars. The Inter-state Commerce Commission has sent out circulars of inquiry for information on safety appliances, brakes and couplers, the purpose being to report the facts to congress, touching the appointment of a Board of Experts, to whom will be submitted all improvements received, for their information, test, and selection of such appliances to be uniformly applied to all cars on the railroads of the country, the purpose being, if possible, to put an end to the wholesale slaughter of railroad employes. I feel called upon, as an inventor of an automatic coupler, to furnish your readers with a short synopsis of the twenty-six requirements we claim it fills, as follows:

HEATH'S CAR COUPLER.

Combining my patents, No. 372,801 and No. 408,481, our working model fills the requirements of the Master Car Builders' Association.

1. It is simple, durable, cheap.
2. Couples automatic two, or a train of cars.
3. Can set to couple either side or top of car.
4. At either side or top of car can unset and set to suit instantly

5. Can uncouple from either side or top of car.
6. Can set not to couple buffing round in yards.
7. Can set to couple to any height car.
8. Couples to old-style couplers, any height, without going between cars, or holding link by hand, spring or stick.
9. Can make running switch from top of cars.
10. Engineer in cab can uncouple any or all cars instantly.
11. Coupling hook fast pivoted in its place, always ready.
12. Hook hangs uniformly level, ready to couple with its own or other couplers.
13. Couples at slow or rapid speed.
14. With lever or rod, can guide link-point or hook into all old-style couplers, high or low, right or left.
15. Never need touch coupler hook by hand for any purpose.
16. No spring to aid or secure coupling and brake in frosty weather.
17. Snow or ice can not trouble in any way.
18. Sure double coupler in route, may be single about yard.
19. If on either car to be coupled, no going between cars when buffing to couple.
20. Two inches slack will be sufficient.
21. Can be uncoupled on curves.
22. No stress of impact shock on axle pin of coupler in buffing.
23. Adapted equally to passenger, freight or flat cars.
24. Can shorten space between cars one-half, (sixteen inches.)
25. Can dispense with drawhead. Have rubber or spring buffer to receive buffs and impact shocks.
26. Fits in place of old coupler; quickly put in by any one.

Railroads, order a few couplers, test, and report to M. C. B. Association, 38 Wall street, New York, and to the U. S. Inter-state Commerce Commission, Washington, D. C. A person or railroad securing its adoption and use as the uniform coupler of the United States shall be well paid, or have an interest in the patent.

Railroads report 6,000 men killed or maimed annually, coupling cars, at a cost of over \$3,000 per man, \$18,000,000 annual loss to railroads. This coupler will save it. Heretofore the best couplers failed on 15 above points: viz: Nos. 3, 4, 5, 6, 8, 9, 10, 12, 13, 14, 15, 16, 18, 19, and 22. Address

A. R. HEATH, Covington, Ind.

BELLEVILLE, ONT., November 23, 1889.

MR. EDITOR:—You do not very often hear from Challenge Lodge, No. 66, but we are always willing to send notes when anything in particular occurs. Please publish the following:

Challenge Lodge, No. 66, Belleville, held a very successful ball in the Odd Fellows' hall. The hall was beautifully decorated for the occasion. It was the most successful ball held this season. The weather was threatening for two or three days before, and that day the rain came down in torrents. But in spite of the weather between 75 and 80 couple were seen wending their way to the hall, and they did not regret their going, for all present had an enjoyable time. At midnight lunch was served in the hall, and all fully relished the good things. After the inner man was fully satisfied dancing was resumed, each trying to make it enjoyable for the other until the early hours of the morning came, when we dispersed, glad to meet, sorry to part, and happy to meet again. Dick Snell was present dancing for joy that he was to be united in the holy bonds of matrimony in the course of a few days to a highly respected young lady. The committee having the ball in charge was H. Gorman, J. Williamson, J. Murray, J. McDonald, D. Callaghan, T. Marshall, G. Wilson and W. Loque, and deserve great credit for their work in trying to make it an enjoyable evening.

J. Williamson.

CLINTON, ILL., November 18, 1889.

Editor Firemen's Magazine:

I am going to write a letter, and if I could write as I feel, it would be a scorcher. What is the matter with our name, B. of L. F.? Are these brothers who agitate the changing of our name ashamed of it? If so, let them change their name, not ours. I have been a member of this Brotherhood since the organization of New Hope Lodge No. 37, at Centralia; withdrew and became a charter member of Main Line Lodge No. 176.

During all these years, that name has been good enough for me, Brotherhood of Locomotive Firemen. Who is ashamed to be called one? Benevolence, Sobriety, Industry and Protection—do they want to change that? Do they want to change our record?

Further, what name have we in view? Do they want to be called Brotherhood of Locomotive Hostlers? Brotherhood of Locomotive Enginemen? There, that is it. That sounds big.

Now, you can see that I am opposed to the changing of our name. Those in favor of a change, I would like to have them state, through the columns of the *Magazine*, the object. 176.

TERRE HAUTE, IND., November 30, 1889.

MR. EDITOR:—As an old member of the B. of L. F. I desire to make a reply to the article in the October *Magazine*, by Louis Heller, of Lodge No. 163, by reviewing my experience in railroading. I began in 1877, by firing on the Texas & Pacific Railroad, serving in this capacity for four years. I was then promoted to the position of hostler, at Longview, Texas, remaining in this service for one year, when I was made night round house foreman, where I served until September, 1882, at which time I severed my connection with the Texas & Pacific Railroad. I then went to work as a freight engineer on the Jefferson branch of the Missouri Pacific Railroad, and at the expiration of three months was given a passenger engine which I ran over two years. I have, therefore, served as an engineman in every capacity, from wiper to passenger engineer. My membership in the B. of L. F. dates back to 1877. I first joined Lone Star Lodge, No. 70, at Marshall Texas, which Lodge was later removed to Longview. I have also belonged to Red River Lodge, No. 8, and Texas Belle, No. 155, and am now a member of Vigo Lodge, No. 16, having deposited my card from one Lodge to another as my occupation demanded. During this period of membership I have traveled frequently on a fireman's traveling card. Had the Brotherhood then had a name embracing all classes of enginemen my card would have entitled me to the courtesy of engineers as well as firemen, and as there are so many engineers in our Brotherhood, why should we not mutually enjoy such privileges engineers and firemen can give. I have always advocated this change of name, and I can think of no name that would so well explain its mission as that of "Locomotive Enginemen."

East Line.

INQUIRY comes from Jersey City as to what the members of Forest City Lodge, No. 10, mean by calling W. C. Mooney "blondy."

ST. LOUIS, November 18, 1889.

Editor Firemen's Magazine:

Having cleaned the old "32," rubbed up her brass and shined her generally, so that my engineer said, "Bully for you," I went home to see my wife and babies and found the *Magazine*. I read it and felt proud. Then I concluded to drop you a line, and my thoughts took a sort of rhyming form, and here they are. If they don't suit you, and the cat gets them, I shall be none the less a friend of

THE LOCOMOTIVE FIREMEN'S MAGAZINE.

Of the Brotherhood organs, the best that I have seen is the Locomotive Firemen's splendid *Magazine*.

It has convictions, and is a stranger to fear,
And has the courage to publish what the boys want to hear.

And whether its policy is attack or defense,
It goes at the business with zeal and common sense.

It is the organ *par excellence* of the B. of L. F.,
And in championing its rights it never does get left.

It went for old Corbin, that notorious Christless whelp,
And every time it hit him the old hound gave a yelp.

In favoring federation, all the firemen know,
It told the direction the tide was going to flow.

It bounced the obnoxious laws of the B. of L. E.,
And at Denver, in November, won a telling victory.

No stauncher friend of labor ever raised a battle flag,
And this is a stubborn fact about which there is no brag.

It has lashed the blatherskite, the Plukerton and spotter,
And its words, like whips of flame, could scarcely be hotter.

It has flayed the dirty scab wherever he was seen,
And such is the record of our *Firemen's Magazine*.

It has been iconoclastic, death to hypocrisy and shams,
And its arguments for justice have been like battering rams.

It has been the friend of firemen, and of every working man,
And the boys name its editor and say, "Behold the man."

He dares tell the truth, the Brotherhood to save,
And when that can't be done the Brotherhood needs a grave.

What say you, firemen boys, where Canada's rivers flow,
Down to the sunny land, where warm winds ever blow?

What say you, firemen boys, from the Pacific's golden shore,
To rock-ribbed New England, where Atlantic billows roar?

What say you, firemen boys, shall we refuse to rally
In our Lodges on the mountain, in Lodges in the valley?

Rally to the support of our gallant *Magazine*,
With a hip, hip, hurrah for our peerless Eugene.

Double its subscription, increase its prestige and its power,
We can do it, we will do it. Now's the day and now's the hour.

In the thickest of our battles our flag is never lowered,
And where the fight was fiercest our Gene never cowered.

Then while the skies are blue and while the pastures are green
We will stand by our editor and our splendid *Magazine*.

Longfellow.

Personal.

THERE are no better member in our Order than Bro. Mace of 178. He is always ready to extend the hand of fellowship to a worthy member.

It is reported that Bro. W. Stewart of No. 67 is willing to wager that his boy can throw more coal and talk faster than any member of the lodge.

It is remarked in Jersey City for the benefit of the members of Loyal Lodge, No. 207, that Bro. Maybee has a mustache and that he is very proud of it.

W. Y. DENNIS, Receiver of Maple City Lodge, No. 198 handles an artistic quill and his friends are urging him forward as a suitable candidate for poetical honors.

THE members of H. G. Brooks Lodge, No. 169, are requested to ask Bro. C. S. Graham what article he purchased on Fourteenth street, in New York late in November last.

As Secretary of Stone Mountain Lodge, No. 32, Bro. Jno. W. Wright is a success. His letters are among the neatest and best written in the files of the Grand Lodge.

VICE Grand Master Hannahan reports Salt Lake Lodge, No. 178 in prime condition and the members in all regards in consonance with the progressive spirit of the times.

It is reported that Bro. Brown of No. 140, is one of the most ardent supporters of the brotherhood in Colorado. He is of the type one is glad to meet when away from home.

AMONG our active members in Harbor City Lodge, No. 300 is Bro. A. S. Hewitt who does service as Secretary and Collector, besides being general utility man for the lodge.

At the organization of Lodge No. 366, at Ogden, Utah, Bros. H. Grubnan and J. J. Murphy, of No. 98, rendered efficient service for which they have the thanks of the Vice-Grand Master.

On his recent trip to Utah, Bro. Hannahan met Bro. J. H. Hand, of No. 113, whom he found actively interested in the work of the order and in line with the progressive spirit of the times.

FRANK Dunham of Triumphant Lodge No. 47 maintains his popularity on the Illinois Central. Frank is at home on the right side of an engine, and knows how to get there, you bet.

THE remorseless hand of death cut down the bright little girl of Bro. and Mrs. J. C. Oakley, of Lyndonville, Vt., and the bereaved parents have the profound sympathy of the entire community.

R. W. RIDGEWAY, Esq., Superintendent of the Third Division of the D. & R. G. has our thanks for courtesies shown our Vice-Grand Master. Mr. Ridgeway is eminently a representative railroad man.

At the home of Bro. and Mrs. A. H. Garfield, of Huron, S. Dakota there is great rejoicing over the arrival of a little daughter, November 11th. The fond parents have the congratulations of their many friends.

W. T. WEBB, Esq., General Foreman of the repair shops of the D. & R. G. at Pueblo is spoken of by those who know him as an exceedingly courteous gentleman and has the esteem of all the men in his employ.

THE members of Trenton Lodge, No. 253 are congratulating Bro. Joseph H. Decator upon his promotion to the right hand side. Joe was advanced as a reward of merit and those who know him predict for him a promising future.

B. J. FIELDHOUSE of Dominion Lodge, No. 67 was on December 7th united in marriage to Miss Lottie Sargent. Bro. and Mrs. Fieldhouse spent a delightful honeymoon in the States, and have now settled down to the realities of wedded life.

OUR Vice-Grand Master says that when Bros. Hynes, Hoover and Walton debate a proposition, the wool flies like snow in a storm. Bro Bennett had a realizing sense of this and pulled for the shore, while the V. G. M. staid with the tournament.

It affords the *Magazine* pleasure to chronicle the marriage of Bro. Thos. Leonard, of Green Mountain Lodge, No. 301, to Miss Sadie E. Leavitt. The groom and bride are deservedly popular and many good wishes are expressed in their behalf.

THE saying that misfortunes never come singly came home to Bro. Wm. Davis, of Dominion Lodge, No. 67 with solemn reality. Two of his children died within a short time of each other and his household is weighed down with the sad affliction.

E. P. HASTINGS, an old time member of our Order, now a member of Division No. 55, B. of L. E., Terrace, Utah, was a caller at the Grand Lodge office during our absence. We regretted our failure to meet Bro. Hastings and hope he will call again.

In the latter part of October Bro. J. Haddon, of Calhoun Lodge, No. 84, met with a frightful death by the explosion of his engine between Haskell and Valparaiso. Bro. Haddon was highly esteemed and his death is mourned by all who knew him.

CONDUCTOR Dan M. Murphy, formerly of North Madison, Ind., is now running a train on the Santa Fe, between Pueblo and Denver. He possesses valuable mining interests and his many friends will be glad to learn that he is on the high road to prosperity.

DURING a recent visit of Grand Master Sargent at Macon, the boys introduced him to the "poling" scheme, quite popular in Georgia. The G. M. being thoroughly initiated, it is quite likely that he will try it on Bro. Davidson, who, we are informed, would make an excellent persimmon knocker.

CLARENCE DIXON a most worthy member of Empire Lodge, No. 212, died November 3d. He was also a member of the I. O. O. F., and both orders took part in the funeral ceremonies. A tribute of some length is paid him by a fellow member which on account of lack of space, we are unable to present to our readers.

His many friends will be pleased to learn that Bro. C. W. Cheeseman, of 25, now located at Ogden, Utah, has an excellent run and is doing well.

We are glad to know that Bonanza Lodge, No. 194, is booming and that Bro. A. J. Grinnell is now running a switch engine, and that five of the members of the Lodge have been promoted to switch engines, and four to engines on the main line. That looks like business.

In W. F. Brundage, Rocky Mountain Lodge, No. 77, has an officer of unquestioned activity, ability and integrity. We could wish that some of our weak and pining lodges had just one such man as Bro. Brundage, to set them an example as to what can be accomplished by resolute purpose and indomitable will.

We learn that Bro. Jas. T. Looney, of Ohio River Lodge, No. 294, has gone to the right hand side and is running a yard engine in Lexington, a position that fits his shoulder like a musket. He can now go up on Spring street every night of the week, and he takes advantage of his privilege. Good for Jim.

We are pleased to announce that Bro. W. F. W. Curl, Collector of Orange Grove Lodge, No. 97, at Los Angeles, was married November 20, 1889, to Miss Ellen Grace Price. The *Magazine* cordially extends greetings to the bride and groom, and congratulates Mrs. Curl upon her "new name," and wishes the happy pair a life journey of happiness and prosperity.

The committee in charge of the ball and supper lately given by Northwestern Lodge, No. 82, tendered an invitation to Bro. Frank Dupell of the Grand Lodge office to be present, and, accompanying the same were four supper tickets which Bro. Mayo remarked, would probably secure a square meal for the celebrated lunch fiend. Bro. D. did not attend.

The many friends of Bro. C. J. Singleton, of the Grand Executive Board will be pleased to learn of his marriage to a most estimable young lady of Mattoon, Ills. In entering upon their matrimonial voyage Bro. and Mrs. Singleton have the best wishes of the members of the brotherhood throughout its jurisdiction and with this sentiment the *Magazine* is in hearty accord.

Our esteemed Brother A. J. Schmidt (Centric Strap) of Gulf City Lodge, No. 115 is now stationed at Houston, Tex. and has charge of a yard engine. The switchmen say he is *par excellence* with an engine and handles the cars like a trained veteran. An engineer from the ground up, with habits and character above reproach, Bro. Schmidt is certain to rank high in his chosen calling.

Past Vice-Grand Master W. G. Edens, of the Brotherhood of Railway Trainmen, and a more clever gentleman never lived, slipped into Terre Haute recently while we were asleep and brought a huge blizzard with him, after which he silently departed for Lafayette. We have no objection to an average blizzard, but hope that Bro. Edens will stay with it next time long enough to give us a grasp of the hand.

One of the strongest teams in 59 is Walker, McMurray and Bailey who are said to be equal to forty horse power in an emergency.

H. L. BRIGGS is widely known throughout the State of Texas as a right royal brotherhood man, whose every impulse throbs in harmony with the good of the order. As Master and Secretary of Gulf City Lodge, No. 115 he has distinguished himself as a careful, painstaking and thoroughly competent officer, in whom the members take a just pride. A model Master such as Bro. Briggs is bound to have a model lodge.

We are indebted to Bro. Morris Turnham, of Clark-Kimball Lodge, No. 113 for a call from Mr. Geo. Wentworth, round-house foreman of the U. P., at Pocatello, Idaho. Mr. Wentworth was formerly a resident of Terre Haute where he still has many relatives and friends who were glad to welcome him back to the Hoosier State. We found in Mr. Wentworth a genial gentleman and a practical railroad man whom we shall be pleased to meet again and often.

MEMBERS of the brotherhood who visit Chicago with a view to calling on V. G. M. Hannahan are cautioned against the bench-legged dog that presides over the premises of that gentleman. He answers to the name of "Spot" and is as "yaller" as a pumpkin. The cur measures five feet from snout to tail, with legs less than three inches long. Dan Duggan of Buffalo insists that that set of legs is a misfit and must have been intended for some other canine. "Spot" is sure death to peddlars and tramps, and when at home Bro. Hannahan amuses himself and friends by watching them disappear over a six foot fence minus the bosom of their pantaloons.

We notice that a Barbers' Protective Union has been formed and incorporated under the laws of Illinois, with its headquarters at Freeport. We doubt not that it will soon become national, and feel assured it will be a great benefit to all tonsorial artists, worthy of the name.

We acknowledge the receipt of a splendid picture of the photographic art, which gives at one view the members of the J. B. of A. of the A. T. & S. F. system. The picture is valuable and the faces indicate that prudence and courage will prevail in all cases where the J. B. of A. is required to act.

Through the courtesy of Gate City Lodge, No. 92 we have received a photograph of the interior of the hall in which the tenth annual ball of that lodge was held. The decorations were superb and are shown to good advantage in the picture which we prize as a souvenir of an occasion of special interest.

THE *Frog*, referring to "the complimentary excursion tendered the engineers by the mountain roads," says it cost the companies something, but think how much they have advertised their roads. Why, those women will talk about the Rocky Mountains till they reach the golden shore." And some time thereafter.

Hannahan's Thanksgiving Dinner.

The second day after Thanksgiving we received a package by express accompanied by a private note which read as follows:

"Old Pard, I have sent you by express a part of my Thanksgiving dinner. Barry eat the tail."

Hannahan.

The part expressed to us was a hog's ear about 18 inches long with the hair on—as Barry eat the tail,

HANNAHAN'S THANKSGIVING.

Hannahan must have eaten the remainder—about the whole hog. Just think of Hannahan with a whole hog in him except the tail and one ear—Hannahan transformed into a pork barrel—or a sausage grinder—or more properly a pork packing establishment running in opposition to Phil. Armour. What a splendid King of Grease he would make. See him smoke, and call himself Lord Bacon. How the average Israelite must admire him on account of his fondness for swine. It will now be in order for Hannahan to squeal when lard is cornered—to grunt when assailed, to root when hungry and bore his friends when at leisure. The complimentary ear expressed to us at something less than a "dollar of the daddies," is being made into a silk purse, as a hair loom, and in due time will be presented to some child of Ham. It is well understood that when Bro. Hannahan attempts to do anything he goes the whole hog.

The Grand Master at Saginaw.

In the early part of November, Grand Master Sargent visited Saginaw Valley Lodge, No. 286, and had a delightful meeting with its members, who had looked forward to the visit with great interest and who received the Chief Executive of the Order with many demonstrations of regard. Bro. Sargent reached Saginaw on Saturday the 9th, and in the evening a reception was held in the Brotherhood Hall, where feasting and dancing was in order. The *Saginaw Courier-Herald*, of November 12, referring to the subject says: "The interior of the building was handsomely decorated with evergreen, bunting, emblems of the order and hot house plants, and the tables were spread with oysters in every style and other seasonable delicacies, cake, coffee and fruit. Afterwards the room was cleared and to music furnished by the Saginaw Orchestra the nimble firemen and their pretty wives and sweethearts danced the closing hours of the day away. On Sunday morning a business meeting was held which the Grand Master attended, and in the afternoon another was convened for the discussion of important subjects. Brother Sargent, while in Saginaw, was the guest of Bro. Will F. Carle, Secretary of 286.

A New Lodge.

On Sunday, December 9th, 1889, Vandalia Lodge, No. 405, was organized at Effingham, Ill., by Grand Master Sargent, Grand Secretary and Treasurer

Debs and Frank Dupell, Master of Vigo Lodge, No. 16, assisted by twenty members of No. 16. The new Lodge is composed principally of men who belonged to No. 16, of Terre Haute, and the name it bears, is in honor of the Vandalia system of which Mr. Riley McKeen is President, and to whom the new Lodge tendered its thanks for courtesies. A number of surrounding Lodges were represented, and the new Lodge starts off under highly favorable auspices. Secretary J. F. O'Reilly, of No. 16, distinguished himself and made many friends, as did Master Cornick, of No. 37. The New Lodge, being fully equipped, has the best wishes of the Brotherhood.

For unique design the invitations and programmes gotten up for the eleventh annual ball of Fargo Lodge, No. 85 are entitled to the ribbon. The invitations were in the form and style of train orders and the programmes were made to represent time cards. The scheme was strikingly original and displayed decided ingenuity on the part of the committee. No. 85 is keeping up with the procession.

The Locomotive Engineer.

In the December number of the *Locomotive Engineer*, John A. Hill, editor, we find the following "birthday" notice:

"With this issue the *Locomotive Engineer* completes its second year. What it has done we leave to the individual reader to judge for himself; for, after all, it is what good a paper does to individual subscribers that determines its value. Judging from the letters received on the subject, we feel very well pleased with the results so far. The circulation has gone steadily forward from the first, and is now ten thousand copies.

Manufacturing concerns have patronized the advertising columns liberally, and found, as we contended they would from the first, that what was of interest to the men in the ranks was of interest to the officials over them, and that all had a certain amount of influence in the purchase and use of tools and supplies.

We are indebted to many friends for the raising of large clubs, a considerable number of which had more than a hundred names.

The paper may now be said to be fairly on its feet. The avenues of information have been paved and improved, and connections and acquaintances formed that make the road, if not easier, at least surer for the future. We are going to try to make a better paper next year, than we have this, and, with your help, we are sure we can."

We want to add a word: The *Locomotive Engineer* is the most mature "yearling" that we remember ever to have seen. It is large, lusty, liberal—brainy. There was a place for it, and it fills the place. It has a mission and is fulfilling it. We want every members of the Firemen's Brotherhood to subscribe for the *Locomotive Engineer*. They can't put a dollar to a better use. The investment will pay large dividends. If they subscribe for the *Locomotive Engineer* and read it for a year, they will be greatly obliged to this *Magazine* for helping them to invest \$1.00, in a way that will do them a *heap* of good.

John H. Howell.

John H. Howell, Receiver of Marvin Hughitt Lodge, No. 132, who has been Post Master of Eagle Grove, Iowa, during the past four years has had still further honor bestowed upon him by his constituents by being elected Sheriff of Wright County, by a handsome majority. An Eagle Grove correspondent of the *Des Moines Leader* tells the story in that paper. Here it is:

"The strife over the postoffice in Eagle Grove has revived again, in consequence of our popular postmaster, Mr. J. H. Howell, having been elected sheriff of Wright county. He was the only democrat elected on our county ticket, his great personal popularity overcoming 700 republican majority, with something to spare. His resignation of his present office has been sent to the department, and hence the activity of his would-be successors. Consternation filled their breasts yesterday in consequence of a report circulated on the street to the effect that President Harrison had refused to accept his resignation on the ground (which could not be disputed) that he had made a most acceptable postmaster, that the shrievalty need not necessarily interfere with his duties as postmaster, and he should therefore hold both offices until his commission as postmaster expires. Until Mr. Howell himself contradicted the rumor the little coterie of postoffice politicians were inconsolable, and if a vote of the patrons of the office was taken as to who should fill the position Mr. Howell would get four out of every five."

The foregoing bears eloquent testimony that Bro. Howell is in the line of advancement as a reward of merit and that he may continue to climb until he reaches the summit of his ambition is the ardent wish of the *Magazine*.

The De Soto (Mo.) Meeting.

In the forenoon of Tuesday, November 19, 1889, a federated meeting of the various railroad organizations was held at De Soto, Mo., under the auspices of Pride of the West Lodge, No. 6, which the editor of the *Magazine* had the honor of addressing. The various orders were well represented and several of the representatives addressed the meeting.

In the afternoon a closed meeting of the Pride of the West Lodge was held for the transaction of business. In the evening a grand musical and literary entertainment was given at the Grand Opera House, which was largely attended, and was pronounced a brilliant success. One of the most agreeable incidents of the entertainment was the address of Hon. W. F. McEntire, of St. Louis, a young attorney of splendid literary attainments and an eloquent speaker. Mr. McEntire was listened to with profound attention and elicited generous applause throughout. He is an ardent friend of labor organizations and in full sympathy with the labor movement of the times. We predict that at no distant day he will be heard from in the councils of Missouri and of the United States, in pleading for justice to the laboring men of the country.

After the musical and literary entertainment concluded its programme, dancing was in order, and fair women and gallant men danced the hours away to charming music.

Pride of the West Lodge, did itself immense

credit November 19th, and received the thanks of all who were so fortunate as to participate in the elegant enjoyments it had provided. Such entertainments speak well for our Order, and the fact that they are becoming frequent shows conclusively that our Brotherhood is well abreast of the army of progress.

Amusements.

Orange Grove Lodge, No. 97, gave their seventh annual ball at Turner's Hall on Thanksgiving eve. The hall was beautifully decorated, and exhibited a very tasteful appearance. The attendance was large, and socially, it was a success. Brother Morton, as floor manager, "did himself proud."

Trenton Lodge, No. 253, B. of L. F., recently gave its fifth "select sociable" at Masonic Hall, Trenton, N. J. A Trenton paper refers to the "sociable" as "the most successful social affair of the season. The hall was tastefully decorated: the music was excellent and there were a hundred couple on the grand march. The ladies were in beautiful toilets, and the gentlemen were not unmindful of the effect of fashion. The refreshments were in keeping with the elegant surroundings and the waltz went round till 2 a. m., when the band struck up "Sweet Home," and the happy company sought their couches and visited dreamland.

The grand annual ball given by Eureka Lodge, No. 14, B. of L. F., Tuesday evening, November 28, was in all regards one of the most brilliant social events of the season. The printed program was one of unusual beauty, reflecting great credit upon the lodge as being fully abreast of this aesthetic age. It is needless to say, that the toilets were superb, the ladies lovely, the music entrancing, and the refreshments such as to make the average epicure wish life were one long banquet. The dances included quadrills, polkas, waltzes and schottisches, and never did the "light fantastic" score more admiration. Let the dance proceed until all the Lodges of our noble Order are in the giddy whirl of pleasure. All work and no play makes the pick very heavy.

Referring to the fourth annual ball recently given by Burnside Lodge, No. 282, Mt. Carmel, Ill. A local paper says: The members of Burnside Lodge, No. 282, B. L. F., made a great social as well as financial success of their fourth annual ball. The hall was handsomely decorated with flags, evergreens, mottoes, pictures, etc., while on the stage was a representation of a locomotive. A head light and green lanterns ornamented the exterior. The music was by the ever popular Carters' Big Four, of Evansville. The attendance was large and Burnside's boys entertained their guests superbly. Nothing was lacking to add to the joyousness of the occasion. At midnight forty-four couples sat down to an elegant supper at the Grand Central. Taken as a whole the ball was one of the most successful ones ever given in Mt. Carmel, was ample evidence that boys of Burnside, 282, B. L. F., never do things by halves.

The *Fort Worth Gazette* of November 28th refers in highly complimentary terms to the third annual ball given by Trinity Lodge, No. 83, B. of L. F., on the evening of November 27th, at Hoffman's Hall. The *Gazette* says that "never since the Brotherhood was organized, was there, even in Fort Worth, a more successful social event, and the immense throng that collected there from the different railroad towns in the state spent hours of enjoyment that will long linger in their memory. The hall was beautifully decorated with evergreens and bunting, while, besides the brilliant gas jets, the large hall was flooded with the light from four large locomotive headlights, one in each corner of the hall. The music was splendid, and the company composed of as fine-looking men, and as pretty, well-costumed ladies as ever collected in a hall in this city." The programme was elaborate, and the supper was not only bountiful, but, as the *Gazette* says, was a "royal banquet." Perfect order reigned supreme, and the occasion was one of boundless enjoyment.

We have the Oakland, Cal., *Times* of November 12, giving a graphic account of the grand ball given by the members of E. C. Fellows Lodge, No. 143, B. of L. F. at Cavalry Hall, Oakland, Wednesday evening, November 11. The decorations of the hall were beautiful, showing refined taste and artistic arrangement. "At 9 o'clock," says the *Times*, "the hall was thronged with firemen, their ladies and their guests, and the grand march was a most brilliant inauguration of the ball. The committees, which were all happily efficient in their various duties, were: Arrangements—T. L. Davis, T. J. Roberts, Ed Johnson, D. Culderwood and E. W. Graham, Reception—J. W. Edgar, Thos. Kearney, Ed Stanley, H. Coyle and H. Edgar, Floor Manager—G. W. Pangburn, Floor Committee—R. H. Potts, W. H. Fulton, E. C. Cushing, J. B. Corbett and E. P. Woods.

The banquet was an elaborate affair and was prepared by Unity Lodge, No. 13, Ladies' Auxiliary. The officers of this Lodge are: President, Mrs. T. J. Roberts; Vice-President, Miss A. Kearney; Secretary, Mrs. C. W. Pangburn; Treasurer, Mrs. D. Quill.

Dancing continued till the early morning hours, and those who attended from a distance were accommodated by special trains at 3 a. m.

Such events are chronicled with pleasure by the *Magazine*, as they bear eloquent testimony that our Brotherhood is fully abreast of the times in the elegancies and refinements of life.

The *Daily Gate City* and the *Constitution-Democrat* of Keokuk, Iowa, of November 28 and 29, gives special prominence to the tenth Annual Ball of Gate City Lodge, No. 33, B. of L. F., given on the evening of November 27, 1889 in Gibbons' Opera House. The *Gate City* says: "A merry gathering of ladies and gentlemen assembled in Gibbons' Opera House to enjoy the delightful Terpsichorean pleasures which were prolonged until the small hours of early dawn. The brotherhood is to be congratulated for the splendid success they achieved, the ball rivaling all its predecessors in sociability and equaling many of them in the number of guests present, and the *Constitution-Democrat*, among other complimentary things said the dancing hall was attractively decorated, many affirming the decorations to be the finest ever seen in the hall. The proscenium of the stage was arched with a handsome work of evergreens studded with flowers. From the flies were suspended red, white and green railroad lanterns, and the word "Welcome" in large gilt letters. Lighted locomotive headlights bearing the number "93" were placed on either side of the stage, and the intermediate space was occupied with stacked coal scoops and picks. There was also a fine model engine, the work of Richard Schouten. In a glass case on the stage. The balcony on the east side of the room bore the words, "Gate City Lodge, No. 33, B. of L. F.," in gilt, on a background of red bordered with evergreens. "Protection, Charity, Sobriety and Industry," the motto of the Order, in gilt letters, also appeared. Over the top of the balcony was an evergreen arch studded with flowers, underneath which was a stuffed eagle upon an American shield. There was also a model engine displayed. Couch lanterns, festoons of evergreen and bunting, lent attractiveness to the decorations." It is easily seen that the occasion was one of more than ordinary interest and eclat. Delegations from surrounding cities were present, and Gate City Lodge won universal praise.

Acknowledgments.

MINNEAPOLIS, MINN., November, 10, 1889.

To the Officers and Members of the Brotherhood of Locomotive Firemen:

GENTLEMEN:—I have just received, through Mr. W. E. Richmond, a draft for fifteen hundred dollars (\$1,500), on the policy held by my beloved husband, Jas. Rooney. Please accept my heartfelt thanks for the prompt adjustment of the claim. May God bless your noble Order and let it continue to be a blessing. I sincerely thank the members of Northwestern Lodge, No. 82, for their kindness to me during my illness. May God in his goodness and mercy prosper your order and be the protection of its members, is the earnest prayer of a widow.

MRS. N. J. ROONEY.

WAMEGO, KAN., November 24th, 1889.

To the Brotherhood of Locomotive Firemen:

DEAR SIRS AND BROTHERS:—I desire to return thanks for the payment of a draft for fifteen hundred dollars, the full amount due me on the policy of my husband, Geo. Edwards. I also wish to thank the members of the Wamego Lodge 223 for their kindness and the many favors shown me in my late bereavement. May heaven's blessings fall on the members of your noble Order, is the wish of,

MRS. G. A. EDWARDS.

BRUNSWICK, GA., November 5, 1889.

To the Officers and Members of the Brotherhood of Locomotive Firemen:

GENTLEMEN:—I desire to return my deep and sincere thanks for the draft for fifteen hundred dollars, the insurance due me on the sad death of my beloved son, who was killed on the E. T. V. & G. R. R., July 21st, 1889. May this worthy brotherhood always prosper and when the earthly race of each is run may the star of hope shine brightly through the dark valley of shadows, to realms of cloudless and endless day. Again allow me to thank you and God bless the noble Order, is the wish of a heart broken mother.

MATTIE C. DOUGLASS.

PUERLO, COLO., November 19th, 1889.

To the Brotherhood of Locomotive Firemen:

I received this day through A. M. Sourwine, Receiver for Connecting Link Lodge, No. 25, a draft for fifteen hundred dollars, in full payment for beneficiary certificate, held by my brother, Orley Wheeler. For this favor and past courtesies, please accept my sincere thanks. With the best wishes for the welfare of your order. I am, yours truly,

CHAS. A. WHEELER,
Div. No. 6, B. of L. E.

GLENWOOD, PA., November 18th, 1889.

To the Brotherhood of Locomotive Firemen:

GENTLEMEN:—I desire to return thanks to Iron City Lodge, No. 318, for the beautiful wreath of flowers presented for the casket of my late husband, who was killed in Wheeling, W. Va., on the morning of September 24th, also to thank them for their words of sympathy and many acts of kindness to me in my great trouble. With kindest wishes for the prosperity of their lodge,

I am, very truly,

MARY E. GIBSON.

Addresses Wanted.

JAMES P. HACKETT.—A member of Fortune Lodge, No. 120, is requested to correspond with the Secretary of his lodge.

W. S. HURD.—When last heard from was working on the Mexican Central. Any one knowing his whereabouts will please correspond with T. J. Griffin, Secretary of Truckee Lodge, No. 19, B. of L. E., Wadsworth, Nevada.

ALFRED MORIN.—In 1884, was firing engine 272, on the D. & R. G. R. R. out of P. V. Junction, Utah. His aged and feeble parents are very anxious as to his whereabouts, and any one knowing of him, will please inform his brother, E. Morin, who is firing on the Northern Pacific, and whose address is, Missoula, Montana.

WILLIAM LACY.—An engineer on the Northern Pacific Road, on March 17th, 1888, later supposed to have been firing on the Santa Fe Route, running out of Topeka, Kansas. Any one having information as to his whereabouts will please correspond with George C. Ragsdale, Room 303, Grand Block, St. Paul, Minn.

Brotherhood Charts.

We are in receipt of many inquiries in regard to the charts, known as "Our Brotherhood Charts" and desire to say in reply, that they can be obtained from Bro. Wm. J. Hugo, of Eureka Lodge, No. 14, whose address is 79 N. Noble street, Indianapolis Ind. They are being closed out at 50 cents per copy.

DON'T BLAME THE WORLD.

Don't blame the world because the thorns are found
among the roses;

The day that breaks in storm may be all sunshine
when it closes.

We can not hope to always meet with fortune's fond
caressing,

And that which seems most hard to bear will bring
with it a blessing

The buried seed must rot in earth ere it produce the
flower,

And the weak plant to fructify must have both sun
and shower;

So man, to gain development, must struggle with
life's crosses,

And view with calm philosophy his trials and his
losses.

A deadly, pois'nous weed may yield a salve of surest
healing;

The sweetest bloom may pois'nous be, although its
bane concealing;

Things are not always what they seem, but still
'twas heaven designed them.

And we should class them all as good, and take them
as we find them.

Little we know of this brief life and nothing of its
sequel;

Then let us take in humble trust all that may seem
unequal;

God's ways are not our ways, and He should certain-
ly be trusted;

All that is wrong, in His good time, will surely be-
adjusted.

—Francis S. Smith.

A FREAK OF NATURE.

A wonderful freak in nature, resulting from the
charming of a hen by a huge rattlesnake, is reported
by Major Scheller du Buol, of this city. He had oc-
casion to search for a favorite hen belonging to his
coop of rare fowls, and he found her near a pile of
brush, trembling like a leaf and gazing with strained
eyes and neck transfixed, at a huge rattlesnake, with
head and tail up, ready for its fatal spring. Major
du Buos had a hoe in his hand at the time, and lost
no time in dispatching his snakeship. For three suc-
cessive days thereafter the hen laid an egg, on the
large end of which was an exact representation, in
miniature, of the rattlesnake, the flat head, short,
thick body, and button tail of this species of reptile
being strikingly apparent. Otherwise the eggs were
perfectly formed, and of ordinary size. The coils or
representations of the snake were raised a quarter of
an inch from the shell, and similarly formed on the
inside.—*Galena Dispatch Chicago Times.*

OLD PLANTATION DAYS.**Ole Uncle Ned and Ole Massa Done Gone Away.**

They are passing away—the old-fashioned negroes
of the ante-bellum South—and the places which
knew them once will soon know them no more for-
ever. They will in a few years be entirely sup-
planted by a progeny little like their ancestors. The
old plantation—"de white folks' house"—the happy
negro quarters—the family ties which bound the
two races together in bonds of affection and tender

consideration which one must have experienced to
appreciate—gone, all gone!

Old massa, old missus and the young massas and
misses. What a happy family! exclaims a writer in
the *Florida Times-Union*. And who ever mourned
with more unfeigned grief than the old family ser-
vants the breaking up of the old family when "ole
massa" died? Alas, it always fell upon the former
with a bitterness born of the uncertain fate which
awaited them afterward.

But they are fast dying out; the old plantation
songs have faded from lips on which alone they were
once so musical, which no other conditions may
ever realize. Did you ever see the long procession
of family servants—fifty or a hundred or more—
follow the coffin which bore "ole massa" to his last
resting place?

Down in de cornfield,
Hear dat mournful sound;
All de darkies am a-weeping,
Massa's in de cold, cold ground.

Talk about the negro dialect! No writer has ever
approximated it unless he was born and reared on
the old southern plantation from childhood to age.

And Christmas times "befo' de war." The happy
hearts in the "negro quarters" were up and singing
like the larks before the dawn of day, for the "aunts"
and "uncles," those monarchs of that realm which
has no succession—had been awake half the night
"waitin' for Christmas."

Were those the days of slavery and barbarism,
when white and black alike were happy only be-
cause they were ignorant?

But who would exchange these brand new days
for the old? These days when the "colored ladies
and gentlemen" wear bangs, or carry a razor or a
cigarette?

Still, it is sad to think of the complete dying out
of a race, one of the most interesting in the annals
of time—one peculiar to itself, and which can never
be reproduced. As the Indian passed beyond the
Rocky Mountains to die away on the western plains,
so this race, as it was known, of Yore, is passing over
the dividing ridge of two generations, to be known
no more.

A WALTZ SONG.

As lightly as the sirens go
Over the waste of sand,
Keeping time to the rhythmic flow
Of the waves upon the strand.
Gracefully as the swallow dips
Half seen through the twilight haze,
Even so my fair partner trips
As the music softly plays.
And to her in the waltz I whisper low,
The words of a song I knew long ago,
And the burden runs in the measure slow,
"Thou art all to me."

No music could my soul inspire
With hopes or thoughts more grand,
For I to her sweet love aspire,
I bow at her command.
'Tis a symphony played by Love
And the notes like jewels fall,
A mystic spell around is wove
As I murmur, "Thou art all."
Insteps to the music together go,
Her cheeks like the sky at dawning glow,
As she answers me in whispers low,
"Thou art all to me."

Flavel Scott Mines.

TIMES GO BY TURNS.

The sea of fortune doth not ever flow;
 She draws her favors to the lowest ebb;
 Her tides have equal time to come and go;
 Her loom doth weave the fine and coarsest web;
 No joy so great but runneth to an end,
 No hap so hard but may in fine amend.
 Not always fall of leaf, nor ever Spring,
 Not endless night, yet not eternal day;
 The saddest birds a season find to sing,
 The roughest storm a calm may soon allay.
 Thus, with succeeding turns, God tempereth all,
 That man may hope to rise, yet fear to fall.
 A chance may win that by mischance was lost;
 A net that holds no great, takes little fish:
 In some things all, in all things none are crossed;
 Few all they need, but none have all they wish.
 Unmingled joys here to no man befall:
 Who least, hath some; who most, hath never all.

—Robert Southwell.

TRADES UNIONS VS. THE CORPORATIONS.

It is charged against the labor movement that it is cruel. They say we combine, we form trades unions, and do various things that are inimical to the well-to-do classes, the corporations, and the capitalistic gentlemen seem to think that the laboring men should be in subjugation to them. Well, what if we do! Where did we learn it? "To be sure, we say to the Chinese, stay at home. Don't come here." We say to the crowding millions who try to swamp our trade, "Stand aloof, we won't teach you." We say to the mills of Lowell who have turned us out of door, "We'll starve you into submission." Well, "it's a narrow contest, it's an unjust, it's a cruel, it's an avaricious method." So it is. Where did we learn it? Learned it of capital. Learned it of our enemies.

We know labor is narrow. We know she is aggressive. We know she arms herself with the best weapon a corrupt civilization furnishes—all true. Where do we get these ideas? Borrowed them from capital; every one of them; and when you advance to us on the level of peace, unarmed, we'll meet you on the same. While you combine and plot and defend, so will we.

But our opponents say, "Come into the world with the white banner of peace." Aye, we will, when you disarm. How foolish it would have been for Grant to have sent home his Sharpe's rifles to Springfield, and garnered all his cannon in New York, and put all his monitors in the harbor of Norfolk, and gone down to Virginia with 80,000 unarmed men to look her in the face. Labor comes up and says, "They have shotted their cannon to the lips; they have rough-ground their swords as in battle; they have adopted every new method; they have invented every dangerous machine; and it is all planted like a great park of artillery against us. They have incorporated wealth; they have hidden behind banks; they have concealed themselves in currency; they have sheltered themselves in taxation; they have passed rules to govern us, and we will improve upon the lesson they have taught us. When they disarm we will—not before."—Wendell Phillips.

AFRICA AND ITS TRIBES.

Throughout the great area included in the Equatorial Provinces there must be varieties in the physical type. The tribes are not, however, strikingly different to a casual observer. They are all finer people than the West Coast negro whom we see in America. The head is higher, the face less prognathous, the features more agreeable, and the limbs more symmetrical, and muscled well down to the extremities. The long heel and crooked shin, which we consider characteristic of the true negro, do not belong to the negro of the Upper Nile. The type improves as we ascend the Nile. The Baris are fine, large men, uncommonly tall and well filled out. The women also are tall and strong. The Madis are, however, the beauties and dandies of the whole country. One will see there really handsome men. They are not so large as the Baris, but very symmetrical, and their features are often positively agreeable. They take more pains in personal decoration than most of their neighbors, dressing their hair very elaborately, and often painting their bodies in fantastic patterns.

All of these people are armed with spears, and many of them carry bows and arrows as well. Shields are by no means universal. Such of the tribes in the immediate vicinity of the Nile as carry no shields seem to dread the shields of the Makraka warriors from the West, who were occasional allies of the troops of the Provinces, quite as much as they feared their fierce courage and reputed cannibalism. In arms, as in dress there is some variety in detail. The size, shape, and barbing of spear and arrow heads vary. The arrows particularly are often fiendishly contrived to lacerate terribly, and to be withdrawn only by free cutting. Poisoned spears and arrows are used, but from such information as I could gather, I concluded that the danger from them was easily exaggerated. The people have not the knowledge to concoct poisons that will at once last on the head of the weapon and be quickly soluble in human blood. It is doubtful, indeed, if they have any poison that would produce a serious general effect if introduced into the circulation, although their poisoned weapons make ugly sores. In short, they can not fight with specifics any more than white men can; but must rely upon their individual courage and address, in which they are not deficient, and upon the quality of their weapons, which are formidable enough.—Col. H. G. Prout in *Scribner's Magazine*.

THE OLD SPECKLED ROOSTER.

How dear to my heart is the old speckled rooster.

Which fond recollection brings back to my view;
 With spurs long and pointed and curving, he used ter
 Go crowing around till he made the air blue;
 And when some strange rooster would come to do
 battle,

How quick would the old chap get up on his
 guard!

He'd make the eyeballs of the strange rooster rattle,
 And scatter the feathers all over the yard;

The old speckled rooster, the mongrel-bred rooster,
 The 50-cent rooster that scrapped in the yard.

—Nebraska State Journal.

OLD COINS.

At the recent sale of rare English coins in London, a crown piece of 1633, executed by Thomas Simon, and known to have been given by Charles the Second to Lord Chancellor Clarendon, fetched £500. As late as 1881 it was sold for £215, and in 1742 it sold for only £20, and was resold for £12. A pattern shilling of the Commonwealth was sold for £80, a 50-shilling gold-piece of the Commonwealth, £227; a gold crown piece of 1658, £285; and a pattern Queen Anne farthing, in gold, £43. There were altogether 743 lots, and the total amount realized was £6,682.

WATCHES.

The word "watch" is derived from a Saxon word signifying to wake. Watches were first called clocks, and had weights. The earliest known use of the modern name occurs in the record of 1242, which mentions that Edward I. had "onne larum" or watch of iron, this case being also of iron gilt, with two plummetts of lead. The first great improvement, the substitution of a spring for weight, was about 1550. The earliest spring was not coiled but straight pieces of steel. Early watches had only one hand, and required winding twice a day. The dials were of silver or brass; the cases had no crystals but opened at the back, and were four or five inches in diameter. A plain watch cost the equivalent of \$1,500 in our currency and after one was ordered it took a year to make it.

A WORKMEN'S BRIDGE.

Mr. Baker, one of the engineers of the Forth Bridge, addressed a meeting of workmen in Newcastle, Eng., and in a description of this celebrated cantilever bridge, said that it was essentially a workmen's bridge, and whenever he had occasion to refer to the subject in public he had always endeavored to do justice to the workmen, to whose individual and collective pluck and ingenuity the success of the work was due quite as much as to the scientific knowledge and powers of organization of the engineers and contractors. In so novel an undertaking the workmen often had to use their own brains on the spur of the moment to overcome difficulties, without waiting for instructions, and by that means only could the work be pressed on and accidents avoided. The superstructure of the Forth bridge required the manufacture on the spot of about 50,000 tons of steel girders, all of which were erected at heights ranging up to 370 feet above the sea level without the aid of scaffolding. As the men gained confidence and experience the work proceeded very rapidly, and nearly 2,500 tons of steel work were erected in a single month. There had been no accident of any kind affecting the structure itself throughout the whole period of the operations, and the loss of life had been comparatively small, having reference to that occurring in connection with other great works. The total length of the great cantilever spans was exactly one mile, and the strength of the steel superstructure was such that six of the largest iron-clads yet built, weighing each from 12,000 to 14,000 tons, might be safely suspended from the six great cantilevers. It was not necessary to say that the weight of any possible number of

railway trains which could be brought on the bridge would be insignificant in comparison. As regards lateral strength, a provision for wind pressure had been made which would ensure the safety of the bridge during a hurricane of three times the severity that had ever been observed. It was hardly possible at the present moment to avoid comparing the two greatest metallic structures of the world—The Forth Bridge and the Eiffel Tower. No novelty had been claimed for the Forth Bridge, and none should be claimed for the Eiffel Tower, for the idea was as old as the Tower of Babel. There was considerable merit in the details of the steel work of the Eiffel Tower, both architecturally and structurally, but the lecturer did not think that the world-renowned tower was the most difficult work which its very able engineer had executed. Neither would M. Eiffel for a moment contend that it was as difficult a work as the Forth Bridge. Two Eiffel towers laid horizontally, and joined together at the centre, would just span one of the openings of the Forth Bridge, but, of course, the steel work would not be strong enough to carry its own weight if the towers were placed horizontally instead of vertically, whereas the Forth Bridge cantilevers, as already stated, would carry their own weight and six great iron-clads in addition. It was anticipated that the bridge would be practically finished at the end of this month.

POPULATION AND IMMIGRATION.

Mathematics, applied to the immigration question, develops food for the most serious thought as to the nation's future. Civilized races, under prosperous conditions, double their numbers every twenty-five years. At this rate the natural increase of the present population of the United States would, in 650 years, increase to such vast numbers as to cover the entire land surface of the earth so thickly that four individuals would have to stand on each square yard of surface.

Now, the census proves that the natural increase of our population has actually been at this rate, and in proof of the fact it is shown that the population in 1800 was 5,308,483, and in 1830 it had grown to 12,866,020. This was almost entirely from natural increase, as the entire number added by immigration up to 1820 is estimated at 250,000. This increase is really in excess of the average claimed. From 1830 to 1860 the population increased from 12,866,020 to 31,433,321, including immigration; this shows an increase of nearly 6,000,000 above the rate stated for our estimate. This is *actual* increase, and there is no way of scaling it to reduce the showing. Since 1860 immigration has steadily increased, and the population is rapidly growing to such density that we are already confronted with the same questions that are puzzling the older nations of Europe.

Now, the United States is but a small fraction of the land surface of the globe, and if our present increase steadily maintained would, in 650 years, cover the surface of the globe to the density stated, how long would it take to cover the limited area of the United States to such a density as to make the struggle of existence desperate beyond the capacity of man to endure?

GRAND LODGE.

These columns are reserved as the official department of the Grand Lodge.

All Official Documents, including notices of dues and assessments and other notices, reports and statements will be published in this department.

Officers and Members of Subordinate Lodges are requested to note carefully each month the contents of this department.

JANUARY, 1890.

Notice to Receivers.

OFFICE OF THE GRAND LODGE, B. OF L. F.,
TERRE HAUTE, IND., January 1st, 1890.)

To Receivers of Subordinate Lodges:

SIRS AND BROTHERS:—You are hereby notified, as provided in section 56 of the Constitution, that no beneficiary assessment is required for the month of *January*, 1890, and that therefore none has been levied for said month. Yours fraternally,

F. P. SARGENT, G. M.

EUGENE V. DEBS, G. S. & T.

Notice to Custodians of Protective Fund.

OFFICE OF THE GRAND LODGE, B. OF L. F.,
TERRE HAUTE, IND., January 1st, 1890.)

To Custodians of Protective Fund:

SIRS AND BROTHERS:—Pursuant to section 215 of the Constitution, you are required to forward to the Grand Lodge, not later than *February 1st*, a report of the Protective Fund of your Lodge for the quarter ending *January 31st*, 1890. Two blank forms have been forwarded to your Lodge for this purpose; one copy of your report is to be filed with the Lodge and one copy to be forwarded to the Grand Lodge as above provided. Yours fraternally,

F. P. SARGENT, G. M.

EUGENE V. DEBS, G. S. AND T.

Notice to Secretaries.

OFFICE OF THE GRAND LODGE, B. OF L. F.,
TERRE HAUTE, IND., January 1, 1890.)

To Secretaries of Subordinate Lodges:

SIRS AND BROTHERS:—Pursuant to Section 51 of the Constitution, you are required to report to the Grand Lodge as expelled all members who failed to

make payment of their Quarterly dues and Protective Fund dues for the quarter ending *April 30*. The names of said members must be reported to you by the Collector of your Lodge not later than *February 2d*, and by you reported to the Grand Lodge immediately thereafter. Failing to report the names of expelled members as herein provided, the Grand Lodge will hold subordinate members liable for their assessments, as per Section 55 of the Constitution. Fraternally yours,

F. P. SARGENT, G. M.

EUGENE V. DEBS, G. S. AND T.

Protective Fund Dues Notice.

OFFICE OF THE GRAND LODGE, B. OF L. F.,
TERRE HAUTE, IND., January 1st, 1890.)

To Members of Subordinate Lodges:

SIRS AND BROTHERS:—Pursuant to section 215 of the Constitution, you are hereby notified that the Protective Fund Dues for the quarter ending *April 30th*, 1890, amounting to seventy-five (75) cents, are now payable, and must be paid to the Collector of your Lodge on or before *FEBRUARY 1ST*, 1890. All members now enrolled, and all those admitted prior to *April 1st*, 1890, are liable for the full amount of Protective Fund Dues for said quarter. All members admitted during the month of *April* (from the 1st to the 30th, inclusive,) are exempt from payment of Protective Fund Dues for said quarter, as provided in section 131 of the Constitution. Any member failing to make payment as above provided, will be expelled from the Order, as per section 51 of the Constitution, said expulsion taking effect *February 2d*, 1890, and the Secretary is required to make due report thereof to the Grand Lodge. Yours fraternally,

F. P. SARGENT, G. M.

EUGENE V. DEBS, G. S. & T.

Quarterly Dues Notice.

OFFICE OF THE GRAND LODGE, B. OF L. F.,
TERRE HAUTE, IND., January 1st, 1890.)

To Members of Subordinate Lodges:

SIRS AND BROTHERS:—Pursuant to section 50 of the Constitution, you are hereby notified that the dues for the quarter ending *April 30th*, 1890 (such an amount as may be determined by the several lodges, provided in no case it shall be less than five (\$5.00) dollars), are now payable, and must be paid to the Collector of your Lodge on or before *FEBRUARY 1ST*, 1890. This amount will be in full payment of all Subordinate Dues and Beneficiary Assessments levied by the Grand Lodge for said quarter, as provided in section 131 of the Constitution. All beneficiary members now enrolled, and all those admitted prior to *April 1st*, 1890, are liable for the full amount of Quarterly Dues for said quarter. All members admitted during *April* (from the 1st to the 30th, inclusive,) are exempt from payment of Quarterly Dues for said quarter, as provided in section 131 of the Constitution. Any member failing to make payment as above provided, will be expelled from the Order, as per section 51 of the Constitution, said expulsion taking effect *February 2d*, 1890, and the Secretary is required to make due report thereof to the Grand Lodge. Yours fraternally,

F. P. SARGENT, G. M.

EUGENE V. DEBS, G. S. & T.

Beneficiary Statement.

Pleasant White Magazine Agent

Having recently purchased the entire stock of watches of the Bankrupt firm of Welden, Richards & Co., consisting of solid gold, silver, and gold-filled cases, we shall offer a portion of the entire lot at prices never before heard of in the Watch trade. Among the stock are 8,780 American Make stem winders, in solid gold-filled Cases, which we shall sell singly or by the dozen to private parties or the trade at the unheard-of low price of \$3.50 each. Each and every watch is guaranteed a perfect time-keeper, and each watch is accompanied with our written guarantee for five years. Think of it! A genuine, Stem-winding, American Movement watch, in solid, gold-filled cases and guaranteed for five years, for \$3.50. Those wanting a first class, reliable time keeper, at about one third retail price, should order at once. Watch speculators can make money by buying by the dozen to sell again.

Solid Gold Watches at \$3.50.

These watches must be sold, and as an inducement for you to order quickly, we will send to each of the first one hundred, ordering from this advertisement, a solid, 14k Gold Watch worth \$50, provided \$3.50 is sent with the order. Elegant, SOLID FOLDED GOLD CHAINS of the latest patterns, for \$1.00, \$2.00, \$3.00, and up ORDER AT ONCE. Be one of the first and get a solid gold watch for \$3.50. All are stem-winding, elegantly finished, and guaranteed perfectly satisfactory in every way. Send money by registered letter or P. O. order at our risk. Watches and chains sent safely by registered mail to any address, provided 25 cents extra is sent to pay post age.

MOORE & LANCEN
PRINTERS,
TERRE HAUTE, INDIANA.

POSITIVELY THE FIRST AND ONLY FILLED-GOLD
Engine - Case American Movement Watch
EVER SOLD FOR \$8.75.

These watches are of the latest style patterns and beautifully finished.

We have secured them, but there is only forty gross or 5760 Watches in this lot and we can't get any more after these are gone, at anywhere near the price we are selling them at. So if you want a reliable time-keeper, you should order at once. We warrant these Watches to be American Movement, Expansion Balance, adjusted to four positions, and to be perfect timekeepers. The cases are filled gold, beautifully engraved and Warranted Five Years by the manufacturer. This Watch is a bargain of a lifetime, and you can sell them as fast as you can show them for from \$7.00 to \$15.00 each. Stem Winders and Setters.

With each watch we send our Catalogue of Watches and Jewelry, and only ask as a favor that you show it with the Watch you purchase to your friends and acquaintances. We will send this Watch C. O. D. by Express upon approval if you send us \$1.00 as a guarantee of good faith. If the Watch does not suit you need not take it. If it is satisfactory send us balance by Express. If full amount, \$8.75, is sent with the order, we will include one of our special heavy Gold Plate Chains, which retails the world over for \$1.00, and prepay all charges. We refer to any newspaper publisher, Bank or Express Co. in New York City. Remit money by Express, Post Office or Express Money Order, at our risk. Call on or address: MORGAN & CO., 61 Murray St., New York.

DEAFNESS

A NEW TREATMENT.

Sufferers are not generally aware that
these diseases are contagious, or that they
are due to the presence of living para-
sites in the lining membrane of the nose
and eustachian tubes. Microscopic re-
search, however, has proved this to be a
fact, and the result of this discovery is
that a simple remedy has been discovered
which permanently cures the most aggra-
vated cases of these distressing diseases by
a few simple applications made (two weeks
apart) by the patient at home. A pamph-
let explaining this new treatment is sent
free by A. H. Dixon & Son, 337 and 339
West King Street, Toronto, Canada.

Copy from Original Letter Received from Division 95, Cincinnati, O.

Brotherhood of Locomotive Engineers.

[SEAL.]

CINCINNATI DIVISION, No. 95.

CINCINNATI, OHIO, September 5th, 1899.

This is to Certify, That Brother Chas. T. Brown is a member of this Division, No. 95, B. of L. E., and has been a member of the B. of L. E. for twelve years, and we can recommend him as an upright, honorable and worthy brother.

He has lately connected himself with the Railway Officials' and Conductors' Accident Association, of Indianapolis, Ind., and said Association has no connection whatever with the Order of Railway Conductors, or any other order or society—it being a distinct organization for the purpose of insuring railway employes in the United States, Canada, and Mexico, against accidents. Brother Brown has been appointed Special Agent for the United States, Canada and Mexico, for the Mechanical Department of railroads. We feel confident that you will find anything Brother Brown represents to be just what he says.

E. E. McMILLAN, C. E. [SEAL]
G. BAKER, F. A. E.

INDIANAPOLIS, IND., September 15th, 1899.

To BROTHER ENGINEERS:—Having been appointed Special Agent for the United States, Canada and Mexico, for the RAILWAY OFFICIALS' AND CONDUCTORS' ACCIDENT ASSOCIATION, of Indianapolis, Ind., for the Mechanical Department of Railroads, and having been informed by reliable authority that some of the unprincipled representatives of other accident companies have circulated the report among Engineers and Firemen that this Association is connected with certain Orders and Societies; on account of such representations, which are untrue in every respect, I publish copy of above letter from Cincinnati Division, No. 95, B. of L. E., which will be sufficient without further explanation.

As all business from Mechanical Department of Railroads comes through my agency, I will furnish every Agent a copy of the above letter, and any application given to an Agent who has this letter in his possession may be the same as given to me in person.

Trusting that I may receive a share of your patronage, and will be more than pleased to add your name, one and all, to our list of membership, assuring you that I will use every honest and honorable means to secure your patronage. For rates, etc., address

Lock Box 49.

CHAS. T. BROWN,
Special Agent, Mechanical Department of Railroads, Indianapolis, Ind.

Special Announcement to R. R. Firemen!

WANTS IT.

Send **TWENTY-FIVE CENTS** for the Superb
Holiday Number of

"The Station Agent."

The representative journal of the freight and ticket departments of the railways of the United States and Canada.

READY FOR DELIVERY DEC. 15.

This issue will contain contributed articles by prominent writers on railway subjects that will be of interest to every person in the service. Edward Needam, Superintendent of the Midland Railway, of England, explains the system of train workings on his road, and the method of handling traffic. In this article are shown fac-similes or way bills, blanks, records, etc., used on English railways a comparison of which with those in use in this country will be interesting as well as instructive. J. L. Ringwalt, author of "Development of Transportation Systems of the United States," details the "Reduction in Transportation rates since 1869," give some solid information. Marshall M. Kirkman, second vice president of the Chicago & Northwestern Railway, writes on the subject of "Care of Cash by Agents." A prominent fast freight line agent gives the

History of the Fast Freight Lines of the Country.

This article should be read by everyone interested in freight traffic. A feature interesting to all ticket agents will be an article on tickets showing fac-similes of all coupon tickets, now in use, and many obsolete forms, with history of the development of the present ticket system in this country.

Don't fail to secure a copy of the Holiday number of **THE STATION AGENT**. Price 25 cents. Annual subscription \$2.00. Subscribe now, and secure the magazine for one year from January 1, 1890, thus receiving the Holiday Number free.

RAILROAD

Patent Square Ventilated Dinner Pail.

BEST PAIL MADE,

We have many testimonials like the following:

WHEELING, W. VA., August 19, 1888.

Reardon & Ennis:

I received my Dinner Pail some three months ago, and have given it a good trial. I have carried it in a tank-box, where it is cool, and I have carried it on the engine, where it is very hot: it is about the same. It keeps the victuals nice and fresh, and if I could not get another I would not take Five Dollars for the one I have. I can not recommend your pail too highly to Railroad men who want victuals that are fresh and

healthy to eat.

Yours truly,

HARRY J. DRUMMOND, B. & O. R. R.

Size of No. 2 pail is 9½ inches long by 5½ inches wide by 9½ inches high, when locked up.

TO INTRODUCE THESE PAIRS, UNTIL FURTHER NOTICE we will deliver ONE NO. 2 VENTILATED PAIL, boxed and expressage paid, at any express point in the United States, on receipt of P. O. Order for one dollar and fifty cents. Try one.

REARDON & ENNIS,

Sole Manufacturers, TROY, NEW YORK.

Castner & Curran,

General Tide Water Coal Agts.

CELEBRATED

Pocahontas Semi-Bituminous Coal.

1 Broadway, New York. 308 Walnut St., Philadelphia.
70 Kilby St., Boston. 36 Main St., Norfolk, Va.
1 Fenchurch Avenue, London, England.

The Pocahontas Coal is acknowledged by all Railroads that have used it to be the best American coal for Locomotive use. It generates steam with great rapidity, and at the same time holds the fire an unusually long time. The merits of the coal are shown by the unprecedented growth of the mines, which were not opened until 1881. Since that time the outputs have increased over 1,200 per cent., amounting in 1887 to 1,300,000 tons. During the present year it will be at least 2,000,000 tons. We are therefore prepared to fill all orders with prompt dispatch.

SCIENTIFIC AMERICAN

ESTABLISHED 1845.

ABOVE ALL. THE THREE T. T. T. TRU TH, TEMPE RANCE, TRI AL. THE BROTHERHOOD MEDICAL CO.

of Chicago, Ill., "a Joint Stock Organization of Railroad Engineers," proprietors of

Dimmick's Kidney and Bladder Cure

Are placing with all retail druggists who desire, the above-named invaluable and thoroughly-tested remedy, on a guarantee of merits and success in all cases which are reasonably possible. In difficulties of the circulatory system and urinary organs, proceeding from the non-performance of proper functions of LIVER AND KIDNEYS, such as Pains in the Back, Cold Hands and Feet, Female Difficulties of delicate nature, Children that Soil their Beds, or adults who are obliged to leave their beds many times during the night, Early stages of *Rheumatism*, Paralysis, or General Depression—excepting in habitual use of *Intoxicants—Bright's Disease, Consumption, Softening of Brain, Stone in Bladder* (that has passed the period of crushing. Any one so troubled should secure one package from their druggist and use before the incurable stage is reached.

THE druggist of whom procured is authorized to guarantee the merits in all reliable cases, "except as above," refunding the money when the remedy fails, when taken as directed and heed is given to the habits of life recommended and described on the large bottle. Dose is small, consequently needs to be taken continuously, commencing with five drops, increasing each dose one drop three times a day, before meals, until some unpleasantness is felt, then take the dose which did not disturb, continuing one week, then try again to increase, and so on each week, taking the maximum dose as determined by test.

Nothing better for old people in decline of life and receding circulation, or for those who are traveling or engaged in railroad employment, exposed to sudden changes of temperature tending to derange the circulation.

In every severe and sudden cold *Dimmick's Kidney and Bladder Cure* will be found reliable and beneficial, and should be taken at once in the largest dose without disturbing the head, stomach or bowels.

The *Brotherhood Medical Company* are ambitious to establish the fact, that parties may be engaged in manufacturing, selling or prescribing proprietary remedies, and so conduct and represent their calling as to compromise no principles of business or conscience. No misrepresentations made. We fail sooner than intentionally depart from truth and honor. We have abundance of reliable and original testimonials, which are true, that the use of *Dimmick's Kidney and Bladder Cure* has more than satisfied the expectations of many. Responsible contracts in writing made with all who order one dozen, the conditions of which are confidential, and conduce clearly to promote their interests in trade, with no possible chance of loss. Advertising matter sent "free of expense" to all who desire, who have the remedy on sale. If any person is too old or remote to call on druggist or at our office, and will advise us by mail, we will give the case special attention, and reach them personally or by correspondence. Formula given to any reliable and trusty person who takes the trouble to inquire, showing clearly that there is no harm in using to a child.

Price \$1.00 per bottle, two bottles in our cartons. The small one is for convenience in using, especially for railroad men when on their trips, saving the inconvenience of carrying for a large bottle when on the road, at work or traveling. Correspondence solicited and promptly noticed by

100,000 VALUABLE PRESENTS!

ALL USEFUL. NOTHING CHEAP.

Every One Gets a Present. NO BLANKS.
THE SMALLEST PRESENT WORTH FIVE DOLLARS.
\$2,000 Cash! \$1,000 Cash! \$500 Cash!

And 99,997 Cash and other Valuable Presents to be given away absolutely FREE.

The Publishers of *The Family Magazine* have given away thousands of dollars in pictures, books and other articles, to their subscribers. It has always paid them to do this, and their Magazine now has a splendid circulation and profitable advertising patronage, and classed among the best of literary publications of the day.

This year they have made an arrangement with a large book publishing house which enables them to make an offer heretofore unparalleled in the history of the publishing business. They want to increase their circulation in the next few months at least *One Hundred Thousand Copies*. This will enable them to double their advertising rates, and increase their income from that source alone at least \$50,000 yearly. They are aware that many cheap publications are put upon the market with all sorts of tempting offers, which are never carried out, but over 80,000 readers of their Magazine can testify that they have always done exactly as promised. They will do it in this case.

100,000 PRESENTS. READ OUR GRAND OFFER.

SIXTH PRIZE.

To the first 200 persons guessing the correct number of punctuation points used in this advertisement, we will give each \$5 in cash, \$2,000.

To the next 99,996 persons who send in a guess, whether correct or not, before March 1st, 1890, we will give a *Complete Set of Dickens' Works*, as illustrated below, so that each and every person is sure to get a valuable and costly present, worth many times the subscription price of our Magazine. A committee of five, whose expenses we will pay, are requested to meet at our office March 1, and award the prizes. List of which will be published in March issue. No postponement.

CONDITIONS:

- 1st.—All answers and guesses must be received on or before March 1st, 1890.
- 2d.—All contestants must accompany their answers with *One Dollar* (\$1.00), in payment for one year's subscription to the *Family Magazine*.
- 3d.—No contestant will be entitled to more than one prize. Each contestant can, however, try for all the prizes, but will be awarded only one.
- 4th.—Compound words count as one word. Figures not to be counted unless spelled out.

PLEASE REMEMBER that the smallest prize you get is a COMPLETE SET, 12 Volumes, of CHARLES DICKENS' WORKS.

AS ILLUSTRATED HERE.

Charles Dickens was the greatest novelist who ever lived. No author before or since his time has won the fame that he achieved, and his works are even more popular to-day than during his lifetime. They abound in wit, humor, pathos, masterly delineation of character, vivid descriptions of places and incidents, thrilling and skillfully wrought plots. Each book is intensely interesting. No home should be without a set of these great and remarkable works. Not to have read them is to be far behind the age in which we live. The twelve volumes in this set contain the following world famous works, each one of which is published complete, unchanged, and absolutely unabridged.

OLIVER TWIST.
DOMBEY AND SON.
MARTIN CHUZZLEWIT.
OUR MUTUAL FRIEND.

CHRISTMAS STORIES.
TALE OF TWO CITIES.
HARD TIMES.
NICHOLAS NICKLEBY.

BLEAK HOUSE.
LITTLE DORRIT.
PICKWICK PAPERS.
DAVID COPPERFIELD.
MYSTERY OF EDWIN DROOD.

BARNABY RUDGE.
OLD CURIOUS SHOP.
GREAT EXPECTATIONS.
UNCOMMERCIAL TRAVELER.

THE ONLY WAY TO GET THIS SET OF DICKENS

Is to subscribe to our Magazine. It can be obtained in no other way. It is not for sale by booksellers or new dealers.

All who send \$1.00 before March 1st, 1890, will get either \$2,000, \$1,000, \$500, \$100 in Cash, a Solid Gold Watch, \$5.00 in cash, or a Complete Set of Dickens' Works, 12 Volumes, and one year's subscription to the *Family Magazine*.

This is the grandest offer ever made, the greatest bargain ever offered! Up to this time the price of a set of Dickens' works has usually been \$10.00 or more. The use of modern improved printing, folding and stitching machinery, the present extremely low price of white paper, and the great competition in the book trade, are the factors which make this wonderful offer possible. Bear in mind we offer, not a single volume, but the entire set of twelve volumes. All may now afford the luxury of owning a handsome set of Dickens' works. Satisfaction guaranteed or money refunded. Do not neglect or put off this wonderful opportunity. You are sure of getting a beautiful *Illustrated Magazine* replete with choice stories, Poems, Household Articles, Ladies Department, Illustrated Fashion Department, &c., and a complete set of Dickens' Works. Besides this you have a chance to get either one of the large prizes offered.

YOUR SUBSCRIPTION FREE. If you will cut this advertisement out and show it to your friends and secure a club of five, and send us \$5.00, we will send six subscriptions for one year, which entitles you to six guesses. Send \$10.00, and we will send twelve subscriptions, which entitles you to twelve guesses. A day's work will secure a club. Try it and get your subscription and guess free. Remit by Postal Note, Money Order or Registered Letter. Address,

Kindly mention paper you saw this ad. in.

TESTIMONY FOR ALVA'S BRAZILIAN SPECIFIC.

We, the undersigned, take pleasure in certifying that we have used the Herb Medicine known as "*Ramon Alva's Blood Purifier*" with wonderful success, and we have also known many others to have used it with a like result. Appreciating its value, we cheerfully recommend it to all Brothers and others requiring a remedy for the purification of the blood, as the best known; and we guarantee that a trial will convince all of its great merit.

H. H. MORAN, W. M. DAVIS,
H. H. GREENLEAF, J. O. CASKEY,
M. E. EGAN, JAMES THOMPSON,
C. H. STARR, *Engin's Acambaro, Mex.*
City of Mexico, Div. 150, Mexico City.

CELAYA, October 1st, 1889.

I, Parochial Priest and Ecclesiastical Judge of Celaya, State of Guanajuato, hereby certify that I know several people who have been cured by Don Ramon Alva's remedy. It radically and effectually dispels all impurities of the blood

FRANCO M. GONGORA.

The above signature is that which he uses in all his business, officially and otherwise; and he is an old pupil of mine.

✠ P. A. ARCHBISHOP OF MEXICO.

CELAYA, October 1st, 1889.

I know several people who have suffered greatly from the consequences of impure blood, and in a very short while have felt

much better by using the medicine which was sent here by Don Ramon Alva for that purpose. I recommend this remedy as one which produces the best results, and is the best of its kind.

PABLO VARELA.

CELAYA, June 4th, 1889.

Don Ramon Alva :

DEAR SIR—I have the satisfaction of informing you that the Specific of which you are the owner, has produced the most wonderful results for a friend of mine who has suffered from Herpetic Eruption; and I consider your Specific a regenerator without an equal. In the name of my friend, I thank you sincerely, and be sure I will recommend your valuable medicine, as I have again seen its results. Yours truly,

PRESBITERO PABLO JUAREZ.

CELAYA, October 1st, 1889.

I certify with all formality that from personal knowledge the medicine made by Don Ramon Alva, and known now as "*Alva's Brazilian Specific*," purifies the blood, and therefore cures radically the infirmities which arises from impure blood.

The above to be used at the convenience of those who are interested.

EUSEBIO GONZALEZ.

Retail Price, \$4.00 Per Bottle.

N. B.—Railroad Men ordering Six or More Bottles at a time will be supplied at Wholesale Prices.

The above applies merely to Railroad men.

For further particulars, address

"ALVA'S BRAZILIAN SPECIFIC" CO.,

2082 and 2084 Lexington Ave., New York City, N. Y., U. S. A.

While you are hesitating about Buying a Filled Watch Case, let us

PUT A FLEA IN YOUR EAR.

First, DURABILITY—You need have no doubt here. Our filled cases will not fail you in this respect. Take this as a warranty; we mean it. What we say of the different grades of the Boss cases we guarantee. “But,” say you, “it is easy to say ‘guarantee’ at the front end of a trade.” We wish you to understand that we are at the hind end of all the guarantees we make as well as at the front end. We’re easy on this point for

We’ve made Boss Cases long enough to know what’s safe to promise about them.

Now, CONSTRUCTION—UTILITY. Boss filled cases keep the dirt out. They’re “built that way.” The Dust Bands do it—in all our cases. Your fine movement is as safe from dust and cinders as if in the innermost chamber of the Great Pyramid!

The Third Point Is Beauty. We’ve spoken of Durability and Utility, you want the pleasing quality also. If “a thing of beauty is a joy forever,” as Keats said, you may find a good many “joys forever” among the Boss case designs your jeweler will show you if you ask him. This is a point we needn’t dwell on. You can tell what pleases you—we can’t. Only, look at the patterns—that’s all we ask

EUGENE V. DEBS, . . . *Editor and Manager.*

AUSTIN CORBIN.

This *Magazine* has on more than one occasion referred to Austin Corbin, President of the Philadelphia & Reading Railroad Company, and another company, the offshoot of the P. & R. Co., more properly, perhaps, the tumor of the P. & R. Co., an abnormal growth, the result of inoculating the P. & R. Co. with the virus of Corbin's soundrelism, and which, according to the reports of a Congressional Committee, enables Corbin, the land pirate and Napoleon of Knavery, to "Russianize" one of the richest portions of Pennsylvania. Such a notorious pal of the Devil as Corbin, such a moneyed miscreant, such a repulsiveascal, rogue and reprobate, ought to be ceaselessly castigated, excoriated, at least. Every workingman in the country should take pleasure in whipping, metaphorically, at least, the scapegrace, the wealthy wretch, through the world.

This soulless swindler of rich and poor; this man with a National reputation of en-

imity to organized labor; this wrecker of railroads and the organizations of workingmen; this demolisher of Lodges, Divisions and Assemblies; this employer of Huns, Dagos and imported paupers; this degrader of American workingmen; this enemy of the American home; this man whose methods for getting money are worse than footpadism, as is known, was permitted to defend his nefarious practices in a publication known as the *North American Review*, whose late proprietor, being a millionaire, had, doubtless, a fellow-feeling for Corbin, and for a consideration, we suppose, permitted him to assail organized labor through its pages; or, it is quite probable, the venal creature wrote the article for so much money—an arrangement, which, if it was made, compensated him for the wear and tear of his fangs and rattles while employed in denouncing labor organizations, and making it appear that he (Corbin) was something better than a Shylock, who, to get 5 or 10 cents a day out of the wages of workingmen, would not quite cut his heart out of him. This caitiff Corbin, in his *North American Review* article, says:

The wage question is one in which capital, as such, is only remotely concerned. It is primarily and essentially a question between the employers and the employed.

In this, Corbin manifestly tells the truth. As a general proposition, there is not now, there has never been, nor can there be, war between capital and labor. Labor creates capital; it is the child of labor. The war in the past, and at present, is between the working man and his employer, when his employer is such an enshrined wretch as

Austin Corbin— but not between such employes and an honest man.

Notwithstanding the fact Austin Corbin had, as the Congressional Committee puts it, "Russianized" the anthracite coal regions of Pennsylvania; had forced a strike for the purpose of advancing the price of coal and reducing wages—something at both ends of the line—he has the impudence to say:

There never has been a time—and it is fair to assume there never will be—when employers, and public sentiment as well, have not fully conceded to the worker the right to better his condition by leaving his employer's service and obtaining more congenial or suitable employment elsewhere, at his pleasure. The worker in this country at least, under the law, happily, *is not a slave*; he owes no permanent service to anybody; he is a free man, as he ought to be, and nothing save his own environments, for which no employer can be justly held responsible, can compel his service at any time or place, or to any man or set of men.

Here we have declarations from "Russianizing" Corbin, in consonance with the genius of American institutions, made for the purpose of hiding from public view the scoundrelism perpetrated by himself and his co-workers in the villainous business of placing workmen in a condition which prevented them from leaving his "service and obtaining more congenial employment elsewhere." It has been shown that Corbin inaugurated the strike on his railroad and in his mines. Thousands of his men, having been paid less than was required to supply food and shelter and clothes, thrown out of work by his "Russianizing" methods, could be told to find "congenial employment elsewhere," with calculating cruelty. They could not go elsewhere. Half starved and half naked, wretched beyond exaggeration, "Russianized" to serfs, degraded, crushed and penniless, the victims of curses planned with Satanic cunning, they were compelled to accept conditions that horrified the Congressional Committee that investigated them. The remark made by Corbin that "the worker in this country, at least, under the law, happily, is not a slave," is the climax of irony. Workers under Corbin may not be chattels, but in a most grievous sense they are slaves, being compelled to work for such wages as Corbin may name, or starve. Corbin creates

their "environments" and is responsible for their "Russianized" degradation. Having accomplished his purpose, he attacks trades-unions, labor organizations, as follows:

In some foreign countries, the tyranny of trades-unions has dominated the lives of a majority of the working people, and only those have been able to escape from it whose indomitable energy, skill and perseverance have carried them up out of the ranks. With other good, bad and indifferent importations of foreign products, we have found ourselves, within recent years, to have acquired a body of professional labor agitators, which has been largely re-enforced by lazy imitators of domestic growth.

Those who know anything of the advancement of labor from degrading conditions, know that it has been through labor organizations, and to say such organizations have depressed labor is not only a malicious, but a foolish lie. The testimony of the most astute thinkers, those most familiar with facts, declare that trades-unions have been of incalculable benefit to their members. Organization, in its very nature, resists oppression, resists degradation, exalts manhood, self-respect, and is conducive to good citizenship. The attempt to degrade labor agitators, men who champion the cause of workmen, will prove a failure; it has already proved a failure, and the fact that Corbin's efforts have been successful in Pennsylvania, should only prove to him that with the sentiment abroad in the land labor agitators will, at no distant day, overwhelm him in defeat. He says:

Like other phenomenal social and political movements which have had their birth, growth and decline, this labor agitation assumed the methods of leagues and societies, with forms and ceremonies, oaths and penalties, mysteries and fearful punishments, and, withal, parades and paraphernalia generally. These, and all the like, would be harmless, and are, until they come within the legitimate domain of the laws of *meum* and *tuum*, upon which our Government rests.

In saying this, Corbin demonstrates that he is a miserable observer of phenomena. Labor organizations have had their birth and are still growing. The decline has not set in. They are just now grappling with "the laws of *meum* and *tuum*," "mine and thine," upon which governments rest. The Congressional Committee decided that Corbin was all *meum*; that he ignored *tuum* from the first. Workmen are studying

meum, and the time will come when such men as Corbin will have to disgorge; nor is the time discouragingly remote. Corbin evidently saw the meanness and weakness of his malicious antagonism of labor organizations, and deemed it proper to make some sort of an apology for the organization of trusts, syndicates and pools with which the country is flooded and cursed, and puts in the following plea:

Business men organize associations for such purposes, and are continually widening their own spheres of observation and usefulness by such conferences; and in the domain of the mechanical arts there are constantly forming new societies for comparison of views and experiences and the promulgation of knowledge concerning the matters of which they know. But these, and such as these, are not dominated by unprincipled demagogues, whose sole purpose is to live by the labors of others; they are unselfish bodies of men who are only too glad to let their light shine, and to teach the new generation what they have learned from their philosophy and experience.

That is to say, business men like Corbin "organize" within the legitimate laws of *meum* and *tuum*—mine and thine—but such organizations have little regard for *tuum*; it is all *meum*, and the workingman's *tuum* is so small that he starves, goes in rags and lives in dens, becomes "Russianized," as in Corbin's dominion. Business men's organizations may not be "dominated by unprincipled demagogues," but they are dominated, as a rule, by unprincipled scoundrels, whose sole purpose is to rob workingmen and degrade them to the level of cattle. They do let their light in their palatial homes shine, while they darken all the huts of the men who toil that they may be rich. The workingmen have "learned from their philosophy and experience" that the time is at hand when labor, *organized and federated*, will not long tolerate the robberies of such men as Corbin. In this connection Corbin eulogizes scabs and serfs as follows:

It is their just pride that their own industry and energy, and their thorough loyalty to the interests of those who trusted and employed them, have been the foundation upon which their prosperity was built. Not a single one of them all owes his prominence and success to the "labor unions."

What prominence has a scab or serf ever secured that was honorable by being the lawning, abject lickspittle of the men who sought by any device to overthrow labor or-

ganizations? Labor organizations have reduced the hours of labor from fourteen and sixteen hours to ten and nine and in many instances to eight hours a day. Union wages are the best wages paid in the country, and in this, as in his figures relating to the sale of coal, Corbin lies. Speaking of the efforts to overthrow labor organizations, Corbin makes the following statement:

Some employers have endeavored to accomplish this. They employ no new men who are members of any of the labor unions; applicants are required to promise not to join any while retaining their employment; those who prefer the unions are required to quit the service, and promotions are entirely confined to those of *undoubted loyalty to their employer and his policy*. The day of terrorism from the unions and their salaried and titled leaders is over, in cases where this policy has been rigorously pursued. The walking delegate is not now doing much walking in the neighborhood of works of this class—at least not at the expense of the workmen.

Here we have it in a nutshell. Workingmen can see through the scheme at a glance. It is, boiled down, simply this: Abandon your labor organizations or remain idle; starve, tramp, become vagabonds and outcasts. Workingmen can and do comprehend the scheme. Some will yield, some will crawl for a time, but the day is coming when they will resist; when they will organize, in spite of the world, the flesh and the devil, with Corbin thrown in. The "undoubted loyalty to employer and his policy" will give way to undoubted loyalty to right, justice, truth and fair play. Having sought, as best he could, to justify his Russianizing policy, Corbin takes occasion to laud the workingman, as follows:

It is a great satisfaction to know, as the writer does, that the industrious, independent and law-abiding element among the workingmen is growing fast in this country; and, if the employers of labor will show a tenth part of the independence and willingness to suffer temporary ills that their non-union employés do, there will soon be an end of the matter, and these indolent agitators, who figure only in conventions and newspapers as the friends of the workingman, with salaries attached and expenses paid, will fade out of sight and mind. Any case of real oppression of laboring men by cruel or selfish employers will speedily be detected and remedied by a just public sentiment, without violence to individual liberty or breach of the public peace.

The "writer," Corbin, knows that he has about 35,000 serfs on his railroads and in his mines, including thousands of the most degraded creatures to be found on the Ameri-

can continent—"dumb, driven cattle," for whose welfare there is less regard than is exhibited for the mules that work in the mines. The fact that labor agitators are not "indolent" but on the alert is what troubles Corbin and his pals, just as policemen and detectives who are on the alert trouble burglars, sneak thieves, footpads, sandbaggers and the entire gang of professional criminals that infest society. The talk about "any case of real oppression of laboring men by cruel and selfish employers" being "speedily detected and remedied by a just public sentiment" is intensified impudence when coming from a man like Austin Corbin, advertised by a Congressional committee as a colossal scoundrel, known to be "a cruel and selfish employer," who, to defend his degrading policy, goes into print, where he advertises himself still more than the Congressional committee had done as a brass faced, leather-hearted, conscienceless knave. Corbin, as he winds up his screech, turns exhorter, as follows:

The workingmen of this country should never lose sight of the fact that every labor agitation, even if only spasmodic and temporary, tends to destroy the smaller industries of the country which are scattered all over the land, whereby employment for all kinds of workers, skilled and unskilled, is found throughout nearly the whole of our diversified territory, and to concentrate all productive industries in the larger centers of population, where labor is abundant and cheap, where rents and means of subsistence are comparatively dear, where squalor and wretchedness prevail, and where filth and disease most abound.

Corbin would have workingmen remain quiet. Agitation disturbs his nerves. He pleads for "smaller industries." He would have it understood that he wants competition in mining and transporting coal; that he wants the small operators to prosper, and hence he wants workingmen to remain quiet, submit, wear fetters uncomplainingly, desert labor organizations and consent to be Russianized. Corbin has no more sense of shame than a courtesan—no more than a petrified dog. Thousands of his employés have astonished all beholders by the filth, squalor and wretchedness of their surroundings. The Congressional committee sent to investigate his rascalities could hardly believe that such conditions could prevail in the United States, and yet Corbin has the

audacity to don the robes of a saint that he may the better serve the devil and continue his worse than Russian policy. In closing, Corbin gives the Congressional committee a whack, as follows:

Freedom from dictation is the birthright of every citizen. The politician who seeks to take away its safeguards should be reminded that the people have long memories, and that sooner or later their just judgment will be visited upon the unfaithful public servant who, for personal political reasons, by unwise legislation strikes at the independence of the individual wage-worker and his right as a free man to work at such trades, for such wages and for such persons as he pleases, without dictation from any quarter.

Austin Corbin don't like the appearance of a Congressional committee in his Russianized dominion. He wants freedom from dictation. He thinks it his "birthright" to rob and degrade workingmen. The fact that the people have "long memories" will yet make Austin Corbin wish they had short memories. He is yet to be more firmly in the grasp of the politician. The unfaithful public servants who have permitted Corbin to riot in his rascalities will be relieved. The days of the "unwise legislation" that "strikes at the independence of the individual wage-worker" are numbered; the wise legislation is coming that will strike at the Russianizing methods of such Christless whelps as Corbin—coming as certain as day follows night; coming as certain as light dispels darkness, and it is coming to stay. Let workingmen organize and federate and get ready to hail the coming of the time when the Corbins, like prehistoric monsters, shall disappear from the earth.

THE *Scientific American* estimates that the present population of the United States is 64,000,000. The rate of increase, exclusive of immigration, is estimated at 18 per cent per annum—about 100,000 a month. By immigration the increase of population averages 43,000 a month, or over half a million yearly. The aggregate annual growth from both causes will not fall much short of a million and three-quarters. The estimated foreign population is not far below 14,000,000. Taking all the increase, home and foreign, and it is about 20 per cent per annum, or about 15,000,000 a year. Of this increase at least 10,000,000 go to swell the army of workers. With Austin Corbins in control the Chinese level will be reached at no distant day.

LOOKING BACKWARD, 2000--1887.

Edward Bellamy's book, bearing the title "Looking Backward, 2000--1887," we learn from the title page, has reached a sale of one hundred and fifty-four thousand copies. It is safe to say that up to the time of this writing, the book has had a million of readers; how many more it will have, is a matter that belongs to the realm of conjecture. The demand is still on and must run its course.

The author was fortunate, we think, in selecting a title for his book. The title naturally suggests the idea that the author is looking backward from 1887, but such is not the case, as the reader soon learns. He finds himself, with Mr. Julian West, the hero of the romance, projected into the future one hundred and thirteen years and looking backward from A. D. 2000.

The writer was fortunate in the matter of dates. The 30th day of May, 1887, was a well chosen time for Mr. West to be put to sleep by Dr. Pillsbury, the renowned mesmerist of Boston; the home of codfish aristocracy; the Hub of the Universe; the Athens of America; the center of æsthetic art, of literature, and quite as famous for the production of "Soolivan me Soolivan," the champion slugger of the world.

Mr. Julian West was a rich young man of Boston, who had never performed a day's work in his life. He inherited his wealth; and lived luxuriously upon his income and belonged to Boston's upper tendom. He was engaged to a charming young lady, was on the eve of solving the problem, "is marriage a failure?" and was building a palatial house for a home. Work proceeded slowly on account of labor troubles. Strikes interfered with his plans; he became nervous, was afflicted with insomnia, was mesmerized, slept one hundred and thirteen years, was found by Dr. Leet in his subterranean room and was brought to life on the 30th day of May, A. D. 2000. For a short time after his resuscitation Mr. West was dazed and bewildered, but finding himself physically and mentally as good as new, neither old nor infirm, he began investigating the new order of things and tells his

story in a way well calculated to interest his readers.

Mr. West's first surprise was in taking from the house top, a bird's eye view of Boston. It was not the Boston of the nineteenth century. "Miles of broad streets, shaded by trees and lined with fine buildings stretched away in every direction." He beheld "open squares filled with trees, among which statues glistened and fountains flashed" and "public buildings of colossal size and architectural grandeur unparalleled" in 1887 were seen on every side. Such things convinced Mr. West that Rip Van Winkle's sleep was a short nap compared with his prolonged mesmeric torpidity—in fact, the changes he observed were of such stupendous magnitude that instead of one hundred and thirteen years, Mr. West thought he must have slept a thousand years. Fortunately for Mr. West, he went to sleep and waked up in Boston. If it had been Chicago, the splendor of progress that would have met his eyes would have so completely overwhelmed him, that he would have doubtless given up the ghost then and there.

In the year 2000, there were no chimneys in Boston, nor elsewhere in the country. The crude methods of combustion in the days before Mr. West went to sleep, had been obsolete for nearly a century and chimneys disappeared with the crude methods.

Mr. West, having been the victim of a strike at the time he was building him a house and home, desired to know "what solution, if any had been found for the labor question?" He informed Dr. Leet that it was "the Sphynx's riddle of the nineteenth century." The reply was that "no such thing as the labor question" was known, and that there was "no way" such a question could "arise." At the time Mr. West fell asleep there existed "wide spread industrial and social troubles," and "the inequalities of society and the general misery of mankind were portents of great changes of some sort." "The most prominent feature of the labor troubles of 1887, and for some years previous," Mr. West thought, were "the strikes" that occurred. These strikes, Mr. West thought, were

made "formidable" by "the great labor organization," as "the workmen claimed they had to organize to get their rights from the big corporations." Dr. Leet said that was "just it" and remarked that "the organization of labor and the strikes were an effect, merely, of the concentration of capital in greater masses than had ever been known before."

At this juncture, in the conversation, the condition of things at the time Mr. West went into his one hundred and thirteen years' trance was sharply defined. Men believed that "the concentration of capital threatened society with a form of tyranny more abhorrent than it had ever endured," and "that the great corporations were preparing for them the yoke of a baser servitude than had ever been imposed on any race." It was declared that in the closing years of the nineteenth century, "railroads had gone on combining till a few great syndicates controlled every rail in the land." It was an era of syndicates, pools and trusts." The great trusts crushed out all rivals. Small capitalists became the tools of the larger ones. Under such circumstances the great body of the people demanded a change, and Dr. Leet tells Mr. West that:

Early in the last century the evolution was completed by the final consolidation of the entire capital of the nation. The industry and commerce of the country, ceasing to be conducted by a set of irresponsible corporations and syndicates of private persons at their caprice and for their profit, were intrusted to a single syndicate representing the people, to be conducted in the common interest for the common profit. The nation, that is to say, organized as the one great business corporation, in which all other corporations were absorbed: it became the one capitalist in the place of all other capitalists, the sole employer, the final monopoly in which all previous and lesser monopolies were swallowed up, a monopoly in the profits and economies of which all citizens shared. The epoch of trusts had ended in the Great Trust. In a word, the people of the United States concluded to assume the conduct of their own business, just as one hundred odd years before they had assumed the conduct of their own government, organizing now for industrial purposes on precisely the same grounds that they had then organized for political purposes.

In the foregoing, the reader learns the character of the change that had taken place, during the period intervening, between 1887 and the year 2000. It is not surprising that Mr. West was greatly aston-

ished. The codfish aristocracy of Boston had disappeared—no traces of it were left. The high hills of "upper tendom" had been leveled. The millionaire and the mendicant had vanished out of sight. The nation, with a big N, had assumed control. Hunger, cold and nakedness did not exist in the year 2000. There were no wars, no army, no navy, no militia—and the government had no war powers. Parties and politicians had gone glimmering, and "demagoguery and corruption" were "words having only an historical meaning." The nation having become the sole capitalist, became "the sole employer," and "all the citizens, by virtue of their citizenship became employés, to be distributed according to the needs of industry." In the year 2000, the citizens between certain ages constituted an industrial army and work was "rather a matter of course, than of compulsion;" however if a man would not work, he would "be left with no possible way to provide for his existence."

Dr. Leet informed Mr. West that there were neither children nor old men in the industrial army A. D. 2000; that the people held "the period of youth second to education and the period of maturity, when the physical forces began to flag, equally sacred to ease and agreeable relaxation." In addition, Dr. Leet said:

The period of industrial service is twenty-four years, beginning at the close of the course of education at twenty-one and terminating at forty-five. After forty-five, while discharged from labor, the citizen still remains liable to special calls, in case of emergencies causing a sudden great increase in the demand for labor. " " The 15th day of October of every year is what we call Muster Day, because those who have reached the age of twenty-one are then mustered into the industrial service, at the same time, those who, after twenty-four years of service, have reached the age of forty-five are honorably mustered out.

In the industrial army of A. D. 2000, every new recruit enters the grade of a "common laborer" in which he serves "three years." During this period he is assignable to any work at the discretion of his superiors." There is no way under heaven for him to escape. He is in for three years, and must submit. After three years the man may choose his occupation, and until he does choose he remains a

"common laborer." Men who want to join the liberal professions can make their choice after three years service as "common laborers," and if they can respond to the demands made upon their brains they graduate, if not they fall out and go back to the ranks of the workers. No favoritism is shown and hence there are no quack doctors, educators or preachers, scientists or philosophers.

The Nation regulates wages. Every worker gets enough. More than that could be of no possible value to anyone. It should be understood that A. D. 2000 there was no money, no buying or selling, no banks or bankers, neither debt nor credit. No lawyers, law suits nor courts as they existed when Mr. West went to sleep. Neither states nor legislatures, the occupation of law makers had forever disappeared, except that something in the shape of a Congress met once in five years, but no change could be made in laws until the proposition had been considered five years. After a citizen's wages had been fixed, he received a sort of a credit card which he presented at a National ware house when he wanted anything to eat, drink or wear. This card represents the holder's share of the annual product of the nation. With this he must be content. The only claim he had upon the Nation was his "humanity," and all shared alike. Every man, said Dr. Leet, is expected to do his best, and is therefore equal to any other man who does his best." If a man having endowments to do twice as much as another man, and didn't do it, it held that he ought to be punished rather than rewarded if he did work to the full measure of his endowments. The people of A. D. 2000 were determined to keep things on a dead level. They tolerated nothing like aristocracy—not even in intellect. Money, stocks, bonds, mortgages, banks, boards of trade, bucket shops and shylocks had all disappeared. From ocean to ocean there could not be found a millionaire, a land shark, nor a cattle king. Cornering food products belonged to the infamies of the dead past. Everybody was the ward of the nation. Everybody was prosperous, happy and contented. Everybody had to work twenty-four years. At 45

all became pensioners and live upon the National bounty.

It should be understood that in the year 2000 women were provided for in a way that disbanded the Woman's Rights Party effectually. All women belonged to the Industrial Army, but were assigned to such work as was most agreeable to them. They were under a discipline entirely different from that which regulated the masculine army, in fact, the women's army constituted "rather an allied force than an integral part of the army of men. Dr. Leet said to Mr. West :

"They have a woman general-in-chief and are under exclusively feminine regime. This general, as also the higher officers, is chosen by the body of women who have passed the time of service, in correspondence in the manner in which the chief of the masculine army and the President of the Nation is elected. The general of the women's army sits in the Cabinet of the President and has a veto on measures respecting women's work pending appeals to Congress. I should have said in speaking of the judiciary, that we have women on the bench, appointed by the general of the women, as well as men. Causes in which both parties are women, are determined by women judges, and where a man and a woman are parties to a case, a judge of either sex must consent to the verdict."

Things were lovely as seen by Mr. West in the year 2000. The women were not subjected to the drudgery of housework, and a girl, without impropriety, could tell her sweetheart that she loved him without being asked to do so. The Nation had abundant means out of the surplus products of labor to educate the young and support the old. Music of the best was had for the asking and was telephoned to the residences of all the people. In times of storms the people of cities went about as if the skies were cloudless—protected by awnings, a sort of a National umbrella. Every dining hall was a sort of Delmonico's and the cooks ranked with the best in any land. Sermons were preached to audiences of 150,000 by telephone, if the people preferred their theology that way. There were no beggars, no poor, no sick. The term "charity" was obsolete. A man demanded his own, received it, and it answered every requirement. And here it should be understood that this millennial era, this miniature heaven, was brought about by organized labor, the industrial army of the country had solved every problem.

Unfortunately, Mr. Julian West's story is a dream, and fortunately, a dream which, unlike Rory O'Moore's, is not to be interpreted by assuming that things contrary to Mr. West's vision, are to exist in A. D. 2000. Labor is organizing, a vast industrial army is in the field and is marching toward the highlands of victory. *Looking Backward* is inspiring. It outlines a possibility, or rather many possibilities, some of which are to be accomplished facts a century in advance of A. D. 2000. Trusts will go, syndicates and monopolies will follow. Land-grabbers will be made to relax their grasp upon lands. Unjust laws will be repealed. Corrupt courts will be purified. Labor is organizing for such work, and those who relish good reading should read "*Looking Backward*."

THE following measures were agreed upon at the International Labor Congress, held at Paris, France :

1. Eight hours a day to be the maximum of the day's work fixed by International law.
2. At least one day's holiday to be given each week ; no work to be done on fete days.
3. Abolition of night work as far as practicable for men, and entirely for women and children.
4. The total suppression of labor by children below the age of 14, and protection of children up to the age of 18.
5. Complete technical and professional education.
6. Overtime to be paid for at double rates, and limited to four hours in twenty-four.
7. Civil and criminal responsibility of the employers for accidents.
8. An adequate number of qualified inspectors to be nominated by the workers themselves, and to be paid by the state or the commune, with full power to enter workshops, factories or religious establishments at any time, and to examine the apprentices at their homes.
9. Workshops to be organized by the workers, with subsidies from the municipalities or the state.
10. Prison and workhouse labor to be conducted under the same conditions as free labor, and to be employed as far as possible on great public works.
11. No foreign laborers to be allowed to accept employment, and no employers to be allowed to employ such laborers, at rates of wages below the trade-union rates fixed by their trade.
12. A minimum wage to be fixed in every country, in accordance with a reasonable standard of living.
13. The abrogation of all laws against the international organization of labor.
14. Equal pay and opportunities for women and men for equal work.

It will be observed that labor is waking up to its rights and to the abuses which centuries of oppression have heaped upon it. Day is dawning. There is to be no more night for labor forever. (This is not exaggeration. The doom of the Corbins is settled.

ANDREW CARNEGIE ON BEST FIELDS FOR PHILANTHROPY.

In the December number of the *North American Review*, Andrew Carnegie, the millionaire, supplements his "Gospel of Wealth" *flapdoodle* with a *poppycock* article on "The Best Fields for Philanthropy." We use the italicized slang phrases purposely and understandingly, as fitting and proper when discussing the pharisaical utterances of a man who, regardless of the ills inflicted, has become a millionaire by robbery (within the law) of thousands of American toilers. This man Carnegie, like Austin Corbin, has the golden key which unlocks the covers of the *North American Review*, whose late editor and proprietor was a millionaire, every dollar of whose wealth was inherited, and Carnegie, having enjoyed the friendship and fellowship of the millionaire editor, takes occasion to beslime his name with characteristic *rot*, in saying "he had played his part in life well"

meaning, we suppose, that the dead millionaire liked his "Gospel of Wealth" because it proclaimed that the laws as they exist regarding "competition, accumulation and distribution," should be "accepted and upheld," and that "great wealth must inevitably flow into the hands of the few exceptional managers of men." And Carnegie, comprehending the value of the privilege to put his millionaire ideas in print, compliments the *Review*, saying it "shines on, a lamp still burning, to show the great army of humanity the pitfalls which it must avoid in order to retain what has been already conquered, and to light the paths which that army must tread on its way to future conquests."

It might be proper to say just here, to Andrew Carnegie, that the "army" of workingmen in the United States does not accept the laws of "competition, accumulation and distribution" as just, and will change them at the earliest day practicable. The industrial army believes that the laws are vicious, and have been fruitful of conditions of unparalleled injustice, of villainies which defy exaggeration, of robberies whose sum totals are told in the colossal fortunes of men like Andrew Carnegie. Why should

the wealth created by workingmen "inevitably flow into the hands of the few exceptional managers of men"? There is no honest reason why. That it is the case is an arraignment of the Christian (?) civilization of the age. When Carnegie proclaims in his "Gospel of Wealth" that the "best obtainable conditions of competition, accumulation and distribution" have been reached, he indorses every conceivable form of robbery practiced by unscrupulous scoundrels to enrich themselves at the expense of the poor. He indorses the land pirates and their aiders and abettors; he indorses the men who organize trusts, whereby "great wealth inevitably flows" into the hands of the few; he indorses every form of corporate robbery and monopolistic greed; he indorses the inhuman scamps whom it would be a compliment to call burglars, who corner food products and make it more difficult for the poor to obtain a sufficiency of food in a land that boasts of its ability to feed the world; and this he calls the "Gospel (the glad tidings) of Wealth."

Mr. Allen Thorndike Rice, the editor millionaire of the *North American Review*,—according to Carnegie,—was immensely pleased with Carnegie's "Gospel of Wealth." Austin Corbin, the man who has Russianized a portion of Pennsylvania, was also doubtless delighted with Carnegie's "Gospel," and we reckon the devil himself became hilarious over it, and if he has a fire-proof book-case, Carnegie's "Gospel of Wealth" is doubtless one of his text-books. Carnegie desires to pose before the world as a pious fellow—one of the tribe of Pharisees, who not only made "long prayers," but at the same time "devoured widows' houses," and made the poor bend their backs to "burdens grievous to be borne." Carnegie takes exceptions to Christ's Gospel because it says "that a rich man shall hardly enter into the kingdom of heaven" and "it is easier for a camel to go through the eye of a needle than for a rich man to enter into the kingdom of God." Carnegie, while asserting that the "Gospel of wealth but echoes Christ's words," endeavors to wriggle out of the tight place in which Christ's words place him. He says:

Time was when the words concerning the rich

man entering heaven were regarded as a hard saying. To-day, when all questions are probed to the bottom and the standards of faith receive the most liberal interpretations, the startling verse has been relegated to the rear to await the next kindly revision as one of those things which cannot be quite understood, but which, meanwhile, it is carefully to be observed, are not to be understood literally.

It will be observed that Carnegie believes that it will be easier for him to get into heaven than for "a camel to go through the eye of a needle." But Carnegie ought to remember that Christ did not take his view of beggars—he did not denounce beggars, he took pity on them; they excited his sympathy, and he wrought miracles to feed them. Carnegie, in his "Gospel," takes no stock in beggars. "Of every \$1,000 spent in so-called charity," Mr. Carnegie thought "\$900 was unwisely spent," and Mr. Thorndike Rice made it "950," and Carnegie revised his figures to suit the millionaire editor's views. In this connection, as Carnegie says that his "Gospel of wealth but echoes Christ's words," it may be well to give him some of "Christ's words" in which rich men and beggars are given special prominence, as follows:

There was a certain rich man which was clothed in purple and fine linen and fared sumptuously every day; and there was a certain beggar named Lazarus, which was laid at his gate, full of sores, and desiring to be fed with the crumbs which fell from the rich man's table; moreover, the dogs came and licked his sores. And it came to pass that the beggar died and was carried by angels into Abraham's bosom. The rich man also died and was buried, and in hell he lifted up his eyes, being in torment.

Does Carnegie's "Gospel of wealth but echo" the foregoing words of Christ? or, have Christ's words, in this case, as in the "camel" and the "eye of the needle," been "relegated to the rear" to give Carnegie, Corbin, *et al.*, a chance to escape?

Carnegie may fare better than the rich man who "dressed in purple and fine linen," and who, under his changed condition, would have been delighted to have had a little cold water. We hope he will, but while he is posing as a philanthropist, *par excellence*, he might read Christ's gospel, and the Bible generally, with great benefit.

It is not a little amusing to note Carnegie's survey of "the best fields for philanthropy." He has seven fields—as follows: First, founding universities; second, free libra-

ries; third, founding hospitals, medical colleges and laboratories; fourth, founding public parks; fifth, public halls for meetings and concerts of elevating music; sixth, providing swimming baths; seventh, erecting church buildings.

In maintaining that the foregoing are "the best fields for philanthropy," Carnegie spreads himself like a green bay tree—and it is well enough to comment briefly upon such subjects. Carnegie admits that great wealth, colossal fortunes, should be administered for the best good of the community *in which and from which* it had been acquired. Carnegie calls it "surplus wealth." In acquiring it from a "community" it had been taken from the people. What people? From workers who alone create wealth, taken by processes as infamous as ever disgraced human affairs, taken by processes of robbery, under the laws and conditions and decisions that the best thinkers of the age, not anarchists, but statesmen, say must be changed if the liberties of the people are to be preserved. Carnegie says the present "conditions are the best that are obtainable," and therefore "that great wealth must inevitably flow into the hands of the few exceptional managers of men." Let us see. Assuming for illustration, that in the present population of the country there are 15,000,000 of men dependent upon their daily wages for subsistence, and that on an average, wages, by present "conditions," are 50 cents a day below just compensation. In that case, "the few exceptional managers of men" would rob labor daily of \$7,500,000, or for 300 working days in the year, of \$2,250,000,000. Suppose wages are 25 cents a day less than justice demands? In that case the annual robbery would amount to \$1,125,000,000. Suppose the robbery to amount to 10 cents a day, and even at this low figure, "the few exceptional managers of men," would be enriched, at the expense of labor, to the amount of \$450,000,000 annually, and this stupendous infamy, Carnegie says is "inevitable;" and the toilers, having been robbed, having been subjected to poverty, hunger and dirt, having been reduced to rags, and compelled in thousands of instances to inhabit dens, Carnegie and millionaires of his ilk, look around for "fields

for philanthropy" in which to bestow their swag, and he thinks universities, swimming pools and music halls, all bearing the name of the philanthropic millionaire, is the direction the boodle ought to take, and this is the outcome of Carnegie's "Gospel of Wealth." It is to fill the land with paupers by robbery, reduce workmen to serfs, create conditions which compel men to work at such wages as "the few exceptional managers of men" decree, or starve; and then take the "surplus wealth" thus obtained and found universities, lay out public parks, decorate "swimming holes," etc., and tell the victims of the piracies to graduate, master Latin and Greek, walk in the parks, bathe, feed on wind, and shout: "Long live Carnegie."

Such is not the order of exercises. Carnegie's programme will proceed for a time, and then the audience will demand a change. It will come. "The exceptional managers of men," the "few" who have been the beneficiaries of the "inevitable flow" of wealth into their hands, will find the "flow" immensely reduced, and the rich men who rob will find themselves calling for "water." Their "Gospel of Wealth" will be "relegated to the rear," and a gospel of justice will be enthroned. It requires patience to read Carnegie's slush about the "right modes of using immense fortunes" known to be the product of cool, Christless robbery. To read his slush about using "enormous fortunes" so they "shall not have a degrading, pauperizing tendency," when it is known that the accumulation was secured by "degrading and pauperizing" the men whose skill, sweat and toil created the wealth that made the "enormous fortunes" possible, indicates unparalleled impudence.

The programme is to stop the "inevitable flow" of wealth into the hands of the "few" and introduce new methods of "distribution." It will be done. The organization of workmen is not a meaningless movement; it is not a holiday parade. It means business. "The best field for philanthropy" just now, is where men of intelligence and courage demand simple justice for workmen, and the "Gospel of Work" will, at no distant day, supersede Carnegie's "Gospel of Wealth," and relegate it everlastingly to the rear.

SUPPRESSION OF TRUSTS.

As we write information comes from Washington that three bills have been introduced in the Senate for the suppression of trusts. This is encouraging. It shows that there are men in Congress who are not sold, body and soul, to the money power of the country, and that the united voice of honest men is yet heard in the councils of the Nation. This speaks well for the integrity and courage of legislators.

The overwhelming and crushing power of trusts is understood. From this time forward trusts are to be an issue in politics. No matter to what party a man belongs, no matter under what flag he sails, if he does not pronounce against trusts he will find himself politically dead and buried.

The people have resolved that trusts must go. They are rank piracy. They are a constant menace to the integrity and perpetuity of free institutions. They are as much out of place in America as would be a titled nobility, Dukes, Lords and a' that.

Who are the United States Senators who have introduced bills for the suppression of trusts? Senator Sherman, Senator Reagan and Senator George.

An exchange says:

Mr. Sherman's bill, for example, declares all trusts unlawful; gives persons power to recover in courts whenever articles are advanced in value by combinations, and pronounces officers of trusts guilty of misdemeanors.

Senator Reagan's bill, which is more drastic, defines a trust to be: A combination of capital, skill or acts, by two or more persons, firms, corporations or association of persons, or of any two or more of them, for any, either or all of the following purposes: 1. To create or carry out any restrictions in trade. 2. To limit or reduce the production or to increase the price of merchandise or commodities. 3. To prevent competition in the manufacture, making, sale or transportation of merchandise, produce or commodities. 4. To fix a standard or figure whereby the price to the public shall be in any manner controlled or established, or any article, commodity, merchandise, produce or commerce intended for sale or consumption. 5. To create a monopoly in the making, manufacture, purchase, sale, or transportation of any merchandise, article, produce or commodity. To make, or enter into, or execute, or carry out any contract, obligation or agreement of any kind by which they shall bind, or shall have bound themselves, not to manufacture, sell, dispose of, or transport any article, etc.

Senator George's bill specifies that all contracts, agreements, trusts or combinations made with a view to, or which tend to prevent full and

free competition in the transportation, importation manufacture or sale of any article of merchandise, shall be unlawful, and in all suits brought in court, arising out of contracts, judgment shall be given against the trust. The President is given power in his discretion to suspend the custom duties whenever he is satisfied that any articles have been enhanced in price by reason of trusts.

The foregoing shows the drift. The men who are now engineering trusts may read the doom of their nefarious enterprises. It may require years to make these devil-fish relax their grasp, but it is only a question of time. It required about a dozen years to perfect and pass an interstate Commerce bill, but trusts are not to remain that long to disgrace civilization and thwart justice.

A VOICE FROM OLD ENGLAND.

John Burns, of London, in response to a request sent by the *New York World*, sent the the following message to America by cable:

To Friends and Fellow Workmen in America:

The year that has passed away has been the most momentous for labor in England since 1848. Everywhere the workers have shown an enthusiasm for organization truly extraordinary in its effects. In London alone 300 trades have secured shorter hours or better wages, and demanded successfully from their present masters better conditions. This means that 200,000 more men and women in London have been added to the ranks of organized labor. The gas stokers in eight months have made 50,000 members and reduced their hours—at better wages—from twelve to eight per day. The baker, who formerly worked ninety to one hundred hours per week, now works, through his union, only sixty hours, and for better pay. In the port of London every dock laborer, stevedore, lighterman and carman is and must be a member of the trades union. The working women are following the example of the men and pressing forward for better times.

All through the world the laborer is moving upward toward the light, the little they are getting making them divinely discontented with what discomfort remains. In Egypt forced labor has been recently abolished. All through the Continent of Europe, encouraged by the recent labor successes in England, unions are organizing, while in the colonies labor is marching with accelerated speed.

All this should be encouraging to the Americans, who have often been pioneers. In America I trust that workers are imbued with the responsibility of their position in the universal labor movement that American citizenship bestows upon them. They are citizens of a republic that will be the central force and influence of the Anglo-Saxon race throughout the world, and which may become a power for universal good.

All is well if each one sinks within himself feelings of mistrust, jealousy and suspicion and works for

the common good. In the new year that is coming English and American sons of labor will have an opportunity of showing their sentiments towards each other by practical efforts to secure internationally the eight hours per day. Certain it is that to keep their relative positions with other countries Americans have in the new year work before them. Believing that they would perform it, and regretting my inability through pressure of work to help them by accepting their invitation to lecture through the United States, we send them from the old country our best wishes for their success and heartiest greetings for the new year.

JOHN BURNS.

Here we have the utterances of a working-man's friend, a leader tried and true; a man with a great heart and immense executive ability. He is not a labor aristocrat. He cares nothing for big letters at the head or tail of his name indicative of his position. The poverty, the degradation, the woes of his fellow men awaken him, inspire him—every latent faculty is brought into requisition. He demands a reduction of the hours of toil and better wages. His vigilance is sleepless; his courage never falters; his energies never flag, and he triumphs. He leads multiplied thousands of toilers to better conditions, better food, better homes, better clothes, and makes them, therefore—God save the mark—better "subjects."

England has had in the past, has now, hosts of great men; but, after all, John Burns is England's Abou Ben Adhem.

SUFFERING FOR FOOD.

We are indebted to Brother George Auchter, Jersey City, for the following editorial article, clipped from the New York World of December 20th:

MONOPOLY AND STARVATION.

Thousands of men, women and children in Trevorton, Pa., and the villages round about are suffering for food and will presently starve to death unless help is rendered from without.

The trouble is that the men can get no work. The reason they can get no work is that the Philadelphia & Reading Coal and Iron Company has a monopoly of the only valuable product of the country, coal, and the rich men who own that monopoly have decided that it will pay them better to suspend operations for a few months than to continue them.

The idleness of the entire population is nothing to these rich men. The cries of the helpless starving women and children do not plague their ears. They consider only how best to manipulate their monopoly of a natural product so as to make it pay the largest possible dividends upon watered stock, every share of which bears a lie upon its face and represents a grinding of the faces of the poor.

This case is not an isolated one. It represents only the condition into which monopoly inevitably brings every business upon which it can fasten its fangs—a condition that makes a few rich men absolute masters and all the rest slaves, in worse plight than plantation negroes ever were, for they were sure, at least, of food as the gift of their owners' self interest.

It is into this condition that the monopolists seek to bring all the industries of the country, and it is in aid of their scheme that iniquitous tariffs, falsely called protective, levy burdens upon all the people and exclude them from the benefits of competitive trade.

This is the use that Plutocracy makes of the political power it purchases with the money it has wrung from the unrequited labor of the poor and the helpless.

In the foregoing from the *World* the iron hand and the iron-shod hoof of Austin Corbin can be seen. Talk of the impoverished and degraded condition of the poor in other lands; in what land, in the round world, are the poor worse off than where Corbin rules? Corbin snaps his fingers in the face of constitution and law—in the face of our much, overmuch, vaunted civilization; in the face of humanity, God and Heaven, and asks, with brazen effrontery, "What are you going to do about it?" Pennsylvania, with less courage than an average spaniel, permits an infamous monopoly, in the hands of men as heartless as hyenas, to inaugurate famine within her borders and remains silent. In the presence of such exhibitions of infernalism, is it strange that Anarchists should multiply? Is it strange that man—according to the late revision made "a little lower than God"—should, in view of such wickedness, seek to emulate God, and blast the cursed regions of Pennsylvania with fire? The condition of things in Pennsylvania is fruitful of horrors. Well will it be for America if Congress and Legislatures accept timely warnings and crush out of existence monopolies and trusts. If this is not done there will come a time when famine-crazed people will inaugurate a social earthquake, regardless of consequences.

M. FONAIL, member of the French Chamber of Deputies recently moved to grant 750,000 francs to assist striking miners. It didn't go through, but it was a straw showing which way the wind is blowing in France.

Fast time is made on the Vandalia Line between Terre Haute and Indianapolis, seventy-three miles, the distance being made, including stops, in ninety minutes—running time, say eighty minutes, or a mile in one minute and five seconds. Hard to beat.

The indications are, that during the year 1889, 5,000 miles of railroad have been built.

Poverty and Promotion.

Want is a bitter and a hateful good.
Because its virtues are not understood.
Yet many things, impossible to thought.
Have been by need to full perfection brought.
The darning of the soul proceeds from thence.
Sharpness of wit, and active diligence;
Prudence at once, and fortitude it gives.
And, if in patience taken, mends our lives.
—Dryden.

“IS he dead?” inquired the mother of a little pale-faced boy, as she turned her tearful eyes to the doctor. “No,” replied the doctor, “he is not dead, but may die any minute.” Then the mother buried her face in her hands and sobbed aloud. The doctor was kind-hearted, and with an effort at cheerfulness, said: “Bob may live; there is one chance in a thousand for him, and much depends on the nursing he receives during the night. He must be bathed in alcohol, and every few minutes he must have a sip of brandy diluted with water, as weak as if to be given to an infant. These stimulants should be administered immediately,” and then the doctor arose to leave the house, or, more properly, the hovel. Mrs. Worthington, for so we will name her, was penniless. Her last cent had been paid for medicine and for delicacies for Bob, and now her boy's life depended upon obtaining a little alcohol and brandy. Poverty now reigned supreme in the Worthington home. A little coal was on hand, and for food, a few potatoes and a little bread, was all the widow's store. Despair took the place of tears; mental agony dried their fountains. Never, in all her bitter experience, had the pangs of poverty been so sharp. The doctor had gone, and the widow was alone with her dying boy. Evening shadows were gathering fast; Bob's life trembled in the balance. The mother remembered what the doctor had said: “He may die any minute; he has one chance in a thousand.” Mrs. Worthington had never begged—but now, Oh, God! she must do it for her boy, for herself, never—no, not beg; she would ask for credit. “Surely,” said she, “the druggist will give me credit for the alcohol and the brandy.” She went to Bob's wretched couch; he was sleeping, or in a stupor, perhaps dying. She did not know, but he was breathing; he was alive, and repeating, “one chance in a thousand,” she closed the door and started for the drug store. Approaching the proprietor, she said: “Bob is very sick; he may die any minute, but he has one chance in a thousand to live. Will you credit me for a little alcohol and brandy?” “Who's Bob,” was the gruff rejoinder. “My little boy; he is very low, may die any minute, but there is ‘one chance in a thousand’ for him. I will pay you as soon as I can.” The druggist gave a long and leisurely puff from his cigar, saw the smoke gracefully curl,

and then, turning to the woman, said: “No.” “Oh, God!” she exclaimed, and left the place, saying: “He may die any minute, but there is one chance in a thousand for him.” She had not noticed who was in the store. She had proceeded but a few steps, when she was accosted by an urchin—a street gamin, a boot-black and a newsboy—who asked her: “Missus, who is Bob?” “Oh, he's my little sick boy.” “But what's his name?” “Bobby Worthington.” “Oh, I know Bob, him and me's been pard. I've got some chink—how much you want? Let's see how much I've got: there's a quarter, there's two dimes, there's a nickel—yes, here's another nickel. Let's see; here's 55 cents. Will that do? You may have it all. Bob and me's been pard. Where's Bob's roost, missus? I'd like to see him. Here, take the money and get the stuff. May I go and see Bob?” And thus the little “Arab” rattled on. Mrs. Worthington returned to the store, procured the alcohol and brandy. It didn't take all the money, but Dick, for that was the little “Arab's” name, wouldn't take any of it back. He just wanted to see Bob, 'cause Bob and him had been pard. * * * * *

Bob got well. The alcohol and brandy saved his life. Dick went home with Mrs. Worthington, and until Bob got well made the place his home. All day selling papers and shining shoes, at night with his earnings he was with Bob; and his money was given to the widow—given freely, given with his heart in every penny—given as a generous father and a loving mother give their children, without a thought of return. Dick was an angel in disguise. As Bob regained his strength, Dick expanded in generosity. He supplied all the funds. Nothing that he thought would help Bob escaped his eye. He worked harder than ever. He wouldn't spend a nickel for a cigar. He sold more papers, got more shines than ever before. Bob was his pard and he stood by him until his health was restored.

Mrs. Worthington had cause, till her dying day, to shower blessings upon the head of Dick Davidson. Bob's sickness found him a homeless waif, without kindred, turned loose upon the streets to take his chances, and yet, beneath his grime and rags, there beat a heart as noble as the best and proudest of the land. He had been Bob's “pard.” They had sold papers and “shined” shoes together. His sense of comradeship was acute; with him friendship meant, in time of need all he had, all his possessions. He loved Bob, as Jonathan loved David, and when he heard Bob was sick, then all his wealth, 55 cents, was poured into the lap of Bob's sorrowing mother; nor was this all, but he stayed with Bob, watched him and worked for

him, and rejoiced when he saw his "pard" getting well, thinking of the good time coming, when "me and Bob" would again be pards. I have said Bob got well, and sure enough, Bob and Dick were once more "pards," and forever afterward were inseparable. Bob's home became Dick's home, and Mrs. Worthington acted towards him the part of mother. Bob could read a little; Dick did not know his letters. Mrs. Worthington became their teacher. The earnings of the two boys made the home more cheerful. Comforts multiplied, and in a year a pleasant cottage was rented. Clean clothes took the place of Dick's former garments, and then, with the transforming influence of soap and water, Dick became a handsome boy, and the two "pards," Bob and Dick, became conspicuous on the street corners for their tidiness and intelligence.

Their first promotion came in the shape of being made messenger boys. Mrs. Worthington was anxious to get them away from evil associations, and when she told her story to the telegraph manager, he became interested, and wanted to see the boys. He found them sprightly, and employed them.

This was the first promotion of Bob and Dick. It is needless to say they were proud of their good fortune. Dick, as a street "Arab," had learned to smoke and chew tobacco, and sometimes drank beer, but from the day that he found his "pard" sick and in want he abandoned every bad habit. Bob had been more fortunate, for, living with his mother, he obeyed her, and though recognized by the "Arabs" as one of them, Bob had managed to remain uncontaminated by the vices of the tribe.

At night, when the boys came home, their earnings were deposited with Mrs. Worthington, whom Dick was permitted to call mother, and by those who did not know them, they were looked upon as brothers. Mr. Smith the telegraph manager, questioned them closely in regard to all matters pertaining to their life and habits. Bob had a family record. He told of his father. He said: "I loved my pap. He had to work hard. He dug wells and cellars and cisterns, and once, way down in a well, he had a chill, and some men brought him home, and then he was sick ever so long. The man he worked for, my mamma says, wouldn't let him have some money that he owed my pap, and my mamma had to sell things we had in the house, and bye and bye my pap died. I sold papers and shined shoes, and gave my money to my mamma; and then I got sick and almost died; and then Dick, he came to my house, and he gave my mamma some money he had got selling papers and shining shoes. Then I got well, and Dick and me have worked together ever since I got well, and Dick, he lives at my house, and we're bein' pards."

"And how about you?" said Mr. Smith to Dick. "I don't know nothin' about my pap nor my mam. It just 'pears to me I've allus ben sellin' papers an' shinin' shoes. I never had any home as I know of till I went to Bob's home; never had no mother 'cept Bob's mother - she lets me call her mother - but I never stole nothin', no cop never run me in. Nobody ever give me anything. I allus sold papers and shined shoes, and Bob, 'fore he was sick, was my pard."

"Didn't the Young Men's Christian Association try to get you to go to church and to Sunday school? Didn't the minister sometimes stop and talk to you about being good?" queried Mr. Smith. "No, I never seen any of them folks," said Dick, "but the Salvation Army, poundin' and beatin' tambourines, but up to Bob's house we reads the Bible an' Bob's mother prays an' we all sing in the evening before we go to bed."

"That will do," said Mr. Smith, "but you will have to have uniforms when you become messenger boys." "How much do they cost?" inquired Dick. "About \$7," was the reply. "We can buy 'em," said the boys. The bargain was made and the boys took the position.

In their new uniforms Bob and Dick were two of the finest looking boys on the street. Mr. Smith watched them closely and found them in all matters truthful and reliable. At this time Bob was thirteen years old. Dick did not know his age, but guessed he was as old as Bob, and that was satisfactory. When the day's work was done Bob and Dick went home, and Mrs. Worthington taught them as best she could. Bob was fond of making all sorts of sketches with his pencil, and Dick took a great liking to the rudiments of arithmetic. Both boys had learned to read well and to write legibly. There was a night school in the neighborhood and the boys became pupils. The teacher, fortunately for the boys, was capable and took an interest in them. He was an excellent draughtsman and mathematician. Discovering the bent of the boys' minds he encouraged them and was delighted with the progress they made. Dick mastered figures in a way that astonished his teacher, and in drawing Bob was not less fortunate. For two years these boys attended the night school. Bob's drawings were marvels of beauty and accuracy, and Dick's progress in arithmetic was not less wonderful. Their proficiency became the talk of the neighborhood, and finally Mr. Brown, the teacher called the attention of a civil engineer to his two prodigies. Mr. Thompson, for such was the engineer's name, became at once interested in the boys, and his interest in them was greatly increased when he learned the story of their trials and good conduct. He sought out Mr. Smith, the tel-

graph manager, and talked with him. Mr. Smith was more than generous in their praise. He said they were prompt, faithful, truthful and studious. Then Mr. Thompson called upon Mrs. Worthington and learned the whole history of the boys. She told Mr. Thompson how she formed an acquaintance with Dick; how the little "Arab," as she believed had saved Bob's life; how he had helped her in the darkest hour of her sad experience, and how he had made her house his home from that time.

Mr. Thompson became still more concerned in the welfare of the boys. Again he visited Mr. Smith and told him that, with his consent, he would offer the boys a place in his office. Mr. Smith didn't want to part with them, for he had plans of his own for the promotion of the boys, but seeing that Mr. Thompson's office was better than the place he had in view he consented, and in another week Bob and Dick were promoted to positions in the office of one of the most distinguished civil engineers in the State.

This was the second promotion won by good conduct, faithfulness and study. Mr. Thompson, like Mr. Brown, saw at once that in the boys he would eventually have able assistants. And now began another and a higher course of training. The boys were made acquainted with the severities of study, but they never flinched. Dick was required to take lessons in drawing and Bob in mathematics. In everything they were still "pards," and now perhaps more than ever of mutual benefit to each other. If Bob was bothered in the labyrinths of geometry and trigonometry, Dick was on hand, and the same was true of Bob when Dick's eye and hand failed in the niceties of drawing. For five years Dick and Bob worked in the office of Mr. Thompson. They mastered every detail. Their capabilities were acknowledged. They took charge of the business. Their habits were unexceptionable. They were credited with being absolute masters of their professions, and were now young men of high character and respectability. In the office of Mr. Thompson the boys had been again and again promoted, but promotion did not make their heads dizzy. They loved their home, and it is useless to say it was not the miserable hovel where Dick found Bob sick and gave Mrs. Worthington 55 cents. Frequent moves had been made, and now their home was a pretty cottage of modern style and comfort, handsomely furnished, and Mrs. Worthington, who had grown gray, no longer required to work, spent her days in luxurious ease; and Bob and Dick, as they grew older, developed every noble trait that could be expressed in unvarying affection and devotion to the woman who for years had watched over them with a mother's solicitude.

During their connection with Mr. Thompson's office a line of railroad had been built requiring consummate skill in the engineering department. The work required had brought out the latent ability of the boys, and it was found that they were equal to the task. Mr. Thompson, first to recognize their worth, sent them to the front on all occasions, finding in every instance that he had not overestimated their worth.

Here we drop Bob and Dick. They are now known as Robert and Richard Worthington, civil engineers, than whom none stand higher in the estimation of railroad magnates.

It were useless to detail further promotions. The Brothers Worthington could now command positions, and to-day one is president of a great railroad corporation and the other its general superintendent, and they are still "pards."

Married? Yes, married. Would you see their home? Well, do not look for it among the brown stone front palatial residences of the millionaires, but rather seek out a spacious double dwelling house, with a porch extending along the entire front, surrounded by shade trees. Note the wealth of climbing roses and the air of quiet which prevails, and which comes down like a benediction. Children? Look again, and note the golden-haired, bright-eyed frolicsome group which beautify the scene. Let us go in, for it is a place where a workman is welcome—where a street "Arab" is never turned empty away. There is neither pomp nor circumstance to intimidate nor embarrass, but wholesome recognition and cheerful words. Mrs. Worthington greets you with a tremulous voice, as when she said to herself on the way to the drug store: "Bob, may live; there is one chance in a thousand for him." Her sun is setting beautifully, and Bob and Dick are gently helping her as she descends the declivities, and her "daughters," Grace and Kate, attune their voices to the melodies of affection and the little grandchildren help to make the home a type of heaven.

The stalwart men who "sold papers" and "shined shoes" and belonged to the tribe of "Arabs" are sympathetic, and when they hear "Here's your Herald—all about the fire," a sale is made; and when it is "Shine, sir," the boy gets a nickel, regardless of the "shine."

In the world's broad field of battle promotion is, as a rule, the reward of merit, and, though poverty is inconvenient, there is room on top, and, in spite of poverty, where there is a will there is a way to climb.

Erastus.

"Is Miss Jones an experienced young lady?" She ought to be. She has been a young lady for the past thirty years."

The Relation Between Labor and Capital.

THE relations between labor and capital are so rapidly resolving themselves into social and political questions as to demand public investigation and legislative action. Governments are instituted for the purpose of the better protection of life and property, and for securing the prosperity and happiness of its people; the protection of the life and health of its citizens, particularly of its weaker members. The fathers of our Republic had in mind the old maxim of doing "the greatest good to the greatest number" when they founded our Government. A large and respectable portion of the people say that many acts of Legislatures and decisions of Courts are not in harmony with the designs of the founders of the Government. If such is not the case, so they reason, the few who live a life of luxury could not accumulate, in so short a time, the immense fortunes they do, while the many, by whose sweat and labor these fortunes are created, are scarcely able to secure the necessities of life, while living, and, at death, have nothing but blessings and good will to bequeath their children.

Ill fares the land, to hast'ning ills a prey,
Where wealth accumulates and men decay.

Persons who are making a study of industrial and economic questions tell us that our country is fast drifting into the condition suggested by the poet. The laboring masses are also led to believe that their condition is not what it should be under a people's Government. Laws that have either been repealed or become obsolete in Monarchical Governments are rigidly enforced in this. In vain do we search our statute books for laws similar to those enacted by European Governments for the better protection of the working people. The first to feel the blighting effects of commercial depression are the laboring classes. They have usually been told that "hard times" are caused by over-production. They wonder how there can be an over-production when so many people are nearly naked, as well as cold and hungry. Legislators are confronted by the want of reliable data regarding the labor problems they are called upon to solve; and, many times, to appease what is termed "popular clamor," laws are enacted which often prove curses rather than blessings. Law is sometimes called the science of human experience. Experience consists of facts. It is only by study and analysis that the principles which give vitality to facts can be discovered. Such a principle, when discovered and declared, clothed in words and equipped for human service, is recognized and applied as a law. One of the greatest of all the defects of modern law-making is legislation based on

the narrow and incomplete experience of a few persons, which may be and often is merely exceptional. Laws based on experience or planned to meet the needs of a locality, or a class, will almost certainly be found to be antagonistic to some other place or interest. But if all the facts are known, the rules to be declared will be modified, and such exceptions made as justice may require. Legislation without a proper knowledge of the facts is simply campaigning in the dark.

From a paper before me I take the following:

A very serious question confronts the American youth under the restriction system of apprenticeship.

This subject is worthy of the best thought of the most profound thinkers of our time, and I hope that my words will serve as an introduction, and may be the cause of others to take up this question for future discussion. We have a restrictive system of apprenticeship in the United States I fail to find in operation in many of the trades and callings, and in many others it exists only in name. It is frequently urged that the restrictive system of apprenticeship is driving the American youth from the skilled callings; that the native born is being driven out from the workshop to make room for the workmen of foreign birth. It is held by many that the trades-unions are to blame for this state of affairs; that the American labor organization is inimical to the interest of the American workman. When the mechanic worked steadily for six days in the week to perform a certain amount of work, by hand, it was necessary for him to know the use of tools; he had to bind himself for a term of years to his employer, and to work for a pittance, with the hope of one day of taking his place at the bench as a journeyman. It made no difference what trade they learned, they were all hard to acquire. At present it is a waste of time to bind a boy to any particular trade, for the reason that they are all subdivided. The aim of the employer in employing apprentices is to secure cheap help on work that is not necessary to employ competent mechanics to perform; under such conditions wages must have a downward tendency. Twenty years ago the apprentice learned all of the "arts and mysteries" of the trade, while the beginner of to-day is placed at a machine and is apt to be kept at it during his entire apprenticeship; and when his apprenticeship expires he is of but little use as a mechanic. During the period from 1859 to 1875 trade-unionism flourished more than at any time in our history. During this period the employers of labor learned to go to foreign lands to secure mechanics who would engage to take the places of American workmen. The employer was not forced to go

abroad for workmen, but he regarded the trade society as a foreign institution, and would not recognize it in dealing with his employes. During the past ten years the importation of foreign workmen by employers was practiced on a more extensive scale. The argument that trade-unionism is to blame for the presence of so many foreign-born mechanics is not worthy of consideration. The truth plainly stated is, that every foreigner who is to-day at work in the workshops of the United States is here because he was induced to come here by some agent, in the interest of the employers of labor in the United States. It is neither profitable nor encouraging to learn a trade when the chances are that some morning the mechanic will awake to find a machine standing in his place doing the work performed by him the day before.

Americans believe that they live in the best country in the world; the workman being imbued with that sentiment believes that he should receive the best wages in the world. The employer, who ought to be as proud of his country as the workman, when it comes to the question of employing an American because he is a countryman, or securing the services of cheap workmen, will cast his lot with the foreign workman and the dollars-and-cents side of the question. The foreign workman, not knowing what his services ought to bring in this land, will step into the shoes of the American workman who has received from \$2.50 to \$3.00 a day, and be recompensed at a rate not exceeding \$1.50 or \$1.75 a day. He, having lived where it was necessary to practice the most rigid economy, can, for a time, exist on these wages. We also find that the manufacturing of the United States are being operated as though they were the property of one management. The tendency is to bring them all under one head through the agency of the "trust." This system, although in its infancy, bids fair to become so perfected that it will be impossible for a man to work in any part of the country if his last employer is dissatisfied with him. The tendency for the past few years has been to discourage the American youth when he sought to learn a trade—he being unwilling to spend years in acquiring knowledge which may never be of any service to him. This is an age of revolution and evolution. It is the most marvelous age the world has ever witnessed, and nothing that has gone before can be compared to it, or cited as an indication of what is to follow. One cannot, with any degree of accuracy, predict anything for the future; we grope and fear to risk too much, lest some new invention completely upset all our plans and gives the winning hand to another. We find American youths unwilling to learn trades because they do not bring rich re-

wards or assurances of stability of employment. What the man of ante bellum days regarded as a luxury is to-day an absolute necessity.

Take a look at the room in which you may be sitting when reading this article and contrast it with what your surroundings would have been in 1858, thirty years ago, and note the changes which time has worked. Once we put oil in a saucer, hung a rag over the edge, struck the flints together and ignited the rag. Then we ran the tallow into the mould and made candles; we next ran fluid into the lamp, and stood back in awe to see it burn; after this, gas began to work its way beneath our sidewalks into our sitting rooms; next came the old Drake farm, and the world was astounded to find itself burning the product of the earth after its products had been refined. Then we said, we can go no farther; but found our words contradicted by a glare of light which almost rivaled the noonday sun, and electricity flashed itself into favor. Ten short years ago we wrote our letters, or, if in a hurry, we telegraphed. To-day we talk into a funnel, and not only are the words recorded, but the very sound and quiver of the voice is recorded. We ask, what next? The answer comes from some quarter of the universe in the shape of some new invention. But what has this to do with American youth? Everything, for we must devote more time to him than heretofore, so that he may not, Macawber-like, stand in idleness waiting for something to turn up. Let us turn it up for him by inaugurating a system of industrial schools where the arts, sciences and trades are taught. Surely the American youth is worthy of the best that we can do for him, and we should encourage him in his first steps, that his later ones will be for the good of the Nation. At the rate science is advancing, there will be no trades of any special calling or crafts; in the world's production we will have men of no particular trade, but all men will know all crafts, not the "Jack of all trades," but a far different being, who knows all trades well. Every school room should be a workshop and a laboratory. At present a trade learned is a trade lost, for the learner does not have an opportunity to practice but one part of his calling, and if thrown out of that one groove, cannot fall into another. Under an industrial system of schooling every American youth will know sufficient of all trades to step into whatever opens itself to him, and he will not be forced by circumstances to stand in the way of another who is anxious to rise, but will be befitted to take a step forward at a moment's notice. He will always find work to do, and will do it more rapidly, with better tools and for a greater reward than the artisan of the present.

G. H. Whitney.

Saving the Kearsarge.

HAVING read the article in your December *Magazine*, entitled "Rowley's Gallant Deed. How he saved the Kearsarge," I have concluded, having been one of the crew of the Kearsarge myself, and having a very distinct remembrance of the memorable fight between the Kearsarge and Alabama, to give the readers of the *Magazine* the facts as I recollect them.

Rowley's account opens the fight all right, but the rest of his account is all wrong. There was no such occurrence as he relates, and the idea of manning the rigging and cheering in the heat of the engagement is ridiculous. From the firing of the first shot by the Alabama to her sinking, was one hour and twenty minutes. The actual fight was about fifty minutes. The engagement, while it lasted was hot. We fired 270 shots out of six guns, the Alabama going about 100 shots better. About the flags, the truth is that the halyards of the Alabama's ensign were shot away in the latter part of the engagement, and the Kearsarge had ceased firing, when one of the Alabama's crew came up from the powder magazine, and seeing the lock string of one of the guns laying loose, caught it up and fired off the gun, saying, "he would have one shot at the damned Yankees, anyhow." The Kearsarge fired her entire broad side before Capt. Winslow's orders could be heard. During this time, the boatswain and quartermaster of the Alabama cut the unionjack, and what was left was a white flag, which they tied up to the left of the spanker boom, and the Alabama sunk with a white flag flying. There was no bridge on the Kearsarge, there was no shell fell on deck, there was nobody killed during the engagement; two men wounded, and one died of his wounds and was buried at Cherbourg. When we came home we were paid off at the Chastertin Navy Yard Massachusetts. The reason why I write this, is because I do not like to see you deceived by such a story as Rowley tells. Rowley, I believe, was stationed in the powder magazine.

Very respectfully,

G. H. Hauser,

Late seaman on U. S. Kearsarge.

St. Louis Mo.

LEGEND OF THE DEWS.

Earth had no dews until a baby died—
A dimpled, fair-faced baby, whose dear eyes
Peeped through the swinging gates of Paradise.
And, seeing wondrous treasures scattered wide,
Sought them with fruitless grasp, and, homesick,
cried:

And when the eager, trembling little hand,
Wearied in reaching for the luring things,
Fluttered and folded, like the drooping wings
Of Noah's dove, sent out to find the land
Where no land was—then angels wept their woe
For the sweet, sealed lids and cheeks of snow;
And all their rueful tears the elphyr's bland
Gathered in dainty cups of moonlight hue,
To heap on babies' graves in showers of dew.

MEMORY'S MUSINGS.

TO J E STANHOPE.

Worthy friend, come sit beside me,
Till we two converse together—
(Though, alas! 'twill be in fancy),
In this solemn twilight hour.
May our hearts both float in rapture,
Just as buoyant as the feather
That is wafted by the fragrance
Of a maiden's sunlit bower.

We will sing of life delighted
That so oft to me thou'st painted,
In the dreamy days so happy.
In the days of long ago!
When I thought thee more than mortal,
Ere our trusting hearts were tainted
By the shadows sent from cloud-land,
That presaged a coming woe.

Happy days! and happy dreaming!
Visions clust'ring round hope's mountain,
Gladsome moments, multiplying
Into hours of joy sublime:
Quaffing deeply golden sunlight
At life's overflowing fountain,
Never pausing in our rapture
To denote the flight of time!

If a single thought of parting
Would pass silently before us,
It would make us cling the fonder
In the bonds of friendship dear;
And thy voice, attuned to gladness,
Could woe mine in joyous chorus,
Far beyond all plaintive musings
Or a thought of mortal fear!

How thy heart would bear mine onward
If it ever paused or faltered!
How thy hopeful words would thrill me
Like the trumpet blast of fame!
Till I felt once more courageous,
Till my bosom's doubts were altered,
And my lips were lisping praises
To entwine around thy name!

I had strength to fight each battle
When, dear friend, thou wert beside me,
For I knew thou would'st sustain me
If misfortune strewed the way;
But alas! grim fate was carving,
And in scorn he did deride me,
As I rallied 'gainst separation
And to have thee with me stay.

When the sad farewell was spoken,
As I clasped thy hand at parting,
There were silent sighs unnumbered
Surging sadly in my breast;
And I saw thee unavailing
Try to check the tear-drops starting,
That upon thy drooping lashes
For an instant seemed to rest.

In a moment more the castles,
Which were built in sunlit bowers,
Down came falling, tumbling round me
On the instant thou wert gone;
Though I try to re-erect them,
Toiling in the ruins hours,
Fate keeps laughing at my efforts,
Although hope allures me on.

We are many leagues divided,
Both are drifting to the star-land;
Far beyond our comprehension,
O'er the azure skies above;
Where thou'lt surely be rewarded
With a never fading garland,
To be worn through life eternal.
In the realms of endless love.

And the brightest 'mid the many
In the treasured stores of Zion,
Is the very one the angels
Have selected for thy brow!
Thou hast won it by life's labor,
Holy writ thou may'st rely on,
For it tells us how the master
Will the pure of heart endow.

Shandy Maguire.

MECHANICAL.

Communications relating to Locomotive Running, Firing and Management, and other mechanical topics, are solicited for this Department.

Contributors are requested to be brief as possible, to write on one side of the paper only, and to forward copy so as to reach the Editor not later than the tenth day of each month.

Review of January Magazine.

The *Magazine* for January comes to us in new and improved shape, having new type inside and newly designed covers, each of which helps the general appearance of our book and makes it an organ which no association of workmen would have any reason to feel ashamed of. "May its shadow never grow less," but may it be extended, until every man connected with the locomotives of the country shall be a careful reader of its pages.

"W. L.," some time ago, asked SLIPPING "why does a locomotive slip OF on a down grade without the use of steam?" and I answered DRIVERS. that I could see no reason why they should, but now "W. L.," from Ohio, is corroborated by "F. E. P.," from Pennsylvania, who says he has noticed the same thing, and further says, that "she would still continue slipping for as much as a mile down grade with the throttle-valve shut," and wants our young mechanics to give an opinion on it. The persons who have noticed such phenomena should be in better condition to study out the reasons that causes them to slip than others who have not observed them, and to whom all laws of mechanics would seem to indicate that such things could not be. That a locomotive slips in starting a train in not to be contradicted, and that while bringing a train into speed, or while pulling a heavy train, as somewhat constant slip exists, which is not so evident when in full speed or with a light load, will be self-evident, and can easily be demonstrated by such of us as have children, sleds and a frozen pond at hand. (Our young men might substitute sweethearts and one of those chairs on runners for children and sleds.) While either party would be apt to slip around rather lively in starting a heavy load and bringing it into speed, yet when in speed, or with a light load, not much slipping would be done. All indications go to show that while steam is being used there is constantly a little slip, which is in proportion to the load that is being pulled, but that the wheels should slip "for a mile with the throttle-valve closed," would seem to indicate the existence of a hitherto undiscovered power, for it is certainly to be as-

sumed that power is necessary to slip the wheels, as is stated by your correspondents. Even Mr. Lockwood's answer, that it is owing to the imperfect counter-balance, does not answer why they should slip going down hill without steam, for certainly, according to Mr. Lockwood's theory, the wheel could slip only during a portion of its revolution, for during the other portion the increased force (hammer blow) would take such a hold as to make slipping an impossibility. Mr. Lockwood will please take notice that these correspondents do not allude to slipping half a revolution, but for several hundred revolutions of the wheel. Mr. Lockwood also says, that two graduates of Steven's Institute in Hoboken made some tests on a Baldwin, running on the Central Railroad of New Jersey, between Bound Brook and Jersey City, and reported that *there was no slipping of the drivers*. It is to be presumed that these tests were made in the interest of science and to arrive at the truth, yet it is just possible, and, indeed, highly probable, that this was a light train, for as Bound Brook is only thirty miles from Jersey City, it is likely the tests were made with a three-or-four-car train, and would have resulted differently if eight or twelve coaches, with three or four of them Pullman sleepers, had been attached. The difference between a light pull and a heavy one can be most distinctly seen in a comparison of the tracks, or hoofprints, of a horse hitched to a light carriage and a horse of the same weight pulling a heavy wagon, and ought to bring conviction that a constant slip is going on when a heavy load is being pulled; but that it varies, according to the position of the counterbalance, has not been made clear to me by the reading of Mr. Lockwood's article nor any thought which I have given it.

STEAM Although I have devoted much space of the January POWER. *Magazine* to Dr. "Wilson," there are a few points in the Doctor's January article which require attention. The Doctor says it is wrong to calculate for two cylinders in a locomotive. Does he mean to say that a two-cylinder engine is no stronger than a one-cylinder machine, and that the second one does not affect the power except in so far as it helps over the dead points? As the Doctor says it ought not to be counted, of course he must mean that it does nothing. Again; the Doctor has fixed the constant pull of a horse at 150 pounds. Then he says that all he can get out of one piston, with an area of 283.5 inches and a pressure of 120 pounds, is 34,020 pounds as a pull, and then says it is only a little over one horse power. Taking the Doctor's own figures of 150 pounds as the constant pull of a horse, does not this 34,020 pounds on one piston denote as many

horses as 150 is contained in 34,020, or nearly 227, or 454 horses for the two pistons, on any machine which has two? Or does the Doctor mean us to take leave of common sense and believe it as he puts it, *a little over one horse power*? Does he believe one horse will pull a locomotive? And yet they not only pull themselves, but trains of 1,000 tons, as I have shown in *January Magazine*. The Doctor himself has called attention to the difference between foot pounds and constant pull often enough, so that he should not confound the constant pull of 34,020, which he has said was there until the train started, with the 33,000 foot pounds which represent power and motion. If the Doctor willfully and persistently discards and ignores the work done by one cylinder, which is surely as much as the other, he can make any kind of figures he pleases; perhaps it might be as well to ignore the existence of steam and of the other cylinder, and thus let the people see that instead of being indebted to steam for rapid transportation, we have been dreaming, and are just now being awakened to our senses by the "Dr.'s" revelation. If the "Dr.," after reading this, and my article on work done by locomotives, in the *January Magazine*, will answer some of these points it may be well to continue this discussion, but if it is to lead into an advertisement of a new scheme I shall not have any more to say on the subject.

UNCLE SILAS "Uncle Silas" seems also to be in doubt in regard to "Dr. Wilson's" "horse sense," and ON gives a good explanation of HORSEPOWER, horsepower and thinks Watts is still good authority on this point.

BOILER A. T. Conkling asks in regard to a boiler having sixty pounds PRESSURE of steam, and in reply I would say that when we say a boiler has sixty pounds of steam, we mean to say that every square inch of plate in contact with the steam is subject to a pressure of sixty pounds.

MEASURING "A. T. C." also asks about measuring a safety valve. There ARE a number of different shape A SAFETY safety valves and of course the VALVE. steam openings are also different. The most common shape are the circular and the annular steam openings. Fig. 1 shows a circular opening in which A is the steam space or opening, and B is the rim on which a beveled seat is ground. The opening in this case is 3 inches in diameter and 3 multiplied by itself is 9, and this multiplied by .7854 equals 7.0686, showing that this valve has a little over 7 square inches in it and would require a force of a little over 420 pounds to hold it to its seat if the boiler had 60 pounds of pressure to the square inch. In Fig 2 A represents a hole

for the valve spindle, B a depressed part of the casting, C C raised rings ground to a true face on which the valve rests, covering D D D, which is the steam opening. To arrive at the number of square inches in this opening we have two methods, one being

to find the area inside of the outer edge of the steam opening, and subtract the area of the space inside of inside edge of opening in this way, one diameter being 34 and the other 24 inches.

The 3½-inch circle contains over 9 square inches; the 2½-inch circle nearly 5, leaving a little over 4½ as the steam opening. Another way is take the average diameter, which, in this case, is 3 inches, multiply by 3.1416, which gives 9.4248 inches as the circumference in the center of the opening; multiply this by the width, which is ½ an inch, and we obtain 4.7124, the same result as before. This valve would need but about 282½ pounds of force to hold it down with 60 pounds on the boiler.

DISPLACEMENT A plunger 1.5 inches in diameter has an area of 1.76715 which, multiplied by 20 (the length), and 60 (the strokes), yields a product of over 2,120 cubic inches, or, (as it takes 231 cubic inches to the gallon) a little over 9 gallons.

HORSEPOWER Boilers are rated for horsepower by the heating surfaces as it is by them that the amount of fuel consumed, heat evolved and water evaporated is governed.

HORSEPOWER The power developed on a piston in a cylinder, varies with the pressure and the speed, and the same cylinder may at one time show ten times as much power as another, and therefore no definite horsepower can be assigned to any given size cylinder.

ECCENTRIC "A. Duncan" asks, "What is an eccentric blade? In some sections we call it eccentric rod, it being the connecting parts between the eccentrics and the links in ordinary locomotives."

DIRECT AND By direct motion we understand that the eccentrics move the valve without any intervening device, such as a rocker arm, and by indirect those which move by the use of the rocker.

THROW The throw of an eccentric is not governed by its size, but by the amount that its center is from the center of the axle to which it is attached. A 5-inch in diameter eccentric may be attached to an axle with its center 1 inch from the center of the axle, and have 2 inches throw, and if a five foot eccentric were used with its center 1 inch from the center of the axle its throw would be only 2 inches. The throw of an eccentric is twice the distance that its centre is from the center of the axle.

Hoping that I may have made my answers clear and that they may stand the test of investigation, I am, as ever,

Vulcan.

Comparison of Horse and Steam Force.

Let us first assume that horses can travel at the rate of 20 miles per hour, which is 1,760 feet per minute. Then, from what we have already demonstrated, their load as a constant pull is 18½ pounds per horse. Now, we will take 20 cars as the load, and have them moving at the rate of 20 miles per hour, and that it requires all the constant pull of 40 horses to keep it moving. Then the combined force of the horses would be $18.75 \times 40 = 750$ pounds as the tractive force required while the train is in motion. This is allowing two horses for each car, with a starting force of 750 pounds each. Then, for 40 horses, it is $750 \times 40 = 30,000$ pounds of tractive force to start the load. Now, in a former paper, in speaking of the starting force of steam in the locomotive, with 19x24-inch cylinders, and a pressure of 120 pounds in the cylinders, I stated the whole force is 34,020 pounds, and the difference between the starting force of 40 horses and this locomotive to be 4,020 pounds, and let this be to start the locomotive, which would be regarding it as equivalent to 2½ cars. Then the locomotive and 40 horses could start the same load. Then, if steam horse-power means the same as for the horse himself, why should they not accomplish the same amount of work in the same time, in drawing a load? The foot pounds of work for 40 horses for one minute, is $1,760 \times 750 = 1,320,000$ foot pounds. Proof - $33,000 \times 40 = 1,320,000$ one minute's work for 40 horses.

We have shown the starting force of this locomotive and 40 horses to be equal, and we have them both to move the load 20 miles per hour, and to do this we have already shown the tension, or pull, required of the horses, and the foot pounds of work done in one minute. Now it remains to show the same things for the locomotive. At 20 miles an hour the piston speed is 496 feet, but the distance traveled along the rail is 1,760 feet. Now, let the pull for the steam be the same as for the horse. And as the steam (piston) speed is 496 feet, the tension of pull per horse-power is 66,532 pounds. Then $66,532 \times 40 = 2,661,290$ pounds is the whole tension or pulling force of the locomotive to draw the load. Now, this is a constant push or pull against the piston at the strongest point, and the two cylinders average this, when the estimate is put on only one. The piston contains 283.5 square inches, and $2,661,290 \div 283.5 = 9,387$ pounds pressure, instead of the "always supposed two-thirds," or 80 pounds, as given in the example. Now, with this steam pressure, how many foot pounds of work is done in one minute? thus, $283.5 \times 9,387 \times 496 = 1,319,863$ foot pounds, only 137 pounds less than 40 horses, and would have been

The New York Central Railroad is soon to have fifty new passenger coaches, which will be used mostly for the extensive travel on both the Harlem and the Hudson River divisions.

exactly the same if the fractions had been counted closely. Now, we have seen that 40 horses and this 19x24-inch cylinder locomotive have the same power to start the load; and when taking it along the road at 20 miles per hour, they do the same amount of work each minute or each hour. But you only have a steam pressure in the cylinder of about 9½ pounds per square inch, instead of the "must be supposed two-thirds of boiler pressure."

Now let us reverse - not the engine, but the speed of travel - and let the horse have his gait, 2½ miles per hour, and make the engine travel at the same speed.

Then the constant pull of 40 horses is $150 \times 40 = 6,000$. This gives in foot pounds for one minute's work, $6,000 \times 220 = 1,320,000$ foot pounds, just the same for one minute's time as when he was going 20 miles per hour. Let us now see what a locomotive can do, running 2½ miles per hour, which is ½ of 20 miles. As the speed is 8 times less, the pull or push must be 8 times greater. At 20 miles per hour we estimated the pull at 66,532 pounds for each horse power. Then to pull the same load it will take 8 times as much steam pressure as it would for twenty miles an hour; then the pull per steam horse is $66,532 \times 8 = 532,256$ pounds pressure per horse power, and for 40-horse engine, 19x24-inch cylinders, it is $532,256 \times 40 = 21,290,240$. The piston speed is 62 feet per minute, and the work for the locomotive is $21,290,240 \times 62 = 1,319,994.88$ foot pounds, which is only about 5 pounds less than we found for forty horses traveling 2½ miles per hour. Therefore, as this whole pressure against the piston is 21,290,240, let us see how much that is per square inch of piston: $21,290,240 \div 283.5 = 75.1$ pounds, nearly, which almost reaches "A Philadelphian's" two-thirds boiler pressure. But if we check up this fiery, snorting steed, and let him prance along at 2 miles per hour, then he will have to lay his shoulder to the wheel not only at 80 pounds, but at about 94 pounds, nearly ¾ of the boiler pressure.

Now, if 20 cars make a full load for 40 horses, at 20 miles per hour, there would be a tractive force of 37½ pounds for each car, when pulled by horses, and a pressure in the cylinder of about 133 pounds for each car. But if the train only moves 2½ miles per hour, then the pull for the horses is 300 pounds per car, or a two-horse force, and there would be in the cylinder a pull of 1,064 pounds per car, which represents two-horse steam force. But, as shown in a former paper, you can not have 75 pounds pressure in the cylinder, therefore your locomotive must fail to pull the load. But the horses can get in their work, and I believe two horses will pull a car with ease. If it takes 30, 40, or 50 cars to make a full load

for the above pulls, all the change or difference that it can make is, the 6,000 pounds pull for the horses would have to be divided by the number of cars, and it would be so many pounds less pull for each car. Thus, if 40 cars made the load, then the pull for each car would be 150 pounds, or one-horse force, and for the steam it would be 532 pounds pressure in the cylinder; therefore, a locomotive on a slow motion would fail for the want of momentum.

Again, as we found the locomotive equal to 45 horses in starting a load, including the locomotive itself, and after starting the locomotive can go 20 miles while the horses go 2½ miles, and as the momentum of a moving body is the mass multiplied by the velocity, then the steam has 8 times as much momentum to help pull the train as the horses would. And to illustrate: Let us say for every pound of force given by the horses, going 2½ miles per hour, that momentum gave one pound to propel the train; then so many horses can pull one car, and the momentum one, and this would move two cars. And for every pound of steam force there would be 8 pounds of momentum; therefore so much steam would be required to keep one car moving, and the momentum would haul eight cars, making 9. If this is true, then for every 3 cars for the horses the engine would take 9. But it takes about 3½ pounds pressure in the cylinder to equal 1 on the horses' traces. Therefore the work again is about equal.

If the load for 40 horses is 20 cars, going 2½ miles per hour, and the locomotive can haul 20 cars, at the rate of 20 miles per hour. Then there would be eight times the work done by the locomotive, as by the horses. But the steam force could be no more than the horse force, the balance is momentum. Again as one pound of horse pull is equivalent to 3½ pounds steam pressure or steam pull; then if the locomotive takes 20 cars 20 miles per hour, 40 horses would take 70 cars 2½ miles. Now we have looked pretty well over the ground, as to what steam can do without momentum, under various conditions; and find its force very small, compared with what it has credit for. But let the boys not be discouraged, your engines will pull just as much as ever. However you may not feel so proud of them when you mount the footboards. When doing so you have been made to believe you were behind 500 or 600 prancing fiery steeds, when it turns out they cannot do more than 40 or 50 old plugs, and the laugh is not so much on you, as on those who made the rules to estimate the power.

I think the laws of mechanical philosophy are about as well established, and as near correct, as the laws of astronomy were in the days of Galileo.

Let us now recapitulate:

1st. I have demonstrated that in estimating horse power that it should be the constant pull of a horse; and not the foot pounds of work he can do in one minute; and that when the rate of travel is 220 feet per minute (the ordinary travel of a horse), the tension of pull is 150 pounds. But if the rate of travel is 440 feet per minute, the tension of pull is only 75 pounds, and so in proportion as the rate of travel is increased or diminished.

2d. That all rules for estimating the horse power of steam engines is wrong, for the calculations are for the work of one minute, instead of a constant pull. If the work is the drawing a train at 60 miles per hour, it is the work of hauling the train one mile that is estimated, instead of how much force it would take to start the train, or what force is required to keep it going. And the same rules should apply to steam, as to the horse, and the rate of travel for engines is the piston speed in feet, and not the distance passed along the rail.

3d. I think I have clearly demonstrated that the amount of steam claimed to be used, never is used. (a). It is not possible to make the amount. (b). If it was made there is no store-room for the 100th part of it. (c). If the water claimed to be used, was all made into steam 1,700 inches to one of water, or compressing it to 120 pounds pressure, being 212 inches to one of water, you would have a pressure of not less than 3,000 pounds in the boiler for one minute's supply, or your steam space must be enlarged 26 times. And to have 15 minutes supply on hand, your steam space would have to be nearly 400 times as large as it is.

4th. By the methods used in conducting steam from boiler to cylinder, and the escape provided, you cannot get the amount of steam claimed into the cylinder; and if there, it would require half the force claimed to get it out in the time required. In other words, you would have both ends of the cylinder full of steam at the same time, then it would be something like 60 horses pushing the piston forward, and 50 horses holding it back.

5th. You all well know if you run your train only $2\frac{1}{2}$ miles an hour, that it would require a great deal more steam to run 20 miles than it would to run 20 miles in one hour, for you would be eight times as long on the road, and you would have to use as much if not more steam per hour on the slow run than you would per hour on the fast run. Yet some are so silly as to tell you the faster you run the more steam it takes. It *possibly* may take more per hour but a great deal less per mile.

6th. That you obtain, when running 20 miles or more an hour, no force from the expansion of steam to drive the piston

from the middle of the cylinder to the end of the stroke.

7th. We have shown if steam can pass from boiler to cylinder at the rate of one mile per minute, that a very small opening into the boiler would soon let out a boiler full of steam.

8th. That the utmost force steam can have in starting a load, or the machinery which it is to drive, is measured by multiplying the area of piston by the number of pounds of steam pressure in the boiler. And if you get more than one-eighth of this in steam force when running at ordinary speed, let some one please demonstrate "with facts that cannot be controverted."

9th. According to book philosophy, we have shown that if horses pulled a train 20 miles per hour, the whole force required to keep it at that rate is only $\frac{1}{8}$ part of the starting force of the horses; and that the same laws are applicable to the steam; if so, then when in motion you have not more than $\frac{1}{8}$ part of boiler pressure. That is if boiler pressure is 120 pounds you might have two pounds in the cylinder.

In conclusion will say, I am aware that I have done violence to almost all laws of mechanical philosophy, and it is done because they won't harmonize with facts.

To illustrate; one writer says there is no machinery which will enable a man to do more work with it than he can without it, and gives this example: "A man can draw more coal out of a pit with a rope and tub, drawing it up hand over hand, than he can with any appliance of machinery." The writer seemed to forget that a rope and tub were machinery. Why did he not have him a winding stair, and carry it up in his hands? And many of the other so-called laws of philosophy are just as absurd.

L. A. Wilson.

ARGENTA, ARK.

Drawing.

Probably no accomplishment is of more use to a mechanic than the art of drawing, with which all ought to be familiar, but which until lately, has not received the attention it deserves, and thus a great many persons have started out in their life-work without this art. A familiarity with mechanical drawing must be a great educator, for in making drawings according to scale the mind must become used to working in a systematic manner, and when tracing the outlines of a machine its component parts will impress themselves on the memory and the uses of the various mechanical powers with their properties, will be conveyed to the brain by the sense of sight until their functions are perceived much clearer than it would be possible otherwise. While in the consideration and the study of old forms,

drawing will be found a great educator. It is when a person has a new idea which he is working out, or which he is trying to convey to the minds of others, that the facility to illustrate the idea by drawings becomes of the greatest importance. Much time, labor and money would no doubt have been saved if persons with new ideas had always been able to make drawings of their designs, because when plotted to a scale, defects not visible except on close measurements, then become apparent and show the futility of continuing on that line. Or, if the idea is to be communicated to others it cannot be done better than by a drawing of the machine or its different parts in various views. Entertaining such views in regard to drawing, it has ever been a matter of regret to the writer that he never enjoyed the opportunity to acquire this art, and it is therefore with a great degree of pleasure that he noticed that the *Locomotive Engineer*, edited by John A. Hill, has an article in the November number on this subject, and that it is to be followed by others, so that persons so disposed could acquire this useful art. Much good will no doubt result from this, as I find from consultation with other readers of the *Engineer* that many are going to take up the study, as they feel it will be a great help to self-improvement and of incalculable benefit to them in the future. In the matter of cost very good outfits can be had much cheaper than the estimate furnished in the *Engineer*, and which no doubt will do all that the novice or even the expert will require of them, and it will be to the advantage of our members if they desire to avail themselves of these drawing lessons to apply to the *Magazine* for directions on drawing outfits.

BARNESVILLE, MINN., Jan. 12, 1890.

MR. EDITOR: The boys had an argument relating to the way a spring broke, "going down or coming up." We concluded to submit the matter to the "Mechanical Department" of the *Magazine* for a correct answer.

Yours truly,

Boliver.

The Iron Car Company of New York have arranged for several car building establishments in different parts of the country, to build the iron tubular car. There are over three thousand of this type of car now in use, and the demand for it is steadily increasing. The first car of the kind put in service, ten years ago, is still running, and has cost next to nothing for repairs.

The Georgia Central are in the market for 800 freight cars and a number of locomotives.

Shop Items.

The Bristol Machine and Car Works are to be enlarged.

It is said that the car works at Rotterdam, N. Y., will start up with 200 men.

The Georgia Southern & Florida have begun work on their shops at Macon, Ga.

The Boston & Albany Railroad Company is building a wood-working shop at Providence, R. I.

The Houston & Texas Central Road is contemplating the erection of large machine shops in Denison, Texas.

The shops of the Memphis & Charleston Railroad, at Sheffield, Ala., will consist of a machine shop, 100x200 feet, and a blacksmith and boiler shop, 90x200 feet.

The plans for the new Louisville, St. Louis & Texas shops at Cloverport have been approved and accepted, and work will begin at once. The shops will be just twice the size and capacity as those burned at Henderson.

The nature of the business of the Minnesota Iron Car Co., which has filed articles of incorporation with a capital of \$2,000,000, at Duluth, Minn., propose "to smelt iron and other ore, to manufacture pig-iron and its kindred products, railroad cars of all descriptions, locomotives, marine and stationary engines and machinery, iron and steel rails and plates, railroad fastenings, bar iron and forgings of all kinds, and castings of iron, steel, brass and other metals, malleable iron, tubes of iron and steel, metals for structural purposes, and all materials necessary for or incident to the production of railroad equipment and construction, and for other purposes."

The marvelous Baldwin Locomotive Works are at present turning out twenty-eight complete locomotives weekly, or at a rate of four and two-thirds a day, or a complete locomotive every two hours and eight minutes of time. These are really astounding figures, and the mind fails to take in their full significance until one has gone through the works and noted the small army of men employed and the vast equipment of machinery. It has been remarked that there is comparatively little to be seen in these shops, which a tool maker would be apt to consider as indicating remarkable high efficiency, and in this connection the opinion of an eminent engineer, not, however, connected with the works, may be interesting. He seems to think that the high efficiency is due largely to their system, which enabled them to quickly detect any weak spot, and take measures to strengthen it. At the beginning of each week, each foreman receives a blank form filled out, which indicates what work must be done in his department that week, in order to complete certain engines according to contract. If, for any reason, he thinks that he will be unable to do the specified work within the week, he gives notice to that effect, in order that suitable arrangements may be at once made, either for increasing his output in some way, such as by putting on more hands, by ordering night work in that department, or by sending part of the work to other departments, where practicable. Towards the end of the week it is the business of each foreman to ascertain if he is likely to finish the required work, and if not, to give the reason. When any department is found to be often or habitually behind, it is strengthened in some way, usually by the addition of men or machinery, or both. This plan obviates a great deal of vexatious and expensive delay, and at the appointed time, when the erection of an engine should commence, all the parts which are to compose that engine are almost sure to be ready to go together. Any weak link in the chain is at once detected, and every man who is responsible for a part of the work knows that, if his department falls in the least behind, he will be expected to give a satisfactory reason for it within a few days, and before any very serious or irreparable delay takes place.—*American Machinist.*

Rolling Stock.

The Jackson & Sharp Co. is building several cars for the Chateaugay road.

The Lafayette car works are building 25 refrigerator cars for the Ohio & Mississippi road.

Two new passenger cars have been received by the Western of Alabama.

The Baltimore & Ohio has received at Chicago four new Pullman sleeping cars.

The Baltimore & Ohio is constructing at its shops at Mt. Clare, Md., six postal cars.

Thirty new freight cars were received by the Louisville, St. Louis & Texas road last week.

Since winter 20 box cars and several passenger cars have been finished at the Waterville shops of the Maine Central.

The Louisville, New Albany & Chicago road is building 100 refrigerator cars, the first the company has ever owned.

The Indianapolis Car & Manufacturing Co. has completed 100 of the fruit cars it is building for the Louisville & Nashville.

The Jackson and Sharp Company, in Wilmington, Del. has recently shipped passenger cars to the Richmond & Danville, the Allegheny Valley, and the Ulster & Delaware Railroad.

The Michigan Car Company, in Detroit, has recently taken the contract to furnish 100 coal and 200 box cars for the Rome, Watertown & Ogdensburg Railroad.

One of the oil companies which has just opened a well at Terre Haute, Ind., has contracted with the Terre Haute Car and Mfg Co., to build 20 oil tank cars for them.

The Kansas City, Wyandotte & Northwestern has placed an order for 3 new locomotives, 100 box freight cars, 3 cabooses, 2 chair cars and 2 combination passenger coaches.

The Louisville, New Orleans & Texas has recently received 4 new passenger coaches, and 6 others are nearly completed. An order will soon be placed for a large number of freight cars.

The first installment of the 750 additional ventilated fruit cars, ordered by the Central of Georgia recently, has been received from the United States Rolling Stock Co.'s Anniston works.

The Pullman Company is building for the Atlantic City road 45 first-class coach and five combination cars, the first instalment of which will reach Camden June 10. All will be delivered by June 28.

The Wason Car Mfg Co., of Springfield, Mass., has just finished five cars for the Brooklyn, Bath & West End road. The cars are of open style, for summer travel and excursion trains.

The Cleveland, Columbus Cincinnati & Indianapolis has received all the equipment which was contracted for last February, and now has in service 1,400 more freight cars and six more locomotives than on February 1.

The Ohio Falls Car Co. has secured contracts to keep its passenger department busy for the next ten weeks, and has also been awarded a contract to build 20 box cars and several cabooses for a Southern road, and is negotiating for a contract to build 500 cars another Southern line.

The South Baltimore Car Works are completing at the rate of eight a day the 700 cars recently ordered by the Richmond & Danville for the southern fast freight business. The works are also working on an order for 50 freight cars for the West Virginia Central road, and there is work enough on hand to keep the company busy till September. New machinery has been recently put in and a new foundry built.

Car Notes.

The Alabama Car and Foundry Co. has been organized at Anniston, Ala. Capital stock, \$200,000.

The citizens of Galveston, Texas, are confident of raising the \$50,000 required to secure the location of the Santa Fe Railroad shops.

The Southern Car Works are extensively improved by the addition of a foundry and other departments. Mr. H. M. Perry will have the management, beginning about May 1.

The thirty-five or more parlor cars running on the Long Island Road are being refitted by the Pullman Palace Car Company, and they will be in good shape for the summer travel.

The Plintsch system of lighting cars by compressed gas was shown at the Time Convention, held last week at the Hotel Brunswick, New York City. Mr. St. John was in charge of the exhibition.

The Loconia Car Co., of Loconia, N. H., is busy with orders for ten passengers for the Boston & Maine, ten cars for the Cheshire road, and one hundred freight cars for the Upper Coos Railroad.

Car No. 4, on the Tuckerton Railroad, has been running on that road for eighteen years. During that time it has never been under shelter, never been to the shops, and has never been treated to a coat of paint.

Ryan & McDonald, Waterloo, New York, report heavy sales of construction cars to railroad contractors in February, mostly to Southern states. They report business good through February. They manufacture all kinds of contractors' implements.

The Boyden car brake, having been successfully tried on freight cars, is now being experimented on passenger cars. The Baltimore & Ohio Road is now running a daily train fitted out with this brake between Baltimore and Frederick. The action of the brake is said to be very satisfactory.

Through the winter nine hours was a day's work in the Delaware, Lackawanna & Western Railroad Company's car shops at Scranton. This week the men were ordered to work ten hours a day, the business of car building and repairing having recently become quite brisk in that section.

The New York Central people recently invited representatives of all the different railroads to look at the latest achievement of the Wagner Palace Car Company. It was the vestibule sleeping car Lorraine, which all of the half hundred agents present acknowledged was a little more like a palace on wheels than anything they had seen before. The New York Central's plan is to build enough more cars of the same pattern to make a complete train each way for the Chicago vestibule limited. The novelty of the new car is in the division of the interior into compartments or staterooms, ten in number. The rooms may be connected to accommodate large parties. There are four staterooms for ladies and six for gentlemen. The first room on the gentlemen's side is finished in oak, with seats of tan plush, tapestry of blue and blue and gold, curtains of tan and gold. The second apartment is in sandal-wood, the third in mahogany, the fourth in Circassian walnut, and the fifth and sixth again in antique oak and mahogany. The plush covering on the seats and the brocade tapestry have been chosen in each instance to harmonize with the wood finish. The rooms on the ladies' side are similarly finished in oak, satinwood, Circassian walnut and mahogany. Each room contains an upper and lower berth and all the latest improvements. The 70-foot car has also a library and buffet. Among those who saw the car were: General Passenger Agent Farmer and Assistant General Passenger Agent Dehaven of the Erie; General Passenger Agent C. E. Lambert, of the West Shore; and G. B. Comors, general passenger agent of the Fall River Line.

Woman's Department.

EDITED BY IDA A. HARPER.

Letters pertaining to Woman's work, such as education, temperance, home and fireside, and kindred topics, are solicited.

Correspondents are requested to write plainly, on one side of the paper only, and forward their manuscript so as to reach the Editor not later than the tenth day of each month, directing all communications for this Department to

MRS. IDA A. HARPER,
TERRE HAUTE, INDIANA.

THE OUTLOOK FOR 1890.

There is no class of people who can look back over the things accomplished during the past year with as much satisfaction as the women of this country. A general and steadfast progress is taking place among all the civilized nations of the world but nowhere is this advancement so marked as among the women of America. The exigencies of the late war transformed them almost into a new race of beings. So large a body of men were called away from their business to defend their homes and liberties, that it became necessary for women to take up the occupations always before considered as belonging exclusively to the other sex. They learned to their own surprise and that of everybody else that they fitted into these places as if made for them. Thousands of men never returned and thousands came back sick, maimed and unable to work. They found that women had taken hold of the tasks they had left unfinished and developed a wonderful fitness and ability.

For a number of years after the close of the war, when there was everywhere general confusion and disorganization, this peculiar phase of affairs was accepted as a matter of course. Then there came upon the field a new generation of men, strong, ambitious, ready to engage in competition for position and power. They found that it was not with men alone they must enter the lists but that many places were already in possession of women and that in all avenues were members of this sex, inspired by the same purpose as themselves. In some instances they have rebelled against the present order of things and made the pathway very rough for the tender feet of women. But in many others they have recognized the grand principle of equal rights and have proved themselves generous, helpful and encouraging.

Having once enjoyed the fruits of their labor and tasted the sweets of independence, women will never again return to their former positions of dependence and inferiority. This fact may as well be admitted. The time will never come, even under the

most favorable conditions, when women will not work under very great drawbacks, but they will succeed in spite of these disadvantages. The position of the American woman to-day has advanced as much in the past twenty-five years as has that of the African slave. The situation of the former was much above that of the latter a quarter of a century ago and although both have progressed woman is still far ahead in education, ability and morality. In one thing only is the negro superior to American women, the government has seen fit to confer upon him the highest form of citizenship, while it is still denied to capable, intelligent, native-born women.

To review the steady and remarkable progress of the past three decades would require a volume, but in no one year has this been so marked as in the one just closed. Among the more important educational events is the opening of Columbia College, which has heretofore kept its doors closely barred against women; the establishment of a Law school for women in New York; the appointment of a colored woman to the presidency of Agassiz College; and the carrying off of the honors by girls in a number of the universities throughout the country. The beginning of the new year finds a much greater number of women than ever before engaged in money-making occupations, over three millions in the United States, and there is practically no position forbidden to them except those which are required by law to be filled with "electors." Politically they have made much more progress than is supposed by those who do not make a study of these questions. Wyoming has adopted a constitution which confers full suffrage upon women and, as soon as this territory is admitted as a state, women will vote for President. The four new states have come in without full suffrage but in both the Dakotas women have school suffrage and in South Dakota the enfranchisement of women will be voted upon in the spring. In Montana women tax payers vote upon all questions relating to taxation. In Kansas a larger number of women exercised the right of municipal suffrage than ever before. In Boston it is universally conceded that the women are the controlling force in the school elections. Women now exercise some form of suffrage in twenty-five States.

The present year, the beginning of a new decade, will witness a still greater advance. It is the spirit of the age, the recognition of the rights of others. The great question with woman now is not how to obtain the privileges she desires but how best to prepare herself for the exercise of these privileges which are sure to be hers. Nobly and effectively is she answering this question. The day is approaching when the

majority of students in our Colleges will be girls. This is already the case in the High Schools of the country. The Art Societies, Literary Clubs and Classes for the Study of Languages are almost wholly composed of women and they are encroaching upon Science, Law, Medicine and Political Economy. Manual Training Schools are a new feature but they are destined to multiply, while schools of Domestic Science are springing up throughout the land. This is no time for idle and aimless women. Thousands upon thousands are recognizing this fact and the number is yearly increasing. Our American women will prove in the future as they have never failed to do in the past, that they are equal to every demand and ready for every emergency.

Our correspondents seem inspired to renewed effort by the beginning of a new year and our letters are numerous and interesting this month. They are welcome and will appear as rapidly as possible. Do not write for the approbation of the men. Consider what will interest women and, depend upon it, it will also meet the approval of the other sex.

Our readers will notice by the December *Magazine* that Shandy Maguire has commenced making love to Mrs. Henry B. Jones. Hands off, ladies. This is a case which calls for no interference.

"A PLEA for the Bachelors," in the December number shall receive attention next month. Space forbids at present.

For Woman's Department:

A TRUE GHOST STORY.

BY BESSIE MORGAN.

"No, my dear, I don't believe in ghosts, as a general thing. I think when folks get to another world they're mostly willing to stay there and let this one go—but of course there are cases when they can't rest till they've settled something they've left out of order here.

"I never saw a ghost myself, but I was well acquainted once with a girl who did see one. Her name was Abby Wayne.

"She was a real nice girl, and as pretty as a pink. I don't know as I ever saw one that was handsomer than she when she was dressed for meeting—not that she didn't look well in her everyday clothes too, but she had such a style to her!

"She had a deal of attention from the young fellows in the town, but she didn't settle down to nobody in particular till Tom Gerry came home. He was educated at West Point. The Gerrys had relations pretty well up in the world, and held their heads high.

"Well, I don't know how 'tis, but there's something about a *uniform* that gives a look to a man that nothing else does, especially to girls. They are

always waiting for a chance to fall down and worship, anyway. They make their heroes out of pretty poor stuff sometimes, but as long as they don't find out the difference, I reckon they're happy.

"But in Tom Gerry's case there was no imagination needed, and all the girls went wild over him the first thing. You couldn't blame them, for he came as *near* to being all a woman could ask for as any man I ever saw, and I'm old enough now, if I wasn't then, to have my judgment count for something.

"But the rest of the girls didn't have a chance beside Abby! The first time he saw her 'twas all over with him—and Abby, she was just as much pleased on her side.

"It made the rest of the young men jealous enough, but they had to stand back. They wouldn't have been anywhere beside him without the uniform, and when you came to throw that in with all the rest, there was no more to be said.

"The young folks had a good time that summer. What, with picnics and sailing parties and so forth. Tom—he always went everywhere with Abby—I reckon, made the most of his pleasure while it lasted. He knew he was going out on the plains pretty soon to try some of the *disadvantages* of wearing a uniform.

"Well, my dear, when they were coming home together one evening in the moonlight, Tom stopped at the gate, and—Abby didn't tell me what he *said*, but she told me he looked, as he stood there waiting for his answer, as if he'd marched up to the enemy's guns, sure enough! And she never told me what she said to him—but *land!* she didn't need to! There was but one thing a girl *could* have said, and 'twas easy to guess all the rest.

"They were a handsome pair everybody thought, but his family weren't exactly pleased; they'd got a wife all picked out for him. Sarah Cooms her name was, and she had money. His mother invited her right on to make a visit, hoping to break up the other thing; but she'd begun a little late in the day.

"Well, of course, he had to be polite to Sarah, and see her 'round some; but Abby, she knew how 'twas, and she didn't mind much, till it came to the last of his stay.

"He'd got his orders to go on Monday, and Abby she did think, that last Sabbath night he might, go to meeting with her.

"She told him so, as he was walking home from church with her in the morning, and he said he wished he could, but Miss Cooms would insist on going; there was nobody else to take her; he'd get rid of her as soon as he could, and if Abby'd only walk slow, he'd manage to overtake her before she reached home.

"So 'twas all settled pleasant enough. But that afternoon Francis Smith must come in. She was one of the girls that had been interested in Tom, and she began to talk to Abby right off about the attention he was paying Sarah Cooms.

"I wouldn't stand it if I were you," said she; 'everybody's noticing it, and saying how he's neglecting you. These young lieutenants ain't to be trusted anyway—they're awful flirts,' said she. 'Think's likely he's got his debts, and he knows Sarah's got money.'

"Abby, she had a quick temper, and she flashed right out on Francis, and I guess she never spoke to her again as long as she lived. But that didn't help Tom any.

"She went to meeting with her sisters that evening, looking like a picture, if ever a girl did, and holding her head like a queen; but she never turned her eyes towards the Gerrys' pew. Tom came up with her, as he said he would, long before she was half-way home, and her sisters, they turned down a side street, and left them alone.

"'Twas a dark evening, and Tom, he got his arm around her, and his cheek down against her's, and began reproaching her for walking so fast, and saying how sorry he was for all the time he had to waste away from her, the last evening they'd have together for ever so long. He put in a lot of lover's talk, with all the rest, and Abby felt as if her heart was breaking—for the more she loved him the worse she felt, when she remembered what Francis had said. So she answered him cold as ice:

"'I am only sorry that you should have given me as much of your time as you have,' said she, 'but its being your last evening makes no difference. If you were to spend the rest of your life here I should not accept any more of your attention, and I do not require an escort any further this evening—thank you.'

"At first Tom thought she was not in earnest and didn't take much notice. But when he found she was, and that Sarah Coombs was the cause of the trouble, he held up his head as proud as could be. He didn't make any excuses or try to explain. If she hadn't any more trust in his honor and truth than that came to, he hadn't a word to say.

"I've always blamed him for it too, for he could have made her make it up with him if he had tried. When a woman's once spoken her mind she's always ready to take back every word she has said. But he bid her good bye without offering to shake hands, and marched away down the street without ever looking behind him.

"Half way up to the house Abby stopped and watched him as well as she could for the darkness. She was dying to run after him, but her pride wouldn't let her and he never looked around.

"Well, he went away next day. She didn't see him again. She couldn't write to him for she didn't know his address and she couldn't ask his mother for it, for her pride wouldn't let her ask any questions.

"Oh, dear me! Folks have to suffer when they let their pride get the upper hand of them, and Abby grew paler and thinner every day, and she tried to be so lively for fear folks would notice. It most broke my heart to see her.

"The young men thought she had broken off with Tom and they tried to come 'round her again, but she wouldn't have anything to do with them.

"So it went on till Tom had been gone almost a year. Abby was in church with her sisters one Sabbath evening waiting for service to begin. 'Twas a warm night and the windows were all standing open and she was listening to the whip-poor-wills and thinking how mournful they sounded; and I reckon she was thinking of Tom as well.

"The Waynes sat in one of the side pews—reserved seats they call them, you know—so she could look down the aisle without turning her head. She was was watching one and another coming in when all at once her heart gave a great jump and went to beating as if it meant to choke her; for there, behind them all, she saw Tom Gerry!

"She hadn't heard he was coming home, and she wondered if he had been wounded, he was so pale and his handsome uniform all stained and soiled. She had never seen him look like that before, but his eyes were shining steady and clear, and fixed on her.

"He had to come up the aisle very slowly, because of them ahead of him. They kept stopping and turning into their seats, but he never looked to the right nor to the left, or noticed anybody. Abby hung her head and blushed for shame and happiness, for his eyes were asking her to forgive him all the time, and she knew he'd come back to her.

"Then she looked up at him again. What matter if folks did see? She'd cared too much for what they'd think all these weary months. He'd come quite near, now, and a chill seemed to fall on her heart. She could see he was pressing his hand tight against his breast, and he looked so strange and sorrowful. But he came right up to the door of her pew as if he was going to sit with her. She half rose up and moved to make way for him, and then—he was gone!

"He was not in any of the pews, and he was not in the aisle. The folks who had come in ahead of him had taken their seats and were looking at her curiously. Then she heard the minister say, "Let us pray!" very solemnly and she dropped on her knees and fainted dead away.

"Well, folks said 'twas the heat had been too much for her. She told her sisters what it was, but they hadn't seen anything and they laughed at her for thinking so much of Tom Gerry.

"But it wasn't a laughing matter to Abby. She was sure something was wrong and true enough, the news came after a while—it took longer in those days for a letter to travel. The news came that Tom was dead. He'd been killed in a skirmish with the Indians, and the night Abby thought she saw him at the evening meeting he was lying out on a wild, rocky hillside with an arrow through his heart.

"No, my dear, Abby never married. She couldn't get over the thought of Tom's coming all that way when he was dying to ask her forgiveness, when she wouldn't go as far as the gate that summer night to make up with him.

"Strange, wasn't it? But things do happen sometimes that we can't account for, and it's no use to say anything is impossible, for I know this story was true."

CLINTON, IOWA, December 8, 1880.

I wonder if it will surprise your readers to hear from this quarter of the globe?

I miss a number of old writers from the Woman's Department. Is it because the men are crowding them out? They have a great way of spreading themselves and walking over all before them. Occasionally we find a modest man, that will step aside and give us women all the room we want. I, for

one, like plenty of room, not because I am such monstrous size, but because I don't want to be crowded.

In the last *Magazine* one man deplores being a bachelor; others envy him. We find the bachelor dissatisfied, the husband dissatisfied and wives clamoring for a divorce; not so much because they want to be single, but because they could not have a new dress or bonnet just when they wanted it, or because, as some say, "why, I had to go right into the kitchen." Some girls marry with the thought they will have nothing to do; others don't think at all and when they find a part of the management falls to their lot they open their eyes in wonderment, then they, too, become dissatisfied.

I am a married woman, do all my own work, besides taking music lessons and never do house work in the afternoon. We go out a great deal, receive callers and entertain visitors.

We are not rich, on the contrary are quite pinched some times, yet we do not go shabby. We take good care of what we have, and with economy get along nicely.

We never quarrel, and have been married seven years. We manage together, consult one another and everything goes as smooth as a marriage bell.

I find fault with both men and women for not living happily together; they don't half try. The fault is not entirely a woman's, neither is it entirely a man's. They must pull together. If one gets out of patience at some trivial thing, it won't mend the matter for the other to get angry. One at a time; you never heard of a man or woman quarreling alone.

I do not think there would be so much cause to envy a bachelor (or an old maid, by the way) if married folks would each do their part to make home pleasant. There certainly would be fewer henpecked husbands and disheartened wives.

From a Fireman's Wife.

K. B.

[Let us hear from you again. The men shall not crowd you out.—ED.]

BLOOMINGTON, ILL., December 1, 1889.

To Woman's Department:

I am very much interested in this Department of the *Magazine*, and it has long been my intention to write something for it.

I seldom notice any praise bestowed on the members of Blooming Lodge, No. 40. Now I think that such a prosperous lodge as this should be often represented by the wives and sisters of the Brotherhood.

The Fourteenth Annual Ball that was given on Thanksgiving eve, was a grand success, owing to the geniality and amiability of the young firemen. The ball was beautifully decorated with American flags and emblems of the Brotherhood. The programmes were the finest of the season. The time was spent in such delightful amusements that "Old Father Time" was never thought of, and the merry ringing laugh of the firemen re-echoed through the spacious hall as their feet lightly stepped to the strains of sweet music. The friendly face of Mr. Quackenbush was noticed among the many spectators.

May the Brotherhood prosper to the extent of my wishes. I remain

A Fireman's Sister.

LAKELAND, MEADE CO., KAN., December 4, 1889.

To Woman's Department:

Thinking perhaps that some news from the far west would interest you all, I will write a few lines. This has been a very favorable year for this part of the country. Our crops are all good; millet, sorghum, milomaize, Kaffir corn, Indian corn, Egyptian millet, etc., all good. Oats were short on account of dry weather in the spring. Early garden did not do well for the same reason, but late garden did well. Alfalfa is a sure crop, and there is being a large quantity put out. One man near the town of Meade has 250 acres and intends to have 600 as soon as he can get his ground in condition and get it put in. It is very expensive to get started the seed being so high. Some of the farmers harvested five or six crops off their alfalfa—one ton to the acre. It makes the best of feed for all kinds of stock and when once started it is no further trouble.

We have a sugar mill in Meade which made excellent sugar last fall. The mill was late in getting started, so there was a great deal of cane went to waste.

They have a large well at the sugar mill 6x8 feet. They worked at it night and day to get it ready for work by the time the cane was ready. The men were down in the well digging when they heard a rumbling noise and signaled to be hauled up, and scarcely got out of the way when the water burst in the well and filled up eight feet in five minutes. It stands full of water and is over a hundred feet deep. There is an Artesian well not far from there, and about four miles north of Meade there are a large number. They throw the water up to quite a height and one of them fills a coal oil barrel in forty seconds. These are only small bores being two and one-half inches. They are not very deep being from seventy-five to one hundred and fifty feet.

The soil of Meade County is a rich sandy loam. All kinds of melons do well here and grow to enormous size without any extra effort. One of our neighbors brought in one which weighed sixty-five pounds, and there were lots that were a great deal larger. And such sweet potatoes! so large and sweet. There were some peaches raised in this neighborhood this year and the trees were only three years old. As this neighborhood has only been settled for five years trees have not got much of a start as yet. The sod has to be broken and the ground got in good condition before trees will do well. The tree claims are beginning to make a show here and there over the country, and as the trees get larger they will improve the looks of the county, which is one vast stretch of prairie now.

There is to be a sugar mill erected in the southeast corner of the county. The bonds have been voted and work will begin in a few days. The land is most all proved up and a good farm can be got ready to go to work on in the spring. Good claims with sixty or eighty acres of breaking which has been under cultivation for three years can be bought cheap. There is a new frame school house to be built the contract for which is let and work will be commenced on that in a few days.

Messrs. Heber & Emmerson, of Meade, can give any one all the information they require. Mr.

Heber is a representative of this county and has always worked very energetically for the interests of the county.

The Rock Island Railroad runs through the town of Meade. Meade is the county seat of Meade county and is a nice town. They have a twelve thousand dollar brick school house, and an eight thousand dollar city hall. Plenty of good water is obtained at forty feet. We have had abundant rains all summer and fall. The rainfall is said to have been twenty inches. There is a good deal of fall wheat sowed which is in fine condition. The green fields look nice. We have had about a foot of snow already this fall and the ground is in splendid condition for plowing at the present time. The weather is quite warm. There is hardly ever a month in the year when we can not plow. We have our cold blustery days once in a while and the ground will freeze for a few inches, but in a few days it is warm again and farmers can go on with their work. Stock do well on the buffalo grass all winter. A farmer needs to have a stack of feed for a time of storm. Last winter we only had to feed cattle for three days. There came a snow and sleet and covered up the grass for that time. At the end of that time it turned warm and cattle could go on the pasture again. We welcome the *Firemen's Magazine* in our western home and it has our best wishes for its success in the future, and may it help the boys to be true and temperate, manly and good, ever working up to the standard of the motto of their Brotherhood.

Very respectfully yours,

B. L. Worth.

[It would be hard to get more information in the same number of lines than is found in this letter. Is our correspondent a man or a woman? We hope he or she will come again.—Ed.]

PHILADELPHIA, PA., December 20, 1889.

To the Woman's Department:

On the evening of December 19th, 1889, in the city of Philadelphia, Pa., the ladies of the Supreme International Council to the twin Brotherhoods of the B. of L. E. and the B. of L. F., gave a complimentary supper and social, in which were represented the brothers of six different divisions of the two noble orders. A happier picture could not be drawn by artist, than that of the two who daily brave the danger of life together, as, side by side, they sat with their families at the feast. The Council is composed of the wives of the twin Brothers, its aim being to promote the welfare of its members and their families, and to give all moral and material aid in its power to its members and those depending upon them. We do not tax our members to support the Supreme Council or its officers, but when required a union meeting can be called. We pay a sick benefit and a funeral benefit. The charters of the subordinate councils are not attached to the divisions of either of the orders of the Brotherhoods, as we wish to avoid all dissatisfaction, but are legally issued at the headquarters of the organization, in the city of Philadelphia, Pa., where all information will be freely given by addressing

SUPREME INTERNATIONAL COUNCIL,
613 N. 3rd st., Philadelphia, Pa.

For Woman's Department.

JEAN OF INGLESIDE.

We wandered by the mill-stream,
We gathered lilies fair.
I wove them in a coronal,
And decked her soft, brown hair;
I begged of her to name the day
When she would be my bride;
Her answer drove all doubt away—
Sweet Jean of Ingleside.

CHORUS:—

Bonny Jean, Bonny Jean,
My heart's true queen,
Sad the day when you left me,
Sad the years they have been,
Since we parted forever—
Since death us did sever,
Yet I ne'er shall forget thee,
My dear, bonny Jean.

I clasped her form in love's embrace,
I said I would faithful be,
I made a vow that I'd be true.
If she would be true to me;
Her trusting eyes looked up, she smiled:
"How can you doubt," she cried,
"My heart, my love are thine alone—"
Dear Jean of Ingleside.

Long years have passed, no more we roam
Beside the old mill-stream,
No more I gather flowers rare,
To crown my bonny Jean;
For ere a twelve-month rolled around
Death claimed her as his bride,
While I, in grief, am left to mourn
For Jean of Ingleside.

—Mrs. Nettie Bloom.

WEST OAKLAND, CAL., Dec. 15, 1889.

HANOVER, N. H., December 19, 1889.

To Woman's Department:

The manuscript of the *Narrow Gauge* which has provoked so much discussion was prepared for publication and sent to the Woman's Department and it was published in another part of the Magazine.

You read it outside of the Woman's Department and jumped to the conclusion that it was a second publication, when it was in reality the first and only one. Of course I am not sure that this is the right solution. It is the only one that occurs to me as probable.

If it is right, Editor Debs is the responsible party and should have a violent and spasmodic tension applied to the capillary adornment of his intellectual repository, which is Boston, for, "he ought to have his hair pulled." It is not strange nor inexcusable in one performing the responsible and arduous duties of your profession to sometimes make a ———— oh, yes, a "mystery" but at the same time it is not just that an innocent person should suffer in consequence of it.

My reason for using a nom de plume in this instance was that having said good-bye to the Magazine, as I thought for good, only a short time before, I did not wish to say that I had so soon exercised the woman's privilege to change my mind.

Hoping that my solution or some other will soon dispel your mystery and with congratulations on the improvement of the Woman's Department, I remain

Most sincerely,

Alice O. Darling.

[This surely ends the discussion. I must have prepared the manuscript a long time before it was published and hence the confusion in my mind.—Ed.]

THE LITTLE KING.

A little face to look at,
A little face to kiss,
Is there anything, I wonder,
That's half so sweet as this?

A little cheek so dimpled,
When smiles begin to grow,
A little mouth betraying
Which way the kisses go.

A slender little ringlet,
A rosy little ear,
A little chin to quiver
When falls the little tear.

A little hand so fragile,
All through the night to hold,
Two little feet so tender,
To tuck in from the cold.

Two eyes to watch the sunbeam
That with the shadow plays—
A darling little baby
To kiss and love always.

—*Leeds Mercury.*

GRAND RAPIDS, MICH., January 2, 1890.

For the Woman's Department:

The four hundred people who attended the ball given by Grand River Lodge, December 31st, have reason to be congratulated. Those who stayed away deserve the sympathy of all their friends, for they missed participating in one of the finest parties ever given by any organization in this city.

Hartman's Hall has many times been filled with the cream of society, but it never contained within its walls any fairer women or braver men than those who, on this occasion, danced the Old Year out and the New Year in.

The hall was finely decorated with bunting, and flags of all nations. In the rear of the stage were draped three large American flags, which were kindly loaned by the Common Council. The Lodge is indebted, also, to the Tower Clothing House, for like favors. In front of the stage was a large banner, bearing the inscription: "Welcome—B. of L. F.—1890-1890." The gallery was ornamented with festoons of red, white and blue bunting, and everywhere were flags of all colors.

At 8:30 the orchestra began playing a spirited strain, and soon fifty couples had formed on the floor, and were led by Mr. and Mrs. M. W. Smith, through the intricacies of the Grand March. Scarcely had it ceased when the sweet strains of a waltz broke on the ear, and soon the floor was filled with gay dancers, keeping time to the rhythmic, swaying melody, the whole forming a scene of rare beauty. Although there was no attempt at any unusual display of dress, yet there was something better; viz: bright eyes, fair faces, young hearts, and the jolly good fellowship—coupled with a desire to please—which is proverbial of railroad men.

There were quite a number of visiting firemen present, and among them I noticed the following: Mr. Will Harland and Mr. T. Hyland and lady, of Jackson; Messrs. J. Maroney, W. Potter and J. McComb, of Muskegon; Messrs. W. Deland, P. Hensen, and Mr. Frank Wellman and lady, of Fort Wayne.

The committee on arrangements deserve unstinted praise for the manner in which the ball was conducted, making it not only a social, but a financial

success, as the lodge will clear about \$250. Brother George Downey, the chairman, was a host in himself, and he was ably seconded by the other members. The floor managers were noticeable for their distinguished appearance and affable manners. The music was perfect. The supper, which was served at Brittan's restaurant, was very toothsome. And when the twenty-two numbers comprising the programme had been danced, none of the company seemed to realize that it was New Year's morning, so delightfully had they "chased the glowing hours with flying feet;" and no doubt each one, as they sought their couch, in the "wee sma' hours," felt like "blessing the man who invented sleep." I am sure that before weary eyelids closed in slumber, the owners mentally ejaculated that the second annual ball of Grand River Lodge, No. 265, was an unqualified success, and they would not have missed it for the world.

—*Mrs. A. E. Collins.*

CEDAR RAPIDS, IOWA, December 6, 1889.

To Woman's Department:

The December *Magazine* is at hand and again I have eagerly read the Woman's Department with the same feeling of disappointment at not seeing just what is uppermost in my thoughts, but I had wished some one more accustomed to writing to start the ball to going.

But now the New Year will soon be ushered in I think it an excellent time to begin a good work. There are many Ladies' Societies of the B. of L. F. organized, now why not have each one send you the list of officers to be published in your Department of the *Magazine* and thus we could correspond with each and get their idea of forming a Grand Lodge to work from instead of struggling on separately as now. If you think favorably of what I suggest I hope you will say a word in favor of it as soon as space will permit in the *Magazine*.

A Fireman's Wife and Well Wisher,

M. P. C.

[The Woman's Department heartily endorses this request and will be glad to publish the list of Lodges and of officers if sent in.—Ed.]

ESCANABA, MICH., November 20, 1889.

To Woman's Department:

I have been reading the *Magazine* for the last hour, as I have done many a time before, but it has just occurred to me to try and say something in behalf of Mineral King Lodge, No. 129. They are as jolly and as brave a set as you will find among the firemen anywhere, but these are only the words of all of us. The Lodge that holds our loved ones is the best, but I think God will shower his choicest blessings on the man who organized the first Lodge of railroad firemen. No. 129 has a big membership and is still increasing. My husband is a member and it all the boys were as anxious for the Lodge as he is they would always have a good attendance. I would like to mention some of the boys, but will wait till I see whether this is for the *Magazine* or the waste basket. So with a hearty God bless all firemen, I remain a

Fireman's Wife, Mrs. H. Blake.

To the Woman's Department :

SEALED ORDERS.

Out she swung from her moorings,
And over the harbor bar.
As the moon was slowly rising,
She faded from sight afar—
And we traced her gleaming canvas
By the twinkling Evening Star.

None knew the port she sailed for.
Nor whether her course would be ;
Her future course was shrouded
In silence and mystery—
She was sailing beneath "sealed orders,"
To be opened out at sea.

Some souls, cut off from mooring,
Go drifting into the night,
Darkness before and around them,
With scarce a glimmer of light—
They are acting beneath "sealed orders,"
And sailing by faith, not sight.

Keeping the line of duty,
Through evil and good report,
They shall ride the storm out safely.
Be the voyage long or short,
For the ship that carries God's orders
Shall anchor at last in port.

—Mrs. Mattie Eubank.

MILAN, TENN., December 11, 1889.

BOWLING GREEN, KY., November 19, 1889.

To Woman's Department :

As I am a great reader of the B. of L. F. journal and having heard nothing from Lodge No. 100, I would ask for a small space in your columns to let you hear from our boys. They are in a prosperous condition and all good-hearted, true and noble men. Although I am personally acquainted with but few of the boys, I think them the noblest men on earth. They are ever ready with willing hands and cheerful hearts to perform their duty. If their clothes, hands and face be sometimes black while on duty, the same noble heart beats beneath them, and I am particularly interested in one certain young gent who belongs to Lodge No. 100, who, I think, has the noblest heart man ever had, and if I am never a fireman's wife, it will be simply because I am not asked.

Also, I am in love with Mr. Shandy's poems. I think they are grand and if he was single and young, and I did not like some one else better, he would have to look out.

Now, Mrs. Editor, this is my first attempt. Please do not let this find its way to the waste basket, as that would so discourage me I would never try again. With my best wishes to the B. of L. F., I am,

Respectfully,

Brown Eyes.

[This letter has been a long time reaching us. We trust Brown Eyes got her fireman for a Christmas gift.—Ed.]

MISSOULA, MONT., December 13, 1889.

To the Woman's Department :

I sometimes see in the *Magazine* where brothers want the Woman's Department abolished. Now, I can't see what those brothers can be thinking of. I think we get excellent advice from the lady correspondents. Who has ever read Cousin Nell's letters but that thanked her for the good advice she gave us? The poems by Mrs. Nellie Bloom are excellent. One can read them every day, and not get

tired of them. I often wonder how much hard study it must take to compose such poems. Also the poems of Alice O. Darling. They are the very best and most entertaining of reading. They are always bright and cheerful. And of other writers too numerous to mention, all of the letters are worth reading several times.

I suppose the ones that want the Woman's Department cut down or abolished are the ones that are at home and surrounded by a mother and sisters, who, when they come in from their run, can sit down and have a pleasant evening at home, talking to that dearest of dear friends, a mother. But to us who are thousands of miles from home, and perchance have no mothers or sisters to talk or write to, it is we who enjoy reading the Woman's Department. I say, give the Woman's Department more room, even if it is necessary to enlarge the *Magazine*. I feel sure there are lots of good letters left out for want of space. I think every B. of L. F. man ought to feel proud to have such an esteemed lady as Mrs. Harper at the head of the Woman's Department, and should thank her for the interest she takes in our cause. She has always words of advice and kindness for us, which I, for one, highly appreciate.

I hope the day is not far distant when the women shall have the same privileges as the men. You will oftentimes hear men say that women don't know how to vote, and don't know how to manage the government. But if you should tell these men that their mothers did not know as much as some men that come to the polls to vote and hold office, they would promptly knock you down. But she knows enough to suffer when the husband spends all his wages at the saloon or gambling table. The sooner the women get to vote the sooner these curses will be wiped from the face of God's green earth.

I say God bless every true lady, and long life and prosperity to the Woman's Department of the *Magazine*. Truly yours,

—A Fireman.

[Thanks for kind words. It is just a little habit some men have of wanting the earth, that makes them desire to keep the whole *Magazine* for themselves. The Woman's Department will continue to hold forth at the old stand.—Ed.]

For Woman's Department :

ONLY A LITTLE BROOK.

Dear mother, I tremble to think I must die;
It is lonely and sad in the dark grave to lie.
Could you but go with me, I know that your hand
Would guide me through the gloom of Death's shadowy land.

This deep, endless river I shrink as I feel
Its darkness and mystery over me steal;
I fear its wild waves will my soul overwhelm
Ere I reach the far shore of the Heavenly Realm.

But, what is this music that falls on my ear,
Enchanting my senses, dispelling my fear?
Oh! the angels are with me—I am not alone;
They're bearing me safe to my dear Father's home.

The playmates I loved who have gone on before,
Are waiting for me on yon beautiful shore;
Jesus beckons me to Him, I follow His call—
It's only a little brook, after all.

—Mrs. G. Hull

WASHINGTON, DAVISS CO., IND.

To Woman's Department:

While attending the sixth annual convention of the B. of R. R. B., at St. Paul, Minn., lately, I was deeply touched by the kindness of a great many members of the B. of L. F., B. of L. E., B. R. C., O. R. C., and S. M. A., and their noble wives. Although at St. Paul as the guest of Lodge 22, B. of R. R. B. (to whose order I am under great and many obligations), yet the members of the above orders, indiscriminately, showed me every kindness and attention. I was very much pleased, indeed, at meeting that well-known, popular and handsome gentleman, Mr. F. P. Sargent, Grand Master of the B. of L. F. Surely, that order is blest with noble officers. If Bro. Sargent can not drive away the blues, then there is no dispelling them. Last May this gentleman piloted a delegation of K. of P.'s from Terre Haute to our city. It was my good fortune to be on the same train, and for three hours his good humor and ready wit kept not only his own order, but every other passenger, convulsed with laughter. He has promised us a visit, and we sincerely hope that promise will be kept. Another of my visitors at St. Paul deserves especial mention. This is Bellaire, of Winona, better known as the One-Fingered Fireman, having lost every member of both hands except the first finger of the right hand. He was a frequent caller, and a very cheerful visitor, notwithstanding his terrible mishap. Although misunderstandings have arisen between different orders, yet it is but fair to state that each, collectively and individually, has always treated me with the greatest respect and kindness. An engineer from Dakota, having occasion to pass through St. Paul, on hearing I was there stopped off purposely to visit me. To each of these generous, kind-hearted visitors, I return my sincere thanks, and hope always to be deserving of their kindness and friendship.

Yours respectfully,

—Mrs. Henry B. Jones.

[Mrs. Jones' poem to Shandy Maguire will appear next month.—Ed.]

INDUSTRIES.

Miss Annette Whitney conducts a successful insurance business in Osage, Ia.

Dr. O. S. Covert is a dentist in Denver, Colo., who finds profit in her profession and does it credit.

The extremes of the Continent, Brooklyn and San Francisco, each boast of a pretty young girl, who is doing creditable blacksmith work.

Prof. Seelye, in his book, "The Nineteenth Century," in the concluding chapter on monopolies, says: "The greatest monopoly that has ever existed is the monopoly of sex, and it will be overthrown in the nineteenth century."

Miss Jennie Slack, aged sixteen years, residing in the blue-grass region of Iowa, near Villisca, has this season planted and cultivated thirty-five acres of corn, besides milking six cows night and morning and helping in other work about the farm and household.

Miss Carrie Meyer, a fifteen-year-old girl, is now frescoing the walls of the Southern Hotel in St. Louis, Mo. She has designed and executed the frescoing for a large number of the finest rooms in the hotel, and is regarded by her employers as an able and accomplished fresco painter.

Mrs. Emma Yewdall accumulated some money as a milliner, inherited a little more, and having a liking for horses and active life, she invested in a lively stable in New York City, and is doing well.

Mrs. S. K. Hart has been added to the staff of the *Woman's Chronicle*. This enterprising weekly, published at Little Rock, Ark., by a woman's company, who also carry a job printing office, is a very bright paper, pure and wholesome in its tone, and with much real wit in its columns.

Madame Erard, who for the last thirty-four years—since the death of her husband, in 1855—has been the head of the great pianoforte firm of Erard, died lately, at her residence, opposite the Bois de Boulogne, at an advanced age. She was ever jealous for the reputation of the establishment bearing her name, and her encouragement of musical art was most generous.

A middle-aged, gray-haired woman, Mrs. Gill by name, is a prosperous shoemaker in New York, the only woman in that trade in that city, so far as is known. Her father was a shoemaker in England, and, following a natural inclination, she learned the trade, and before she was fourteen years of age she made a good pair of shoes. When old enough, she went to work in a shoe factory, and worked in several factories after coming to this country. But she longed for the independence of a little shop of her own, in place of the slaving of a factory, and for ten years she has worked and thrived at her bench, doing much custom work at first, but chiefly repairing or "cobbling" of late, as that pays the best. Mrs. Gill has the reputation of being a competent worker, a kindly, industrious woman, and a good neighbor.

EDUCATION.

Madame Dronsart has received a prize of 1,000 francs from the French Academy for her essay on George Eliot and other famous women.

Miss E. O. Abbott, of the Vassar College class of '73, has been appointed head of Barnard College, the new Columbia Annex.

There are twenty-eight lady poor-law guardians in London, and seventy-six in Great Britain. A number of them have been re-elected seven, eight and nine times.

An examination of subscription lists, made by Edward W. Bok, shows that seven-eighths of the subscribers to the magazine literature of to-day are women.

Mrs. Elizabeth W. Champney, whose "Vassar Girls" has reached its eightieth thousand, is going abroad again in the spring—this time to Ireland—to catch the "local color" for a new story.

Mrs. Bentley, the wife of one of the best-known African missionaries, is teaching telegraphy to some black boys on the Congo. The last time she was in Europe, she learned telegraphy for the purpose of training native operators. She hopes to have them ready for service by the time the Congo railroad is laid.

Miss Susan B. Anthony is taking active steps to raise money toward the expenses of the National-American Annual Convention to be held in Washington, next February, and has issued an appeal for funds. Contributions may be sent to her at the Riggs House, Washington, D. C.

A Woman's Directory is soon to be published in Chicago, giving the names and addresses of 30,000 Chicago women who belong to various religious, benevolent and political organizations. The book was compiled for the purpose of estimating the number of women in Chicago who were interested in work not purely personal, and to encourage them to a greater unity of effort.

At the University of Zurich, last year, twenty-nine women studied medicine, fourteen philosophy, and two political economy. In London there were forty-eight women medical students. In Paris there were one hundred and eight, of whom eighty-three were Russians, eleven English, seven French, three Americans, two Austrians, one Roumanian, one Turkish.

DOMESTIC.

A skillful cook is the most popular of interior decorators.

If ribbons need renewing wash them in cool suds made of soap, and iron when damp. Cover with a clean cloth and iron over it.

It is a good idea for a tall woman to have her kitchen table and ironing-board a little higher than ordinary. It will save many a backache.

To remove the shiny look from black clothes, wash well, then dip black cloth in hot tea and coffee, equal parts of each, and sponge clothes.

The best way to clear out and straighten the fringe of towels, doilies, etc., before ironing, is to comb it while damp, with an inch length of coarsest toilet comb.

Entire wheat flour is said to require less shortening than ordinary flour. It is a wholesome food, makes good hasty pudding, gems, bread, cakes, and even pie crust.

Use honeycomb or crochet bedspreads for all common use. They can now be obtained, of fair quality as low as 75 cents, and an excellent one for \$1.25. They are not heavy to wash, and look better when not ironed but pulled out straight to dry.

Mrs. Joseph K. Henry, of the *Southern Journal*, says:

"If an adjustment of financial affairs could take place between many husbands and wives; the farmers' wives that have loaned their milk and butter money to their husbands, which has never been returned, it would amount to enough to enable the women to embark in the banking business with a capital which it would take seven figures to represent."

"The need of a convenient dress for work is strongly felt by business women. One of the largest working girls' societies of New York has adopted the blouse waist and straight, gathered skirt as club dress for the members."

"Many a woman has spent a lifetime of toil and energy in upbuilding a man and his fortunes, to have nothing in the end but a dwarfed nature, broken constitution and pauperism. The class whose services are priceless, that of wives and mothers, suffers more of actual want and humiliating dependence than any other respectable class in the world."

"Poverty is a hard, cruel condition of life. A woman has the possibility of children to consider also, and is in duty bound to select a man both pure and courageous to fight the battle of life for her. There will be enough uncertainty at the best, as society is now organized."

"I wish I could see every woman in the United States join the rebellion, and oblige the men to provide steam power. It is simply barbarous that women, particularly mothers, should be compelled to do such heavy and unhealthful work. When I was a child, I have seen mother carry thirty pails of water across two lots and up four icy steps, to do a washing for six, in a handleless tub; use a leaky boiler that was past mending, but could not at once be replaced; hang the clothes on a knotty rope-line in freezing weather, and then clear the kitchen and get supper to the music of baby's crying, whose milk, poor fellow, had been spoiled for him by mother's hard work and exposure."

Miss Maria Louise Baldwin, a young colored lady, has been appointed principal of the Agassiz School, at Cambridge, Mass. She graduated with honors from the Cambridge High School, and later from the training school. She then took a position in Chestertown, Md., but in October, 1882, returned to Cambridge, at the request of the School Board, and was put in charge of the ninth primary grade of the Agassiz School. Here she performed such admirable service that she was successively promoted to the eighth and seventh grades.

SUFFRAGE.

Never again in Wyoming will any active and organized head be made against woman suffrage.—*Cheyenne Tribune*.

If the suffrage is long in coming, we have this consolation: that every day makes the desire for it more general, the absence of it more absurd, and its power for good when it does come more certain.—*Westminster Gazette*.

It is a satisfaction to be told by these same authorities of what is really a self-evident fact that it is neither the women workers or reformers, neither the ones that demand the largest opportunity for women, nor the ones that hurry to avail themselves of rights conferred, who are anxious to ape masculine vices. It is the frivolous society woman who finds life vapid and tiresome, and who seeks the zest of a new diversion.—*Woman's Journal*.

The Haverhill (Mass.) *Gazette*, in commenting upon the recent meeting in that place, says: "We fail to see wherein the granting of the rights of suffrage to women could by any possibility have a harmful result. Many of the men who oppose the granting of this right are intellectually, and in every other way, the inferiors of the women against whose rights they discriminate. By all means, give the women a chance. Who can possibly be harmed by it?"

"My opinion is that the mother of a statesman is better calculated to vote than a man who can't read or write. We may be a little peculiar, but we think when a woman has marched a band of boys all the way up to manhood and given them a start towards making good citizens, with this wicked world to buck against, she can vote all day, as far as we are concerned, in preference to the men who don't know whether Michigan is in Missouri or Arizona."—*Laramie Boomerang*.

I consider my wife, my sister and my daughters the peers of any man, and it has pained me to hear Judge Tuley say that women had to be legislated into their rights which God Almighty had given them. It pains me to hear arguments made as though it were necessary to convince me that woman was the superior of man. And I say, when it becomes necessary for woman to be legislated into her own rights it ought to cause every man in this broad land to blush for shame.—*Cregier, Mayor of Chicago*.

The most complete triumph in the history of the woman suffrage movement so far is the adoption of the constitution of Wyoming, making no distinction of sex in qualifications of electors, by a vote of about eight to one. For the first time in the history of the world have women had the opportunity to vote for their own freedom, and grandly have they silenced those who claim that women would themselves decide against woman suffrage. The victory is largely due to the women, and they have demonstrated their ability and determination to defend their political rights.

TEMPERANCE.

All over the Christian world the greatest number who suffer from the curse of strong drink are those who 'let it alone,' yet who must pay the penalty of the sins of others, and all.

Upon motion of Mrs. Mary A. Woodbridge, the following telegram was sent in behalf of the National W. C. T. U., to the Knights of Labor in session at Atlanta, Ga.: "Brothers and sisters, stand for total abstinence; for a strike against the liquor dealers; a boycott of the saloons; a national day of rest and the ballot for women, and may God be with you."

The following from the Milwaukee *Sentinel* shows what kind of education the saloon system fosters:

"At last six new school buildings are immediately necessary, but because there are so many saloons the taxpayers must support police and courts and jails and charitable institutions with their money. There are hundreds of children of school age in the city who are denied school privileges because we cannot afford to put up more school buildings."

The Woman's Prohibition League of Brooklyn has made a commotion. The ladies found out that in many cases in the Brooklyn public schools the authorities were neglecting to have the compulsory scientific temperance lessons taught, and that the beer dinners of many children at home render them unfit for the afternoon school work. The ladies called the mayor's attention to the matter, for which they are being loudly denounced by the whisky papers.

The Chicago Anchorage for women, located in the worst part of the city, was founded three years ago by the National W. C. T. U. It has a remarkably successful corps of workers. Dr. Kate Bushnell spent the first months of her widening career in helping to set the Anchorage on its feet. To-day this Christian mission is the most popular and, had it the space, would be the most populous refuge for degraded women the West. Its light in the window is always shining for despairing, sinning sisters.

After the late fire in Seattle prohibition reigned for several days. Most of the dives and saloons were burned and the mayor prohibited the rest from reopening. Thousands of lemonade stands sprang up and many men began to appreciate temperance drinks. A new beverage, strawberry lemonade, had a great sale and was pronounced by many, even drinkers, to be better than beer. Temporary prohibition worked so well that a petition was presented, signed by more than a thousand leading citizens, asking that all saloons in the city be kept closed for three months in the interests of rapid rebuilding.

MISCELLANEOUS.

Senator Sumner once wrote of Clara Barton: "She has the talent of a statesman, the command of a general, and the heart and hand of a woman."

"O mamma," said little Lord Fauntleroy, fresh from the city, pointing to some sunflowers, "just see those penwipers growing over there!"

The clinging ivy is a pretty thing to look at, until we learn that it is very apt to crush the life out of the tree upon which it acts as parasite.—*Mrs. Ellen B. Dutrick.*

"What do they always put 'D. C.' after Washington for?" asked Mrs. Quillp. "Why, my dear, don't you know that Washington was the daddy of this country?"

"Never scold your wife for crying," says Dr. Agnew. "So long as a woman can weep she will never do anything desperate, and she will have much more patience than a dry-eyed woman."

Bobby (at the table)—Ma, chuck me a piece of bread. Mother (shocked)—Bobby, is that the way to ask for bread? Bobby (guiltily)—Chuck me a piece of bread please.

Miss Bell (warningly)—Sally, they used to tell me when I was a little girl that if I did not let coffee alone it would make me foolish. Sally (who owes her one)—Well, why didn't you?—*Life.*

Mrs. Clara Hoffmann says, "If the men of this country continue the use of narcotics, before long there won't be many men who are big enough for the average woman to look up to and revere."

"Where do the pins all go?" asks a contemporary. "Well, some go into clothes, some go on the street, some go into paper, and many of them occupy chairs in our schools and colleges."—*Harper's Bazar.*

"There ought to be more of her mother in her; but that's the risk a woman runs in marrying—the risk of bringing children into the world of the same disposition and habits as the man she's disappointed in."

"We must have a class of men between the laity and the ministry," said Mr. Moody recently. "Sure, we have them already," was the comment of a witty Irishman. "They are the women, God bless them."

"Mamma, mamma," sobbed a little three-year-old girl, running into the house, much offended, "I wish you'd whip the old hen." She won't let me see the chickies. She's dead lifted up her dress, an' they all run right under."

In great crises man cries: "Oh, dear! what will my wife do?" Do! If she loves him, and he is true to her, she will rise on the crest of disaster like a boat on the billow. The crisis will bring out her heroism. The strength of the Eternal will come into her little arm. We need that very strength in politics, in government.—*Rev. C. B. Pibbado.*

"I had my picture taken to-day," said little Christine. "I crossed my arms and leaned on a chair, and the picture man put my head in some tongs." "You must have looked like a lump of sugar in sugar-tongs," laughed papa. "Well, I guess I must have," said Christine, "cause the man kept saying, 'What a sweet little girl!'"

Miss Philippa Fawcett, daughter of Mrs. Millicent Garrett Fawcett and the late Postmaster-General of England, is a very bright girl, and is making Cambridge men look about them. The *Westminster and Lambeth Gazette* says: "Those who are going in for mathematics are trembling lest their laurels should be wrested from them and the honors carried off by a woman."

"Where did you buy your new dress, Bridget?" asked a lady the other day of her newly-imported Irish domestic. "'At 'Push & Pull's' store on Washington street, it was, ma'am," replied the girl. "'Push & Pull's'?" queried the mistress. "'I really do not recall any such firm in Boston. Are you not mistaken as to the name?'" "I think not, ma'am," said Bridget, confidently. "At any rate, that's phwat it said on the door."

In many places circles are being organized by women to study the art of conversation. Those who enter these circles have lived long enough to learn that gossip, scandal, a discussion of the latest fashions and small nothings are not conversation, and that such trivial topics fail to interest. They have learned that personal beauty is not to be compared with the art of entertaining discourse, and that nothing will draw and hold and make a woman so pleasing and interesting as the ability to discuss subjects of moment. They have learned that there is a unbought grace, a natural charm about conversation that wins confidence and opens the way to all the arts.—*Advance.*

SUSIE'S SIGHINGS.

O, I want to write a poem just as full of fire,
As are all the poems written by Shandy Maguire;
O, I want to fill my verses just as full of sweets,
Just as full as sorghum cane, just as full as sugar beets.

O, I want to make my verses cool like turtle doves—
Just as full of melody as Shandy's are of loves;
O, I want to be a poet who can like an eagle soar,
And talk of things celestial that won't make my hubby snore.

O, I want that divine afflatus that Shandy ever feels,
So I can write poetry about arch angels or eels,
O, I want to be a genius that can rattle words like hail,
And make my readers think they are riding on a rail.

O, I want to be a poet, a real lady Dandy,
Who can make her muses rhyme as smoothly as Shandy.

O, I want to be a poet of the greased lightning style,
So I can write verses by the car load or mile.

O, I want to get the *Magazine* to say "I'm all the rage."

Say I'm the "sweetest singer of this poetic age,"
O, I want to write for nothing, that is, I write for fame.

And though I have no money, I'll get there just the same.

O, I want the *Magazine* to print this poem mighty soon.

Printed beside some verses, written by Nelly Bloom,
O, I want to let Shandy see I'm "some pumpkins" with a pen.

And maybe he will say so when he writes again."
—*Susie McQuade.*

THE MAGAZINE.

Rejected Manuscripts are not returned unless accompanied with required postage.

Subscriptions must begin with the January, April, July or October number, and expire with the year.

Changes of Addresses of subscribers should be reported to us promptly to insure the safe delivery of the Magazine.

Contributors are required in all cases to give their real names, not necessarily for publication, but as a guarantee of good faith.

Subscribers failing to receive their Magazines will please notify us, giving name and location of Agent through whom they subscribed.

THE ERIE SYSTEM AND FEDERATION.

The Erie System of Railroads is rich, and as powerful as rich. It has an army of employes, but it is not sufficiently rich and powerful to enforce autocratic regulations when the employes unite as one man to resist autocratic impositions, and this fact was fully demonstrated by the collapse of a scheme on the part of the managers of the Erie to annoy their employes and send many of them adrift upon mere technicalities, which had little, if any, relation to capability or efficiency. It was evidently intended as an entering wedge to provoke discontent and create an excuse for *Corbinizing* the Erie, *a la* Philadelphia & Reading.

It appears that in the month of October, 1889, the managers of the Erie adopted a "Book of Rules"—train rules and regulations—for the government of men in their service.

These rules required the employes to answer questions in their own handwriting, and to affix their signatures thereto. By this arrangement the managers would have it in their power to propound not only irrelevant questions, but to pass judgment upon grammar, chirography, and such other things as might, in the opinion of the managers, indicate incapacity and create an excuse for dismissal. The scheme was adroit, but, as we shall see, came to grief.

In the "Book of Rules," which the employes were required to sign, are two sections directly stipulating that the corporation should be relieved from all legal liability, the employes binding themselves not to bring suit against the corporation in case of injury or death. To secure this exemption from liability for the maiming or death of employes may have been the supreme purpose of the Erie management. Manifestly, it sought to shirk all responsibility in that direction, and if the men would sign away such rights, the work required to have them abandon all other rights would not be arduous. The process of degradation, begun, goes on rapidly. It is all

the way down hill, until the poor devil, once a fireman, finds himself on his belly, crawling at the feet of his master, licking the boots that kicked him, and kissing the rod that smote him.

This *non* liability clause, as might be supposed, caused dissatisfaction, but there were those on the Erie who would sign it; fortunately, there were others who refused. The men sought legal advice and were advised not to sign the rules which embodied the two objectionable sections. This advice resulted in calling a union meeting of the employes at Hornellsville, early in November, which appointed a committee representing the employes, charged with the duty of going to New York to consult with the officers of the Erie corporation. This duty was promptly performed. The committee met the General Manager of the Erie System, E. B. Thomas, Esq., and as a result an agreement was perfected whereby it was left optional with the employes to sign or not to sign the "Book of Rules," and the two obnoxious sections were stricken out.

This was a notable victory for the employes and was secured by unity of action on the part of all the trainmen on the system. It was *FEDERATION*. It demonstrated once more that there is conquering power in unity.

It was a part of the agreement with General Manager Thomas that the examination of employes should be oral, or, if they chose to fill out the book, they could have all the time they required. This was satisfactory to the committee and they returned home and reported results, which were accepted as a settlement of the difficulties. But the employes were soon given to understand that they were mistaken in their conclusions; that their work was to be done over again. The Division Superintendent on the Eastern Division of the Erie, soon after the supposed settlement, called up four of the oldest engineers and insisted upon them passing an examination at once, as per "Book of Rules."

The engineers asked for time to prepare themselves. The request was refused and the men were suspended until such time as they passed the required examination. This was a flagrant violation of the agreement with General Manager Thomas, and as a consequence a meeting of the committees of engineers, firemen, conductors, brakemen and switchmen was called to be held in Jersey city. The meeting convened December 28th, and it was unanimously decided that a demand be made for the withdrawal of the "Book of Rules"; that an oral examination be substituted, and that no employe be required to affix his signature to any examination. And it was further ordered by the meeting of the Employes Commit-

tees that the four engineers suspended by the Division Superintendent be reinstated with full pay during time of suspension.

A sub-committee was appointed to visit General Manager Thomas, and as per agreement met him on the 30th of December. The result of the conference was that the demands made by the sub-committee were granted. The "Book of Rules" was withdrawn, oral examinations were substituted for written examinations and the four suspended engineers and one suspended fireman were reinstated, and on the 31st of December, the last day of the year, the committee called upon division officials and all minor grievances were adjusted.

From first to last the employés on the Erie sought to avoid difficulty. Of the committee which brought about the amicable settlement, Chairman Youngston, of the B. of L. E., of Meadville, was spokesman, and C. F. Graham, of H. G. Brooks Lodge, No. 169, of Hornellsville, represented the B. of L. F. The committee was composed of the right material -- clear-headed. It grasped main questions and issues, and General Manager Thomas was quick to see that the employés on his system meant business with a big B.

General Manager Thomas saw at a glance that on his system, for once, at least, his employés had federated; that in case of a strike to obtain justice every man would abandon his employment, and that things on his road would be so silent and still that he could hear the "dull thud" of the drop of a pin. General Manager Thomas wisely estimated the power of this federated force. It was engineers, firemen, conductors, brakemen and switchmen in alliance, and it conquered, and will always conquer, when the cause is just.

Grand Master Sargent, of the B. of L. F., in response to a telegram, was on the ground, ready to give his cooperation and the benefit of his counsel and influence in the efforts of the men of the Erie system to secure justice.

It is worthy of note that the conductors on the system, members of the O. R. C., were ably represented and took an active part in adjusting the grievances of the men, and although, as we are informed, they received no encouragement from their Order, they stood with the rest for the right in the federated action, and are entitled to share with all in the blessings of victory.

This *Magazine* takes special pleasure in chronicling the result of the contest on the Erie. We are profoundly gratified that a strike did not occur. It is strictly in consonance with the position of the *Magazine* from the first, that with federation strikes will seldom, if ever, occur, and should they occur they must of necessity be of short duration.

A more conclusive argument in favor of federation than that furnished by the contest on the Erie could not be made. It is overwhelmingly convincing. Words cannot strengthen it. If any of our readers want convincing logic in defense of federation they have only to refer to the settlement of troubles on the Erie. As we contemplate it we feel satisfied that federation is winning hosts of friends, and that at an early day every Order of railroad employés will be in line under the glorious banner of FEDERATION.

THE UNION PACIFIC EMPLOYEES' MAGAZINE AND FEDERATION.

In the month of June, 1889, the authorized representatives of the Brotherhood of Locomotive Firemen, the Brotherhood of Railroad Brakemen and Switchmen's Mutual Aid Association, met in the city of Chicago and established federation between the great orders named.

Since that date the Switchmen's Mutual Aid Association and the Brotherhood of Railroad Brakemen have met in annual convention and approved the action of their representatives.

In September, 1890, the Firemen's Brotherhood will meet in biennial convention at San Francisco, at which time the action of its representatives in establishing federation will be passed upon.

We feel quite confident that their action will be approved. They acted in strict accord with the following instructions:

"Motion, that the Committee having the matter of Federation in hand be given FULL POWER TO ACT IN ALL THINGS NECESSARY TO EFFECT FEDERATION with the several organizations named, and that they HAVE AUTHORITY TO MAKE SUCH CONCESSIONS AND MODIFICATIONS IN THE FEDERATION LAWS ADOPTED BY THIS BODY AS MAY BE REQUIRED TO SECURE THE APPROVAL OF THE OTHER ORGANIZATIONS."

The U. P. E's *Magazine* deemed it proper to devote a portion of its valuable space to maligning the representatives of the federated orders who met in Chicago to establish federation.

We assumed that the editor of the U. P. E's *Magazine* would not have been guilty of such flagrant discourtesy and injustice unless he had been imposed upon by some designing creature who was an enemy of lawful authority and a disorganizer, but we made no allusion to Bro. Wm. F. Hynes, a trusted and worthy member of the Brotherhood of Locomotive Firemen. He has not been disloyal to authority, and therefore could not have been the "insect" that pre-empted the editor's ear. Moreover, it appears that the editor of the U. P. E's *Magazine*, of his own free will and choice, outrages every propriety by assaulting with vulgar abuse and ridicule the representatives of the Firemen's, Brakemen's and Switchmen's Orders who met in Chicago with an

honest purpose to solve the federation problem. He says: "There has been no one imposing on us. The editor is solely responsible for all that has appeared in these pages." The editor takes the entire responsibility of assault and insult, falsehood and fiction. In his November issue he said:

Nine Grand Officers of three organizations of railroad employes met in Chicago last June, supposedly to prepare a plan of federation for railroad employes' organizations, but succeeded only in federating themselves.

This is the truth or it is a lie. If it is the truth, the editor is entitled to be proud of it. If it is a lie he ought to be manly enough to kill it in his own columns, where it first rattled.

In the month of September, 1889, at the fourth annual convention of S. M. A. A. of N. A., the following resolutions were adopted:

Resolved, That the Switchmen's Mutual Aid Association, in fourth annual convention assembled, do hereby endorse the measures taken by our Committee of Grand Officers in the federation council in June, 1889; and furthermore, be it

Resolved, That it is now the desire of our Association to still further strengthen the bonds of federation, and we hereby instruct and implore our brothers to live in harmony, peace and fraternity with each other. Let the motto of the Supreme Council, Mutual Justice," guide and control us in all our future relations. A federation based upon the rights of man, and far nobler than any similar achievement of ancient or modern times, has at last been consummated, and it is a matter of honest pride with us as Switchmen that our organization was foremost in this splendid movement.

At the sixth annual convention of the Brotherhood of Railroad Brakemen, held at St. Paul, October, 1889, the convention unequivocally indorsed the action of its Grand Officers in establishing the Supreme Council of the federated Orders—a splendid tribute to the enlightened wisdom of its Grand Officers.

In this connection we reproduce from the November issue of our *Magazine*, page 1005, the following notice:

We are in receipt of an official communication from Daniel J. Carr, Esq., Grand Secretary and Treasurer of the Brotherhood of Railway Conductors, under date of October 21st, making the following announcement: At the first annual convention of the Brotherhood of Railway Conductors, held in Los Angeles, California, September 14th, 1889, it was the unanimous vote of this Brotherhood that the Brotherhood of Railway Conductors unite with the other organizations, viz., B. of L. F., B. of R. R. and S. M. A. A., in federation.

Steps have already been taken to consummate the business and very soon we hope to see the B. of R. C. in line under the federated banner. This movement is in line with the predictions of the *Magazine*, and we had it with undisguised satisfaction.

With these facts in full view does not the editor of the U. P. E's. *Magazine* see that when he said that the representatives of the federated orders "succeeded in only federating themselves" that he did not print the truth? Has he the sand required to make a correction? We shall see.

The editor of the U. P. E's. *Magazine* says "the representatives of the railroad employes

organization created "nine offices, just enough to go around." They created *three* offices. Here is a statement of which 66 per cent is *cool, calculating* falsehood. Will the editor, who is "solely responsible," acknowledge the falsehood, or stick to it? We shall see.

The editor of the U. P. E's. *Magazine* said: "They made laws." * * * "These laws must be revered in secret. Vulgar eyes must not see them. They were evidently ashamed of them." What are the facts? "These laws" have been *sent to each Lodge* of each of the *federated* Orders. The U. P. E's. *Magazine's* statement, it will be seen, was a clean cut falsehood, a malicious and mischievous falsehood designed to do injury. It was mean and inexcusable. Does the editor see it in that light? If not, he is blind. Will he retract it? We shall see.

The article in the November issue of the U. P. E's. *Magazine* was very contemptible. The editor was not required to use his columns to defame firemen, switchmen and brakemen, or their representatives. He was under no obligation to print falsehoods and abuse. He was not required to do injustice to any organization of workingmen seeking to better their condition, and to get into line to fight the enemies of labor. We assume (not "an hypothesis" nor a "compound hypothesis") that the editor of the U. P. E's. *Magazine* is not paid to play into the hands of corporations to defeat workingmen, that he is not a Corbin slave. If we are correct, why does he, by falsehood and kindergarten flatulency, seek to decry federation and thus strengthen the hands of the enemy? Let him answer if he can.

We have read the U. P. E's. *Magazine* for January, 1890. The five-page article, in reply to a few criticisms of ours is a curiosity in its way. When a writer says he "assumes an hypothesis," and still worse, assumes a "compound hypothesis," he may be said to be beyond the reach of reason or ridicule. When a man assumes an assumption, and a "compound assumption, it will be entirely characteristic of his mental caliber to caption his article, "Argument or Blackguardism," as if to say, "for the life of me I don't know which." If the question was put to the U. P. E's. *Magazine* editor, if you call a dog's tail a leg, how many legs would he have? he would doubtless answer "five," unmindful of the fact that calling a tail a leg don't make it a leg. To call scathing criticism "blackguardism" don't make it blackguardism, and with these reflections we leave the U. P. E's. *Magazine* editor with our best wishes for such felicities as he can scratch together while reflecting that his vulgar abuse and gratuitous falsehoods have been exposed and that the "Supreme Council" will doubtless pass him by with such *supreme* contempt as slander merits.

THOSE "TWO LETTERS."

The number of letters we have received from railroad men in different parts of the country regarding our stand on federation, indicates to us that we are voicing the sentiments of the large majority. Two of these letters we publish in our correspondence pages of this issue: one from Salida, Colorado, and one from St. Louis, Missouri.

— *U. P. E's Magazine, January, 1890.*

We have read the "two" letters. They are what we should call "Jim Dandies," or, "Denver Dandies." The "Salida" and "St. Louis" *dodge* is "too thin." They were sired, evidently, by the same irate whangdoodle, or Jack o' lantern. Earmarks and brands, hide and hair, are all in alliance to *bust* the trick and expose the juggler. The letters were evidently quickened into life in some cranium peculiarly suited for the production of argumentative tungi, mushroom and toadstool logic. The trouble with the *writer* is, that he puts too much faith in the explosive power of wind, and the killing qualities of mud. He is deficient in giant powder, dynamite, gun cotton, nitro-glycerine, and other death-dealing forces known to Nihilists. If he was in Russia, he could scatter his letters broadcast, and the Czar would simply say: "Let him rip; he is harmless." If he were a bull in a china shop, the cups and saucers, though he bellowed and pawed his worst, would be entirely secure. His own *mug* would probably be the worst damaged article in the shop.

The writer is a freak; a colossus, one leg in Salida and the other in St. Louis, and between them, what a grand canyon! And still more wonderful, while performing this astounding straddle, he manages to get his nose into the sanctum of the *U. P. E's Magazine*.

This wonderful literary freak may be styled "Railroad men in different parts of the country," with entire propriety. We see no reason why he should not date his letters from every hamlet, village, town and city on the continent. There is no law prohibiting such enterprises. He might claim that he was in such places in the spirit, while he got his hash and had his washing done in Denver. By this happy arrangement, the editor of the *U. P. E's Magazine* could make it appear that in "voicing the sentiments of the large majority," he was taking the cakes; that his "stand," or, more properly, "set-down," on federation, "had waked up the world and the rest of mankind;" and the "sweet singer" of Michigan could write of the splendid success of his exploit and that of his Salida-St. Louis-Denver correspondent, as she did of the bull frog and bumble bee, in producing a rain storm in Kansas, of which she sang as follows:

"The bull frog raised his tail on high,
And went bounding o'er the plain;
The bumble bee went thundering by,
And then came down the rain."

We see no reason why the correspondence should not proceed. We enjoy it. "A little nonsense now and then," etc., is not out of place. The very fierceness of the writer is enjoyable. To see him in the majesty of his wrath, wielding his paper battle-axe, shooting his wind gun or letting fly his straw arrows, is immensely amusing; but the real beauty of the joke is, that he evidently writes in Denver, instead of Salida or St. Louis. In this, we may "assume an hypothesis" or a "compound hypothesis," but it looks that way. Of all the missiles fired at the editor of the *Firemen's Magazine*—scrap iron, horse shoes, mule shoes, old screws and nails, old candle-sticks, coupling pins, street scrapings, pie, slugs and what-not—the proud warrior can come and pick them all up, and have them on hand to shoot again; they did not reach their mark.

The *Firemen's Magazine* is doing business at the old stand. It is said to be the best publication of its kind in the country. It is loyal to the authority of the Brotherhood of Locomotive Firemen. In alliance with those who seek to enthrone the right and everlastingly crush the wrong, it welcomes to the arena of discussion every friend of labor—every advocate of federation.

We have devoted more space to the *U. P. E's Magazine's* curiosities than we intended; but one and the same critic and correspondent writes from "different parts of the country" about the same date, and says about the same things in about the same way; carrying about the same pressure, and all the time "voicing the sentiments of the majority;" we confess to a liking for the farce, and would have the play go on. There is too little fun in the world, men do not laugh enough. This the *U. P. E's Magazine* seems determined to remedy, and is succeeding bravely. May its shadow never grow less.

Expired Railway Patents.

The following list of railway patents, furnished by F. B. Brock, Patent Attorney, Washington, D. C., expired during the month of January, 1890, and are now free to be used by anyone, viz:

Rail joint, J. M. Clem.
Rail, W. S. Hunter.
Railway chair, E. D. Mann.
Railway truck, D. S. Tutbill.
Lubricating car axle, J. R. Morris.
Car brake, A. M. Rouse.
Buffer spring, C. W. Saladee.
Car coupling, J. W. Bates.
Car frame, R. M. C. Parker.
Car heater, Michaels & Broadwell.
Car seat, A. Barney.
Car spring, J. W. Culmer.
Car starter, L. D. Benner.
Car wheel, R. Ramsey.

Persons desiring copies of patents, drawings and specifications, can obtain the same for fifteen cents by applying to Mr. Brock, whose address is as above given.

JOHN LIVINGSTON BACKS WATER.

This *Magazine* is abundantly on record in its denunciations of the proceedings of John Livingston to secure the action of the Interstate Commerce Commission to aid him in his warfare upon railroad corporations that extend to Locomotive Engineers the courtesy of free passes to and from the annual conventions of the Order. We do not remember to have encountered anything, even in this sordid age, more repugnant to liberality or more unjust alike to corporations and to employes, and we hail with honest pride the collapse of John Livingston's scheme to enthrone a policy so utterly at war with fair play and justice.

It seems that Mr. John Livingston himself became ashamed of his policy. It is quite likely that the Railway Shareholders' Association, of which Livingston is President, unable longer to withstand the scorn of an indignant public, demanded of its President that he should back-water; back out and back down. Be this as it may, he has judiciously "thrown up the sponge," as follows:

BEFORE THE INTERSTATE COMMERCE COMMISSION.

JOHN LIVINGSTON, President of the Railway Shareholders' Association,

against

THE DELAWARE, LACKAWANA & WESTERN RAILROAD COMPANY, and 110 other Companies. No. 210.

THE SAME against

THE NEW YORK, LAKE ERIE AND WESTERN RAILROAD COMPANY. No. 238.

To the Interstate Commerce Commission:

Convinced, from the perusal and mature consideration of the answers of more than one hundred of the defendant companies to the complaints, and also to the amended complaint filed in the first above entitled cause, on the 9th of October, 1889, that since the beginning of railroad operations in this country it has been and is now the custom observed by all railroads in the United States to grant free transportation, under reasonable regulations, to their own officers and employes and to those of other railroad companies when the application as to the latter comes from the principal officers of such other companies, and that they have included among the officers and employes the members of their immediate families; that in the employment of its officers and employes by many of the defendant companies they are engaged knowing that such transportation favors have been accorded, not only to themselves, individually, but to the members of their families; while, other companies, regulate and fix such privileges in and by the contract of employment; that such practice had become, at and before the passage of the act to regulate commerce, and continues to be necessary to efficient railway management, and could not be departed from without seriously prejudicing the safe and successful operation of the railroads toward which the relation sustained by the members of the families of their employes is different from that of the public, generally, and the free carriage of such persons is a service rendered by the railroad companies under substantially dissimilar circumstances and conditions from that rendered to any other person not belonging to the family of an employe; that it is promotive of the interest of every railroad company and of the convenience and safety of the public to grant transportation to its employes and dependent members of their families, free, or at reduced rates, and that they are justified in the issuance and sale of employes' mileage

books, and at one-half of cent per mile, for the use of specified members of their families as is the admitted practice of the New York, Lake Erie & Western and several other defendant railroad companies; and it further appearing, from the verified statements of nearly all the defendant railroad companies, that public policy requires the continuance of the aforesaid practices; and, there being a reasonable doubt whether anything in the act to regulate commerce abridges or prohibits the free exercise of such alleged right of the defendants, the universal custom of half a century should be permitted to continue until Congress shall have declared its true intent and meaning in the premises by apt and proper words amending said act; and it further appearing that said Interstate Commerce Commission by an order made herein at a general session thereof, at Washington, on December 7, 1889, held that where free passes are not given by any of the defendant railroad companies for *Interstate* transportation evidence thereof would not be admissible upon any of the issues in the first above mentioned cause thereby declaring that *all passes to be used only within the limits of one state are lawful and proper*:—

I hereby request the Interstate Commerce Commission to dismiss the above mentioned two causes as to each and every of the one hundred and twelve defendants therein, and that the petitions and complaints, and the amended petition and complaint heretofore filed by me, therein, be dismissed, and that no further proceedings be had therein against any of said defendants.

Dated, December 16, 1889. JOHN LIVINGSTON, Petitioner and Plaintiff, in person, Campville, Tioga County, New York.

The foregoing document, received direct from John Livingston himself, is interesting reading, and is conclusive that Mr. Livingston has had enough, and knows when he has got enough; this much, at least, is creditable to Mr. Livingston.

The *Magazine* has a right to felicitate itself upon the outcome of Mr. Livingston's scheme, since the reasons set forth for withdrawing his suits, are, in many regards, strictly in accord with the arguments, from time to time, urged by us. It is not only good policy on the part of railroad corporations to permit their employes to ride free, but it is simple justice that such a policy should prevail, and no class is more benefited by such a policy than railway shareholders—*sic transit sham*

MASTER MECHANICS.

We are indebted to Mr. Angus Sinclair for important papers relating to the work of Master Mechanics, issued by Mr. Sinclair as Secretary of the American Railway Master Mechanics' Association. One of the circulars relates to the "advantage and disadvantage of placing fire-boxes above the frames," and the following questions are propounded:

1. Do you consider it an advantage to place the fire-box above the frame? If so, please state your reason.
2. Do you experience any more difficulty in keeping mud rings and flues from leaking when above frame than when below?
3. State the distance from bottom of mud ring to bottom row of flues.
4. Is your ring set level or does it drop in front? If so, how much? If you drop in front, please state your reason for that method of construction.
5. Are your mud rings double riveted all around, or only in corner?

6. In placing the fire-box above the frame, does it run straight across, or drop in middle?

7. What depth of fire-box would you recommend?

8. Does your fire-box stand level, or do you dish your frame toward the front end?

9. What increase of grate surface do you obtain by raising fire-box above the frame?

10. Do you experience any more trouble with driving boxes heating with fire-box above frame?

11. Do you have any more trouble with flues stopping up with fire-box above frame than below, and what is the diameter of flues used?

12. Do you use water bars or grates, and for what kind of coal?

13. Do you use brick arch with fire-box above frame?

14. Please state in a general way what advantages or disadvantages, if any, you have derived from placing fire-box above the frame.

Quite likely some of the writers in the *Mechanical Department of the Magazine* may have something to say upon subjects suggested by the interrogatories—at any rate they are eminently practical and will, we think, interest locomotive firemen.

THE LATE STRIKE ON THE MACKEY SYSTEM.

On the evening of January 6th the strike on the Mackey system, which had continued for eight days, was declared off.

It was said by Admiral Porter that "a pin is worth fighting for if it involves a principle."

The late strike on the Mackey system involved a principle. Does some one ask in what way, or in what particular was any principle involved? We shall see.

Governments, that of the United States for instance, or that of any of the states, possess autocratic power in that, 1st, they can deprive a man of his property. 2d, of his liberty, and 3d, of his life. But they can do neither without giving the man accused of wrong doing a hearing. He has to know the charge made against him. He has to be given an opportunity to be heard, and must be adjudged guilty. Till this is done no penalty can be inflicted.

Mr. G. A. Hurd, Master of Transportation, acting under orders of President Mackey, concluded, in the treatment of a number of employes on the system, to deny them the rights accorded by the laws of the state to the meanest sneak thief within its jurisdiction, send them adrift, remand them to idleness with their reputations smirched, without giving them a hearing, without so much as intimating what wrong they had done for which they were deprived of earning an honest living for themselves and those dependent upon them.

Manifestly a principle was involved in such proceedings. The men discharged had a right to know wherefore. They had a right to be heard in their own defense. They had a right to confront their accusers. They had a right to protect their own good name. This was denied them, and such rights having been denied them they had a right to strike.

And here, let it be said, that President Mackey, in denying his employes such rights, placed himself not only in flagrant antagonism to his own best interests, but as conspicuously, in antagonism to the best interests of society. He assumed prerogatives characteristic of Czar, Sultan and Shah. He simply deprived men of the means of subsistence, equal to taking their property. He set them adrift regardless of consequences. In doing this he provoked a strike on his system which should have had the hearty cooperation of every employe on the system. Why? We proceed to show?

Mr. Hurd, acting under orders from President Mackey, began the discharge of conductors. This work went steadily forward until eight conductors had been discharged, the eighth man being Geo. W. Lovejoy. It then leaked out that men were being discharged because they had been connected with a previous strike on the system, and because they were members of the B. of R. C. In the previous strike the employes won the battle, and the discharging of the men was the penalty they were required to pay for their victory, and in the same line, it appeared that President Mackey concluded that the manly independence of the members of the B. of R. C. was something requiring rebuke.

Here, again, we find vital principles involved. It is a wrong of great enormity to make a workingman pay a penalty for achieving a triumph over a corporation whereby he simply gains his rights or a fraction of them, and it is an outrage on personal rights, rights as sacred as any that relate to personal liberty, to impose any penalty whatever upon an employe for being a member of a labor organization, and when such penalties are imposed every fearless, independent, manly working man in the land should resent it.

In saying this, we interpose no plea against discharging men who neglect their duty, who are wanting in fidelity to obligation, who abuse their privileges and are recreant of trusts. They belong to the leprous scabbing class whose employment is everywhere a menace to safety and success.

Well, the strike ended. The strikers lost nothing and gained much. Five of the men discharged by Mr. Hurd, all who were worthy of re-instatement, were re-instated. The pay of trainmen was increased, that is to say, over time is paid for, and in the future, conductors are to be chosen from the ranks of brakemen.

Mr. Hurd, as demanded, did not retire, and this, we surmise, was just to him, though no man ought for a minute to retain a position, the duties of which include being the executioner of innocent men—it being sufficiently unpleasant to a sensitive man to impose extreme penalties upon the

guilty. It is said, however, that Mr. Hurd will not, in the future, be required to discharge men, and that when a man is discharged on the Mackey system he will be granted a hearing. And it is worthy of remark that one contemptible creature who played the part of a spy and consented to scab, was *fired* and found it healthy to leave.

On the whole, the outcome of the strike has set no one back, and we predict that the Mackey system will be more prosperous for the strike than it would have been if it had not occurred.

CORBIN'S WHISKERLESS SERFS.

We have had occasion in the past to denounce Austin Corbin, the only regret we have experienced in the performance of the duty being that the words at our command were weak as compared to the unspeakable meanness of the Russianizing rascal who controls the Reading railroad.

We have intimated that at the proper time Austin Corbin might issue a decree to brand his serfs as Texas ranchmen brand their cattle, but we did not suppose that an order in that direction would be issued for some time to come. The work of degradation has gone forward more rapidly than we had estimated. In proof of this we reproduce an Associated Press dispatch, headlines and all, from Philadelphia, which appeared in the Indianapolis News, and which has not been contradicted.

THEIR WHISKERS MUST GO.

Clean-Shaven Faces Must Characterize Officers of the Reading Road.

PHILADELPHIA, January 9.—In compliance with a general order issued by the Superintendent of the Philadelphia & Reading road, the brakemen and baggage-masters employed on the road will be compelled to report for duty in the future with clean-shaven faces. This order has caused no end of talk among the men, many of whom have beards remarkable for grace and beauty. Brakeman Wm. H. Welch sports a beard à la Vandylke. He is as proud of his facial adornment as a peacock of its tail, and rather than sacrifice his dignity to an arbitrary rule of railroad fashion he has decided to throw up his job. About a year ago when a similar order was issued, Welch was excused, as he excused himself for wearing whiskers by stating that he had a sore throat. This excuse will not go this year. It is simply a case of whiskers and no work or steady employment. Now the employes who enjoyed the luxury of a clean shave are now suffering with the gripe.

In connection with the order doing away with beards is an order compelling the men to keep their coats closely buttoned while on duty. This means for the men a sort of Russian bath between stations. When the Superintendent of the road issued his sweeping order for a sacrifice of the beards he made no explanation, but it is generally understood that his idea is to have all the men employed on the road look as slick as possible. According to his way of thinking a man cannot meet these requirements except by having a clean-shaven face.

The foregoing is what might be termed "interesting reading" for workmen, in this glorious era of light and knowledge, civilization and progress, liberty and independence, etc., etc., to the end of the chapter.

In some penitentiaries convicts are required to have "clean-shaven" faces. The felons have to submit. They are outlaws, doomed to servitude as punishment for their crimes, murderers, burglars, sneak thieves, and so on through the list. Corbin treats his men as if they were convicts and they obey. One brakeman revolts—one, only one. Nor is this all. The men must wear their coats "closely buttoned." Did a Czar ever issue such orders? Were southern slaves ever subjected to such humiliations? No, never. Corbin's slaves submit. Will they submit when he issues his order to brand them as the cattle of the "P. & R." Why not? The order would not be more degrading than those recited in the dispatch which we print. Do railroad workmen see the point? To resist such degrading tyranny, what is wanted? Simply organization and federation. That is all—and that can be had.

If there is one class of men whose hearing ought to be perfect, railroad employes, says the *Mechanical News*, may certainly be considered as coming under that head. It is rather alarming, therefore, to encounter the statement that "Profound deafness among railroad employes is by no means rare; on the contrary, it is met with very often." We find this assertion in a paper entitled the *Whistle Signal*, by Dr. Robert Barclay, of St. Louis, read by him before the National Association of Railway Surgeons of America, and since printed and ordered by them to be sent to every railway manager in the United States. Railroad employes are expected to be physically perfect—to have not only good ears, but good eyes; in fact, they are expected to be as near faultless, physically, as possible. It is well known that the various organizations of railroad employes initiate neither partially blind nor partially deaf men; nor do they initiate physically unsound men in any regard. In all of these things the organizations study the interests of railroad corporations and the interests of the public. How stands the case with railroad managers? Are they as careful and considerate as the organizations? The *News* thinks not, and intimates that their indifference is an infirmity of which they occasionally exhibit marked symptoms, when the public safety and comfort, instead of their own interest, is the matter under consideration.

ELSEWHERE in the *Magazine* will be found the full text of the agreement between the Knights of Labor and the National Farmers' Alliance and Industrial Union, which is highly interesting reading.

THE December number of the *Big Four* (*Bee Line*) *Gazette*, accompanied with a Christmas supplement, is on our table, and both are gems of the typographical art. This highly entertaining periodical has attained quite a popularity among the railway publications of the times, and the December number, a veritable triumph of artistic journalism, reflects the greatest credit on the great railway system it represents. The *Big Four* management, distinguished for its liberality and square dealing, has won its way to popular recognition, and the *Magazine* notes with pleasure its prosperity and success. Col. E. E. South, the agent at Terre Haute, is a thorough railroad man and a most obliging gentleman—in all regards the right man in the right place.

Literary Notes.

Among the many leading thinkers who will contribute able papers to *The Arena* during the next two or three months are mentioned Edgar Fawcett, George D. Cheever, D. D.; Gen. Clinton B. Fisk, Rev. Howard Crosby, Rabbi Solomon Schindler, Richard Hodgson, LL. D.; Rev. Minot J. Savage, Prof. J. Rodas Buchanan, Helena Modjeska, N. P. Gilman, W. E. Manley, D. D.; Helen Campbell, A. C. Wheeler, Junius Henri Browne, W. H. H. Murray, Prof. M. L. Dickinson, Stephen M. Allen, A. M., LL. B., F. R. H., St. James D. Bixby, Ph. D.; Elizabeth Cady Stanton, H. H. Gardener, Rev. R. Heber Newton, Emily Kemplin, LL. D., secretary of Medico-Legal Society of New York; Felix L. Oswald, M. D., Ph. D.

We have received from the publishers, Charles Scribner's Sons, 743-745 Broadway, New York, a copy of a book entitled, "The American Railway: its Construction, Development, Management and Appliances." The book contains 456 pages, with 225 illustrations, thirteen maps and nineteen charts, many being colored. The book is substantially bound in half leather, octavo, and is sold for \$6.00 net. The contents of the book are such as to at once commend it to all who desire accurate information relating to the railroads of the United States. That our readers may have some idea of the great value of the book, it is only required to say that it is divided into chapters, each being complete in the treatment of its subject. The introductory paper is by Judge Thomas M. Cooley, Chairman of the Interstate Commerce Commission, and the remaining chapters are as follows:

"The Building of a Railway," by Thomas Curtis Clark, Civil Engineer; "Feats of Railway Engineering," by John Bogart, State Engineer of New York; "American Locomotives and Cars," by M. N. Foney, author of the "Catechism of the Locomotive," Editor *Railroad and Engineering Journal*, etc.; "Railway Management," by Gen. E. P. Alexander, President Georgia Central R. R.; "Safety in Railroad Travel," by H. G. Prout, Editor the *Railroad Gazette*; "Railway Passenger Travel," by Gen. Horace Porter, Vice-President Pullman Palace Car Co.; "The Freight Car Service," by Theodore Voorhees, Assistant Superintendent New York Central R. R.; "The

Prevention of Railway Strikes," by Charles Francis Adams, President Union Pacific R. R.; "How to Feed a Railway," by Benjamin Norton, Second Vice-President L. I. R. R.; "The Railway Mail Service," by Thomas L. James, Ex-Postmaster General; "The Railway in its Business Relations," by Arthur T. Hadley, Professor Yale College—Author "Railroad Transportation;" "Every-day Life of Railroad Men," by B. B. Adams, Jr., Associate Editor the *Railroad Gazette*; "Statistical Railway Studies," by Fletcher W. Hewes, Author of "Scribner's Statistical Atlas."

The book ought to have a large sale and should be read by every railroad man in the country. To make it available to members of our Order it would be well for each Lodge to purchase at least one volume, and in that way every ambitious member could read it at a small cost.

REMARKS ON THE BELOVED 31.

To the foreman at Norwalk, I'll call your attention
To the old "31," that bone of contention.

And if you will listen, with slight hesitation,
I'll tell you her faults in rapid rotation.

Her guides are out of line—her packing is blowing,
And the flange on her tire is rapidly going.

The jacket is loose, the bagging is missing,
And half of her crown-bolts are viciously hissing.

The flues and the mudring—great Scott! how they leak,
So they have to be caulked about three times a week.

Then the sand-box, quite freely our temper has tried,
For the sand's always wet, howe'er often it's dried.

The valves—and the lever—an inch thick with rust,
Won't work worth a cent—and they often get "cussed."

On the rods all the brasses are worn down so thin,
Some day they'll jump over the head of the pin.

The links with lost motion continually battle,
The head brakeman can't sleep for the reverse lever's rattle.

The gauge-cocks and dripper are stopped up, and rusted,
A rope's for the door-chain the throttle gland busted.

The cab, of a curtain, or back board's quite bare,
The holes in the deck admit ample fresh air.

Through the leaks in the roof—of which there's no lack—
The rainwater drips down the fireman's back.

The whistles as hoarse as an old "mooey" cow,
And won't blow when you pull it unless you know how.

She's old, she's worn out, she's broken down,
And she looks at her mudring, her flue-sheet and crown.

But its come "Denny," hustle the coal with a will—
And get off and shove, when you climb Fremont hill.

When you read this report, you will say—"Well, by thunder!"
"Have to jack up the number plate—run a new engine under."

"To please Engineer Horton—that man of fine figure,"
And Fireman Dennis, his "red-headed nigger."

NORWALK, O. W. Y. D.

The Brotherhood.

Correspondence concerning the Brotherhood is solicited for these columns.

Communications should be written on one side of the paper only, and forwarded so as to reach the Editor not later than the *fifteenth day* of each month

District Representation.

MR. EDITOR:—Another year with its hopes and disappointments, its successes and failures, is numbered with the past.

We enter upon another with renewed courage and brighter promise. As an Order, having in view the elevation of our membership to a higher social and moral plane, and for improving our efficiency as locomotive enginemen, we have much to do. There are no limits to our field of usefulness, if we more than half fulfill our promise. Where so many minds and hearts are enlisted in a great cause there must of necessity be a great range of opinion as to the best means to accomplish the end sought. However, we doubtless agree on one point, and that is, "Progress!" We cannot afford to stand still—it is not logical! We must keep step to the music of the age, as nature does to the ceaseless rounds of the seasons. Let us always keep on the move, with our faces to the front.

It is not needful to stretch one's imagination in order to believe that we have members who are content to stand still. The pages of the *Magazine*—for seven years at least—bear ample testimony that this is so.

I do not believe that I am "holier than thou," but I am proud of the fact that I am not of that number who are content to let things wiggle as they please. There are few times when it is either right or proper to do so, and it merely requires the exercise of good judgment to determine when such times come.

Were I called upon to map out a policy for the Brotherhood, I might make a sorry mess of it. Nevertheless, I believe it right and proper to not only map out a policy, but to follow the policy after it is once commenced. However, there are two questions, as they appear to me, that should receive immediate attention, and with them in view, I should make the order large enough in scope to cover the entire ground, thereby creating strength to assert its rights and maintain them, and reduce the representation in our conventions for the purpose of saving at least half their cost and accomplishing better legislation. It is not a matter of congratulation that our conventions resemble the Great American Beer Garden. I do not believe in much of anything savoring of the aristocracy, but I do most earnestly wish that our delegates were, as a rule, more of the gentleman in the sessions, and less of the politician. At present I do not care to say further than call attention to pages 515 and 652 of volume 12. In the former, of course, the figures will need overhauling, because the membership is spreading over more ground. The rule is, as there suggested, I believe, fair and equal to all concerned;

in the latter, there is truth in every line and plenty of food for thought.

I would like to hear from the committee appointed at Atlanta to examine into the matter. Have you got together yet, gentlemen? This matter, as I have said before, was compromised at Minneapolis, and the evils exist just the same as before. Compromise won't do! A prominent delegate at Atlanta said: "I do not believe we ought to reduce our representation, because when we meet we want to show the public that we are at least a strong organization, and we can only do that by having a large delegation." I ain't much on the bluff, but why not double our representation to convince the public of our strength? I cannot see as the brother's argument is either good logic, or necessary; if it was surely public opinion never—at least very rarely—goes with the loser. Kilrain was quite a man and had lots of followers before last July; a little over a year ago you couldn't find a Democrat in a day's travel, but since last election you must be convinced that there was an immense crop of them raised, how many nations have as yet officially recognized the new order of things in Brazil?—how many will if it is a failure? So with us: just as long as we are on the winning side we need not hunt friends; but when the scale tips the other way, you can hardly find them, if you do! In the language of millionaire Vanderbilt, "The public ———!" If we must bend our energies to pleasing "the public" we won't have time for much else. I shall prepare a list of districts, according to the plan I propose, showing the number of delegates, giving estimates upon the cost per capita, total cost of convention, &c., from the next quarterly report of the Grand Lodge, and ask your consideration and examination of the same when it appears.

It may be a little late, but a Happy New Year to you all.

Dringo.

DELPHOS, O., December 10, 1890.

Editor Firemen's Magazine:

On looking over the *Magazine* for December, I noticed a communication signed X. Q., in which the writer closes by saying, "give us a change of name if need be and above all give us federation."

Though but a single sentence it has made things appear to me in an entirely different light. Since change of name was first mentioned in the *Magazine* I have fought it hard but only in our Lodge room. I now think by changing our name to cover all members we represent, with the engineers that we now have in our organization and with those that will be promoted in the next year or two from our ranks, with the federated board existing that the B. of L. E. will be to us in the same relation and proportion as the O. R. C. will be the B. R. C. in the near future.

The Ladies' Society of the B. of L. E. gave their first annual ball at the Rink on Thursday evening December 5, 1890. They were well patronized and everybody seemed to enjoy themselves; they cleared about fifty dollars. If the boys of 185 had as much "sand" as the ladies, we would have a far better Lodge. A raise of pay is the topic of discussion here at present, it having been promised us the first of the year.

815.

NEW HAVEN, CONN., November 10, 1889.

Editor Firemen's Magazine :

You may imagine me to be one of the kind who want the earth; such is not the case. What I most desire is to inform the readers of our much prized *Magazine* that Elm City Lodge, No. 284, is still full of pride, and making such progress in many ways that we desire to make known the fact to our brothers who do not take sufficient interest in their Lodge meetings to attend them, and that, too, when we know they could be on hand without sacrificing their interests.

At a regular meeting held in October, it was voted to appoint a committee to be known as the "Committee on the good and welfare of our Lodge." The first matter presented was to make the Lodge meetings a school for instruction. The committee recommended the purchasing of suitable books, such as would inform our minds and help our knowledge for the care of the locomotives when we are intrusted with them. It is not necessary to refer to the remarks that were made in favor of the recommendations of the committee, except to say the recommendations were adopted and the committee are now engaged in looking up the books.

Another surprise for the brothers was the report that our General Superintendent, Mr. O. M. Sheppard had promised to aid us all he could, and to address the Lodge at some future time, and our Superintendent of Motive Power, Mr. John Hennyfe, said he was pleased to know that we were engaged in such important business in our Lodge room, and that he would cause to be made a working model of the slide valve, and would aid us in every way he could. We certainly have every reason to feel proud, and it is to be hoped that such of our members as have been slow to attend the Lodge meetings will now take a better view of the subject, and make it a point in the future to attend more frequently.

On the evening of October 31, our Lodge held a very pleasant sociable in the Lodge room. There were present about eighty invited friends and brothers with their wives, who brought abundantly of those good things needful for the body, so that we were able to set covers for nearly one hundred. The supper and the dancing were the principal features of the evening, and the occasion was greatly enjoyed by all. The object of the sociable was to bring out the brothers and their families, and thereby create a closer unity among them.

At our last meeting a committee was appointed to make arrangements for our fifth annual ball, which will be held in the Polo Rink, January 22, 1890. The Wheeler & Wilson Band, of Bridgeport, has been engaged to furnish the music, and the committee will try to make the event one long to be remembered. It was also voted to give a prize to the member who could bring in the best list of questions on the rules.

We now have ninety-eight members and three applications. We are having good results from the operation of our new By-Laws, and our brothers say that they shall be lived up to in every particular. We have a number of members who live out of the city and are connected with our system, but

while not favored with frequent opportunities to attend the Lodge meetings are nevertheless with us heart and soul. I refer to Bros. Winterbottom, Abel, Keating and Sheppard. Another one of our brothers who is a whole-souled member and has the Lodge's interest at heart, is Bro. Duggan, who was promoted more than a year ago, and was compelled to make another city his home. He became so lonesome that he quietly went off and took some one else to console him when he became despondent. It is expected that Bro. Duggan will entertain the brothers with an address upon the subject often referred to, "Is Marriage a Failure?"

In conclusion it may be said with propriety that our Lodge is harmonious, and the writer hereof trusts that this may be the state of all our Lodges.

Fraternally yours,

W. A. P.

AIR LINE JUNCTION, O., November 14, 1889.

Editor Firemen's Magazine :

In reading our *Magazine*, with our limited power of observation, and lacking the faculty to see the promotion of the welfare of the Order brought about by a certain class of its contents, I conclude that small progress will be made in showing to any the plausibility of publishing such trash. If we are not laboring under a mistake, our official organ is published for the good of a labor organization, and to do malice to none, whose purposes are practically the same as the one the *Magazine* represents. Everyone has a way of knowing when he is being treated disrespectfully. And a very effectual way of resenting it is to give the aggressor a wide berth. For if one can walk without legs, two orders of the same department can get along without each other. The monthly issues are full of the latest topics discussed before the common people. It also shows a constant study on the part of its editor in getting the most valuable and interesting matter for its readers, and should be found on every page, not having any portion devoted to anyone for such useless trash as we sometimes see.

A change of name of our Order would not in any way, as we can conclude, be beneficial to us. While upon the other hand, there are some pointed facts in favor of its present name. A change of name, so as to consistently allow engineers to remain in or join the Order, would in course of time compose a majority of the membership who would be persons other than firemen, and consequently, a classification of insurance as well as grievance committees and boards of adjustment would be necessary in order to promote the welfare of the firemen to any extent. Past experience has taught us that the majority would not want firemen to be recognized, except when the chestnuts get too hot for their paws. Such being the case, it would not be wise to have the men on different sides of an engine come under head of government, since this head would naturally be obliged to favor the majority, or be ousted out. And firemen, or the minority, must succumb to some of our late circumstances. One has said "Let well enough alone," and well might we, for although we may be in a frying pan, we might get in a fire.

Yours fraternally,

A. S. Meach, of 142.

PARSONS, KANSAS, November 19, 1889.

Editor Firemen's Magazine:

To say that I am surprised at the remarks made by some of our brothers in the columns of our *Magazine*, is placing the matter before them very mildly. They complain of the management of affairs; of the mechanical department, and of other things too numerous to mention.

In the first place, I would like to call the attention of the complaining brothers to this fact. The *Firemen's Magazine* takes the lead as far as labor principles are concerned. In this I defy contradiction, and I am well satisfied that under the present administration it will continue to advocate the rights of workmen in the future, as it has done in the past.

In regard to the Mechanical Department, if any brother desires to give his views in regard to the best method of firing or cleaning an engine he is at liberty to do so. But, to my mind, this department is also for the purpose of discussing all parts of an engine, so that when some of these brothers reach the height of their ambition, or, the "right side," they will be able to run an engine without the assistance of a "ready reference."

One of our worthy brothers advocated the proposition that as soon as firemen are eligible to membership, they should join the B. of L. E. He gives no reasons for this move. He further says that assuredly we can not adjust grievances for the engineers. How can we protect them as brothers and switch engineers if we can only protect them as firemen? What is to become of our Order? As soon as a fireman is promoted to a higher position, is he to be left out in the cold? What will become of our members who are running engines, and who are not eligible to membership in the B. of L. E.? Are they to be driven out of our Order because we cannot protect them? This is a sad mistake. We can and will protect all of our members, regardless of their station. This is the reason why we advocate a change of name, so that all our members can march under the same banner. Brothers, it is your duty when you make an agreement with a railroad company to protect any member, from fireman to engineer, and unless you do so you fail to do your duty.

On the M., K. & T. Ry. we have all our members embodied in the agreement—firemen, hostlers, switch engineers and locomotive engineers—and I will guarantee that we will protect them at all hazards. All that is asked of them is to do their duty, and do it well. This, of course, is asked of all men, and when they fail to do their work as required of them, that which is right and just, they will fail to receive our support, and not until that time presents itself to view. One brother continues to say that if we had fewer engineers in our Order we would not have the trouble that we do. I am not aware of any trouble, nor do I believe there is any. I would like an explanation of this matter. He further says, the engineers are not working against us. At the present time I do not believe they are myself. They are "in the soup" now. But the past record of the B. of L. E. will not bear the brother out in his assertion. I believe in federation. When this is accomplished then

we can bury the past, and all will be well. Until that time arrives there will be more or less friction between the different Orders of railroad employes.

In regard to the stand that our brother editor has taken against the B. of L. E. in the past it should be said that it was not of a personal nature. The actions of that body concerned us all, and he did what any fair-minded man would do. He resented the wrongs with all his power. If the engineers of the B. of L. E. feel aggrieved at his treatment the columns of our *Magazine* are open, and we are willing that they should be heard. Our brother editor has offered them this privilege on several occasions, and no further comments are required. Brothers, in conclusion, I will say, do your duty to those by whom you are employed and you will always have the respect and esteem of your fellow men. Work night and day for the success of the B. of L. E., and remember when you do this success will crown your efforts and peace and prosperity will reign supreme.

Chas. W. Maier.

A NEW NAME AND FEDERATION.

I'm a fireman on or off the track,
A Brotherhood fireman from way back.

I don't play pool, I don't drink beer,
And I'm going to be an engineer.

This much I say as prefatory
To my hallelujah story.

I fell deeply in love with Gertie Green,
Who reads and admires the *Magazine*.

In which she shows she has a mind,
Developed, cultured and refined.

She said the "new name" proposition,
Just suited her faith and disposition.

I quick caught on to the idea
(Gertie blushed from ear to ear)

And asked her what consideration
She had bestowed on federation?

She quick replied, with tremulous voice
That "federation was her choice."

She was going from church, about a mile;
"Could I go 'long?" She said, "I should smile."

The skies were cloudless, night's silver queen
Baptized the words with its mellowing sheen.

Now Gertie and I, my courage came,
And I said, "Ah, yes, that new name,

Would mine answer?" Fred Montramart."
And Gertie said, "Yes, with all my heart."

And there, standing by the garden gate,
We both agreed to federate.

We'd establish at our cozy home
A "Supreme Council" all our own.

Since that glad night with love aflame,
When Gertie said she'd change her name,

That I should be her running mate,
That with me she would federate,

I've blessed my stars that Gertie Green
Read the *Firemen's Magazine*.

—Fred Montramart.

CHARTERS, PA., November 16, 1889.

Editor Firemen's Magazine:

In reading the *Magazine* I came across the article of Brother Cross, in which he severely tries to criticise our editor. His remarks are altogether uncalled for, and do not show any brotherly feeling or regard. Had Brother Cross read his article over several times before sending it he surely would have destroyed it, because it is a gross insult, not alone to the editor, but to our Order at large. To begin with, he denounces the Mechanical Department. Supposing wave power lines do not interest him, why don't he pass it by and study something else which benefits him more? If nothing is contained in the *Magazine* which he desires, why not politely request to have an article published? At any rate, the best book on firing is the fire box itself, and I think it is almost impossible for any man to write and explain the best way of firing an engine so as to be of a great benefit to a fireman. The reason why explains itself. Then comes the tyranny of the editor in abusing the letters of our brothers. Well, an editor that has no views, suggestions and corrections would not suit for the *Firemen's Magazine*. You might as well put a jackass at the head of it as to have a man that would publish any hash and trash that has neither sense nor meaning in it. I think Brother Debs is the right man in the right place. Under his supervision the *Magazine* has improved and grown so that to-day it is in the lead of all journals of railroad organizations. Please do not think I say this to flatter Brother Debs, because I am no sucker; but I glory in a man that has the grit and manhood in him to come out with his honest opinion, no matter whom it suits or displeases. If we had all men of his type in labor organizations the situation would be changed considerably. But this is the great trouble with most of our workmen, they have no opinion to express, and a good many of those that have are afraid to do so. Next comes the biggest insult: the breeding pen for the B. of L. E.—cattle come from pens. I would like to know if Brother Cross hasn't got the same opinion of his fellow men, that he calls brothers, as Austin Corbin or H. B. Stone has—that they are only cattle driven into the pen, fattened up and stuffed until they are fit to be chased into the slaughter-house of the B. of L. E. The comparison of Brother Cross is surely the lowest sentence that ever appeared in the columns of our *Magazine*. The engineers in our Order are no drawback to us—on the contrary, they are a blessing. They are mostly men who have rocked the Order in its cradle and they love it, and a great many would not leave it for anything, and they should be congratulated instead of criticised. In regard to the B. of L. E. getting too much of an overhauling, I do not think so. They deserve it to a great extent: we have friends among them, it is true, but we have lots of enemies also, and I think they are in the majority—at least, indications point that way. Tricks are played on members of our Order by the B. of L. E. men. As long as the B. of L. E. keeps on thinking itself so much better than the B. of L. F., just that long this bad feeling will exist and articles will be written against them, but whenever they come to their senses and grasp the hand of fellow-

ship and good will which has been extended to them so long by our Order, then, and not until then, the past will be forgotten. As my article is getting too long, I wish Brother Cross, and all brothers who are of his turn of mind, to take my advice. If you see an article you don't like, don't read it; what you don't see, ask for. The Lord said, ask and you shall receive. I guess it will be the same with our editor, and I am sure if he has it you will get it. Don't worry him with things that are not of necessity, consider the position he holds. I am sure, for one, that his spare time is limited. Yours fraternally,

F. J. Thomer.

TRINIDAD, COL., Dec. 17, 1889.

Editor Firemen's Magazine:

The December number of the *Magazine* is at hand and carefully read. I find some able correspondents, and am glad the way some of the Brothers give "Pop" their idea, regarding a new name. Most all of the Brothers here are in favor of a new name. The time has come when we need a new name. Why did the Brotherhood of Brakeman change the name of their order? Because their name did not cover all, neither does our present name cover all. If we had strictly lived up to "let well enough alone," where would our Federated orders be to-day? There would be no Federation. In the December number of *Magazine*, I think Brother Editor answers Brother Carl in excellent style. And as for looking Webster over for a new name, that is not necessary. We have Brothers in 344, generally called "Cow Boys," that could find a name without consulting Webster. In Vol. XIII No. 11, page 1009, I find some well penned lines from Lodge, No. 15. I am sorry to say none of our Southwestern Lodges can boast of a visit from our Grand Master, but can say we often hear of a Grand Master through the *Magazine*; but we are almost compelled to believe that we have none in the West. The members of 257, 328 and 344 did see our Vice Grand Master in May, but I am sure it would not have occurred had not Brother John came this way to organize Nos. 328 and 344. We sent word to the Grand Lodge by Brother John that we were not so wild and woolly as generally supposed, and had hopes that would fix matters up so this Brother Sargent would take courage and venture our way, instead of doing all the visiting among Eastern Lodges.

Now a word for 344. We have a membership of thirty-nine, ever trying to make the Brotherhood a success. Lodge meetings are generally well attended. Sometimes we think of electing a "chaser" to run the Brotherhood into the Lodge. We have several newly admitted Brothers who have already put their shoulders to the wheel. Brother McConley says he will bet money that 344 has the most unruly goat in the West. Brother Greaney and Brother Robt. Catlett think the same.

We will soon be very busily engaged in making arrangements for our first annual ball, to be given at the Opera House, on the evening of February 14, 1890.

In the meantime, it is reported that our Collector and *Magazine* Agent are most awfully tired of single life, and say we can't help it. "If we want to get married we have a right to." Go ahead boys, you are both of age. Yours, fraternally, Trinidad

ONLY A LOCOMOTIVE FIREMAN.

"Only a Locomotive Fireman," with scoop and pick in hand.

Furnishing the steam to whirl millions 'round the land;

Through tunnels, over trestles, through blinding snow and rain—

But the people think him only a fireman on the train.

"Only a Locomotive Fireman," with scoop and pick in hand.

But he keeps the train a going all over this great land,

Over hills and through the valleys, in sunshine, fog and hail.

We keep the boiler hot, boys, while flying 'long the rail.

"Only a Locomotive Fireman," even when for weary hours he's fired

"Old Scrap Heap" up and down the grade till every bone is tired;

He then lays down his pick and scoop, still no rest for him, poor man,

But down he goes, beneath "Old Scrap," to clean her old ash pan.

"Only a Locomotive Fireman." "Old Scrap" has made good time,

And she's in her round house stall ready for "a shine:"

And with scouring rag in hand the fireman rubs her brass.

'Till it shows his grimy face just like a looking-glass.

"Only a Locomotive Fireman." So at the end of every trip

He has to daub "Old Scrap's" smoke-box, before he takes his grip

And hies away to his cottage home, for which he pays big rent.

Reflecting that for extra work he does not get a cent.

"Only a Locomotive Fireman," but steadily on he goes.

Firing "Old Scrap Heap" for his victuals and his clothes.

No pleasure with his family, and little time to sleep. He's a locomotive fireman, firing "Old Scrap Heap."

"Only a Locomotive Fireman." Well, as the days go by

We must stand by one another. Shall I tell the reason why?

In "Union there is strength," and no motto can there be

Better for the Brotherhood, or for you and me.

"Only a Locomotive Fireman," but if true to one another:

If I to you, and you to me, are as brother to a brother.

Then "only a Locomotive Fireman," in power shall expand

Till the people all shall hail it as the proudest title in the land.

FORT WAYNE, IND.

C. H. T.

LOVELAND, IOWA, Dec. 14, 1889.

Editor Firemen's Magazine:

In writing to the December *Magazine* "Lone Star" remarks "That if a B. of L. F. engineer gets out of work Brotherhood men on other lines do not wish to assist him to get work as a runner, but want him to go back firing; and he also dislikes a change in name."

Now, this very change of name provides for the recognition of B. of L. F. engineers, not only by the fraternity, but also that the public and railroad officials shall know that we have not only firemen in our order, but engineers, and hostlers as well. A firemen's board of adjustment finds twice the difficulty in adjusting a B. of L. F. engineers' grievance that they do of a firemen's, because, we ourselves, have not made known by our name, that we have such in our order, who are entitled to its benefits. We have been tardy in bringing this matter up, but now that it is before the order let us second the able efforts of our *edition* to secure this step in the right direction. We cannot stand still. We must advance or retrograde. Let us advance.

As to difficulties met with in traveling, I have made a good many miles and I have met some Brothers who did not know whether they owned their soul or the engineer owned it.

They were exceptions. Most of the "boys" had a friendly hand and a kind deed for the traveling Brother and I met no better brothers than in the "Sunny South." I hope the editor will find time and space to "line up" such men as Corbin and Livingstone or rather Deadstone for he is a fossil. We have a glorious kick from the board of adjustment of the U. P. this month (December number).

If I read the reports of the Atlanta convention correctly, I believe our Grand Officers did just what they were instructed to do.

If the majority of the B. of L. F. on the U. P. authorized that document, it is in direct opposition to the acts of the men on that line, for the men of no road are more strongly *federated* than on this same U. P.

They have been the strongest advocates of *federation* in the past and I believe they are yet. The union just now being formed between the Farmer's Alliance and K. of L. demonstrates that all laboring men are drawing near together for mutual support and protection. Our order has been one of the first to say "federation," and we should keep it ringing until all workingmen shall stand shoulder to shoulder, to face the monopolies that are grinding laboring men into the ground, and which if it goes unchecked, means serfdom for all the poor in the end. Unity is strength we know that from past experience.

Look over the list of mighty trusts formed to crush the financial life out of small capitalists, who are not in the ring, and to rob the working people. Against these *we must federate* and present thousands of men against their millions of dollars.

Join hands all ye labor organizations across the gulf of the past. It won't be hard to bridge the gulf once you have commenced, and prepare all for the great struggle which will come sooner or later between *Capital and Labor*.

We must use diplomacy when we can. War when we must. Federation always.

Q. R.

NOT BUILT THAT WAY.

BY SWITCH.

MR. EDITOR:—My pen is not rusted and as yet I am not *busted*.

Nor, for all of Corbin's kingdom would I have you say.

That you think I'm something less than what I profess.

For by all the gods at once, I'm not built that way.

MR. EDITOR:—It appears to me quite clear that the new name idea,

Is something for which our brothers should all watch and pray.

In me there's not a drop of milk shake such as "Pop" puts in his communication—no, I'm not built that way.

MR. EDITOR:—I'd rather be an alligator than bounty-jumper or a traitor.

Rather be kicked by a jackass than to flicker in a fray.

I do not take fright when I'm fighting for the right. And the reason is, I guess, that I'm not built that way.

MR. EDITOR:—I'm not like those Denver fellows, a back-action, wind-worked bellows.

Who, when they should stand their ground, back down and run away.

I am not a vulgar fraction, nor the leader of a sore-head faction.

And find upon examination, I am not built that way.

MR. EDITOR:—I like bravery, chivalric courage, not knavery.

I like to shake hands with a brother, who I know has come to stay.

Men who in the storm and battle, are not like dumb, driven cattle.

And you can bet your Jerusalem town-lot that I'm built that way.

RATON, NEW MEXICO, November 16, 1889.

Editor Firemen's Magazine:

The words of the "cudgel" loving brother of Lake shore Lodge has raised a perfect tornado of just indignation among the members of Lodge 257, and were he within reach at present he would be treated to a dose of the same medicine he so unjustly applies in the Nov. No. of our *Magazine*. His nature and ideas must be on a par with those who are known to-day as Austin Corbin's slaves, else he would not use such terms for our magnificent order as "breeding pen for engineers." The very words make honest members blush to think that we have one among us with so little manhood and self-respect as to propose that the B. of L. F. be used to swell the ranks of the B. of L. E. I know of no instance wherein the engineers did anything for the B. of L. F. unless it was to their interest to do so. It is a well known fact that without the co-operation of the firemen the engineers are powerless, hence their apparent desire for the welfare of the B. of L. F.

We are of the opinion that the name of our Order be adapted to the present circumstances, for as it is now it falls far short of representing what the Order is composed of. Brotherhood of Enginemen, or Brotherhood of the Footboard would, we think, be a decided improvement.

Hoping that Brother Cross will find something more suitable to place above his autograph when next he writes than faultfinding with the editor of a magazine, that is acknowledged by impartial judges to be the very best of its kind in the country, I remain, Fraternally yours,

Scriptio Africanus.

JOLIET, ILL., November 20, 1889.

Editor Firemen's Magazine:

On the evening of October 26th Stone City Lodge, No. 355, gave its third annual ball in Armory Hall. The ball was a splendid success socially and financially, and reflects the highest credit upon the members of the Lodge. The Joliet *Daily News* refers to the event as follows:

"The firemen are just as precise in pleasure as in business, and every one of the twenty-eight dances on the programme received due attention. From the grand march at 9 o'clock sharp, in which about 150 couples took part, to the end of the concluding quadrille at 4:15, the beautiful ball room was a whirl of merriment. Pretty girls and gallant men flitted to and fro in bewildering regularity to the enchanting music of the Stone City orchestra.

"An adjournment was made at midnight to partake of the good things provided by Caterer Tom Creevy in the refectory. Visiting brothers were present from Chicago, Bloomington, LaSalle and Peru.

"The arrangements were well looked after by the committee. Messrs. C. Nolan, M. S. Perrigo and T. F. Hannon. Messrs. W. H. Brooker, H. McPeck, Jos. Cassidy, W. P. Pickett and T. B. Smith received the guests. Mr. M. McRoberts was chief floor manager, with Messrs. W. W. Brooker, F. C. Reed, M. O. Grady, Wm. Hogan, Joe Bannon and J. L. Murphy assistants. M. J. C. Molloy was ticket agent. The programme card was a pretty and unique piece of typography, with beautifully lithographed backs, appropriate for the occasion.

"The local branch of the Firemen's Brotherhood is a prosperous one, although only three years in existence, and has already done much for the social and material advantage of its members. This year it is officered by W. W. Brooker, master; W. P. Pickett, deputy master; J. C. Molloy, secretary; T. F. Hannon, receiver, and H. McPeck, collector."

The members of 355 now have the reputation of having given the best public ball of which the city can boast, and the boys all feel justly proud of their success. Fraternally yours, W. W. Brooker.

ROODHOUSE, ILL., Nov. 18, 1889.

Editor Firemen's Magazine:

I beg a place for a few lines to write of J. M. Dodge Lodge, No. 79. It is still in existence, but the ambition and enterprise of the members is going down. We have not had a meeting for a long time, and the day for our annual ball has come and gone and no ball. The life seems to have gone out of most of our members. There is as good material in 79 as any Lodge in the country. There is Bro. Adams, and Bro. Becraft, and Bro. C. A. Timlin, who have been members of the Firemen's Brotherhood for many years, all of whom would sacrifice anything to benefit the Lodge, but they are all engineers and do not have the time that some members have who are firemen and have special interest in the Brotherhood of Locomotive Fireman. Bro. Timlin is about to start out on a matrimonial trip, with a bride who is one of the fairest daughters of our city. We all wish him happiness and prosperity, a clear track, a smooth rail and plenty of sand.

Firemen's Friend.

PHILADELPHIA, January 1, 1890.

Editor Firemen's Magazine:

I'm a fireman on the "Reading," have just come in and the New Year's bells are ringing—

And this whole durned city, from center to circumference, is full of noise.

Besides, here in my room, there is talking, dancing and singing.

Because it's sort of headquarters, where congregate the boys.

Where they come to talk over old times, before Corbin, the Russian autocrat.

Knocked Labor Organizations, Lodge, Division and Assembly into a cocked hat.

But I take my pen in hand to write about the dear, old year.

Who an hour ago handed in his checks and departed—whither?

The Lord only knows. I saw him stretched upon his bier.

And soundly denounced him for the unseasonable weather.

And for the scourge, the "Russian influenza, *alias* "la grippe,"

And I fancied he said, "Corbin, farewell. I skip."

I don't want to hold the old year responsible for a temperature 73 above zero.

If I did, it would be useless—he's beyond all legal jurisdiction.

It is much more in line of manhood and independence to curse our Nero.

Our Corbin, curse or degrading, Russianized affliction.

But I can't do the subject justice—facts are like a hideous dream—

And I leave the whole infernal business to the *Locomotive Firemen's Magazine*.

Yours in the bonds of hope,

Dom Pedro.

Cheering Words from the Pacific Coast.

WEST OAKLAND, CAL., November 29, 1889.

MR. EDITOR:—It is not often you see anything in the *Magazine* from E. C. Fellows Lodge, No. 143, and some may imagine we are all dead or sleeping, but I assure you such is not the case; for we are wide awake and working hard to promote the interests of the brotherhood in this part of the country. Ours has been all up hill work and we had many obstacles to overcome, but patience and perseverance conquered and to-day we have a Lodge that can compare favorably with any in the Order. When Bro. Hannahan was here lately, he gave us great praise; for the business like way we conducted our work. About three years ago when my eyes were first opened to the work of our noble Order, we had about twenty members and held a meeting about once in two months. Members were leaving by withdrawal and dropping out for non-payment of dues, until it looked as if we would have no Lodge at all. Our enemies (and we had many), were quite elated, and you could hear it boasted, that the firemen's Lodge was nearly gone under. But a reaction came, some of our boys saw where we were drifting to and took off their coats and began a good fight for the preservation of our Lodge, and the result shows for itself. To-day we have fifty members and new ones coming in at almost every meeting. Firemen here, who a short time ago, were ready at any time to talk against our Order and ridicule our actions, now keep mum when the subject is brought up. The young firemen coming up nearly all join our Lodge as soon as they are eligible and as a class, they are ahead of the older ones, for intelligence

and fidelity to the brotherhood. We have a number of young runners who are still faithful to us, and again we have lost quite a number who left us to join the B. of L. E. Several tried to make themselves believe it was right that they should do so, but when cornered they all acknowledged they could not see the justice of such a law. We have great hopes for good results from our next convention in San Francisco. The unanimous feeling here is that we should change the name of our Order, not but what we are proud of the B. of L. F. and dislike to give up the name we have sailed under, and under which we achieved so much success but we feel that considering how many engineers and hostlers we have, the name B. of L. F. does not answer the purpose. We have lately moved into a fine large hall and our weekly meetings are well attended. We have organized a ladies' auxiliary; the first one west of the Rocky Mountains and it has been a great help in more ways than one and I would advise every Lodge that desires to prosper to immediately organize a ladies' auxiliary, no matter if they can not obtain a large membership you will soon learn its value.

Several of our boys have married recently and if some more of them would follow suit it would help the Ladies' Lodge along. Our fifth annual ball was a grand success financially and otherwise. It had the largest attendance of any ball ever given in Oakland, the fact must be quite galling to some of the social clubs and military companies to think that the tallow-pots can beat them giving a ball. Unity Lodge, No. 13, Ladies' Auxiliary, cannot receive too much praise for the valuable assistance they rendered us in making the ball a grand success. Every one highly praised the supper that the ladies served and said it was one of the finest balls they ever attended. Two prizes were offered, one a nice B. of L. F. pin for the member of No. 143, who sold the most tickets, won by our Past Master T. J. Roberts, and the other of a pair of B. of L. F. ear rings was won by the wife of Thos. Kearney, our Vice Master. Wait until our next.

One of our members has just completed a trip throughout the whole country, and everywhere he went he slandered the fair name of our of 143, and made statements that were false and misleading. He just arrived home and he will receive such a reception he so richly deserves. After doing all we could to help him along, that is the way he showed his gratitude. We all keenly feel the disgrace of having such a member, but we are all liable to be imposed on. In some parts of the country where the standing of 143 was not known, he made an impression both on the feelings of the members and on the treasury of the Lodge. But when he got around to where we were known he got a cool reception. Hoping this will find space in the *Magazine*, I remain

Yours fraternally,

Far West.

The Denver, Ft. Worth & Texas railroad have ordered from the Baldwin Locomotive Works, ten consolidation engines with 20x24-inch cylinders.

The Toledo, Ann Arbor & North Michigan road has five new engines under contract, which are nearly completed, and will probably be delivered this month.

MISSOULA, MONT., December 20, 1889.

Editor Firemen's Magazine:

I earnestly desire the assistance of the members of the entire Brotherhood in finding my brother, Alfred Morris, from whom we have not heard since 1884, at which time he was firing engine No. 272, on the Denver & Rio Grande railroad, out of P. V. Junction. My desire to hear from my brother is greatly increased by the fact that my aged parents are continually inquiring if I have any news from Alfred? It pains me to tell my poor old mother that no tidings have come from her lost boy. Brothers, will you help me to find my brother? If he is dead the sad news will not be more painful than this long-continued suspense, and I assure you that my aged parents and I will ever feel grateful.

E. Morris.

LOUISVILLE, KY., December 20, 1889.

MR. EDITOR:—A good while back I thought I would write something for the *Magazine*, I got the idea that I could fix some things that were out of order, polish up the brass, etc. But just about that time I read in the *Magazine* something about buying a dictionary for the purpose of helping a fellow to spell. I went right off and got me one of these books. I got a little book that gives a few plain rules about composition and I have had them with me in the cab ever since. Now my grammar may be a little off, if it is I want you to get it into shape, but I won't make you mad on account of spelling; it's O. K. according to my dictionary. Now I will not write about the boys whose wives have presented them with babies. I am not going to write about the boys who have got married, and the boys who are going to get married, such things are chestnuts. I want to say that I want the Brotherhood to have a new name. I want it because just as the *Magazine* says, our present name don't suit our conditions. I want a name that tells the truth about us. We are a Brotherhood of the foot-board. We are a Brotherhood of enginemen, that is just what we are. We have not firemen, hostlers and engineers. I want a name that tells the truth.

Now you see, Mr. Editor, I am not afraid of enginemen getting to be too strong in our order. Not a bit of it. I am a fireman because I want to be an engineer, and when I get to be an engineer I am going to stick to my old order, and don't you forget it. I am no "breeding pen" fireman, I am for federation. I am no swell-head. I can work with switchmen and brakemen and engineers and conductors. If we can have federation Austin Corbin can't knock us out, smash our Lodges as if they were egg shells, and you can't have any more C., B. & Q. strikes.

I've been reading the *Magazine* ever since the Atlanta convention, and I like the way it has talked about the new name and about federation. I swap books with the switchmen, the brakemen and the engineers, and I read them all, and I tell you it makes me feel proud clear down to my toes to have them praise our book and its editor, because he isn't afraid to talk to the boys; to give it to old Corbin and Livingstone, and my engineer told me in our last run that he wished his Journal was half as good as my *Magazine*, and one engineer told me to change in the laws of the engineers at Denver

wouldn't have been made only because the *Magazine* had pitched into them and showed them up. I have read what the *Magazine* has said about men's independence and such things and I like that kind of talk. I think when a man hasn't any independence he is of mighty little good to the order. They are the fellows that kick, they appear to be mad because everybody isn't as weak-kneed as they are. They are always getting down, but I guess there are enough who have courage to pull the order through in spite of their kicking. For one, I am for the B. of L. F. all the time, and we have a big lot of boys here who think as I do.

Yours fraternally,

Rastus.

DUNSMUIR, CAL., December 16, 1889.

Editor Locomotive Firemen's Magazine:

Thanksgiving night, November 28th, was one long to be remembered by the members of Mount Shasta Lodge, No. 312, the occasion being a grand ball given by the members of No. 425 B. of L. E. and No. 312 B. of L. E. at Sisson, fifteen miles north of Dinsmuir. The hall was elaborately decorated with banners, flags and colored lights. Precisely at eight o'clock the grand march was begun headed by floor director Jno. O'Neil and wife. As the couples passed the headlight at the head of the hall each received a neat and tasty souvenir in book form containing a neat cut of one of our ten wheel Rhode Island engines, the order of dances, the officers of Mount Shasta Lodge, No. 312, and officers of A. J. Stevens Division No. 425, and from that time the floor director and assistants kept dancing going at the rate of sixty miles an hour including stops. The members of the Niles band were compelled to run their air-pumps to full capacity in order to keep pace with the untiring dancers. At 12 o'clock Mr. A. Person, proprietor of the Depot Hotel, was presented with a gold-headed cane for the many courtesies showed to railroad men since this eating house has come under his management. Supper being next in order the couples once more formed in line and were guided to Doney's Hall, where they were seated to a delicious and bountiful repast; after partaking of the good things for nearly an hour and the band having replenished their fires and gotten up a full head of steam, we retraced our steps to the hall and kept up the dancing until 6:20 A. M.

Through the kindness of our Master Mechanic, Superintendent and General Manager we were granted a special train from Dinsmuir to Sisson and return, gratis, and also the use of our decorations, etc. Many were the expressions of approval of the way the affair was conducted. It was one of the most enjoyable events that ever transpired in this section and was due mainly to the increasing efforts of our energetic committee of arrangements, consisting of J. M. Campbell, J. D. Cummings and Jno. O'Neil of the engineers and F. B. Farmer, A. De La Montague and H. L. Walther of the firemen. In all it was a grand success socially and financially. Before closing I would say a few words for 312; she is gaining steadily in membership and pocket-book, and before many moons roll by we will have this part of the world with a barbed-wire fence around it.

Fraternally yours,

F. W. Walraven.

NORWALK, OHIO, Dec. 16, 1889.

Editor Firemen's Magazine:

I think that it is about time something was heard from Maple City Lodge, No. 198. I have waited for some one more competent than myself to say something for us, but have waited in vain. I have never seen anything in the *Magazine* from No. 198 yet and I do not want our Brothers to think that we are all dead here, so I will do the best that I can to let them know what we are doing. We held our second annual ball on thanksgiving evening and it was a success, both socially and financially, and we boys feel well satisfied with it. And now a few words about our lodge; we number thirty two members, and as all but one are on one road, and that we only have thirty-five engines and only about forty firemen in all, I think it is about as good a showing as any road around can make and the boys are all wide awake and ready to stand up for the B. of L. F. every time, and any Brother that finds his way to Maple City Lodge, No. 198, will find friends of the right spirit and will not go away empty handed. Our master, V. C. Fritzsimmons, who is noted for his fatness, is the right man in the right place, when he is in the chair the boys have to attend to biz. Our Secretary, H. P. Boyley, is not very large, but he gets there just the same, and is always on hand to attend to business. In fact, we have a good set of officers and all have the welfare of the Order at heart and do all they can to help it along. Promotion has not been very rapid with us here on the W. & L. E. for the last two years, and them that do get on the right hand side, a few leave us, but I am glad to say that a good many stay by the good old B. of L. F. and say they intend to keep on doing so. Business is good here with us now and all the boys are drawing good pay. We built thirty-five miles of new road last summer and intend to build more next summer. They talk of building to Pittsburg, if they do, the W. & L. E. will be quite a road. Presently we only have 200 miles of track. We have three new engines coming of the Pittsburgh make; when they come we expect that they will give one or two more of our B. of L. F. boys a show.

I remain, yours,

Reuben Glue.

TACOMA, WASHINGTON, Dec. 19, 1889.

MR. EDITOR:—As it seems to be the custom for all the kickers to express themselves in our *Magazine*, I beg leave to work off a few ideas that have presented themselves to me. As I look over our December *Magazine*, which is in first part, pure in sentiment, showing deep thought and intellectual powers, awaking the reader to the uncertainty of life and the instability of earthly things and puts forth teachings of the purest character, and on through this grand medium of ours, we find articles tending to educate us both morally and mentally. While in our Mechanical Department, we find ideas presented by some of the advanced men of our country, which appear to us in all as a fine castle of pure sentiment and intellect and our grand motto over the door, "Protection, Charity, Sobriety and Industry." But come with me now and take a look over the back yard fence, of the same house, size up, think of the

sayings and the attitudes some of the occupants and supporters assume. You find one group discussing the change of name. They warm up in remarkable shape, talk loud and long, knowing there are outsiders, just over the fence, who are listening regardless of the engineers who live next door, taking in every word and commenting on the weakness of men, who are getting sarcastic and putting to blush the "fraternity" and "Brotherly Love." Some are discussing federation and its advantages others claim the present federated board is unconstitutionally organized, while some of the agitators of the B. of L. E. look over and cry "I told you it would not work." Then some of our Grand Officers take a hand in the matter and give some of the Brothers a roasting that serves to lessen their faith in the fraternal feeling which exists in the hearts of the majority of our members. Now Brothers, should not this progenitor of unkind feelings be stopped? If these questions are of such an urgent nature and must be decided in the near future, then let it be in our legislative sessions and if they need discussion in order to be brought before this Brother in the proper light, let it be done in union meetings, and not before the public, thereby depriving those unfriendly to us of the advantage of knowing that there is desolution in our ranks. This leaves an open place in our walls of protection, which everyday, some unscrupulous person takes advantage of and gives a thrust. Now Brothers, I do not think the *Magazine* was intended for the purpose of allowing any one, who would throw up the price of our *Magazine* to know the inmost feeling, spite, envy and malice of some of our members shown in some of their articles. We, I sincerely believe, should be more guarded in our writing or use the space for more useful matter, and let frequent legislation do the work urged by these cutting penman. If I do not get roasted for this attempt, I shall believe there are others with the same opinion as myself.

Yours, fraternally,

Jno. Malin.

GRAND RAPIDS, MICH., November 21, 1889.

Editor Firemen's Magazine:

I see in the November *Magazine* that S. W. Hodge takes the brothers in the South to task. Now, I have been in the South and can say that I never was used better than I was with my Southern brothers. Our brothers in the South have a harder row to hoe than the rest of us, for there are lots of negroes firing, and the B. of L. E. don't stand by the firemen as they ought to do. Besides, it makes a difference, sometimes, how a man handles a card. I know there are lots of good B. of L. E. men in the South. On many of the railroads a card is as good as the money. I am sorry to say that we have brothers who belong to the Order, and that is all. They never go to a meeting once a year; still they call themselves Brotherhood men. It seems to me that there ought to be a clause in our Constitution and By-Laws requiring members to attend Lodge meetings when not prevented by business or sickness.

Yours fraternally,

A Member of 265.

RAT PORTAGE, ONT., December 19, 1889.

Editor Firemen's Magazine:

Owing to the distance that separate the several B. of L. F. Lodges on the Canadian Pacific Railway system and the expense of bringing together delegates to form the Joint Board of Adjustment, the very important duty has been neglected. Northern Light Lodge, No. 129, wrote to all Lodges on the C. P. Railway system, requesting them to vote on a place of meeting for the formation of the Board, at the same time recommending the city of Winnipeg as being centrally located between the Atlantic and Pacific oceans, to both of which the C. P. Railway extends. The vote was in favor of Winnipeg, and the meeting convened in that city on December 3d in Assiniboine Hall, and the following Lodges were represented, viz.: Nos. 129, 225, 262, 296, 305, 321, 341, 342 and 590. The Joint Board was duly formed according to the requirements of section 200 of our Constitution and remained in session for three days. Everything pertaining to our department over the entire C. P. Railway system was thoroughly discussed. Division No. 96, B. of L. F. held a union meeting on the night of December 4th, which was largely attended by engineers and firemen and much valuable information was received by all present. Such friendly interchange of ideas by engineers and firemen employed in every system cannot but be fruitful of much good.

Among the many courtesies received by the Joint Board in Winnipeg, none were more appreciated than Brother Johab's oyster supper, and Brother Wood's evening at home. The delegates met many true friends of the B. of L. F. in Winnipeg, but we believe that the most lasting impression was made by John Collins, a native of the Prairie City.

Chas. Unwin.

CORSICANA, TEXAS, December 11, 1889.

Mr. Editor:—I received my *Magazine* some days ago, and as my engine has been in the shop for the past two days, I have devoted my leisure hours to the perusal of its interesting and instructive pages. I have been a subscriber to the *Magazine* for the past year, and have kept each number, and intend having them bound in one book for future reference. I am sorry there is not an index attached to the December number for the year, as is the case with several periodicals I take. Don't you think that that would be an improvement that you could make to the *Magazine* for 1890? I have read with interest the various letters from the brethren on the different subjects, but more especially those concerning the change of the name of our order. I am very much in favor of the change of the name to something that will indicate what composes the membership. In our Lodge we have quite a number of engineers and hostlers who will remain with us; our principal officers are engineers and hostlers. Our boys have fared well this year during the busy season, a number of them have been transferred to the right side, and have done credit to their promotion. Bro. Alex. Kessinger, who graces the left side of the 77, and Bro. John Johnson, who pulls the bell cord of the 10, have both recently obeyed the Scriptural injunction "to take unto themselves a better half." Both of these are passenger men, and a number of the boys are now

anxious to change off with them, thinking that they might capture some charming damsel along the line, if reports be true, though it is not confined to passenger men, as one of our ten-wheeler boys, it is said, will in a few days capture one of the fair damsels of Ennis and join the grand army of Benedict's. Our road, the Houston and Texas Central, is getting ten new ten-wheel Cook engines, said to be fifty-five tons. The boys are not elated with the prospects of tackling an eleven-foot fire box, especially with Frisco slack coal.

I see in the *Magazine* that it is reported that the Texas Central round house and shops will be removed from Corsicana to Houston. The main shops of the Central are now in Houston. There was a move contemplated from Corsicana to Ennis, Texas, but there has been some legal steps taken by the citizens of Corsicana to prevent the move. The matter is still in the courts, and nothing can be done until that matter is decided. There is very little to move from here, as the buildings are about gone to decay.

Our Lodge is doing very well, gaining accessions at nearly every meeting, and a nobler band of brothers could scarcely be gotten together. We are on a safe financial footing, with an enthusiastic membership. I am, fraternally yours.

Alpha.

Mr. Editor: The readers of the *Magazine* live in hopes that the next issue of the expected report of the Labor Bureau will contain something of lasting benefit to the Locomotive Firemen of Wisconsin. Mr. F. Flower, ex-labor commissioner, "flowered" the last one in a peculiar manner or way of his own. The O. R. C. was toasted in a manner royal and princely, and to add to this eyesore, much space was set aside for "The Painter," residence at Unity—perhaps a side-track on the Wisconsin Central.

The idea of filling up a state report of labor statistics with such alleged rot and hog-wash is unbearable.

Our idea is that it is a disgrace abroad, if they exchange with other state departments having a similar bureau. Be it as it may, brethren, you would have an idea very similar to others, if you saw this report, and realized that much of the information came from a small town in the lumber district of Wisconsin, located on the "banks of a side track," the switch lights of which probably answer for both gas and electric light, and the population outnumbered fifty, all told. The painter, Thompson, of this "burg," is granted much space, and it is also alleged that people who have looked up the Unity correspondent, might be warranted in condemning such reckless expenditure of money in the attempt to give us truthful information. Therefore, it may be in order to ask the governor to dispense with such an attempt to do nothing, and in the coming report see that the commissioner omits the O. R. C. squib, also anything from Unity. Take in something that is of more magnitude. The only feature in the report of 1887-88 that is redeeming is the "Address of the Stationary Engineers." If all the rest were cut out, there is little doubt but what the *only* bright feature would remain. It is quite ancient, but like all good things, it never depreciates in value. There are a few good ideas embodied in the B. of L. F. con-

stitution. The strike clause could be omitted, for it is no doubt objectionable—compared with what ex-Commissioner Flower attempted in his floral (?) decorations of the O. R. C. With all due respect to the "protective" policy of the party in power in Wisconsin, we hope this will answer as a hint to protect us from any more *excuses* to endeavor to do something for us. We have never been at Two Rivers, Wisconsin, neither do we expect a report from a place where men are worked, and, it is alleged, never see a "pay day."

BADGER.

FORT DODGE, IOWA, December 10, 1889.

Editor Firemen's Magazine:

Our fourth annual ball, November 27th, was a success. There was present between 300 and 400 people, and everybody had a good time. The Lodge cleared about \$75.00, so everybody was well satisfied. We had a bad day for the ball, as two of our brothers, Engineer A. Dubois and his fireman, were buried that day at Waterloo. Dubois left here Sunday, November 24th, about noon, on a wild train, with two heavy engines, and when one mile east of Aplington a bridge broke down and Dubois and his fireman were buried under seventeen cars, loaded with stock, so the feeling amongst the boys was not as cheerful as it would have been under other circumstances. The hall was nicely decorated, and we had the K. P. band of Sioux City.

I, for one, like the writing about the "Breeding Pen" in the last two *Magazines*, and think it is time for the B. of L. F. to stop doing any more "breeding" for the B. of L. E.

There are several of our members who have been up to be examined for promotion lately, but it seems that they will have to study Forney a little more before they will pass our M. M., but we hope they will have better success another time.

Business is rather dull out in this part of the country, yet we are waiting for snow to buck, so the boys can have a little fun.

A Member.

No. 4,147.

MR. EDITOR:—Don't forget this number. You will never let what it contains slip through your memory. If you apply for this document at the Document room of the House of Representatives, Washington, D. C., and get it and read it, you surely can't very well forget what its pages contain. Apply to your member of Congress for one. In reply to his probable announcement that "there is no more in stock," petition him to take proper steps to have 5,000 printed. Then there will be enough of the "Report of Labor troubles in the Anthracite regions of Pennsylvania" to go around among the various Lodge rooms of all labor organizations. It contains nearly 800 pages, good print and paper and is worthy of a good binding. Get one, have it bound in coffin black. Let it be known as the property of your organization to be read by all the members. This will induce you to think that some sections of Pennsylvania are similar to Russia. A move is now on foot in Russia to abandon the jury trials. It will not be long before jury trials in Pennsylvania will be little else than mockery. The recent account of the shooting of exiles in Russia because

they "petitioned" for something of a trifling nature is about as bad as the practice of pigeon-holing our "petitions" in this "free country." Jury bribery and mock trials as they are often termed here, are fully as bad as stealing the petition of laboringmen to prevent them from ever being acted upon. These things are every day occurrences in America. Read, reflect and acquaint yourselves with these schemes to gradually makes serfs of you—America's sons.

Commissioner.

SMITH'S FALLS, ONT., January 7, 1890.

Editor Firemen's Magazine:

I think it is about time we were hearing something from 335. Well we have had a very good winter, so far, for our business. Not much snow; that means few snow plows. At the same time a number of our boys are down sick with that terrible disease "la grippe." Bro. Hand is very ill, also Bros. Pring, Martin and Pye, but we hope soon to see them all around again. I must say that No. 335, is coming up again in its members. Last year having lost quite a number with the strike however, I think the majority wish they were in their old places again. Bro. Golden seems to have a big time down town at certain times. Look out Bro. Golden you don't get run in. Bro. Cameron is also among the sick ones, he is at his father's in Carleton Place. However, we hope a few days good nursing will set him right again. How are the girls at Chesterville, Dan? Hang on if you can. "Opposition is the life of trade."

H. Pye.

*For the Magazine.***ETERNITY.**

Eternity! eternity!

Oh who can comprehend
The boundless scope of such a thought—

Of years that never end?

This life so strangely brief,

The next so strangely long;

One, sadness, pain and grief—

One rapture, peace and song.

Eternity! eternity!

All things beside grow old:

Though earth's last atom pass away,

It would not then behold

The morning light begun

Of that eternal day

Which knows no sinking sun,

No feeble, flickering ray.

Eternity! eternity!

Oh who could give an hour

For careful thought on such a theme,

And still reject the power

That beckons to the light

Unseen by mortal eye,

To mansions fair and bright,

Our home beyond the sky?

Eternity! eternity!

Last refuge of the soul,

Oh may the glories of that land

My wandering thoughts control:

For groping to and fro

The sad heart yearns to see

And all thy rapture know,

Oh blest eternity

Geo. W. Hall

STANBERRY, MO., Dec. 21, 1889.

The Baldwin Locomotive Works, of Philadelphia, Pa., have delivered six engines to the Baltimore & Ohio for fast freight service.

WATER VALLEY, MISS., January 12, 1890.

Editor *Firemen's Magazine*:

Nobody has written from our lodge, so I thought I would write a few lines. Our M. M., Mr. T. J. Price, has taken our worthy receiver, Bro. J. R. Bengtson, off the road, and put him to work in the round house for a few months, from where he will promote him to the ranks of engineers. Good luck to our receiver, our new master, Bro. W. H. Price, the son of our M. M., is a dandy, and don't you forget it; also is our collector, Bro. Guess. The happiest man in our lodge is Bro. J. R. Gaffney. He is shoveling coal in engine 324, a passenger, for a jolly old boy, whose name is Charlie Dunn, and you bet they always get there. Bro. Guess, our collector, is shoveling coal for another fireman's friend, Mr. A. J. Law, on engine 340, passenger also. The rest are hustling freight, with the exception of one who is running the switch engine here. As this is all I know at present, and it is the first time I ever tried to write for the *Magazine*, I hope it will find some space in your columns. With many good wishes for 402, fraternally,
Tallow Pot.

Personal.

L. F. STEPHENS is in the harness again as Receiver for Big Four Lodge, No. 337.

The question is asked as to how Bro. F. Clough of Folwell Lodge, No. 326 caught that cold.

S. E. CANADY, Master of Perseverance Lodge, No. 98, is accredited with being the right man in the right place.

At Salida, Col. will be found a body of brotherhood men who are alive to the times. There are no flies on No. 140.

T. KELLINGER, has been given the sobriquet of "Trapper No. 140," and our Vice-Grand Master says he has earned his spurs.

PROFOUND sympathy is expressed by the members of J. F. Bingham Lodge, No. 135, for Brother Bell who mourns the death of a father.

CHAS. GERLOCK, of Mahoning Lodge, No. 199, has met with a sad bereavement in the death of a beloved wife. Bro. Gerlock is left with a family of small children to whom the loss of a mother is a severe blow indeed. The *Magazine* joins with the members in profound sympathy with Bro. Gerlock in his great affliction.

It would have afforded us special pleasure to have responded in person to the invitation of Mr. and Mrs. James Prescott, to be present at the marriage of their daughter Alice, to Brother Charles A. Cries, Secretary of Golden Gate Lodge, No. 91, January 1st. The marriage took place at Pajaro, Cal., the home of the bride's parents, and the *Magazine* sends its congratulations with the salutation, a happy New Year to bride and groom, and a wish that to them, marriage may not prove a failure.

Names of Magazine Agents.

In numerous instances the names of last year's *Magazine* Agent still appears in the subordinate Lodge directory. This is due to the fact that the name of this year's Agent has not been reported to the Grand Lodge. Secretaries will oblige us by examining the name and address of their *Magazine* Agent as it appears in this issue of the *Magazine*, and if not correct to report at once the name and address of the present agent.

We regret to announce the death of Brother Matthew Wilson, of Calumet Lodge, No. 249, who fell at his post of duty November 23d. Brother Wilson was only 23 years of age and his death is deplored by all who knew him. Lines "In Memory" of Brother Wilson by C. H. Titus, are expressive of the high esteem entertained for Brother Wilson, but we have not space for them here.

Absentees Corresponding With Their Lodges.

Complaints are constantly being made that members do not correspond with their Lodges when absent from the place where the Lodge is situated. This is a source of constant annoyance to the Secretary of the Lodge, and is in violation of the laws of the Order. It is of great importance that the duty should be strictly performed and we hope this notice will result in bringing about a reformation.

A correspondent, writing over the chaste and elegant *non de plume* of "Jack the Ripper" sends in a poem on the "Durned Waste Basket." We give one stanza of the forty comprising the production:

"The waste basket to me is mighty chillin',
If I could, I would be willin'
To bust the waste basket to flinders,
Or, set it on fire and burn it to cinders."

The trouble with "Jack the Ripper" and men of his type, is that they can no more write poetry than a hog can whistle yankee-doodle, and just how they manage to escape the fool killer is a mystery.

We acknowledge the receipt of the "First Annual Directory of I. B. of R. C., December, 1889," issued in "commemoration of the organization of the B. of R. C., December, 1888."

The Brotherhood now has forty-seven Divisions and is booming. Its foundations were laid in correct principles, and its splendid rise demonstrates that Railway Conductors are in sympathy with all the tollers connected with the great railroad enterprises of the times. Most heartily do we congratulate the B. of R. C. We admire the pluck and pertinacity of the membership, and the splendid qualities of head and heart which have distinguished the Grand Chief of the Order, Col. Howard, from the start.

THE Buffalo *Tidings*, of November 12, 1889 prints an excellent portrait of Bro. J. J. Knauff, Master of Buffalo Lodge, No. 12, B. of L. E., giving the following brief sketch of his career as a railroad man. The *Tidings* says: "Mr. Knauff commenced his railroad career on the Grand Trunk Railway at Point Edward, Ont., in 1881. One year later he was transferred to Fort Erie and afterwards to Buffalo. For nearly seven years he served as fireman on the Grand Trunk system, resigning his position in August last to accept a similar one with the Delaware, Lackawanna & Western in the Black Rock Yard. Four years ago he was chosen Vice Master of Lodge No. 12, and the following year elected Master. At the convention held at Atlanta, Ga., recently, Mr. Knauff represented his Lodge with credit and ability, receiving many well deserved compliments from the press. While with the Grand Trunk he served for several years on the Brotherhood's Board of Adjustment, during which period he had occasion to appear before General Manager Hixon at Montreal a

number of times, and was successful in satisfactorily adjusting a number of serious grievances. Mr. Knauff's prospects as a rising young railroad man are exceptionally bright." Brother Knauff has on many occasions given evidence of large capabilities and shown himself worthy of the great confidence reposed in him by his Lodge. The Brotherhood has a host of coming young men of whom it may well feel proud.

THE St. Joseph (Mo.) *Gazette*, in a recent issue, pays St. Joseph Lodge, No. 43, the following well merited compliment:

Notwithstanding the great blow it received during the trouble of 1888, it is still before the public. St. Joseph Lodge, No. 43, with W. E. Sullivan at its head states it is in splendid condition, but not so large a membership. The Lodge now meets at Kishner's hall on Market Square the first and third Thursday of every month, they being compelled to move to those quarters on account of the northern roads. The list of new officers is as follows: W. E. Sullivan, Master; G. W. Whaley, Vice-Master; C. C. Montgomery, Treasurer; F. P. McDonald, Secretary; W. E. Sullivan, Collector; C. B. Richer, Assistant Collector.

The Brotherhood of Locomotive Firemen has many Lodges that in the dark days of 1888, passed the ordeal of the C. B. & Q. strike with unflinching fidelity to every obligation, and among them St. Joseph Lodge, No. 43, was equal to every demand. The battle was fierce but the flag of 43 was never furled or trailed. All honor to such Lodges; they are bound to succeed.

Firemen who Disgrace the Brotherhood.

To refer to mean, scoundrelly firemen who disgrace themselves and the order, is not a pleasant task. Fortunately, the Brotherhood of Locomotive Firemen is not greatly burdened with such characters; but we write with letters on our table crying out lustily against a few tramping scamps, who with credentials in their pockets, certifying to their good standing, use them to impose upon their confiding brothers, obtain employment upon their recommendation and then prove themselves to be utterly worthless. A letter from Macon, Ga., says: "Two men from Aurora came here and obtained work and both of them have quit, just to float, I guess, and one of them sneaked out of town and left a \$16.00 board bill for me to pay, or else swindle a poor widow out of it. I believe such men should be brought to account for such conduct," certainly. Let no time pass until such men are hunted out of the brotherhood. Another letter from Louisville refers to a fireman, who secured a pass by the lodge, which while using, he got beastly drunk on the train, insulted the conductor and was put off, bringing the lodge into disrepute, and greatly injuring the brotherhood. Such men disgrace the brotherhood and should not be permitted to remain in it a day. A horse with the glanders, or a sheep with the scab, is not more dangerous to herd and flock, than such firemen are to the character and standing of the brotherhood. Let them be bounced at the earliest detectable moment.

Wheaton Rampant.

Brother Wheaton, of the O. R. C., writing to the *Railway Conductor* under date of December 20, 1889, seems to be laboring under influences which seriously disturb his mental equilibrium. He exclaims, "When, oh, when, will our members and the conductors of the country wake up to the idea that it is their duty to protect themselves first, and if anything else is to be done let those to whom they are under obligations take care of themselves."

We opine that conductors as a class know how to "take care of themselves," but Brother Wheaton says conductors "almost daily are asked to do something for some one outside of their legitimate line of work." Who, of all the toilers on the world's busy highways, are exempt from such requests? "Yes," says Brother Wheaton, "not only asked but are doing it." Well, by all the gods of mythology! Conductors by responding to such requests take on the robes of nobility. Would Brother Wheaton have conductors go about with their hearts as cold as ice? with never a throb of sympathy? with never an open hand?—just taking "care of themselves." Is that the "idea" that Brother Wheaton wants "our members" to "wake up to"? Brother Wheaton says: "Scarcely a month rolls away without a record being made of the dismissal of a conductor for favoring some one;" and then Brother Wheaton asks: "Where and when will it stop?"

What is it that Brother Wheaton wants to stop? Is it the "dismissal" of conductors? Does he want conductors to refuse absolutely to do a favor to "some one outside"? Does he want to "stop" generous impulses?

Does he want corporations to "stop" employing spotters? The Lord only knows what Brother Wheaton refers to when he asks "When and where will it stop?"

Says Brother Wheaton: "No organization can sustain wrong-doing and live." That's a fact. Brother Wheaton: no organization of wage men can advise *scabbing*; no organization of workers in this age of the world can live an honorable life by withdrawing its sympathy from all other similar organizations; no organization of workmen can live in this age, except under a load of unspeakable scorn, that helps corporations to rob and degrade workmen. Live they may, but it will be with blood clots on the brain, ulcers in their lungs, with bow legs, crooked spines and club feet.

Brother Wheaton says: "As a rule, members expect too much of organizations." That is to say, we presume, that some members expect too much. We do not believe it is true that the majority of members of labor organizations "expect too much" of them, but those who do expect too much are noisy, clamorous, do little and demand a great deal. But every member of a labor organization has a right to expect certain benefits from his organization. He has a right to expect that under no conceivable circumstances will he be rebuked for doing a generous deed to "some one outside"; that under no conceivable circumstances will he be required to *scab*; that when in the discharge of his duties, he is subjected to any degrading conditions or is made the victim of

any injustice his organization will stand by him and do what it can to defend and protect him; and with such reflections, we inquire "When, oh when" will Brother Wheaton, grasping his boot straps, lift himself up and out of his prejudices and lead his organization into harmonious action with other labor organizations?

Walter A. Sawyer's Death.

Referring to the sad death of the late Bro. Walter A. Sawyer, the *Independent Statesman* (Concord, N. H.), of December 5th, contains the following statement, signed W. K. B.: "Rumor was entirely at fault in regard to the cause of Walter A. Sawyer's death. It was not a railroad accident, but a violent attack of typhoid fever, which, after a run of twelve days, terminated in death. He was running a stock train between two points on a section of the Rock Island road to Kansas; the route was one of great difficulty and danger, but by incessant watchfulness on his part he was enabled to bring his train through in safety every time. His boarding place was Caldwell, and one day, when below there, he was taken violently sick, and was obliged to leave the train and go back to Caldwell. He immediately took his bed. The family watched over him with the greatest care, medical counsel far and near was called in, everything that respect and love could command was done for him, but all in vain; in less than two weeks death occurred. He was held in high esteem by the community and his railroad associates. He was master of the Brotherhood of Locomotive Firemen, and performed the duties thereof with great faithfulness and to the perfect satisfaction of the Order. Walter was a handsome young man, an affectionate son and loving brother. To show his love and respect for his widowed mother he sent her some eighteen months ago insurance papers on his life covering quite a handsome sum for her benefit. Rev. Mr. Hale conducted the funeral services. His body was borne to the grave by young men who had known him well, and was laid by the side of his father and other relatives in the beautiful cemetery at the lower village.

We received in due time, the holiday number of the *Station Agent* published at Cleveland, and have derived pleasure and profit from the perusal of its well-written articles, and enjoyed its splendid illustrations of localities. The article on the management of the Midland Railway of England is especially interesting, as also the illustrated article on Florida—in a word, the book, from first to last, is superb in matter and make-up, doing equal credit to writers and publishers. In saying that the *Station Agent* achieved a splendid success by its holiday number, is putting it mildly. Such enterprise is worthy of commendation, and we wish the "monthly journal devoted to the interests of local freight and ticket agents," the fullest realization of the expectation of its publishers.

Back Numbers.

We have on hand sufficient back numbers of the *Magazine*, to begin all orders this year with the *January* number. Of this agents will please take notice, as there has been many inquiries on the subject.

Award of Prizes.

The Matchless Metal Polish Co., of Chicago, pursuant to the announcement heretofore made in these columns awarded five prizes on January 15th, for the sale of Tripoline, as follows:

First prize: O. L. Lindrew, of the Illinois Central, Chicago, Ills., 150 pounds of Tripoline or a watch of equivalent value.

Second Prize: W. D. Luce, of C. St. Paul, K. C. R. R., Dubuque, Iowa, 100 pounds of Tripoline or a watch of equal value.

For the fourth and fifth prizes it was found that S. L. Johnson, Parsons, Kan., Harry Anderson, Grand Junction, Colo., Rudolph, Knoid, of Laramie, Wyoming, Theo. Natmore, of Wadsworth, Nev., and J. L. Roberts, of West Oakland, Cal., had ordered exactly the same amount of Tripoline, and therefore the fourth and fifth prizes, consisting of 125 pounds of Tripoline were divided among them equally, giving each twenty-five pounds of the celebrated polish.

The awards were made strictly in accordance with the terms set forth in the advertisement and will doubtless give entire satisfaction.

The sales of the Matchless Metal Polish Co. are increasing rapidly, a convincing testimonial to the superior quality of their goods.

A COMMUNICATION from Bro. Frank Walton, of Pocatello, Idaho, has been crowded out of this issue on account of the large amount of matter left over from the last number. Communications from Bros. T. P. O'Rourke, W. S. Carter and others, received too late for this number will appear in our next.

Amusements.

The dancing season came in regular order in 1889, and on December 19 reached Newton, Kansas. Star of the West Lodge, No. 340, was not caught napping, but took the festive tide at the flood, and held its second annual ball, which having been splendidly arranged and managed, proved to be a brilliant success. Says the *Newton Daily Republican* of December 20: "The hall looked its best. Festoons of wintergreen reached from the center of the ceiling to the sides of the building, looped up here and there with butterfly wings of pink, white and gold paper. Garlands of wintergreen bordered the walls and this was prettily set off with bright colored rosettes. Two locomotive headlights threw their powerful streams of bright red light across the hall and the white, green and red lanterns hung in appropriate places greatly heightened the general effect." During the evening a banquet was served of delicacies and substantial and only when twinkling stars were getting drowsy did the nimble feet of the dancers surrender to the demands of tired nature, and then away went the happy company to rest and to pleasant dreams.

The members of Tacoma Lodge, No. 192, gave their first annual ball Christmas eve, and according to the account given by the *Tacoma Daily Ledger*, the occasion was a constant round of felicities. Germania Hall was resplendent with young dancers and brilliant decorations. There were numerous visiting delegations. "In the center of the hall was suspended a huge tin 'tallow pot,' inscribed upon it 'Xmas, 1889.' Twenty canary birds in their cages chattered to enliven the scene. At the four corners of the hall were the four mottoes of the brotherhood, 'Charity,' 'Protection,' 'Sobriety' and 'Industry.' Forty colored lanterns were suspended around the hall just beneath the gallery. Two large locomotive headlights, one at each end of the hall, sent forth a very brilliant light. Above the galleries were arranged fifteen banners, while evergreen wreaths in profusion and red and white bunting made the decorations very elaborate. On the

stage was a full-sized crayon drawing of a locomotive, with the letters "B. of L. F." upon its side. Directly in front of the engine upon a dark background shown a bright crescent moon." The "order of the dance" took in a wide range, and continued to an early hour in the morning. A splendid supper heightened the enjoyment, and when the rap came for wraps, all returned happy.

Acknowledgement.

WILLIAMSTOWN, January 8, 1890.

To *Empire Lodge, No. 212, B. of L. F., Watertown, N. Y.*

GENTLEMEN: It is with feelings of gratitude to Empire Lodge and the Brotherhood in general that I acknowledge the receipt of draft on New York for \$1,500, being in full for the amount due me on certificate of insurance in your noble order held by my late son, Clarence Dixon, and in which I was the beneficiary named.

The family join me in thanking the members of this lodge for the respect and many acts of kindness to my son during his last sickness, death and burial. That the Brotherhood may prosper, and the Almighty shield and protect its members from all harm, is my earnest prayer.

Very respectfully,

Mrs. E. DIXON.

SOUTH BUTTE, MONTANA, Nov. 28, 1889.

To the officers and members of *Clark Kimball Lodge, No. 113, B. of L. F.*

MY DEAR FRIENDS:—On this thanksgiving day, I take the pleasure, though a somewhat painful duty, of expressing my sincere thanks to the B. of L. F. in general, and to Clark Kimball Lodge in particular, for the receipt of a draft of fifteen hundred dollars (\$1,500.00) the policy on the life of my deceased son, Thos. S. Ogle, which I received at the hands of Mr. Frank Walton on November 18, at Pocatello, Idaho. Your promptness of payment is very commendable and I particularly thank the brothers, who so lovingly cared for my son in his sick and fevered condition away from home, though not from friends to soften with brotherly love his dying pillow and cool his fevered lips with water in the absence of any of his family for which service I shall always remain your debtor and his sorrowing father,

Thos. Ogle.

The Pennsylvania shops at Altoona, Pa., last week shipped two large switching engines to the Indianapolis division of the Chicago, St. Louis & Pittsburgh.

A STEAM engine has been patented by Mr. Charles Gibbs, of New York City. It has a chambered or hollow piston having valves in its ends, the valve in one end to remain closed and that in the other end to remain open during each stroke of the piston, in such way as to cushion the pistons as they approach the ends of their strokes, the construction being likewise suited for air and gas engines.

OUR DAILY PURSUITS.

We all need to honor our daily pursuits more than we do—to realize that, if we follow them honestly and earnestly, their best results can never be taken from us. This would take the sting out of much that we call failure. No one who has done his best can ever wholly fail. He has that stored up within him which is of more value than many transient successes. If, as Byron tells us, they never fall who die in a great cause, "certain it is that they too never fall who live in the energetic and persevering pursuit of whatever is good or true or useful to mankind.

ORGANIZE!

The Labor Leader.

When labor grovelled in the dust
Beneath the Jaggernaut of gold,
When Greed, Monopoly and Trust
Held slaves in bondage, as of old;
I heard a voice that woke the dead,
A clarion note that rent the skies,
One single word was all it said,
That magic word was, organize!

With sudden force its echoes boomed
From vale to vale, from hill to hill,
America's "Tyranny is doomed;"
And it's reverberating still.
The fettered slaves took up the notes,
And they rehearsed what freemen prize,
And as the chorus gradually floats
Its swelling strain is, organize!

From land to land, from sea to sea
The gospel of our freedom spread
Until resolving to be free
The weary workman raised his head
And with the dignity of right
He looked the tyrant in the eyes
And said, "your only law is might
And ours the right to organize!"

They organized in fits and starts
Unmindful of this one great law:
That unity is what imparts
Strength to the chain that hath no flaw.
But to prepare a chain that can
Hold tight the ship when storms arise,
We must get every workman
In this broad land to organize!

We may resolve and re-resolve
And walk and talk 'till "crack of doom;"
The only thing that will evolve
From out the darkness and the gloom
Of poverty, to comfort, light
And all, this fact must realize,
Is, labors forces to unite;
And to unite them, organize!

The sharks that corner meat and flour,
And other vitals of this land;
Where do they get the strength, the power;
To crush the poor, at their command;
How can so many rich agree
In their control of earth's supplies
It's simple, and a child can see;
They act on one, they organize!

Then meet them workmen in your might
With that good weapon they have made
It will not fail you in the fight,
It is a true Damascus blade.
But work! before you get that sword
You must enroll, and that implies,
You'll be a soldier, with the work
And countersign of organize!

Yes organize, ye millions who
Produced the wealth of this great land,
That keep in luxury the few
Proud idlers that usurped command,
Peace, plenty and prosperity
Will spring unbidden from the ties
Of brotherhood and unity,
Then organize, oh organize!

N. E. A.

A CAR coupling has been patented by Mr. Bush Laird, of Ocean Springs, Miss. Combined with drawhead and coupling pin is a support having spring actuated rest, the rest having its sides grooved and pivot bolts for securing the support in the drawhead, with other novel features. It not being necessary, with this coupling, for train men to go between the cars to couple or uncouple.

THE FARMERS AND THE KNIGHTS.

United on Land, Currency and Transportation Reform—The Two Great Organizations Agree Upon a Common Plan—War Declared Against Injustice—Full Text of the Treaty.

From the Journal of United Labor.

AGREEMENT.

ST. LOUIS, December 6, 1889.

Agreement made this day between the undersigned committee representing the National Farmers' Alliance and Industrial Union on the one part and the undersigned committee representing the Knights of Labor on the other part, witnesseth:

The undersigned committee representing the Knights of Labor, having read the demands of the Farmers' Alliance and Industrial Union which are embodied in this agreement, hereby endorses the same on behalf the Knights of Labor, and, for the purpose of giving practical effect to the demands herein set forth, the Legislative Committee of both organizations will act in concert before Congress for the purpose of securing the enactment of laws in harmony with the demands mutually agreed. And it is further agreed, in order to carry out these objects, that we will support for office only such men as can be depended upon to enact these principles into statute law uninfluenced by party caucus.

The demands hereinbefore referred to are as follows:

1. That we demand the abolition of national banks and the substitution of legal-tender treasury notes in lieu of national bank notes, issued in sufficient volume to do the business of the country on a cash system, regulating the amount needed on a per capita basis as the business interests of the country demands; and that all money issued by the government shall be legal tender in payment of all debts, both public and private.

2. That we demand that Congress shall pass such laws as shall effectually prevent the dealing in futures of all agricultural and mechanical productions, pursuing a stringent system of procedure in trials as shall secure the prompt conviction and imposing such penalties as shall secure the most perfect compliance with law.

3. That we demand the free and unlimited coinage of silver.

4. That we demand the passage of laws prohibiting the alien ownership of land, and that Congress take early action to devise some plan to obtain all lands now owned by aliens and foreign syndicates; and that all lands now owned by aliens and foreign syndicates; and that all lands now held by railroad and other corporations in excess of such as is actually used and need by them be reclaimed by the government and held for actual settlers only.

5. Believing in the doctrine of equal rights to all and special favors to none, we demand that taxation, national or State, shall not be used to build up one interest or class at the expense of another. We believe that the money of the country should be kept as much as possible in the hands of the people, and hence we demand that all revenues—National, State or County—shall be limited to the necessary expense of the government, economically and honestly administered.

6. That Congress issue a sufficient amount of fractional paper currency to facilitate exchange through the medium of the United States mail.

7. That the means of communication and transportation shall be controlled by and operated in the interest of the people, as is the United States postal system.

For the better protection of the interests of the two organizations it is hereby agreed that such seals or emblems as the National Farmers' Alliance and Industrial Union may adopt will be recognized and protected in transit or otherwise by the Knights of Labor, and that all seals and labels of the Knights of Labor will in like manner be recognized by the Farmers' Alliance and Industrial Union.

THAT SETTLES IT.

Tuesday night, just as the curtain went up on the second scene of "Hamlet," a gentleman in evening dress, whose fierce moustache and goatee suggested fire-eating proclivities, marched down the right aisle of the Opera house parquet to a front seat, sat down, and then, with a very fierce expression upon his face, strode up the aisle again into the foyer and out of the theater. A gentleman who saw this singular performance said to me: "That reminds me of an incident which took place in this very theater about a dozen years ago. It was while Fanny Davenport was playing an engagement there. A young man, who was a clerk at the Union Depot Hotel, after a rather lively prying with the boys went to the Opera house. He was a good-looking fellow with a black moustache, and the figure he cut that night was given color by his new light overcoat and high silk hat. By the time he reached the theater it was pretty full, so was he. But he bought a ticket for a parquet seat right down in front and with tolerably steady steps he made his way to it. It was in the middle of a scene. What the play was I don't remember. As he reached his seat and was divesting himself of his loud overcoat Fanny Davenport came down the stage to the footlights and said to the villain who was courting her, but with her eyes to the audience; 'I can never love thee!' She said it with great emphasis, and the handsome hotel clerk arose from his seat, took up his hat and overcoat, and saying in a loud voice: 'Well, that settles it,' retraced his steps up the aisle, while the audience burst into a roar of laughter and applause.'—*Pittsburg Dispatch.*

DID YOU EVER FEEL IT?

Detailed Description of the Sensation Produced by a Policeman's Club.

The scene of a serious riot, just after the mob has been dispersed by the police, is apt to suggest the idea of a general massacre. Blood is spattered right and left, and men are lying about apparently lifeless or staggering away supported by friends. It is hard to realize, under the circumstances, that, in all probability, no one has been killed, or even seriously hurt; but that most of those who have been "laid out" will be walking about next morning and detailing their experiences.

Generally no permanent injury is done to any one, though the drug stores in the vicinity are apt to run short of stinking plaster, and the surgeons at the neighboring station houses are frequently obliged to send out for more lint. Still there are generally a number of cases bad enough to be sent to the hospitals.

According to a writer in *Medical Classics*, the blow of the policeman's club usually produces a mere confusion, especially when applied, as it generally is, to the body. In fact, for the purpose of disarming an opponent, a blow in the ribs is one of the most efficacious. It gives the recipient a sense of "gone-ness" in his inside that takes up his entire attention for a few minutes, to the exclusion of all desire to inflict bodily harm on the myrmidons of the law. Even after he recovers his breath, he is more inclined to use it in denouncing police brutality than to make any further experiments in that direction.

If the blow falls on the head a contused wound may be produced. This, if severe, is sometimes accompanied by a quite copious hemorrhage, giving the wound a ghastly and sickening aspect. Sometimes, if the stroke is given with great force, the wound may be not only contused, but also lacerated. This is about as much damage as the locust, or even the ebony or rosewood, is capable of inflicting; still, when the weapon is swung with the full force of a powerful man, excited by hand to hand fighting or desperately defending himself against several armed assailants, a skull is sometimes fractured. A case of this kind is at times peculiarly dangerous, as the following incident will show:

A man was brought to the station house apparently with nothing worse under his hat than a "brick." There was no external appearance of any wound. He was partially unconscious, but revived sufficiently to give his name and address, and was put in a cell. In the morning he was taken to court, paid his fine, and was released. He was about the streets for several days, but finally was obliged to take to his bed and send for a physician on account of trouble with his head. A close examination then, for the first time, revealed the fact that his skull was fractured. In spite of the doctor's efforts the man died.

This is, of course, a very unusual case, but it shows how great should be the care of the surgeon in examining what may seem to be a slight wound, or no wound whatever, provided that he knows a blow has been struck. In the above case the fracture was not felt until inflammation had set in

around it and exudation had caused a pressure on the brain. This does not generally occur until twenty-four hours have elapsed, and, as in the above case, it may not be felt for forty-eight hours or more. It is dangerous to neglect even ordinary contused erysipelas being liable to set in.

THE STIFF AND THE MOTHER-IN-LAW.

"When I first went on the police force," said the fat policeman to a *Philadelphia North American* man, "I was lucky. One of my assignments was a queer one, and I'm not likely to forget it. I was sent to the house of a man who had just died. He was well known, and belonged to a good many lodges. It was a big crowd at the funeral. I was stationed at the foot of the coffin to preserve order. The shutters were closed and the gas burned dimly. The coffin lid was off and the body exposed. No one besides myself and the 'stiff' was in the room. After I'd been there awhile I began to grow uneasy. I kept looking at that dead face. I'd take my eyes off, and the first thing I'd be gazing at the body again. Suddenly the eyes opened. I thought I was dreaming. Then the left eye winked. Holy smoke!

"'Hist!' went the corpse.

"My teeth chattered.

"Say, officer."

"Goodness! the corpse sat up. 'Ain't you dead?' I gasped.

"Me! Me dead?"

"Yes.

"Oh, no."

"What are you doing there?"

"That's only a dodge."

"Dodge?"

"Yes. I'm just now a dodger. A kind of an artful dodger. See?"

"I'll call the folks.

"Heavens no. I'll tell you. You see I wasn't feeling well. I've got a mother-in-law who is a holy terror. Worse than ten parrots and the hydrophobia. Well, I've been trying for ten years to get rid of her. Now I told my wife that I would simulate death; get put in a vault, be taken out again right away, and sneak West. She liked the idea. I'll be taken out to-night, go to a hotel, and I'll meet my wife in St. Louis. In that way we'll shake the old girl. Well, here's a dollar. I wish you could send out and get me a little spirits' reviver."

"Pretty soon the folks began to come in. The supposed corpse looked as natural as life, everybody said. There is no use saying it at weddings or balls. The mother-in-law sobbed. Then she leaned over and kissed the corpse.

"Why, John smells of whisky," she said. "John was always a beautiful drinker," explained the wife."

FREIGHT on American railroads is less than on any roads in the world, unless it is those of Canada. This is because of free competition, and it is an excellent argument in favor of free competition. When that ceases, in railroading or anything else, high prices are likely to rule. Fortunately, the railway system of the United States is of such proportions that it is not likely to get under one control of two or three individuals.

STATESMANSHIP AS APPLIED TO THE SALOON LAW.

The *New York World* has found a statesman at last, and interviewed him. The ripe fruit gathered is presented to the public in the following form:

"Jacob Pfalsgraff, the German saloonkeeper, was solicited for an opinion on the Cincinnati situation.

"What's der madder py dot willage?" inquired Mr. Pfalsgraff.

"When told of the arrest of 164 saloonkeepers for violating the Sunday-closing law, he said:

"Py gotness, I ton't see some sense von all dot monkey pizness. When der law py Ni York says to keep my saloon glosed on Sunday I ton't fly in der face of der whole legislature py Albany und keep it open some more. All der law asks of a German saloonkeeper in dis goundry is to keep der front door of his saloon glosed on Sunday und open it by der back door. In Cincinnati der saloon men think dot vas a great hardships. It vash more ash dot, by gracios; it vas some outrages. But vhat can you do mit der law hangin' onto your gollar button? Vender der law says to glose op, vhy, der things is to glose op offerding but der back door und say der law vas all right, and you like haf some more of it to keep for Christmas."

"You think this is the proper way to meet the emergency?"

"Sure."

"But does it satisfy the law, Mr. Pfalsgraff?"

"It sadsifies der boliceman on der beat, und der law says noddings."

HEROES AND HEROINES.

The world is full of hero worship, and many are the fortunate ones we honor and revere. Some won by knightly deeds on battlefield, some by splendid prowess in saving life when periled by fire or flood—by every form of daring bravery or noble effort the list is swelled. And a quick and generous appreciation is awarded all such deeds of exceptional heroism.

All heroic acts, however, do not come to the light of public approval, says *Texas Siftings*, for once in a sober strain. There are unknown and unnoticed heroes and heroines in private life whose names are not destined to be "sung in numbers," whose quiet lives flow on in uneventful stillness.

But the young man who voluntarily resigns the ambitious plans of youth, with all their vaguely splendid possibilities, to care for his aged parents, an obligation, perhaps, distasteful to him, seeing his more fortunate brothers and comrades winning fortune and renown that might be his, is a hero of no humble type.

The girl who, putting aside her own happy dreams of the future, dedicates her life to the care of an invalid mother or crippled sister, making their lives bright with the light she denies her own, is a heroine, though not always recognized as such.

In many an obscure home the frail mother is the heroic spirit, who meets the blows of adversity with the shield of cheerful industry. Brave and never despairing, thankful and hopeful to others, she might have poems written of her heroism if her station had been higher in the eyes of the world.—*Chicago Herald*.

CONVICT SLAVES AND WAGE SLAVES.

"Prisoners in the penitentiary at Joliet, Ill., have sent 1,500 pounds of bread to the starving miners at Braidwood, Ill."—*Ex.*

Here, indeed, is the climax of the wage-slave system! Think of it! Free American laborers in our great protected industries reduced to utter starvation and compelled to accept charity of the convict felons of the penitentiary. The convicts, who are only order of chattel slaves yet remaining in America, are still able to give out of their abundance. "Charity" to the starving free (?) laborers. Shame! —*Lucifer*.

SHE TOOK IT ALL DOWN.

There is in Washington a young type-writer whose good looks and charming manners justify the sentiments her employer feels towards her. He is in the habit of dictating his correspondence, while her expert fingers transcribed the words as he utters them. The other morning he concluded to end the uncertainty which had come into existence by asking her to marry him. She was engaged on some copying when he approached her and poured out his sentiments, and, notwithstanding the warmth of his pleadings, kept right ahead with the clickety, click click of the instrument. In fact, she paid so little attention to him that he became discouraged and left the room, intending to speak to her when her mind was free from her duties. He went to his lunch, and on his return sat down to sign a lot of letters that lay on his desk. There was a large pile, and he went through it mechanically, until he struck a sheet near the bottom. Jumping to his feet he simply exclaimed: "Well, I'll be blowed!" The cold glaring typewritten letter read:

"Miss SEBIE:—Maybe you'll think I am an old jackass, but I ain't. I mean business. I know I don't happen to be very pretty, but I'd be good to a family. I was thinking maybe you'd learn to like me if you would go to church with me and give the minister a few minutes' employment. And this ain't to save any salary either. It's because I want you for your— Say, you ain't listening, are you? Well, I'll come in later when you ain't so busy."—*Washington Capital*.

THE OLDEST BANK NOTES.

The oldest bank notes are the "flying money," or "convenient money," first issued in China 237 B. C. Originally these notes were issued by the Treasury, but experience dictated a change to the banks under government inspection and control. A writer in a provincial paper says that the early Chinese "greenbacks" were in all essentials similar to the modern bank notes, bearing the name of the bank, date of issue, the number of the note, the signature of the official issuing it, indications of its value in figures, in words, and in the pictorial representation in coins or heaps of coins equal in amount to its face value, and a notice of the pains and penalties of counterfeiting. Over and above all was a beseeching exhortation to industry and thrift: "Produce all you can; spend with economy." The notes were printed in blue ink on paper made from the fiber of the mulberry tree. One issued in 139 B. C. is still carefully preserved in the Asiatic Museum, at St. Petersburg.—*London Standard*.

ELECTRICITY INSTEAD OF SAND.

A series of experiments with a new electrical appliance for increasing the tractive power of locomotive engines has been successfully concluded by Elias E. Ries, of Baltimore, on the Philadelphia & Reading Railroad. The trials were made on the Frackville grade, one of the steepest on the Reading system, and were pronounced eminently satisfactory in every respect. The apparatus consists of a small dynamo and engine mounted upon the locomotive and furnishing an electric current, which is passed forward to the rear driving wheels, through that portion of the track rails lying between them. The passage of the current into the wheels and back causes an increased friction between the wheels and the rails, which is claimed to be far superior to that obtained by sanding the tracks, and enables the locomotive to draw a much heavier train, without regard to the condition of the track, than is at present possible. The Frackville grade averages 185 feet to the mile, and with the dynamo running and a train of forty-five cars attached to the locomotive, the ascent was made in twenty-eight minutes, while without the current a trip over the same ground with the same train behind required fifty-five minutes. The current used is what is termed a low tension current, and the increased traction obtained is under complete control by the engineer.—[*Mechanical News*.

THE LONDON DOCKS.

The London docks, brought into notice because of the great strike there, are said to have cost not less than the enormous sum of \$100,000,000. St. Katherine's docks, the nearest to London bridge, were opened in 1828, and cost £10,000,000. London docks are still older, having been opened in 1805. They cost £20,000,000, and contain the great warehouses for tobacco rented by the government. The Surrey docks and Commercial docks are more spacious and devoted to the grain shipping trade. The West India docks, opened in 1802, cover 300 acres, and the East India docks thirty-two acres. Millwall docks, in the Isle of Dogs, cover 200 acres. But the great docks are the Victoria and Albert, opened respectively in 1856 and 1860. The Victoria docks cover 200 acres and contain dry-docks capable of docking the largest steamships afloat. One set of warehouses, used chiefly for storing tea, silk, cochineal, carpets and other products of India and China, is said to have continuously a stock valued at \$25,000,000. The Royal Albert dock, which is connected with the Victoria, is the greatest of all, and its completion in June, 1880, was made the occasion of a royal celebration. This dock is a splendid stretch of water-way, almost three miles in extent, with a range of over a mile of iron warehouses and double lines of locomotive tracks and numerous traveling cranes. The aggregate length of dock and passage walls is 3½ miles. The walls are 40 feet high, five feet thick at the top, and from 18 to 19 feet thick at the base, and used up in their construction 500,000 cubic yards of concrete, representing 80,000 tons of Portland cement. Three thousand workmen, 600 or 700 wagons, 17 or 18 locomotive engines, three steam "navies," and a great quantity of minor machinery of various kinds had been engaged from 1875 until the summer of 1880 in

the construction of this magnificent system of docks. Railway trains from every company can unload straight into vessels, cattle are driven aboard, the railway platforms being level with the receiving decks, and the largest possible weights of merchandise are lifted by hydraulic cranes that travel from shed to shed with singular facility.—[*Mechanical News*.

SOME PHILOSOPHY.

Insincerity is often mistaken for a lack of honesty. The ring of coin is often the knell of friendship. They need never fear a fall who never scale the heights.

Adversity undermines many a structure of prosperity.

He who wisely uses his wealth need not leave it for his tombstone.

The sight of a man's money is oftentimes the antidote for the odor of a very bad character.

If you would avoid the suspicion of your neighbor, never carry your molasses in a demijohn.

Prosperity awaits all men, and even pursues some, but it is never found in the haunts of vice.

True genius lurketh under cover, while arrogance stalks abroad in the full light of day.

The most wonderful work of God is man; but brand him slanderer and God will disown his work.

The wisest fish long escapes the most dangerous hooks, and is finally caught with a bent-up pin.

The ambition of youth looks forward to the triumphs of age, while sated age turns back a wistful eye along the rosy path of youth.

It is well the book of life is opened to us page by page. Were all the hard lines bared at once the task would be too hard to master.

Not only should careless statements regarding our neighbors be ignored, but facts themselves should be often subdued in the interest of right-thinking and fairness to our fellows.—[*Frank B. Welch, in Arkansas Traveler*.

GOOD IN THEORY.

"I was reading something to-day that had a good lot of common sense in it," said Mr. Bixby to his wife at the dinner table one day. "The piece said that there was nothing so helpful to digestion or so conducive to long life as cheerful, merry conversation at the table. It's the place to laugh and be glad, and if we must lose our tempers and get out of sorts hereafter let's do it when we're away from the table. Let each of us remember any funny things we may have heard and tell it at the table. Now, to-day I was reading the cleverest little thing in one of our funny paper. It was about—what's this under my plate? The milkman's bill? Fifteen dollars and sixty-five cents! Good heavens and earth, Harriet Bixby, what under the blue dome of heaven do we do with that much milk in one month? We've simply got to get along with less! The girl wastes half of it, or drinks it herself! It makes me so infernally mad to have these milkmen and grocers thrusting their bills under my nose! You've got to economize more. Mrs. Bixby: there's no use of talking about it! We can't go on like this! We'll land in the poor-house sure as gun"—and so on during the entire meal.—[*Time*.

COL. INGERSOLL'S STORY.

"I'll tell you a story, boys," said Colonel Ingersoll, while waiting for the Kerr jury to come in on Friday afternoon.

Colonel Fellows, Lawyer Bird, Mr. Kerr and the reporters leaned forward expectantly.

"During the gold days in California," continued the colonel, "it was the law that the holder of a claim should be liable to lose it if he let it remain idle for ten days in succession. Well, there was one fellow who had been working faithfully, when he fell sick and had to take to his tent. Another fellow came along and jumped his claim. The first man pleaded and argued, but the other was not to be moved. So when the first man recovered he sued the interloper.

"The case came up before the justice. He was very sorry, he told the plaintiff, but the law was absolute on the question, and the defendant could not be ousted. No sooner had he finished than the plaintiff jumped up and bit the defendant a stinging blow behind the ear. The defendant fell over, and the plaintiff jumped on him and began to pummel him soundly. The constable ran up and was trying to part the fighters when the judge arose, and, pounding on the desk, yelled to the constable:

"—— you, sir, leave them alone! The law is the law, but if the gentlemen want to compromise they mustn't be interfered with."

The colonel's way of telling it was as good as the story.—*N. Y. Sun.*

THE TWOMBLY AFFAIR.

Since the last issue of this paper there has been another railroad disaster of a particularly sad nature. A suburban train on the Rock Island road was run into by a freight engine, killing seven persons. The freight engine was run by a son of Master Mechanic Twombly, who, it is alleged, was drunk, and running in a reckless manner. Twombly and his fireman are both held for manslaughter, and M. Twombly was also arrested as an accessory before the act.

That the engineer was drunk on duty there seems little doubt, and final punishment seems just—no excuse a man can make justifies him in going out upon a locomotive drunk.

That the fireman is to be held responsible in the premises seems strange. The fireman has no authority in the movement of a locomotive, any more than a cabin boy has in the movement of a ship; he is there to obey the engineer, and if he undertook to run things, ever so little, he would soon find himself at odds with the engineer, and out of a job. The companies employ and put on locomotives as firemen men from every walk in life, without regard to any qualification whatever, and that they should be entirely under the control of the engineer is right under the circumstances. This boy had no choice—he was like a common soldier—there to obey. He should be held blameless.

No doubt Mr. Twombly has in his thirty years as master mechanic forgiven many another man for drunkenness and given him another trial; but this case, the culprit being his own son, makes the case a bad one for him; but his prosecution for crime in

this particular case, while it might tend to increase the vigilance of railroad officials in the punishment of drunkenness, would seem like persecution.

If the freight train had been provided with air-brakes the accident never would have occurred; it is claimed if the engine had even a steam-driver brake it would have been stopped. If the line had been provided with block signals—and the accident occurred right in the city of Chicago—the train would have been stopped or derailed. For this lack of proper modern appliances the Rock Island road is to blame.

We do not believe that any man or company of men, railroad or railroad official, has got the right to say to any man, "You shall not drink." But the railroad officials have got the right to say that any man who drinks intoxicating liquors, on or off duty, shall not run a locomotive under them; and this is just what they need to be saying and doing.

The brotherhoods ought to be singling out those who are known to drink, and drop them, instead of making a kick to have men reinstated who have been removed for drinking.

Too many men are daily risking their lives against such men as they know are not safe, and liable to cause a disaster at any time. It is time that, in cases of this kind, where it is clearly proved that modern safety appliances are not employed, the railroad companies should be held responsible. That competent employes get along every day without them is no excuse—a competent crew might bring a ship into port many times with a cob driven into a knot hole; but the cob would be liable to rot out at any time.

It is also time that that all competent employes arrayed themselves against strong drink: the lives of all quiver in the balance of every engineer's judgment—don't let any man run against you, and see that you run against no man, where there is the slightest fear that whisky may throw the scales out of balance.—*Locomotive Engineer.*

PUNISHING WOODEN IDOLS.

A curious case of punishing the gods is reported from Foochow. The idols of a certain temple in that city were those appealed to by persons who desired to be revenged on their enemies. They were supposed to cause death to those against whom prayers to them were directed. Recently the Tartar military commander died suddenly, and the idea got abroad among the people that he had been slain by the idols in question. The viceroy of the province, hearing this, at once gave orders that they were to be arrested and punished. The prefect was instructed to see the decree carried out, and armed with the viceroy's warrant, he went to the temple and had fifteen idols arrested. These were of wood, and about five feet high. Before being brought for judgment before the prefect, their eyes were all put out, so that they should not see who was their judge, and be able to trouble him either here or hereafter. After a full investigation, a report was sent to the viceroy, who gave orders that the idols should be beheaded, their bodies cast into a pond, and their temple sealed up forever, to prevent them from troubling the peace of the town in future.—*Rock.*

WRECKED BY A WOMAN.

What a Once Prosperous Man Came to Whose Wife Proved Faithless.

He was a tall, cadaverous individual, about thirty-five years old, with a two week's growth of beard on his face, and a red-tipped nose, says the *Baltimore American*. His eyes had a watery, far-away look in them, and there was an unmistakable smell of bad whisky about him. An old hat much the worse for age was tilted to port on his head, and his clothes bore signs of age and numberless darnings. He went into a prominent ship-broker's office, and, in a husky voice, asked for five cents to get a drink. He was honest about it, and got the money. After he had gone away, a reporter heard the story of his life. He came here from New York about ten years ago, and secured a position in a grain office on South street. He was industrious, and soon gained his employer's confidence. He had charge of the books, and for three years did well, and was promoted to a good position that paid him a nice sum. He was studious, and was a first-class fellow all around. He fell in love with a pretty girl, and a marriage followed. For two years he lived happily with his wife, and a little boy blessed the union. The serpent came into the garden, and the young wife was led off. The husband went home unexpectedly one day, and found the wife and her lover. The husband quietly ordered the man from the house, and had his faithless wife pack her trunk, and, providing her with funds, sent her away. He attended to his duties at his place of business for nearly three months, when his employers noticed that he was half drunk all the time. His child had been put in the care of a family, and almost every night he would visit it. The rest of the night was spent in drinking. In a little while he began to spend more than his salary, and to get drink appropriated some of the firm's funds. He was found out and discharged at once. He went from bad to worse, and after borrowing all the money he could, left town. He was not seen here again until two years ago, when he came as a seaman on a vessel from South America. He is going down to ruin as fast as possible. The faithless wife, after living in luxury in New York with different admirers, died in want the day the husband came home. The child is now living in ignorance of the fate of its parents.

OBJECT OF FEDERATION

There seems to be a very vague idea in the public mind concerning the object for which the railroad labor of the country propose to federate. When any expression is made at all it is such as to indicate that the supposed object of federation is to build up a formidable power in railway circles that will at once assume the position of an autocrat and demand the most absurd things of the companies, and that this will at once bring on a tremendous struggle between the federated employes and the associated employers.

Federation will result in nothing of the kind. The movement is the result of conservatism, not the work of the impulsive. Federation will not produce, but prevent strikes, and save millions of dollars annually to the country. When it is once put into op-

eration the grievances that cause strikes must pass through such a searching investigation and be supported by so large a majority that it is impossible that anything of a petty nature can precipitate a conflict, as has often been the case in the past. Every cause of complaint will be passed upon by three or four outside organizations that will be comparatively free from the intense feeling in the matter that is commonly prevalent in an order when it is about to strike, and thus the benefit of cool counsel secured. And when some faction feels as South Carolina did during Jackson's administration, it will be as promptly subdued by the general government. In short, any cause that produces a strike under federation must have behind it the interest of railroad labor as a whole, and not the selfish motive of some one class.—*Denver Patriot*.

THE BENEFITS OF BENEVOLENCE.

Careful consideration and study of the history of trade unions in the past, says the organ of the Tailors' union, and an honest observation of their standing to-day, can hardly leave doubt in the minds of any one that benevolent features are not only a stimulus of growth and prosperity, but an absolute necessity for the perpetuity of an organization. The unions whose dues are high, but whose beneficial features are also many and well regulated, are the unions that are to-day giving their members the best protection, which is the paramount object of trade unions, and if beneficial features lead to better protection as to prices and conditions of labor, is it not then advisable to adopt them? Every member must feel better individually, and must have more confidence in his organization, if he knows that in case of sickness the union will pay to him something with which to support himself or family, and not become a pauper on the charity of the state or his friends, and to know that in case of death our unions will furnish the means to bury us decently is also a tie that binds men to their union. Protection is what we want, and beneficial features being one of the steps by which it can be approached, our union should follow the example of others, and at the next convention adopt such features as appear most advisable for submission to the local unions. There is no tangible reason why the tailors of America should not be as powerful a body as the cigar-makers' or the carpenters' unions, unless it be indifference and carelessness. Let us awake to the fact that we are living to-day and not one hundred years past, and adopt those plans and measures that new light and thought have made manifest to humanity as the best and most wise. We cannot stand still. We must either keep step with the progress of our race and of our sister trades unions, or we must go down and give place to an organization that will face the realities of our condition as they really are. Which shall it be, progress or decay?—*Peoria Press*.

THERE were some very fine exhibits of railway cars at the Exposition, that is of such cars as they use in Europe. These cars are particularly noticeable for the excellent manner in which they are painted. The builders evidently believe in the efficacy of lead and oil, and the workmen know how to apply it for good effect. Excellent taste is shown in not attempting anything gaudy.

GRAND LODGE.

These columns are reserved as the official department of the Grand Lodge.

All Official Documents, including notices of dues and assessments and other notices, reports and statements will be published in this department.

Officers and Members of Subordinate Lodges are requested to note carefully each month the contents of this department.

FEBRUARY, 1890.

Assessment Notice for February.

OFFICE OF GRAND LODGE, B. OF L. F.,
TERRE HAUTE, IND February 1, 1890.

ASSESSMENT No. 9, \$2.00.

To Receivers of Subordinate Lodges:

DEAR SIRS AND BROTHERS:—You are hereby notified of the death of the following members entitled to all the benefits of the Order, viz.:

CLAIM No. 174. Daniel J. Hagerty, of W. H. Thomas Lodge, No. 159, was killed by Railroad Accident, November 13th, 1889.

CLAIM No. 175. George W. Austine, of Sprague Lodge, No. 123, died of Typhoid Pneumonia, November 15th, 1889.

CLAIM No. 176. Wilbur McCallum, of Charity Lodge, No. 5, died of Typhoid Fever, November 19th, 1889.

CLAIM No. 177. Arthur W. Price, of Pine City Lodge, No. 81, died of Gastritis, November 19th, 1889.

CLAIM No. 178. Walter A. Sawyer, of J. H. Kirk Lodge, No. 376, died of Typhoid Fever, November 1st, 1889.

CLAIM No. 179. William M. Coburn, of M. G. Brooks Lodge, No. 160, died of injuries received in a Wreck, November 22d, 1889.

CLAIM No. 180. John Clancy, of Cedar Valley Lodge, No. 30, was killed by Railroad Accident, November 24th, 1889.

CLAIM No. 181. Milton Shane, of Beacon Lodge, No. 111, was killed by Railroad Accident, November 27th, 1889.

CLAIM No. 182. Robert Mackey, of J. Scott Lodge, No. 136, died of Inflammation of the Lungs, November 25th, 1889.

CLAIM No. 183. Wm. H. Cleary, of Industrial Lodge, No. 21, died by Accidental Drowning, November 27th, 1889.

CLAIM No. 184. James Titterington, of Saginaw Valley Lodge, No. 286, died of Chronic Inflammation and Softening of the Brain, November 20, 1889.

CLAIM No. 185. Christian Jepson, of Black Hills Lodge, No. 86, died of Cerebral Meningitis, December 4, 1889.

CLAIM No. 186. John F. Myers, of Lehigh Lodge, No. 251, died of Paralysis of the Heart, December 6th, 1889.

CLAIM No. 187. George R. Wilson, of Prospect Lodge, No. 162, died from Injuries received in a Wreck, December 7th, 1889.

CLAIM No. 188. John F. Arnold, of Enterprise Lodge, No. 75, died of Consumption, December 7th, 1889.

CLAIM No. 189. James H. Murphy, of Iron City Lodge, No. 318, was killed by being run over by Engine, December 7th, 1889.

CLAIM No. 190. Wm. J. Carroll, of Deer Park Lodge, No. 1, died of Heart Disease, December 10, 1889.

CLAIM No. 191. Michael J. Kivlahan, of New Era Lodge, No. 76, was killed by Engine turning over December 10th, 1889.

CLAIM No. 192. Wesley E. Currier, of Boston Lodge, No. 56, died of Typhoid Pneumonia, December 11, 1889.

CLAIM No. 193. Sidney Olen, of T. P. O'Rourke Lodge, No. 244, died of Phthisis Pulmonalis, December 11th, 1889.

An assessment of Two Dollars (\$2.00) has been levied for the payment of the above claims and you are required to forward said amount for each member, whose name appears on the rolls February 1, 1890, as provided in Section 52 of the Constitution, said remittance to reach the Grand Lodge not later than February 20th, 1890. Any Lodge failing to make returns as above provided will stand suspended from all the benefits of the Order, as per Section 54 of the Constitution.

Yours fraternally,

F. P. SARGENT, G. M.

EUGENE V. DRES, G. S. & T.

Beneficiary Statement.

OFFICE OF GRAND SECRETARY AND TREASURER, J.
TERRE HAUTE, IND., January 1, 1890. J

To Subordinate Lodges:

SIRS AND BROTHERS: The following is a statement of the Beneficiary Fund for the month ending December 31, 1889:

RECEIPTS.

Lodge No.	Amount.	Lodge No.	Amount.	Lodge No.	Amount.	Lodge No.	Amount.	Lodge No.	Amount.

PAID SUBSCRIPTIONS

On the books of the Grand Lodge December 1st, 1890,
one HANSOME

GOLD WATCH

The LOCOMOTIVE FIREMEN'S MAGAZINE is known to be the best publication of its kind on the continent.

MAGAZINE AGENTS need not hesitate to recommend the MAGAZINE to Railroad men—and to all others who are interested in labor problems.

NOW IS THE TIME TO SUBSCRIBE.

GILES, BRO. & CO.,

WHOLESALE JEWELERS

Inventors and Manufacturers of the

ANTI-MAGNETIC SHIELD.

The only positive and permanent protection for watches against magnetic and electric influences, and as such awarded the medal at Paris exposition. It is endorsed and recommended to their employes by the managements of most of the leading railways of the country. Ask your jeweler for it, and take no other. If necessary, order direct from us.

GILES, BRO. & CO.,

103 State Street, Southeast Cor. Washington.

CHICAGO, ILLINOIS.

STILL ON TOP.

PRICES REDUCED.

BAKER'S :: TRIPOLINE

88 MARKET STREET, CHICAGO, ILLINOIS.

BOILER EXPLOSIONS PREVENTED!

CORRESPONDENCE SOLICITED

REMOVES SCALE!

Engineers agree that our **Boiler Cleansing Compound** cannot be equalled

(LORD'S PATENT.)

for Removing and Preventing Scale in Steam Boilers.

Saves Fuel, Labor and Time, and prevents Corrosion in all its forms, and is guaranteed free from anything injurious to iron by the Chemists for United States Mint.

Engineers will receive free, on application, a 25-ct. book "HINTS FOR STEAM USERS." Questions answered by the holder of a first-class Engineers' certificate.

S. W. Lord & Co., 11 So. 9th St., Philadelphia, Pa.

PREVENTS CORROSION!

AGENTS WANTED EVERYWHERE

PREVENTS SCALE IN BOILERS!

WM. SELLERS & COMPANY, (INCORPORATED.) SOLE PATENTEES AND MAKERS OF **Self-Acting Injector of '87**

Range of Capacity over 60 per cent., and can be regulated, therefore, to work continuously for light or heavy trains. Never fails to promptly lift hot or cold water.

No service on a locomotive sufficiently severe to permanently stop its working.

IT WILL RE-START ITSELF

should the Jet break from interruption of the stream or water supply, as soon as the supply is resumed.

ADJUSTS ITSELF

to varying steam pressures without waste of water. Increases quantity of water with increase of steam, and *vice versa*.

Very easily operated—Started by pulling out the lever, and stopped by pushing the lever in. Descriptive Circular and Price List sent on application to Office and Works.

LEGS AND ARMS WITH RUBBER FEET AND HANDS.

Fig. 1.

tent judges have commended the rubber foot and hand for their remarkable advantages.

Awarded the highest prizes at every competitive exhibition.

Endorsed and purchased by the U. S. Government.

A treatise of 400 pages with 200 illustrations and copyright formula, SENT FREE.

Fig. 1 is from an instantaneous photograph of a man ascending a ladder; he has two artificial legs substituting his natural ones, which were crushed by a railroad accident and amputated. Fig. 2 exposes his stumps. With his rubber feet he can ascend or descend a ladder, and balance himself on the rungs. He can walk and mingle with persons without betraying his loss; in fact, he is restored to his former self for all practical purposes.

With the old methods of complicated ankle-joints these results could not be so thoroughly attained.

Over 9000 in practical use, scattered in all parts of the world. Many of these have been supplied without presenting themselves to us, simply by sending measurements on a copyright formula which any one can easily fill out. Eminent surgeons and compe-

FIREMEN, IMPROVE YOUR POSITIONS

Do you know how to think?

Of course you think. But do you really know how to think? Wouldn't you give a good round sum for anything that would help you to think on any subject in an easy way that masters the subject?

We have that very thing. You can make it yours for \$1.00. So can everybody. Of it *The Scientific American* says: "There is really a great deal in the method; its best proof is to apply it to some subject, when it will be found surprising how it draws out one's ideas."

A two-page cloth book, with detachable pages, on six subjects of thought showing how you apply it to 4,000 other subjects of thought in daily life, and reading or lessons. You will not learn how by any other method than contained in our *Wherewithal*—not in the schools, certainly.

Mailed to any address on receipt of price.

Remit by check, postal or money order, a small round sum, one dollar.

ADDRESS,

THE WHEREWITHAL CO.

Broad and Chestnut Sts.,

CATARRH

HAY FEVER

CATARRHAL DEAFNESS

A NEW TREATMENT.

Sufferers are not generally aware that these diseases are contagious, or that they are due to the presence of living parasites in the lining membrane of the nose and eustachian tubes. Microscopic research, however, has proved this to be a fact, and the result of this discovery is that a simple remedy has been discovered which permanently cures the most aggravated cases of these distressing diseases by a few simple applications made (two weeks apart) by the patient at home. A pamphlet explaining this new treatment is sent free by A. H. DIXON & SON, 337 and 339 West King Street, Toronto, Canada.

Lodges of the B. of L. F. wishing to procure Regalias will save 20 to 50 per cent. by sending orders to

L. T. F. ZAISER,
27 So. Meridian St.,
INDIANAPOLIS, IND.

SOMETHING NEW! THE ONLY PERFECT DUST PAN MADE.

Its round shape enables dust to be swept up easily from all directions into its central chamber, and to hold its edge permanently. No upsetting and vexatious scattering of dust.

No stooping down, as the foot hold the dust pan secure at any point. Made in one piece. Convenient, strong and ornamental.

To introduce the Dust Pans we will deliver one of these Dust Pans, boxed and Expressage paid at any Express point in the United States on receipt of THIRTY-FIVE CENTS.

Please show this advertisement to your wives and sweethearts.

REARDON & ENNIS,
Sole Manufacturers, TROY, N. Y.

Castner & Curran, General Tide Water Coal Agts.

CELEBRATED

Pocahontas Semi-Bituminous Coal.

1 Broadway, New York. 308 Walnut St, Philadelphia.
70 Kilby St., Boston. 36 Main St., Norfolk, Va.
1 Fenchurch Avenue, London, England.

The Pocahontas Coal is acknowledged by all Railroads that have used it to be the best American coal for Locomotive use. It generates steam with great rapidity, and at the same time holds the fire an unusually long time. The merits of the coal are shown by the unprecedented growth of the mines, which were not opened until 1883. Since that time the outputs have increased over 1,200 per cent., amounting in 1887 to 1,300,000 tons. During the present year it will be at least 2,000,000 tons. We are therefore prepared to fill all orders with prompt dispatch.

Copy from Original Letter Received from Division 95, Cincinnati, O.

Brotherhood of Locomotive Engineers.

[SEAL.]

CINCINNATI DIVISION, No. 95.

CINCINNATI, OHIO, September 5th, 1890.

This is to Certify, That Brother Chas. T. Brown is a member of this Division, No. 95, B. of L. E., and has been a member of the B. of L. E. for twelve years, and we can recommend him as an upright, honorable and worthy brother.

He has lately connected himself with the Railway Officials' and Conductors' Accident Association, of Indianapolis, Ind., and said Association has no connection whatever with the Order of Railway Conductors, or any other order or society—it being a distinct organization for the purpose of insuring railway employes in the United States, Canada and Mexico, against accidents. Brother Brown has been appointed Special Agent for the United States, Canada and Mexico, for the Mechanical Department of railroads. We feel confident that you will find anything Brother Brown represents to be just what he says.

E. E. McMILLAN, C. E. [SEAL.]

G. BAKER, F. A. E.

INDIANAPOLIS, IND., September 15th, 1890.

TO BROTHER ENGINEERS:—Having been appointed Special Agent for the United States, Canada and Mexico, for the RAILWAY OFFICIALS' AND CONDUCTORS' ACCIDENT ASSOCIATION, of Indianapolis, Ind., for the Mechanical Department of Railroads, and having been informed by reliable authority that some of the unprincipled representatives of other accident companies have circulated the report among Engineers and Firemen that this Association is connected with certain Orders and Societies; on account of such representations, which are untrue in every respect, I publish copy of above letter from Cincinnati Division, No. 95, B. of L. E., which will be sufficient without further explanation.

As all business from Mechanical Department of Railroads comes through my agency, I will furnish every Agent a copy of the above letter, and any application given to an Agent who has this letter in his possession may be the same as given to me in person.

Trusting that I may receive a share of your patronage, and will be more than pleased to add your name, one and all, to our list of membership, assuring you that I will use every honest and honorable means to secure your patronage. For rates, etc., address

The Land of Flowers,
of Orange Groves,
of Perpetual Summer!

FLORIDA

LAND is the Basis
of all WEALTH

Healthy, Prosperous,
Delightful! Nature's
Sanitarium!

Grandest Colonization Enterprise Ever Offered the American People.

THE CO-OPERATIVE LAND AND IMPROVEMENT CO. OFFERS YOU a Beautiful Cottage Site, Business Lot or Orange Grove Tract in one of the Best Locations in that favored State, Florida, **FREE!**

Warranty Deed Free of Incumbrance

Title Perfect.

Land and Location Unexcelled.

READ OUR PROPOSITION

This Company, Incorporated with an authorized capital of \$300,000, own and control 10,000 acres of land in and around Leroy, Marion County, Florida. To enhance the value of all this land by large and diversified ownership, the company propose to give away a portion of this property in

40 Acre Tracts, 30 Acre Tracts,
10 Acre Tracts, 5 Acre Tracts,
Cottage Sites and Business Lots.

All of these tracts are suitable for Orange, Lemon, Grape and Early Vegetable Culture. The above Tracts, Cottage Sites and Business Lots consist of about one-fourth our lands. By giving away one-fourth and reserving the balance we expect the price to quadruple within a year, as many will undoubtedly settle and improve.

This land will be allotted as applications are received, IN A FAIR AND EQUITABLE MANNER, and with no preferences. Each applicant receives a Warranty Deed, Option Bond, numbered and recorded, which entitles the holder to one of the Lots or Tracts above specified.

NO CHARGE FOR THE LAND.

No charge whatever is made for the Land. But we require all to send 25c. Postal Note or Cash, or 50c. in Stamps, when application is sent. This amount is a pro-rata charge to help pay for this advertisement, postage, and also a handsome illustrated book on Florida, its climate, soil, orange culture, etc., and is in no sense a charge for the deed bond or the land it calls for. You are not obligated to have the deed executed if the location or land does not suit you, and the 25 cts. expense will be returned in such case.

• LEROY, MARION COUNTY, FLA.,

Has been rightly named by the press as Florida's Phenomenal City. All our lands are located in and around LEROY, Marion Co., FLORIDA, ten miles from Ocala, the county seat, a thriving city of 4,500 inhabitants. It is all high, dry, rolling pine land, free from swamps or malaria, and one of the healthiest locations in Florida. THE SILVER SPRINGS, Ocala AND GULF RAILROAD runs through it. Splendid Hotel, Depot, Stores, Saw Mill, Lumber and Blind Factory and Cottages already built. Over 10,000 people now own property at LEROY and hundreds of new settlers coming in every year.

It is estimated that 200 houses will be built there during the winter, besides a large Sanitarium, and the Farmers' Alliance Stores, which will make LEROY a great centre for shipping all kinds of fruits and farm products. A new School-house and Church have recently been finished. House lots are now selling as high as \$100, and 5-acre orange grove tracts, \$250.

Rural Free Press, Ocala, Fla., says:

"The land is high, rolling pine, and considered equal to any pine lands in the State. Any of the semi-tropical fruits, such as oranges, lemons, limes, bananas, pineapples and guavas do as well on pine lands as hummock."

HOTEL MATANZA, LEROY, FLA.

The Ocala Banner says:

"The lands are high, dry and rolling, and LEROY is one of the finest and healthiest locations in the State, and all that the Company claim for it is strictly within the bounds of facts."

Mr. A. P. Mann, Jr., General Manager of the Silver Springs, Ocala and Gulf Railroad, in speaking of this land, says:

"It is all high, dry, rolling and fertile pine land, and there is no more healthy location in Florida. The surrounding country, as well as this land is especially adapted to ORANGE and VEGETABLE culture, as well to up-land rice, long staple cotton, corn, and choice varieties of tobacco."

CLIMATE AND HEALTH The climate of this section is unsurpassed by any in the world, not even excepting Italy. Cool, balmy, delightful breezes are constantly blowing from the Gulf and the Atlantic. This immediate neighborhood is well adapted for a Summer as well as a Winter resort.

MONEY LOANED This Company is prepared to loan money for improvements upon property secured from the Company, giving five years to pay for same. Plans of houses will be furnished free upon application to those wishing to build.

LOCAL CLUBS To those wishing to form clubs in their town we will send five warranty deed option bonds for \$1.00; ten for \$2.00; fifteen for \$3.00; twenty-five for \$5.00; forty for \$8.00 and fifty for \$10.00. No more than fifty will be sent to any one club.

WRITE TO-DAY Before free property is all taken, send in a club, and have your friends interested with you. If free property is all taken when your order is received, money will be returned. Send money by Postal Note, Money Order, or Registered Letter.

Address

Co-Operative Land and Improvement Co., 45 Broadway, New York.

Endorsement—Ocala, Fla., Dec. 10, 1887.—We, the undersigned, hereby certify that the land located on the S. S., O. & G. R. R., of fair quality, and will compare favorably with the average pine lands of Florida, and bids fair to enhance in value. J. R. MOREHEAD, County Surveyor; E. W. LONG, County Commissioner; F. E. HARRIS, Editor Ocala Banner; T. W. HARRIS, Editor Free Press; A. P. MANN, Jr., Gen'l Manager S. S., O. & G. R. R.; JAS. L. WHITE, ex-County Surveyor, and others.

C. H. STARR, *Engin'n Acambaro, Mez.*
City of Mexico, Div. 159, Mexico City.

CELAYA, October 1st, 1889.

I, Parochial Priest and Ecclesiastical Judge of Celaya, State of Guanajuato, hereby certify that I know several people who have been cured by Don Ramon Alva's remedy. It radically and effectually dispels all impurities of the blood

FRANCO M. GONGORA.

The above signature is that which he uses in all his business, officially and otherwise; and he is an old pupil of mine.

✠ P. A. ARCHBISHOP OF MEXICO.

CELAYA, October 1st, 1889.

I know several people who have suffered greatly from the consequences of impure blood, and in a very short while have felt

much better by using the medicine which was sent here by Don Ramon Alva for that purpose. I recommend this remedy as one which produces the best results, and is the best of its kind.

PABLO VARELA.

CELAYA, June 4th, 1889.

Don Ramon Alva:

DEAR SIR—I have the satisfaction of informing you that the Specific of which you are the owner, has produced the most wonderful results for a friend of mine who has suffered from Herpetic Eruption; and I consider your Specific a regenerator without an equal. In the name of my friend, I thank you sincerely, and be sure I will recommend your valuable medicine, as I have again seen its results. Yours truly,

PRESBITERO PABLO JUAREZ.

CELAYA, October 1st, 1889.

I certify with all formality that from personal knowledge the medicine made by Don Ramon Alva, and known now as "*Alva's Brazilian Specific*," purifies the blood, and therefore cures radically the infirmities which arises from impure blood.

The above to be used at the convenience of those who are interested.

EUSEBIO GONZALEZ.

Retail Price, \$4.00 Per Bottle.

N. B.—Railroad Men ordering Six or More Bottles at a time will be supplied at Wholesale Prices.

The above applies merely to Railroad men.

For further particulars, address

"ALVA'S BRAZILIAN SPECIFIC" CO.,

2082 and 2084 Lexington Ave., New York City, N. Y., U. S. A.

While you are hesitating about Buying a Filled Watch Case, let us

PUT A FLEA IN YOUR EAR.

First, DURABILITY—You need have no doubt here. Our filled cases will not fail you in this respect. Take this as a warranty; we mean it. What we say of the different grades of the Boss cases we guarantee. "But," say you, "it is easy to say 'guarantee' at the front end of a trade." We wish you to understand that we are at the hind end of all the guarantees we make as well as at the front end. We're easy on this point for

We've made Boss Cases long enough to know what's safe to promise about them.

Now, CONSTRUCTION—UTILITY. Boss filled cases keep the dirt out. They're "built that way." The Dust Bands do it—in all our cases. Your fine movement is as safe from dust and cinders as if in the innermost chamber of the Great Pyramid!

The Third Point Is Beauty. We've spoken of Durability and Utility, you want the pleasing quality also. If "a thing of beauty is a joy forever," as Keats said, you may find a good many "joys forever" among the Boss case designs your jeweler will show you if you ask him. This is a point we needn't dwell on. You can tell what pleases you—we can't. Only, look at the patterns—that's all we ask

EUGENE V. DEBS, . . . *Editor and Manager.*

DO WE WANT INDUSTRIAL PEACE?

In the December *Forum*, Prof. Wm. G. Sumner, asks the question, "Do we want Industrial Peace?"

At the first glance, the question appears preposterous. As we proceed in reading the paper, the absurdity of the interrogative increases rather than diminishes. The learned Professor does not advance far into the subject before he arrives at the conclusion that the discussion of the "so-called labor question has fallen into certain grooves and revolved around certain assumptions and pet notions."

What the "grooves," "assumptions" and "pet notions" are, the learned Professor does not permit himself to state. At the very beginning of the discussion, the writer seeks to push the "so-called labor question" beyond the boundaries of common sense treatment, and to reduce it to the silliest of twaddle-jargon, and yet the Professor seemingly removes his necktie, unbuttons his

shirt collar, rolls up his sleeves, pins back his ears, and sails in and makes the following startling start. He says:

"The labor question is the most remarkable example that could be brought forward of a topic of public talk which has never been reduced to any definite form. According to the only actual attempt to define it which has ever been made by any body within my knowledge, the labor question means things in general, and consists in a regret that the world is such a hard place in which to get a living, and in an enthusiastic aspiration for greater ease and facility in that respect."

In this we have Professor Wm. G. Sumner's idea of the "so-called labor question" with which he proposes to wrestle for the enlightenment of the readers of the *Forum*.

The writer affirms that the "labor question" is "ill-defined," and therefore its discussion runs "off into whims and useless wrangling," and that "as almost the sole result of the discussion, we have a whole vocabulary of words of which we have no settled definition, for example, labor and capital, monopoly, competition, working-man, wages, cost of production," and the learned Professor thinks it difficult to go on with the discussion because he is required to use "terms which within his knowledge, have become parts of the jargon of pseudo-science and bogus philosophy."

Such are a few of the goblins which Prof. Sumner sees in the way of an intelligent discussion of the "so-called labor question," and they evidently frighten him into asking the question, "Do we want industrial peace?"

The Professor refers to the present condition of things in Germany, and to the remark of Emperor William who is quoted as

saying that he "could and would stop strikes."

Prof. Sumner is of the opinion that the Emperor has taken a large contract, and intimates, if the German Parliament should ask the question, "How can we put down strikes?" "the first incidental question will be: how do you know that you want to put down strikes?"

So far, no one, we conjecture, will credit Prof. Sumner with being either comprehensive or lucid. He does not reduce the "so-called labor question" to any "definite form." He indulges in "whims." He says "there are only two ways in which strikes can be put down." 1st, to make a strike "a crime;" 2d, to compel employers "to pay what the employed ask for." The first way, he says "is effete," and if the second is enforced, "social freedom is violated" and "hence the obvious fallacy of arbitration."

It will be conceded, we, think, that Prof. Sumner writes at random. In whatever department of learning he takes rank as a "professor," when he enters the labor field of discussion, he impresses his readers as having gone crazy. Even when most sane, when his mental machinery is in its best working condition, there are evidences of a lack of grasp, as engineers say, "traction" and the machine "slips."

The learned Professor takes occasion to bring into prominence the contract system for the regulation of wages. He says: "At present, wages are fixed by contract between two consenting parties," and that there is no time when a man is more supremely sovereign and independent than when he is making a contract, for then he is freely subjecting himself to conditions which he considers satisfactory." No man at all conversant with the facts would make such a statement. Nominally men are free to make contracts, because in this country it is a favorite assumption, that all men are free. Practically, however, this much vaunted freedom is a fallacy, as treacherous as a mirage, a cruel illusion—and it is safe to say, that nine-tenths of the so-called contracts between employers and employes, the employé is not "supremely sovereign and independent," and does accept conditions which are unsatisfactory and unjust; condi-

tions which he knows are oppressive and which rob him of his legitimate share of the wealth his labor creates. Multiplied thousands of workingmen accept what is offered. When they do accept such wages as are offered, there is an implied contract, but in the whole realm of burlesque no greater travesty could be perpetrated than to intimate that under such conditions a contract has been entered into between employer and employé. For the employé under such circumstances to be "supremely sovereign and independent" would be to invite the penalty of idleness and all of its attendant woes. And this condition, the Professor admits when he says: "Now if one man can force another, by virtue of law and social force, to enter into a contract which is not satisfactory to him, that is to say, which is not the best one he thinks he can make, then the latter is a slave, and the relationship might serve as a definition of slavery." Evidently, Prof. Sumner is correct in saying this, and had he permitted himself to let "well enough alone" it would have been creditable to his mental faculties, but he assumes that the employer and employé occupy the same positions, the same vantage ground, and that in case of making a contract the employer may be as effectually reduced to "slavery" as the employé—a proposition so foreign to fact, so utterly at war with history as to reduce his argument, if argument it may be called, to the merest flummery.

Having placed employer and employé in positions, to be reduced to slavery by the "contract" process, Prof. Sumner is prepared to say that "industrial war is, in fact, an incident of liberty." This "industrial war," the Professor thinks "is an inconvenience," but he doubts "if it is an evil." Here is a learned Professor, who favors "industrial war," and asks, "Do we want industrial peace?" No wonder he asks, "How do you know that you want to put down strikes?"

Why does not this knight errant ask, do workingmen want justice, fair play, honest pay for an honest day's work? In a sense, industrial war is an "incident of liberty." A strike is industrial war, but it is in a far more pronounced sense, an incident of in-

justice, oppression and degradation, than of liberty.

Prof. Sumner, is clearly of the opinion that the United States does not want industrial peace and urges as a reason that "industrial war is worth all it costs," that industrial war maintains "industrial liberty," and that "the most important consideration is that the industrial war is solving questions which can never be solved in any other way."

As we have said, industrial war means strikes. The strike is the declaration of war. There is no industrial war when no strike exists. Professor Sumner relegates to the rear and to silence all means to obtain and maintain industrial peace except the strike. The ballot, the court, the legislature, the labor organizations, arbitration, compromise, argument, reason, common sense, all ideas of justice, of righteousness, moral suasion, everything except "industrial war," which is the strike.

If Prof. Sumner is correct a gloomy future presents itself for the contemplation of workingmen. They are to expect nothing that is not secured by industrial war. Education, reason, enlightenment, religion, civilization, the school, the press, the pulpit, the forum, singly nor combined can be expected to accomplish anything for the industrial masses. "Industrial war" is to conquer an industrial peace, and here the questions recur again: "Do we want industrial peace?" and "How do you know that you want to put down strikes?" It is such frothy discourse, such rigmarole that finds its way into the *Forum* receiving thereby the stamp of erudition.

The country wants industrial peace founded in justice to workingmen. The workingmen of America do not desire to perpetuate industrial war. They would willingly accept the right, based upon an equitable distribution of the wealth they create, and have the record stand that the last strike had come and gone. Every effort organized labor is making is to put an end to industrial war, and enthrone industrial peace throughout the land. Organized labor is animated by hopes of peace, prosperity and good will. It believes the ballot can help. It believes that honest men can be

elected to office. It believes that debauched courts can be purified. It believes that righteous laws can be enacted. It believes that trusts, monopolies and unholy combinations of human sharks can be broken up. It believes that the water in stocks and bonds can be squeezed out. It believes the hours of work can be reduced, the idle be given employment and wages increased, and for these things organized labor is struggling and is making some advancement. For these things labor is organizing and federating, and as a last resort will strike.

The work of education is going forward. Time is required for the accomplishment of great undertakings. Capitalists will combine, marshal their forces and resist the onward march to an industrial peace, but as certain as that the "Father of Waters" has grasped the hills in its hands and dragged them down to the sea, as certainly will labor conquer an industrial peace.

THE *Canadian Labor Reformer*, referring to labor organizations, remarks that "there must be either organization or unrestricted competition among workingmen, and it is for the workers to say which it shall be. Unrestricted competition means, on the surface, each man for himself; in reality, it means that the employer is enabled to beat wages down to the lowest possible rate at which men can live. It means, that, instead of a community of brethren, men will become a mass of struggling, striving, hostile and isolated units, each the competitor and enemy of the other. Organization means that, by acting united and working harmoniously the workers, instead of competing with each other, will mutually assist each other. The difference between fraternalism and devil-take-the-hindmost-ism." The case is rarely stated more forcibly than by our Canadian contemporary. Organization must go forward and be maintained, or all is lost. After organization is perfected, all organizations in industries, where there are different employments for men and women (as in a cotton factory where there are spinners, weavers, etc.) should federate. This done, labor is in a position to arbitrate or strike.

ORGANIZATION AND FEDERATION.

We are soon to have the census reports for 1890. The statistics for the decade ending 1880 are available and have been for a number of years. They are not out of date and are immensely suggestive. In 1880 there were 12,830,000 voters, and necessarily they were men 21 years of age. How many of these voters were men dependent upon their daily wages for subsistence the census tables do not inform us, nor do they supply the number of men engaged in gainful occupations; the closest approximation being the number of males employed between the ages of 16 and 59 years. From such totals we deduct 25 per cent as representing persons engaged between 16 and 21 years of age. Having done this, we arrive at the conclusion that of the 12,830,000 voters 7,621,101 were workingmen, dependent upon their daily wages for subsistence, as follows:

Engaged in manufacturing and mining . . .	1,953,442
Engaged in trade and transportation . . .	484,530
Engaged in personal and professional service . . .	1,859,223
Engaged in agriculture, laborers . . .	3,323,876
	<hr/> 7,621,101

We are confident the figures introduced do not represent the number of wage-workers in 1880, and we assume that in 1890 the number will reach 10,000,000.

Since 1880 the work of organization among workingmen has gone steadily and rapidly forward. It would be vastly interesting to know how many workingmen are enrolled in the various labor organizations of the country. In the absence of authoritative figures we are left to conclusions based upon such estimates as appear prudent. Taking the figures we have given, showing the number of men in the country dependent upon their wages for support, and adding 25 per cent as the increase since 1880, we would have as the present number 9,526,376—say 10,000,000. If we increase the number of agricultural laborers 25 per cent we would have 4,154,220—or, say, 4,250,000. It simplifies the problem immensely in discussing the subject of organization to omit farm laborers, who, as a general proposition, are not in any of the labor organizations of the country. Deducting, then,

4,250,000 from the estimated 10,000,000 of workingmen, and we have as a remainder of 5,750,000 workingmen who are in a position to organize.

It is well understood that there is a large number of workingmen who are not in organizations. It is scarcely required to discuss the reason why it is so. The fact stands out in bold relief. Many reasons are assigned for it, all of which are of more or less consequence.

First. The "common laborer," by which we mean that large class of workingmen who are content with being simply common laborers—that is to say, men who perform labor not recognized as skilled labor. They are men without trades; they are not in any sense craftsmen, but are, nevertheless, important to every branch of skilled labor, and without whose work every department of skilled labor would at once be paralyzed. An illustration or two will suffice. Take architecture (house-building) where brick or stone or both are required, the common laborer is in demand—at the quarry, in the brick yard and the lime kiln, and until his work is performed the skilled workman remains idle. Take the railroad; the common laborer lays its foundation, and his work is all along the line. Is the common laborer opposed to organization? Who knows? Who has authority to speak? In all of the organizations of workingmen only the Knights of Labor have made it possible for the common laborer to enroll his name in the grand army of those who seek by organization to better their condition. This is no reflection upon organizations of trades—of callings, vocations, etc., since only fellow-craftsmen are admitted.

Second. The question, why do men of trades refuse to become members of labor organizations? is far more difficult to answer. It will not do to assign ignorance alone as the reason, though it may be assumed that it is the chief reason. Ignorant people are usually men who harbor a multitude of prejudices, jealousies and suspicions. The term "ignorant," as applied to such persons, does not mean, necessarily, illiteracy, that they are numbskulls, but rather that they are uninformed in regard to

the purposes which animate their fellow-workmen; and, being ignorant in this, they become disqualified for doing anything to improve their own condition or that of their fellow-workmen.

Third. There is another class of workingmen who oppose labor organizations who, though they are satisfied that organization is right and proper, are wanting in courage to assert their convictions. They are born cowards. To preach the doctrines of labor organizations to them is like casting pearls before swine. They are the scab element—the weak-kneed, spineless, chicken-hearted element; those whom the Corbins compel to kneel, as do camels, to receive their burdens. As a class they are the hope of such employers as antagonize labor organizations. They esteem it a great boon to be permitted by their masters to live. Decorate them as you may, elevate them if you can, educate them as you will, they are mentally, morally and physically cowards, a groveling, abject, slavish class, without independence or self-respect, and the men who would rid the world of the brave workingmen who organize, are delighted as the number of such beggarly sneaks multiply.

Fourth. There is one other class of workingmen who fully comprehend the value of labor organizations, but refrain from joining them because they are venal creatures and therefore purchasable. And it sometimes occurs that these sordid creatures are found in labor organizations as spies and traitors. They are the Judas Iscariots in the ranks of labor, they betray and always for money.

It is difficult to estimate the number of all these opponents of labor organizations, but it is large. They have done incalculable mischief.

If we assume that the number of workingmen in the United States, leaving farm laborers out of the calculation, is 5,750,000, the question arises, how many should be deducted from the number as opposed to labor organizations, and upon whom all efforts to educate and qualify them for membership are thrown away? Suppose we say 40 per cent? This would leave 3,450,000 workingmen, exclusive of farm laborers, who may be brought under the influence of labor organizations.

Of this 3,450,000, the question is, how many are organized? We do not know. It would be most agreeable to know. In the absence of such knowledge we estimate the number in this A. D. 1889, at 1,450,000. If this estimate is approximately correct, then we have the fact that there are 2,000,000 workingmen in the United States yet to be organized, men who are willing to organize, men who, when organized, will remain true to their obligations.

To get such a vast number of men into line under the banner of labor is a herculean task. There will be disappointments and defeats. There will be advance skirmishing and sometimes disastrous pitched battles, and there will be victories that will make the morning stars sing together and the sons of God shout for joy. The truth is on the side of labor, and "the eternal years of God" are pledged to the triumph of truth. Never mind the past. "Let the dead past bury its dead." The question arises, what is the present outlook? As the eyes of the labor army sweep around all the horizon, what do they behold—Workingmen supine, inert, listless? No. On the contrary, on the alert, wide awake and organizing. Standing ready to take the labor tide at the flood and move on to victory.

After organization, what? Federation. It is the logical outcome of organization. No intelligent man doubts it. No sane man, except the enemies of workingmen, antagonizes federation. After federation, what? All that labor has demanded, an honest distribution of the wealth that labor creates. Fair wages, a less number of hours for toil. The elevation of the American idea of citizenship, home and family. Then the wielding of the ballot. Just laws, honest officials, a pure judiciary, the annihilation of trusts and monopolies—in a word, the reign of justice.

Is there anything in such reflection that appears preposterous anything in the line of vagary? If so, what? The mind forces of the world are coming to the rescue, falling into line. Bismarck makes concessions to socialists, Emperor William lectures employers and commands them to be just, Lord Salisbury warns laborers against strikes but at the same time gives

employers to understand that they too will be held responsible for commotions in the ranks of labor. Europe, from Biscaya to the Bosphorus, from Lands End to Siberia, from the Mediterranean to the Arctic Ocean, is in a ferment. There is quiet, because 5,000,000 of shotted musketry are ready for blood letting if the masses demand that their fetters shall be removed and the boon of liberty granted, and yet, the spirit of liberty is growing stronger and kings are being taught that thrones and crowns and sceptres are perishable.

In the United States of America there is to be no "decline and fall" such as visited Rome. The workingmen have the ballot and armed with that weapon they will eventually remove every obstacle to progress and demonstrate that the sacrifices made and the blood shed for liberty, are rewarded.

Iowa has at last got railroading and prohibition entangled, as will be seen by the following decision:

The Supreme Court has rendered an important decision here bearing upon the enforcement of the prohibition liquor law. An information had been filed before a justice alleging that certain liquors owned by Con Creeden were kept in the Rock Island freight depot in Des Moines intended for sale in violation of the law. The railroad company was made a party and the case was tried in the District Court, and the liquors were ordered destroyed. The defendants appealed, claiming the matter became one of interstate commerce, over which the State courts had no jurisdiction. The decision of the Supreme Court finds that Creeden was a persistent violator of the law and had been receiving liquor in this way for some time, using the freight office as a storage room to keep the liquors in packages until needed. These liquors had been received from six to fifteen days prior to the seizure. The court holds that the interstate commerce feature of the transaction ended when the liquors had reached the freight house. Under the circumstances it rules that the liquor was being held for illegal purposes and was no longer a matter of interstate commerce and were properly seized and condemned.

It is said of women, "When she will, she will, and when she wont, she wont," and that is about the size of the question about men's drinking, quite regardless of prohibition laws in Iowa or elsewhere.

The eight-hour question is up for debate, and it will never down until it is established throughout the great American Republic.

THE SPIDER AND THE FLY BUSINESS.

The announcement is made that the Illinois Steel Company, whose plant is located at Joliet, has erected "a handsome club house at a cost of \$50,000 for the use of the 2,000 employes at their works," and it is further said that "*the efforts of the company to care for the welfare and enjoyment of their operatives are highly appreciated.*" We have italicized a quotation that the reader may the more readily catch on.

The club house of the Illinois Steel Company, it is said, cost \$50,000. The steel company ought to be satisfied if it could make its investment pay 6 per cent. It has 2,000 operatives who can enjoy the privileges of the club house by paying \$2.00 each—total \$4,000—which is 8 per cent on the cost of the club house, and this is the mighty "effort" of the company "to care for the welfare and enjoyment of their operatives." How long ought it to take the average "operative" to see through such mercenary hypocrisy?

We know nothing of the dimensions of the Illinois Steel Company's club house, but we assume that it is so constructed that there will be "rooms to rent" independent of those assigned the operatives, and that the investment will realize to the company 10 or 12 per cent—of which the operatives will pay 8 per cent—and this \$4,000 a year taken from the earnings of the operatives measures exactly the great solicitude of the company for "the welfare and enjoyment of the operatives." It will be noticed that the operatives pay a round sum for their reading room, lectures, gymnasium, bowling alley, hand ball court, billiard hall, game room, bath room, etc., and yet, the purpose is to impress the public with the fact that the company animated by philanthropic anxiety, puts its hands deep down in its pockets and draws forth money which it scatters with prodigal liberality for "the welfare and enjoyment of their operatives."

In all such exhibitions of piety and profits, love and lucre, christianity and chicane, a double purpose is in view. In the first place, the corporation would have the public believe that God, in His inscrutable providence, has committed the lives, for-

tunes and destinies of armies of "operatives" into their hands, and made them responsible for consequences—; that in some way God has conferred upon the corporations a divine right to rule their operatives, their employes, their workingmen. It is the old, old story, as old as tyranny, older than authentic history, as ancient as hieroglyphics, that the workingman is the rich man's slave, and that anything done for him should be recognized and accepted as an evidence of solicitude for his "welfare and enjoyment."

This accomplished, the corporation may build a club house, compel or invite the operatives to make the investment pay 8 per cent dividends, and then with an effrontery that would make a brass monkey blush, exclaim, "Behold what we are doing to mitigate the ills and woes of operatives!"

As a general proposition, here in the United States, the corporation, trust, syndicate, monopoly, or by whatever name the combination is known, is required to be a little cautious in its tactics, but every passing day demonstrates their increasing boldness to enslave workingmen, and immense headway is made when workingmen conclude that they are in any sense dependent for life, liberty and the pursuit of happiness upon the corporation, for a sense of dependence, if it be only for a bath, for a game of ten pins or billiards, for a book or a lecture, is slavery—it is not independence. It is to ask the privilege to live. It is a condition in eternal conflict with the genius of American institutions and the rights and prerogatives of American citizenship.

Austin Corbin has 35,000 men in this condition. He has destroyed the organizations of workingmen—not one of his 35,000 serfs dare to belong to an organization of workingmen. This done, what do we hear? An order that his men shall shave off their whiskers and go with their coats closely buttoned to their chin. Let men investigate from the day the first autocratic order was issued, since man was created or evolved from monkey or molecule, and nothing will be found more degrading. And what, we ask, stands between the independence of the workingman and unspeakable degradation? Does some one answer the press, the school,

the church? Here and there we hear a chirp of disapproval, but in a vast majority of cases they are dumb and as voiceless as paving stones. What then is the hope of the times? Labor organizations. Strike them down and all is lost. With workingmen organized and federated the future is bright with promise. In that case it will be demonstrated that employers are quite as dependent upon employes as employes are upon employers, and that with fair wages workingmen will provide for their wives and their children, and work out their own destiny and will scorn the patronizing drool of men whose solicitude for their welfare is that of a wolf for a lamb's or a hawk for a chicken's.

THE New York *Press* remarks, that "the American workmen by organizations, trade-unions and so on, should be able to control to a considerable extent the rate of wages paid by the manufacturers of this country. In the production of cheap foreign goods the American laborer has no control, and the foreign producer pays what he pleases (generally starvation wages) to those employed." The American workmen will be able to carry out the suggestions of the *Press* when they federate for mutual protection, and not until then.

IN dividing up the work the statement is made that Mr. Cornelius Vanderbilt will look after the interests of the Michigan Central and the Big Four systems, and that Mr. William K. Vanderbilt will attend to the Lake Shore line. The Vanderbilt system is spreading rapidly.

OF the Wabash system, 1,309 miles are east of the Missouri river and 640 miles west of that river, a total of 1,949 miles.

LAST year there were 960 funerals in Great Britain the result of that number of lives lost in mining.

THE general office of the Atlantic & Pacific railroad has been removed from Boston to New York.

STEEL rails are now worth \$28.00 a ton, and all the rail mills are busy.

The Promotion (survival) of the Fittest.

RECENTLY, several articles have come under my observation relative to what should be the rule in advancing employes to more desirable positions in their line of service. In an editorial article in a recent number of the *American Machinist*, the writer deplors the fact that the Brotherhood of Locomotive Engineers persistently contended for the recognition of the senior employé in cases of promotion. Also our friend De Sanno, in the *Locomotive Engineer* for January predicts a change from the "oldest man," to the "best man" principle. Being a railway employé myself, I shall of course discuss the question from that standpoint and with reference to that branch of industry.

In taking the side of seniority I know that I am swimming against the tide of popular sentiment because the *best* of anything, order, or condition, is first choice in the average human mind. "The survival of the fittest," is in itself a declaration that the best must take precedence. But here I must oppose the current of popular sentiment with the fact that, while the survival of the fittest may be, and doubtless is, a law of nature, it is not a law or governing principle of society. In fact the organization of society is a direct nullification or abridgment, at least, of the laws of nature. Allowed to act without the intervention of human intelligence Mr. Darwin's familiar enunciation would require that the game of life should be played under the old familiar rule of our school day: "*every man for himself.*" But here human intelligence interposes and establishes governments and organizes society. And to what purpose? Manifestly that the weaker and less fortunate of mankind may have a show for existence. Human intelligence declares for that other rule of our play days: "*one out all out,*" and when we go back to those same play days and remember who of our associates used to declare for the one or the other of these rules we shall find that it was not always the most intelligent nor the most charitable of our playmates who clamored for the rule that put the best players always opposed to the poorer and kept the latter in a subordinate position. The one view is the imperialist idea; the other the democratic. On the one side we should expect to find such people as Corbin, Livingstone, and Stone. On the other, every person who is in sympathy with those who earn their bread as laid down in the biblical constitution. "One out all out:" not of this organization or that, but out of any in the ranks of honest labor should be the declaration of all lovers of a "square deal." But I have wandered away somewhat in the field of generalities.

To narrow the question down then to something definite let us take the railway service as a basis, and since one of the writers mentioned has called attention to locomotive engineers in particular, I will confine myself to them. At the very outset however we must determine what constitutes the "best engineer," and when we have done that, I venture the information beforehand, that we shall find him to be, as a rule, among the oldest men in the service. I have always regarded continuity as being as desirable a faculty as keen perceptions, especially in railway service. The men who have an abundance of the staying quality, who hang on in the face of adversity are among the leading railroad men of the past and present. Good judgment, the absolutely necessary qualification of a good engineer can only be attained by the hard knocks of experience; and experience requires time.

My experience as an employer has not been great, but going back to my engine dispatching days, a good many of which were served during the winter months in northern Iowa, I recall to mind that those boys on whom I could depend every day were the ones that I preferred. No matter how good a man he may be, if his back gives out as soon as the turn-table begins to work hard he is a disappointment; his genius will not assist you much in turning engines. A man may be ever so successful in firing up engines but unless he shows up regularly, on time, and you have to break in a new man frequently, you would exchange him for a man who was not quite so apt on whom you could depend after he was once instructed in his duties.

Just here I want to ask who is to decide who is the *best man*? As it now stands I would be left to some of the officials of the road and, although he might be all right as an engineer, he might be a little too energetic in his support of organized labor and would of course not be considered the *best man* for the company, in many cases. Who is the *best man* is largely a matter of opinion. Who is the senior is a matter of record. It is frequently very hard for one employé to see wherein another is better qualified for a certain position than himself and hence unfriendly feelings are likely to be engendered. On the other hand it is always easy to determine who is the senior employé. In a word it is much easier to determine, far as the employes themselves are concerned, who is the *oldest man* than who is the *best man*. And, in the promotion of the former *esprit de corps* is stimulated while the latter the reverse is likely to result and it is the opinion of the writer that the time is now ripe when people whose necessities compel them to work should entertain the most friendly feelings toward each

other. If the *best man* could name his price he might, so far as least, as pecuniary considerations are concerned, be oblivious of the condition of his fellow men. But it has been demonstrated, so far, at least, as the locomotive service is concerned, that he can not. The *best engineers* and firemen were none too good for the C., B. & Q. system until they introduced the question of pay: then *anything* would do.

Orators and writers are prone to exhort us to aspire to the top round in the ladder of fame or excellence. To this I do not dissent provided the aspirant has due regard for the rights and welfare of his fellow men. It would be very unsatisfactory to me to look down after attaining this lofty position and see my collaborators heaving away at the foot of the ladder. It would be better, I think, for me to descend a few rounds, and even go so far as to distribute some of the fruits to be gathered from my lofty position among the "crowd" below, or perhaps 'twere better that I had not climbed so high than that I ascend to the top and have my dissatisfied brethren give me a tumble.

The *best engineers* in the country can not maintain wages unaided. Under a system that only promotes the best men, those who are relegated to the rear, when they see themselves constantly losing ground, have but one means of regaining or maintaining their places and that is by underbidding. And when worst comes to worst, they will do so. Under the present rigid discipline there is little danger of any *inferior class* engineer getting to be very *old* in the service.

Just imagine, if you please, one of those "*best men*" at the top of the ladder. He is picking apples. He picks one for the "*old man*" who owns the tree and then one for himself. This he eats and throws the core down to the "*crowd*" at the foot of the ladder and says, you fellows might as well go away; you don't know enough to pick apples; you may be all right digging potatoes or grubbing stumps, or doing anything else on the ground; but this position is too lofty; you would get dizzy up here. After having delivered himself of this cheap piece of information he continues his apple picking and begins to fill his pockets. "Hello!" says the old man. What are you going to do with "*them*" apples? Take 'em home for my wife and children, says the "*best man*." Can't you get along without apples for your family? No sir. Come down, says the "*old man*"; I'll get some one who can. Down comes the "*best man*" and up go the crowd; two or three to the top at once.

Mr. "Best Man" lays around until his small stock of apples "plays out," and himself and family go without any, for a while, and then he goes back and takes a position *as near* the foot of the ladder as he can.

Now, it is the system that will have a tendency to keep the "crowd" from going up the ladder when the man at the top comes down unless they can do so on the terms demanded by him, that I favor. Let the successful ladder climber say boys, the best thing you can do is to stay here and attend to business and though you may not be getting along very fast your turn at the top is sure to come. The "*old man*" has more fruit coming into bearing every year and he will likely have use for more ladders soon and you are all right if you stay by the "*old man*." You need not be a bit afraid of "falling down" when you get up here; all you want is confidence in yourself and plenty of "nerve." Of course there are a good many things that you can see from up here that you can't from down there. Of course, we have certain duties to perform up here, the same as you do down there, and if a man can not give satisfaction he of course can not object to letting the next man on the list have a chance to try. I can't guarantee you success but I am bound to see you have your right to a trial respected.

How would some of those "*best men*" fellows like to knock through eight or ten years building and perfecting a line of road, contending with cold and snow, bad water, unrepaid engines and long hours on duty. At one time, more work than he can stand; at another, none at all; and then, when the company gets ready to put on regular passenger trains on which he could make about seven days in a week with every night's rest and be at home over Sunday, have one of those *good men* who can get a job anywhere, and who has had a job almost everywhere, and wont go out unless the engine and weather and track are just about so, come along, and, just because he has had a little more air-brake experience than you have, and has the mechanical vocabulary at his tongue's end, take that passenger run. They, nor you, nor any one else would like it. Even the man who took the run, if he was a man in any other sense than a mechanical one, would feel guilty. But that is the best man principle to a demonstration. One of the best arguments in favor of seniority is that it is satisfactory, both to the men and management. There has never been any great trouble, to my knowledge, in making schedule regulations, in settling this point. Of course the company usually reserve the right to deviate from the rule in special cases, but they seldom do, except for good reasons. I am heartily in favor of every one putting forth his best efforts to improve. Knowledge is a nice thing to have even if it does not take one to the top of the ladder at once. It makes a man feel a little more secure in his present position.

A. H. Tucker.

CHILLICOTHE, Mo.

A Winter Night.

Is a fearful night and the wind is high.
The mercury falling far below.
And fearing the cold, instinctively I
Make sure with the quilts and the buffalo:
For the cutting sleet and the blinding snow
Are pelting against the window pane
As if King Winter would have me know,
By the old trees writhing to and fro,
That he has not ceased to reign.
And snuggled away 'neath the covers warm.
Well may I defy the howling blast:
But what of the men who out in the storm
Shrink not from the duty that holds them fast?
In a moment's lull I can hear the last
Faint sound of a whistle far away.
And I think of the men whose lots are cast
Where so many dangers must be passed
As they speed on their perilous way.

The sound of that whistle brings to me
Reflections I can not quite conceal:
For in my musings I plainly see
An engine dash on its path of steel,
And know that the motions of rod and wheel
Are under control of a trusty hand:
And the beams from the furnace door reveal
Another whose duty is to deal
The coal at the fire's demand.

And out on the swaying slippery cars
As they rumble down the Evona Hill.
By the light of their lamps,—dim, wavering stars—
Obeying the signals loud and shrill.
The brakemen work with an earnest will.
From cab to caboose, there is work for all.
And the truly brave are the men who go
Where their duty calls, though well they know
How certainly some must fall.

For well do we know that none can tell
By a railroad man, though good the run.
How long to insure him sound and well:
That the trip in life and health begun
May not prove to be the closing one:
A broken rail or a misplaced switch,
A flaw in a rod or a signal wrong,
Or the track washed out as they rush along,
And the train goes into the ditch.

Yes, I always think, be it snow or rain,
Of the rough, irregular, perilous life
Of the sturdy men on the midnight train,
With its myriad unseen dangers rife.
The soldier is praised for gallant strife,
The hunter for exploits wild and bold:
And I've heard the praises of sailors sung
And the chiming bells for the statesmen rung
And the miners' stories told.

But sing to me of the railroad men,
The brave, unfaltering ones who serve
The interests of home, and often when
I know I should shrink and swerve.
The men with steady, metallic nerve—
Of such I would have you sing to me,
And gladly would give them my fondest verse
Their perilous duties to rehearse
In measures faultless and free

STANBERRY, MO.

Geo. W. Hall.

The Heroism of Women.

HEROISM is a fruitful theme. Orators and poets select it frequently and make the most of it. We do not object. In eulogizing heroes, physical or moral, panegyric is seldom overdone. A real hero is one upon whom admiration may be bestowed with good results to all concerned, in fact, the hero is not so much benefited by it as those who have the capacity to appreciate noble deeds, great sacrifices in the interest of others. The trouble is, in a majority of instances, that real heroism

passes unobserved, unheralded to the world, and this is conspicuously true of the heroism of women. It requires a Joan of Arc, a Florence Nightingale, a Ruth or an Esther to arouse the world to the fact that heroism is not confined to men, but that women as well as men, possess the qualities of courage and fortitude, that they too can do and dare, make sacrifices and bear patiently all the ill-flesh is heir to as uncomplainingly as men, and stand every crucial test that fate may decree, with a firmness as masculine as the inquisition ever witnessed. In our readings we find the following in regard to "Heroic Mothers," which we reproduce because it is pertinent, demonstrating beyond cavil the heroism of women:

On the continent poor students are as frequently to be found as in Scotland, and in Vienna they form the majority. A good number of mere boys may be seen running about from one end of the city to the other, giving lessons while they are themselves still pupils of the gymnasium (the continental grammar school), and of the university students at least two-thirds are defraying the expenses of their studies out of their own earnings. This works satisfactorily so long as the minor examinations have to be passed, but when the students have the doktor-examen, or the state-examen, before them, assistance becomes necessary, as studying hard and cramming others have proved to be incompatible. In such cases the poor mother or the sister, perhaps a seamstress or a dressmaker, or may be the bride elect, who is also dependent on needlework, will for months strain her eyes and work her fingers to the bone to allow the candidate, who is the pride of the family, and may in days to come be its support, to devote himself entirely to his books to prepare for his examination.

The son of one poor widow was such a candidate, and while he was diligently applying himself to his studies, the final examination being very near, the mother deprived herself even of the pleasure of seeing him. One evening some four weeks ago the poor old woman pricked her finger with a needle. Soon her hand became swollen, and the woman sought medical advice at a hospital. There she was told that the finger must be amputated, and she insisted upon the operation being performed at once, so that the accident might be concealed from her son. Twenty-four hours later the whole hand was gangrenous and had to be taken off. Not a whisper of this misfortune was allowed to reach her son's ears.

At last the examination day for the doctor's degree arrived. The young man left for the university after taking a hasty farewell of his mother, and he had hardly quitted the house before the doctors arrived to amputate the arm of the silent old sufferer. It was at an advanced hour of the day when the son came home radiant with joy to tell his mother that their days of anxiety and want were at an end; that he had passed with honors, and that it would now be his turn to provide for his parent. But the one to whom he intended to communicate his joy was no more. Even the last operation was made too late, and blood poisoning was the consequence of her endeavors to hide her pains from her son.

In the foregoing we have a picture of a mother's devotion which, could it be placed upon canvas by the hand of a master, would at once take its place among the masterpieces of art of the world.

Possibly some one may say that the incident in the life of the Austrian mother is overdrawn, that it is fanciful rather than real, or, if true, is an exception to the rule. If such objections should be urged the objector would at once demonstrate his ignorance of the strength of a mother's love, and

his total unfamiliarity with the nobler traits of women's character. In the great majority of cases women become heroines in the hush and quiet of obscurity. Their fortitude, their sacrifices are not heralded abroad. They watch, they wait, they pray and suffer unnoticed and neglected. They bear their burdens uncomplainingly and when the silver cord is loosened, monumental marble does not recite their deeds nor perpetuate their memory. In this, as in many other regards, the world is unjust, and chiefly because the blind bigotry of men will have it so. If the world could know the truth of the heroic deeds of women, there would rise up a noble army of men, who, were it required, would make "bricks without straw" to build them monuments as imperishable as the "everlasting hills."

Francis Whitman.

True and False Success.

We do not choose our part in life, and have nothing to do with those parts. Our simple duty is confined to playing them well.—*Hillard.*

IT should be remembered that success in life is to be regarded as a means not as an end; and that therefore there is such a thing possible as unsuccessful success—such a thing as gaining every end, while the whole life has been a failure. For what is this success to which we have been trying to point out the path? Viewed in the light of another world,—of that measureless existence compared with which this earthly one is but a point, what is it, after all, but a comparatively vulgar, paltry point. Is it anything for which a man should crawl in the dust, degrade himself in his own estimation, do violence to the divine principle within him, or stoop to the smallest mean or dishonorable action? Is life a scrub race, where, at every hazard, though you have to blind the man on your right and trip the one on your left, you must struggle to come out ahead? Shall we subscribe to that dangerous materialism running through American life, which preaches that money is the great end and evidence of the possession of intellect, that a man must be a failure unless he culminates in the possession of a check-book—a belief worthy only of a people prepared to accept "Poor Richard's" maxims as a New Testament? Were we sent into the world simply, in the slang phrase of the day, "to win a pile?" And when we have a competence, shall we sacrifice health, peace, conscience, that we may boast of our hundreds of thousands, though we know that incessant fear and nervous anxiety are often the shadows that surround the glittering heap? Is it nothing to have a conscience void of offence, a face that never turns pale at the accuser's voice, a bosom that never throbs at the fear of exposure, a

heart that might be turned inside out and discover no stain of dishonor? Perhaps you regard popularity as the great test of success, to be the focus of all eyes, "the observed of all observers." Then you live a life only in others' breath, your happiness depends on every turn of the weathercock; you are at the mercy of every wind that blows. Are you the lion of to-day, because you have burnt the heart of the world with your ardent soul? I am the lion to-morrow because I balance myself on a wire over the dizzy chasm of Niagara, and you are quite forgotten. The confounding of excellence with pecuniary success, is both absurd and immoral. Was the divinest life ever lead on this earth a success humanly speaking? And are you entitled to pronounce your fellow-man, who has humbly tried to copy it a cipher, because he has not, like you, courted applause, and made some nook or corner of the earth ring with his name? Has not many a man been a blessing to the world who has made no noise in it, and who has died a beggar? And have not thousands died rich in goods or reputation, who were intellectually and morally bankrupt. It is not too true of the road of ambition, that, as another has said the higher it ascends the more difficult it becomes, till at last it terminates in some elevation too narrow for friendship, too steep for safety, too sharp for repose, and where the occupant, above the sympathy of man and below the friendship of angels, resembles in the solitude if not the depth of his suffering a Prometheus chained to the Caucasian rock?

Whatever you will pay the price for, you can have in this world—that is the rule. Be rich or popular, if you choose, bringing all your faculties to bear upon one point, and letting your intellectual and moral nature lie fallow. But do not arrogate too much on the strength of this vulgar success; do not expect admiration and applause, or even a tacit assent to your claims, from those who are accustomed to look below the surface. Do not deem yourself authorized to pity those who prefer incorruptible treasures to a balance at their banker's,— "the pearl of great price" to the jewel that sparkles on the finger—and who have been successful as men, though they have failed as lawyers, doctors and merchants. The possession of 5-30 bonds, mortgages and corner lots does not always and necessarily reward virtuous industry; "a book, a great work, an architect may owe success simply to the bad taste of the times; and, again, non-success in any candidate may arise from a conscience too clear and sensitive, a taste too good and too nice, a judgment too discriminative, a generosity too romantic and noble, or a modesty too retiring." There is no possible valuation of human character which would

make the slightest show in the stock-list; and hence success, truly understood, must be sought, not in what we have, but in what we are. All experience shows that the greatest and most continued favors of fortune cannot of themselves make a man happy nor can the deprivation of them render altogether miserable the possessor of a clear conscience and a well-regulated mind. An ingenious writer has even written an able book to prove that no change in any man's external circumstances, bating the case of absolute indigence, can alter a man's essential feelings of comfort and happiness for more than three months. Such cynicism, which if universal would put a sudden stop to all the wheels of the world's industry, can have but few converts; men will continue, in spite of the croakings of moralists, to crave and toil and struggle for the world's prizes; and it must be confessed that in spite of all drawbacks, success, even in this vulgar sense, is a desirable thing. Money, and a pleasant home, and freedom from economical cares, books and pictures, the society of cultivated and elegant men and women, the respect of the world, and the best viands, all are solid advantages, which none covet more than those who affect to despise them. Life is certainly a journey and a pilgrimage, but "if it were only a journey of a single night, traveling first-class would be incomparably more comfortable than traveling third." It is therefore a great saying that "heaven is probably a place for those who have failed on earth." Do you ask, then, what you shall aim at in life? We answer: Aim to act well your part, for therein lies all the honour. Every man has a mission to perform in this world, for which his talents precisely fit him, and, having found what this mission is, he must throw into it all the energies of his soul, seeking its accomplishment, not his own glory. "Man is not born to solve the problem of the universe, but to find out what he has to do, and to restrain himself within the limits of his power of comprehension." Having found out what you have to do, do it with all your might, because it is your duty, your enjoyment, or the very necessity of your being. Are your intellectual endowments small, and do you despond because your progress must be slow? Remember that if you have but one talent, you are responsible only for its wise employment. If you cannot do all you wish, you can at least do your best; if there be one thing on earth which is truly admirable it is to see God's wisdom blessing an inferiority of natural powers when they have been honestly, truly and zealously cultivated. Remembering that the battle of life cannot be fought by proxy; be your own helper, be earnest, be watchful, be diligent, and, if you do not win success, you will

have done the next best thing,—you will have deserved it. Is your calling one which the world calls mean or humble? Strive to ennoble it by mixing brains with it. Show by the spirit that you carry into it, that to one who has self-respect, an exalted soul, the most despised profession may be made honorable; act with common sense according to the moment is the best wisdom I know, and the best philosophy to do one's duties; take the world as it comes, submit respectfully to one's lot, bless the goodness that has given us so much happiness with it, whatever it is, and despise affectation.

G. H. Whitney.

"Kissing Mother."

IF there's one thing on earth that I enjoy, and that is not among the many regrets, that one thing is the yet fresh remembrance of a cloudy, murky Sunday afternoon when I knelt down to have my last talk (as it proved) with my dear old mother, then over 80. She was only sick for a few hours then, and she felt that her time had come. After saying what was nearest to her dear heart she folded her hands on my head and invoked the good God's blessing on "her boy" for his tenderness and care, and a few hours later, all unconscious she drifted out and away from earth and her long troubles and few joys, with a supreme faith that she should again meet "her boy," and the jotting by "Kittie Wadden" has reminded me of some of the phases of my own life, as well as what I've seen in my hospital and private practice before the medical was abandoned—and so I've sort of gone over the ground, raking over the coals, thinking of many things I wouldn't care to mention and of others that may be said impersonally, in hopes of making the lot of some sweetheart, wife or blessed old mother happier.

People in the enjoyment of health and vitality do not think often of how little it requires to make a half invalid supremely happy. One of the worst shocks I ever had in my life was to hear a so-called remark of his mother that "she had outlived her usefulness." I could have killed him with no more compunction than a snake, but the law recognized the thing as a man (smallest "m"), and so he lived. He had married another * * * and she, instead of treating the mother tenderly during the few years left to her, did not really abuse, but she did far from making her lot happy. Having thus accidentally learned of the situation I called on the lady frequently and found her an educated woman of the keenest temperament—sensitive, loveable. Left a widow, she toiled with two children, a son and daughter. In later years she became partially paralyzed

from lifting her dear, ungrateful son when he was sick unto death, and so became compelled to sit in a chair.

"Kittie" evidently writes from the heart. Let us hope she will never know other than true love from "her own." Imagine the mother—who listens to all your lame excuses, torn clothes, bruised shins, toes, head, burnt back, and then uncomplainingly sit up half or all the night to fix up—repair—and gets up bright and early so you can be on hand at work or school—sick herself—and you never stop to say a pleasant word, and in the "home coming" you never kissed her in your life, and her heart is hungry for "love." Hadn't she given it to you, (ungrateful as you are) in your younger days you wouldn't exist to-day; and how many men scold, growl, snarl from the time they go in until they go out of the house, when if they only had the horse sense to go up and just put their arm around mother's neck, kiss her and hug her, she would be happier each day, and the same dose given your wife will be in many cases a surprise party to her—I don't charge for the prescription—and it will brighten her up wonderfully. Now, Jim and Sam, you just try it, and instead of buying a glass of beer or a stinkere cigar just go by the florist's on your way from the roundhouse and buy her a couple of pinks or rosebuds, and put them in the top of your hat if its cold. When you get home put them in her hair, just as you used to do when you courted her. Try it, and see if she don't look prettier—see if it don't help her get the work out of the way. If you try it for a week she will watch for you; and suppose a smash should come and you couldn't kiss her when they took you back, what do you suppose she would think—either of them—wife or mother?

We leave our home (if we have one), wife or mother—I've neither—and go about our work and go back unconscious, or find them so—will it not make life easier to leave, or live to know our dearest ones loved us only one day ago. There's a great difference between "possession" and "anticipation." Wife sometimes ruins the home or abandons it; man often grows neglectful, selfish or imagines that he owns "her," and the two are frequently made very miserable by the innovations of the mother of one or the other, but a man can love his mother and his wife both truly, and the one who causes trouble is not true in his or her love. Life at the best is too short for a battle. We should live hopefully, lovingly, and whatever else may come or go, love your mother tenderly. Never let her feel she is a burden. Kiss her dear old face and be sure that her blessing is beyond price, and that her love is second only to that of our Saviour.

The mother love is beyond comparison of the wifely love, and yet both are sacred. The mother loves beyond life, and she is true to the child in and under all circumstances, and if God forgives us as many times as does mother then we may almost be sure of heaven. The mother's work as mother, tends to bring an early old age in many cases, and son or daughter who can or does speak harshly, or who can or does make mother unhappy in her old age or when she cannot be active—such cases let us hope, are in the minority. The maternal function in women hastens early old age in many cases because of the husband's actions while the *mother work* is being done. Men in most cases do so ignorantly, let us hope; and then that the woman should suffer in years to come for this seems to be asking too much—yet how frequently does it occur.

Be choice and tender of a girl, sweetheart or wife, but when approaching signs of motherhood are recognized be then more tender, patient, loving and sweet. When her work is done and the silver betokens age and "the rest that remaineth" then, as you value your life and Christ's promises, "kiss mother" as often as ever you can—let her feel that "her boy," whether he pulls a lever, throws coal or does any other honest work, has a heart for mother and a home for mother as long as both live. Never let the recording angel put down an ugly mark to your debit on the big book, "hurting mother's feelings." Kiss the dear old face, make her smile, and when she says "good-by" finally if she can only "bless her boy" it will make your own life brighter and in your own troubles you can always look back and be glad that "mother" was never sorry for any act of "her boy." Tenderness and mercy was the message of our Saviour to all men—"As ye mete so shall it be measured unto you." We do not obey the law and then we rebel, because we get just what we have given. Isn't that so?

An Engineer.

HER IGNORANCE OF POLITICS.—"James," said the horror-stricken wife, as her husband came slowly limping in with one arm in a sling, his jaw tied up, one eye bandaged and the largest nose on his face she had ever seen, "what in the world is the matter? What accident has happened to you?" "Nancy," mumbled James, who had just returned from a quiet Democratic primary in the 11th ward, "go to bed. What in thunder do you know about politics." —*Chicago Tribune*.

FREDERICK DOUGLASS told a reporter of the *London News* that there were 4,000,000 negroes in this country at the time of the emancipation, and that he now estimates the colored population at 7,000,000.

The Tour of the World Without Money.

Charles Thorne, an adventurous young man, has mapped out for himself a tour of the world without money. As you read this Thorne is probably stowed away in one of the freight cars bound for the booming West, for he started on Saturday night on his long journey, and his plans included the Pennsylvania route, and one of its best freight-carrying cars. Thorne has traveled great distances in his time, he says, and his selection of any car after examination is a guarantee of its completeness in well-turned wheels and light-running trucks, so that officials of railroads which he may select to use during his trip may feel highly complimented. Thorne is a pleasant-faced fellow, about twenty-six years old, and shows in his conversation and manners a vast amount of determination and grit. He is well educated, talks knowingly about every country on the globe and the characteristics of the inhabitants thereof. He pays America a graceful tribute when he says, as he did to a reporter yesterday:

"I know I shall reach 'Frisco all right, for I can easily travel on American railroads, for if I get hungry fifty people will feed me

as soon as I ask it. It's in Europe I shall have to fight the hardest battles of the trip."

The circumstances which led to the journey just begun are peculiar. Thorne landed in this city from Liverpool about a month ago, accompanied by two friends. While in an up-town cafe, a few nights ago, all three fell into an argument as to the ability of any one journeying around the world without paying a fare. Thorne declared he could do it and do it in four months. One of his friends was dubious, the other trustful, and a bet resulted between the two that Thorne could not accomplish the trip within the time named. It was agreed to pay Thorne for his trouble if he encircled the globe without money, whether it takes him four months or four years.

The young man speedily set to work to map out a route, and with his plans carefully scheduled and a serviceable outfit of clothes, hat and shoes, was ready to start. From San Francisco he will stow himself away or work his passage to New Zealand, thence ship for some Chinese port and journey through the Balkan pass to Russia, thence to Germany, down the English channel to England, and ship from there to this city.—*New York Dispatch.*

Freaks of Indigestion.

TOTHER night to Pluto's regions, at a speed surpassing thought,
My poor self, despite remonstrance, on a wild cat train was brought;
Down I went through dismal tunnels, passing China on my route,
Where the natives dine luxurious on a cast-off cowhide boot;
Where the rats and mice and vermin are the Pigtail's daily food,
Ere they leave the Flowery Kingdom and upon our shores intrude.

It was melancholly riding, not a streak of light was seen,
Till a scabby looking trainman sung out loudly, "Fiddler's Green!"
Here a stop was made a second—just a second and no more,
To kick off some train dispatchers whose conceited days were o'er.

Next we sped by Hell's Half Acre—'tis a little spot of ground
Where some engineers and firemen in a painless state are found—
Curving round a jagged mountain, where the flames were leaping high,
I began to notice objects and some painful ones did spy.

Yet we never paused an instant till we reached a level plain
With a mammoth union depot into which we ran the train.
It required no stretch of fancy the locality to tell,
For a blind man with his nostrils might be sure that it was — Well,
I sincerely hope my readers may ne'er find the cursed place,
For 'twill always be a damned spot, terrorizing Adam's race.

What a din of countless voices was resounding in my ears!
I surveyed the crowd a moment but I saw no engineers,
Not a solitary fireman, nor a brakeman was there nigh,
But, oh Lord! a million other railroad dudes I did espy!
And I thought I knew some faces—boys who played the game alone
A few years ago with vengeance, so they clamber near the throne.

I saw half-a-dozen wipers with fingers light as air,
Boys who picked my cab locks nightly, taking things I couldn't spare ;
I saw many superintendents of the good old days gone by,
Who expected when they'd pass us on our faces we should lie ;

I saw several directors who had schemes for getting rich
Paying scrip to us who labored, that was troublesome as itch ;
It was sure to keep us scratching round among the men of trade,
'Twas a miserable existence 'neath their management we made.

I saw preachers there distracted, who in pulpits foamed in rage,
And denounced their congregations as pariahs of the age ;
Sure enough the devil had them, yet I-marveled much, because
I supposed a crown of glory was for all who preached God's laws !

I saw demagogues in thousands who were never known to toil,
But kept hourly agitating that all honest wealth was spoil,
That all things should be divided so they'd get an equal share ;
Judging from their wails of anguish, heaven heard at last their prayer.

There were many red-nosed toppers who drank days and nights on earth,
Never thinking of their children or the wives who gave them birth.
I saw bigots of all nations, who went round the land like bulls,
Whose contracted hearts were harder than the Ethiopian's skulls,
Fiends, who spent their days proclaiming heaven's vengeance swift and strong
Would be dealt to those who didn't to their narrow creed belong.

I saw sights surpassing Dante's I am powerless to describe,
For before my startled vision moved full many an anguished tribe ;
My descriptive pen is feeble such fierce tortures to portray,
Oh ! I made Herculean efforts from that place to get away,
Till a sad, heart-rending wailing burst upon my startled ear,
All my teeth began to chatter, and my eyeballs shook with fear,
And a strange, unearthly figure totter'd up to where I stood,
Asking for a drink of water to cool its boiling blood !

I surveyed it but a second, and what startled me the most,
Was its fierce articulation, tho' it seemed to surely roast !
There it pleaded in a language that thrilled through my heart and brain,
And beseeched me not to leave it till I'd help to still its pain !
I inquired its name—it told me that John Livingston 'twas called,
In the stupor of astonishment I stood almost appalled !
All my old-time indignation, which I felt in days gone by,
At the sufferings of the creature from my bosom then did hie.
With an honesty of purpose and a moisture on my nose
I conversed with it as follows, telling how I'd ease it woes :

" I'll go fetch the Arctic Ocean and a dozen icebergs here,
And I'll labor hard to chill you, for you loved an engineer.
If old foes would now behold you for an instant in your grief,
How they'd dive down here in thousands till they'd give you some relief !
They'd be sure to come barefooted, if they kept their cowhides on
They might kick up quite a shindy for the days now past and gone—
There ! don't cry ! I didn't mean it, you are suffering enough,
And I really feel quite sorry, for your lot is pretty tough.
I'll be back here in a jiffy, now keep still till I'll return,
Tho' you were a mischief-maker, it's too bad to see you burn."

From its presence in a hurry round I started to arise
And awoke from out my slumber filled with horrible surprise,
For the caller he was thumping like a thunderbolt, the rogue !
And bewailing his exertions in this fluent Spanish brogue :
Arah' what the devil ails ye ? Are ye tongue-tied in the bed ?
If ye don't get up, be jabbers, I'll go back and say yer dead !

—*Shandy Magazine.*

MECHANICAL.

Communications relating to Locomotive Running, Firing and Management and other mechanical topics, are solicited for this Department.

Contributors are requested to be brief as possible, to write on one side of the paper only, and to forward copy so as to reach the Editor not later than the *tenth day* of each month.

Some Answers.

MR. EDITOR:—After a year and a half of absence from this point, I again address the dear old Mechanical Department from here, where I made my first appearance as a contributor, which led to a succession of articles which have been sent out to record facts and fancies, truths and errors, as they were impressed on the mind of the author by such research and investigation as came under his observation.

Ill health and hard work kept me for a long time silent, when I felt that I should write at least one article of explanation, but feeling as I did, as if the grave lay just before me, I could never gather courage enough to concentrate my mind on the subject of mechanical topics. This is changed and I now seat myself in the enjoyment of good health, to meet with the readers again.

First, one year ago I contributed an article on lame engines and how to find and remedy the difficulty. I took great care and a number of months of study, as to how to illustrate and finally adopted the plan which appeared in March, 1889, *Magazine*, and in which I made such an error that I had an attack of the blues which lasted me a month or more.

"Vulcan," ever generous and considerate, finds sufficient cause for the mistake (April, 1889, *Magazine*, page 311) in the fact of my having to devote thirteen hours to my duties as hostler and seven or eight to sleeping. How much more would he find cause for the error had he been in full possession of the facts? Sick, but compelled to work as long as I could drag along, coughing like a confirmed consumptive, my wife was stricken down with a severe illness and I had to forego my sleep to watch by her sickbed, and thought it an excellent time to write my article; so between trips for medicine, or the doctor, I made my illustrations one day, and prepared the explanations that day and the next; for sleep I secured two hours of fitful slumber each day, and with work and anxiety mixed with valve motion, is it any wonder I wrote it backwards? When I secured the March advance copy it completely crushed out all courage to see what an error I had recorded, not from lack of considering the topic, but from over attention to other topics.

"Jim Dooky" asks (May, 1889, *Magazine*,

page 408) if my mogul had an extension front and as to the size of fire-box. As I said in a former article, she was equipped with extension front and straight stack. 17x24 cylinders and fire-box sixty-eight inches inside in length, also with a brick arch; her nozzle was single 4½ inches in diameter; she afterwards became the terror of the road to extra firemen. "J. D." facetiously remarks that in the latter part of my short leg article I must have had my feathers rubbed the wrong way, and so I did, as I have explained above, but to "J. D.'s" query as to the tableau, I will say that the man who could not regulate his pump or injector long enough to search out this difficulty as explained, must be one of those engineers who grew and was mislabelled when planted as an engineer sprout.

I find that I have to thank W. A. Gore for illustration of dead grate and brick arch in April, 1889, number. Our engines here have the arch but not the dead grate.

Now we come to questions nearer home. "W. L." asks why does an engine slip running down hill with the throttle shut off, which has called forth some comment. Bro. "Vulcan" calls it "W. L.'s" unique experience, and Mr. Wm. E. Lockwood explains it by the counterbalance. This experience, unique as it may appear to some, is nevertheless a positive fact and is occasionally met with, but is a rare occurrence and has fallen under my observation only four times, one of which was a 19x22 Roger Mogul in freight service on the M., K. & T., engine 130, she was as smart as a whip and I have seen times, on a wet rail, when she would slip running down hill with throttle closed until she was reversed, or the sand level opened to make her take hold. Another case occurred here, but I never rode on the engine to see it, but have it on good authority. A 17x24 Blood engine—we have only two of them on this road—used to cut this peculiar caper and no one seemed able to account for it. This engine, like the 130, was as smart as lightning, and it was a common occurrence for a hostler to put her clear over the table and yet, for all of this great tendency to slip on the part of these engines, when they had their train rolling, the throttle could be pulled out and they would fairly fly with the train without any apparent slipping. Why is this?

I agree with Mr. Lockwood to a *certain extent* regarding this phenomenal condition. The counterbalance must have some effect but I think there still remains one or more unexplained factors, one of which I believe to be atmospheric pressure. "Vulcan" says in February *Magazine*, as I perceive to the advance copy, in answer to Mr. L.'s reply Mr. Lockwood's answer that it is owing to the imperfect counterbalance, does not answer the question why they should slip 20

ing down hill without steam, for certainly, according to Mr. Lockwood's theory, the wheel could only slip during a portion of its revolution, for during the other portion, the increased force (hammer-blow) would take such a hold as to make slipping an impossibility." It seems to me that "Vulcan" here failed to consider one point, namely, that the usual force of steam pressure on the piston with its downward pressure on back end of main rod, is absent when running shut off and that the weight of the rods as soon as they pass the back center assume a lifting, throwing force, having a tendency to *increase* the slipping if already commenced, instead of stopping it; still, I do not think this the entire solution of the proposition, else *all* engines would slip when running at high speed shut off.

Anybody who has ever observed the effect of a relief valve knows that the cylinder of an engine is, to a certain extent, converted into an air pump as soon as steam is shut off, then without the relief valve, as the piston rushes forward a partial vacuum is created in the cylinder behind the piston; when the piston comes back the same operation is performed in front. The pressure on complete vacuum would be 14.7 pounds, on partial vacuum a fractional part of that pressure, according to the extent of the partial vacuum; and here I believe we have a solution of another condition to assist the imperfect counterbalance in producing this almost incredible condition of affairs, as all know it requires much less steam to move some engines than others, and all agree that it is owing to the valve motion. I have taken some engines out of the house and over the table with ten pounds of steam pressure and the gauge correct too, when others would scarcely move themselves with forty, and as it is the smart valve which requires least pressure and the smart engine which slips without steam, it seems to me that the often recurring partial vacuum created in the cylinder by the piston's travel, produces *power* which "Vulcan" says it always requires to slip the wheels, so the throw of the counterbalance followed so soon by the throw of the rods might have a tendency to so far lighten the adhesion that this, so far unmentioned power would exert its influence to such an extent as to cause slipping, which, once commenced, would continue, as the power would not only be continued, but would be more rapidly produced by each succeeding revolution and could only be checked by producing adhesion or checking the power in some manner. I have one instance which causes me to think there is some weight to this, *if only the weight of air*, namely: In one instance, I was with a man on the 130, and when she started her caper he cursed her and opened the cylinder cocks, and strange as it may

appear, the slipping soon ceased, so to me it seems that "as thin as air" is not as thin as might appear at the first glance.

I noticed some months ago quite a discussion as to whether an engine could or could not draw smoke and cinders into the cylinder when running shut off. I will say it is not only possible but on numerous occasions cylinder heads have gone where the woodbine twineth from this identical condition.

"Boliver" says: "The boys had an argument as to the way a spring broke, going down or coming up," and submits it to the *Magazine* for a correct answer. As it ever takes pressure to rend articles of strength. I will say the spring is broken going down and will try to give my reasons for so stating. The boiler of an engine is placed in a frame on which the entire weight rests. We have then an equalizer fulcrum, or as it is frequently termed an equalizer stand, bolted securely to the frame, an equalizer attached to this, at either end of which is a spring hanger attached to a spring; the other end of a spring is attached in a like manner to the frame by another hanger and by this medium the weight of the engine is conveyed through the spring to the driving-box, the spring resting on the spring-saddle and the saddle, in turn, on the box. The springs so used, vary in size and strength according to the weight they are required to sustain, which is, when standing still, some thousands of pounds. Each spring in a four-wheeled connected engine sustaining one-fourth of the effective weight of the engine, as you run along over rough joints and bad track the concussion of the wheels striking the bad places creates a rebound which throws the weight of the boiler *up*, releasing a portion of the tension of the springs and then gravity asserts her sway and down comes the boiler full tilt adding force to weight thus increasing to a great degree the pressure on the spring.

If, in running over very bad track, just at the time of striking a low joint, gravity should lose her hold on the boiler, it might be thrown out in the country, kicked up like a football, or ascend like a balloon, *leaving the wheels* to battle with the low joints alone, but there would be no danger of breaking the springs as they would be lifted away from the saddles and could not have any pressure against them but the pressure of the atmosphere, 14.7 pounds to the square inch, and as they are built to resist thousands of pounds of normal pressure and ordinary concussion I am inclined to think that here the usual expression, "thin as air," will suit to perfection.

"Vulcan," in commenting on my December article says he is sure Mr. Hartman would prefer honest controversy to tamely accepting what he says as a fact without in-

vestigation. When I said those who were engaged in that controversy might wonder at their temerity I did not imply that it should be accepted without investigation but I did imply that when a man began as Mr. Hartman did, at the bottom, carried research and investigation to such a degree that his talent and knowledge secured him a position in a school of polytechnics, which he filled for several years so creditably that a company as world-renowned as the Westinghouse Air Brake Company should select him as the man qualified to take out their Instruction Car to make a circuit of the labyrinth of roads of this continent, to give instruction to the men in the various departments on these roads, his combining theory and practice must be developed to such a degree that his liability to error was reduced to the minimum and when he made a statement which did *not* accord with our ideas, it would be well to *make an immediate and thorough* investigation to see if we had for such a length of time been laboring under a false impression.

And now I will close hoping these few lines will, to a certain extent, perform the duties of an

Eccentric Strap.

GALVESTON, TEX.

Review of the Reviewers.

When I commenced my series of articles on horse power and steam, I did not expect them to be accepted by everyone without objections; for there is nothing new brought out, but that many are ready to condemn it until they are forced against their wills to believe and accept. And not wishing to monopolize too much space in your valuable *Magazine*, I could take no notice of any criticisms until now, and will try and be as brief as the exigencies of the case will admit. But what I have written being a novel way of looking at things, requires more argument and illustrations than topics that are more familiar.

Traction. In answering my question on this subject, "Vulcan" is not inclined to believe a loaded car would start on a gradient of 18 feet, and says, "Some cars might keep moving if once started." "Thurston," in discussing rolling friction, says, "It is stated that a railroad train is not safe against starting, —when in good order, on a good road under the action of gravity, unless the gradient is less than 18 to 20 feet to the mile ($= 0^{\circ} 13'$) and if once started would continue in motion on a gradient as low as 13 feet." Who is right? In answer to my first question, "Vulcan" says it has been found by experiments with Dinagraph cars run with express trains, that it takes 48 pounds pull to start a ton, and when in motion 12 pounds per ton will accelerate the speed to fifty miles per hour. Having never seen a Dinagraph car I don't know at what point the

force of pull is measured. If it is made at the link attaching the train to the tender, and shows a pull there of sixteen ounces to the pound, we will accept it as correct. But if the force is measured in the cylinder or against the wrist-pin, we will have to ask him to demonstrate the relation that a force in the cylinder or on the wrist-pin has to the tension on the link?

If the force is measured by the pressure or push of the steam against the piston, let us see what "Philadelphian's" 681.6 horse locomotive attached to a train can do?

First, what load will it start? Now the piston's area, 567 inches, use all the steam, 120 pounds, gives the force against the pistons of 68,040. If 48 pounds will start a ton, then this force ought to start 1417.5 tons, rigidly fastened, without slack or springs in the drawheads, which would be 56.7 cars of 25 tons each. A pretty big load to start without making use of the slack.

But let me ask, what position will you give your cranks when you let on the steam? Will you give one its full length 12 inches to push against, and the other one on dead center? Or will you divide them half way between a full crank and dead center, giving each a leverage of six inches?

Now one pound pull on a 12-inch lever is equivalent to a two-pound's pull on a six-inch lever, or one pound on each of the six-inch levers. Then the whole force is what you get from one cylinder applied to a 12-inch lever or crank. And the push remains the same at all points, except as changed by the pull being above or below the axle line.

Therefore, if we take the push of the driving rod against the crank in a vertical position, giving a 12-inch lever, we can only count the force of one cylinder, for at this point the other cylinder is dead, and can give no force at all. This is why one cylinder gives the full force of the locomotive, with full length crank. Then the starting force is only one-half of 68,040 pounds equals 34,020 pounds. Now, use two-thirds of this as your working force you have 22,680 to run your train at fifty miles per hour, with 1,800 tons, about 76 cars of 25 tons each. But this is about twice as much as "Vulcan" claims on a much slower speed. Therefore if he is consistent, must admit there is not the amount of steam used as claimed. And these are the "grounds the 'Doctor' hopes to prove they don't have it."

Again, let us say this is the locomotive pulling "Vulcan's" Dinagraph cars, 250 tons, twelve pounds force in the cylinder to the ton, 3,000 pounds of pull, this excited for one minute, through 1,240 feet space (piston speed) gives 3,720,000 foot-pounds of work, which is the work of 112.7 horses for the same length of time. Then the locomotive has *developed* 112.7 horse power, a little less than one-sixth what is claimed

for it. One-sixth of 80 pounds steam equals 13 $\frac{1}{3}$ pounds for steam pressure. *Is the Dinagraph right, and no mistake?*

Let us now go back to the first question, and examine "Vulcan's" philosophy. He says "12 pounds of force will pull a ton at the rate of 50 miles per hour, 61 pounds force for 5 minutes per hour, and probably 31 at 2 $\frac{1}{2}$ miles." Then how much at the rate of $\frac{1}{2}$ mile? In the same ratio of decrease, it would be about $\frac{1}{7}$ of a pound to pull a ton. Now from this train of reasoning and philosophy a logical conclusion would be, that it might start of itself, on a level track, or a puff of your breath would be sufficient.

No "Vulcan," your iron was not hot enough to give such sledge-hammer blows. You had better about face with your philosophy. If it takes 48 pounds to start a ton, it will only take a few pounds less to keep it moving 2 $\frac{1}{2}$ or 5 miles per hour, and when you get a speed of 50 miles possibly it may only take $\frac{1}{2}$, or less, the starting point. Therefore you had better not follow that Jack O'Lantern of a Dinagraph, it makes bad philosophy. Can you see now why I did not want to go so fast? By going slow I thought somebody would put their foot in it. If it takes 48 pounds to start one ton, it must take only a little less when moving $\frac{1}{2}$ miles per hour, the ports would be opened only 124 times, plenty of time to have the cylinder well filled with steam. But when going 50 miles per hour, the ports are opened 1,240 per minute, about 21 times per second, and if the ports are opened half the time, then are they open $\frac{1}{2}$ of a second. How much steam can you flash into the cylinder in that length of time? Consequently your steam must grow "smaller by degrees and beautifully less" as the speed increases. If not you again spoil your philosophy. "It ever takes an equal force to perform a certain amount of work."

Did "Vulcan" ever turn a grind-stone while some one was grinding a dull axe? If so, and the stone was small and light it was a hard pull all the time, but if the stone was large and turning rapidly you scarcely feel the weight of the grinding. Or let him take a 30-inch wheel weighing 150 pounds mounted on friction rollers and a crank attachment. Then let him set this in motion at 50 miles per hour, or as fast as he can. Then please tell us if you are turning the wheel 12 pounds to the ton or the wheel turning you?

Horse-Power. Why 33,000 pounds as the measure of a horse-power is misleading, is, because there is no more "horse sense" in taking a minute's work for the unit of measure, than in taking an hour's work, or a day's work. But if we take the ordinary gait of travel for horses in pulling a load, and use the tension of pull on his traces as

the unit of his power, it smacks of "horse sense." "Uncle Silas" would laugh at an M. D. to hear him say he had a patient suffering with "cold plague." Yet half a century has "scarcely around the corner turned its tail" since such terms were used, and if "Uncle Silas" is not a very old man he may live to see Watt's definition of horse-power changed for one having more "horse-sense." To illustrate: We will say the horse makes 100 steps going 220 feet. Then he will have to make 100 efforts, each continued for $\frac{1}{2}$ of a second to do 33,000 foot pounds of work, consequently the 33,000 foot pounds is more than the united efforts of 100 horses.

But if Watt's definition for horse-power is good "horse sense," then we have a horse, yes several of them, here in Argenta that can jump 200 yards, and with the same philosophy, I can find several "firemen" here that can raise 10,000 pounds of coal.

And sound "horse sense" applied to engines and locomotives is this—when the locomotive is running fifty miles per hour the ports opened 1240 times per minute; therefore, it makes 1240 efforts to do one minute's work. Then, please tell us where is the "horse sense" in taking these 1240 efforts and calling it one? Why not estimate what the force of the steam is for one time going into the cylinder, and that will show you how much push your steam has.

Steam.—If "Vulcan" has followed me in my articles, he has learned why my "suppose" is that they don't have in the cylinder as much steam as is claimed; and it is simply because there is a physical impossibility to get it there, diagrams of dynamometers to the contrary notwithstanding. But oh! how hard it is to give up old habits and beliefs. You cannot very well take your locomotives out of the old ruts, or tracks, on which they run; but you can get your thoughts out of the old ruts and let them roam free to gather in truth whenever you can find it.

"Vulcan" dismisses me rather playfully in the December number of the *Magazine*, but takes me up rather seriously in the January number, and "cants" largely on "supposes" because I used the word four or five times before facts, instead of stating them directly as facts. I estimated $\frac{1}{10}$ of boiler capacity for steam space in the boiler, and gave 15 minutes for the time required to fill that space with steam; and "Vulcan" has not shown that it can be filled in any less time, nor has he claimed any more space. I said any fireman might try if he could make it in any less time by noting how long it would take him to raise the steam 10 or 20 pounds when standing still. If he could raise his steam 10 pound in one minute, then he could make 150 pounds in 15 minutes. "Vulcan" answers, Yankee fashion, by asking, "Is this a test?" and

turns the question over to the intelligent firemen. Since he sets himself up as a critic and teacher of firemen, why does he not answer the question himself? He says I started out with a wrong "suppose," "by supposing 14,658 cubic inches of steam in 15 minutes as the steam producing capacity of the boiler", and as my proposition came at him wrong end foremost he wants it turned around before he can make any reply; then admits it would take 251,328 cubic inches of steam for every minute's work, and 3,769,920 for fifteen minutes' work. To get this you would have to fill that steam space 14,658 cubic inches—more than 257 times every 15 minutes, 19 times every minute. This is so preposterous that I will not "suppose" it can or cannot be done, but will emphatically say it never has been done.

Then to illustrate his idea, says: "Let us come to something real; take a locomotive 18x24 cylinder, cut off at 9 inches, piston area 254½ inches nearly, to be followed 9 inches, would take 2,290 inches of steam for each end of cylinder—9,160 for every revolution of the wheels, and calculates 112 revolutions per minute at 20 miles per hour, requiring 1,025,920 cubic inches of steam per minute, which in turn would take 5,726 cubic inches of water." Then takes his boiler 22 feet long (this about 7 feet longer than the boilers used here, even on 10 wheelers) so I think he has got beyond the *real* in length of boiler as well as width, 43 inches at top water line. But let him have it 22 feet long, and we will say 4 feet diameter—"Vulcan" gave no diameter—then the steam space is 47,772 cubic inches, and it takes 9,160 cubic inches for every revolution. Then your supply on hands will last about 5.2 turns of the wheels and it is all gone. Now to supply this demand, and "Vulcan" says you must have it, then beginning at his end of the "suppose" and what is "real" the steam producing capacity of his 22 feet boiler must produce all it will hold at 150 pound pressure every three seconds. Now, "intelligent firemen," don't you think you are "stuck for steam, and no substitute for it?" if you have to furnish what "Vulcan" demands, and the engineer can blow it away in three seconds. Also "Vulcan" further says: "No fireman or engineer will doubt." (Doubt what?) that he can make 5,731 cubic inches of water into 1,025,920 cubic inches of steam at 140 pounds pressure, 179 inches of steam to 1 of water every minute? No, he only says they will lose that much water in a minute's run. This last sentence lets him out of this dilemma. He started bravely in the big end of the horn with his water and steam, but finds it impossible to get out through the little end, so he calls the firemen and engineers for help, lets go all holds and drops back. Because 5,731 cubic inches of

water is lost, used, pumped into the boiler, is no evidence that it is made into steam 179 to 1. And the best evidence of the amount of steam made and used is what you can get cooped up in the boiler, and you have no control of any outside of that small space, and all firemen and engineers know that it takes several minutes to get that small amount corraled. And no intelligent fireman or engineer will claim that there is any other place to keep a supply of steam except in the dome and boiler above the water line. And after he has worked 15 to 30 minutes to get that space filled with steam at 140 pounds, and that in the next minute he can make 20 times as much, and it all goes into this same space and he still has only 140 pounds pressure. Who believes it?

So here is the dilemma with its two horns on the steam question. "Vulcan" and other "Philosophers" take the horn you must have enough steam to fill the cylinder to the cut-off at boiler pressure, but don't explain how it can be made, nor do they prepare a receptacle to hold the 100th part of what they must have to do the work. I take the other horn, and let every day's experience show how much steam can be made; don't ask for more than the steam space in the boiler will hold using, so that it will last until another supply can be made, and this is sufficient to do the work and keep the machinery of the world moving. Firemen and engineers, which horn will you take?

"Vulcan" thinks I am decrying the power of steam, when the reverse is the case. In all my papers I have not denied that steam was the living force of steam engines; nor have I said they did not do mighty work, but to do this I only require a thimble full of steam where "Vulcan" wants a bucket full. My demand is reasonable and can be supplied, also conforms to every day experience, and have storeroom sufficient to hold a supply that will last until as much more can be made. His demand is unreasonable, and cannot be supplied. It is impossible to make the amount and the supply on hand would be exhausted so quickly that you could not even start your load until you are out of steam. And because the chemist in his laboratory can make 179 cubic inches of steam from 1 inch of water is no proof that it is made in steam boilers in every day practice. In the next I will quote some authors on the subject which will prove even more than have been claiming. And that "Vulcan" shows the white feather at the dome—proof to establish that even the small quantity of steam that the boiler contains more than sufficient to supply the demand.

I am much obliged to "Vulcan" for his criticisms, for they are a great help to bring my views more plainly before the public. Hope he will continue.

ARGENTA, ARK.

L. A. Wilson.

Review of February Magazine.

In spite of the prevalence of "la grippe" the February *Magazine* is on hand, showing that our Editor is "ever bound to be on time," even if some of his co-laborers "fail to make their connection" with their communications, as is evinced by the February Mechanical Department, for it contains very few letters this time. Presumably some of our boys are "bucking snow," "making overtime" or fighting with "la grippe," in either of which experience they have my sincere sympathy, as I have been there myself and am just getting the better of "la grippe," which I think is far worse than any blizzard.

It is with a good deal of pleasure we note that the drawing lessons started in the *Locomotive Engineer* lately are meeting with a warm welcome from many of our friends, who are eagerly availing themselves of this ready means of acquiring an art which will no doubt prove of benefit to them in the future.

"Boliver" asks whether a spring broke "going down or coming up," which is rather a hard question to answer, for it is doubtful whether any one had their eye on a spring at the critical moment, but reasoning from comparison I should be inclined to think that locomotive springs broke when being depressed. A wagon or carriage spring will most frequently be broken by the rebound up after being greatly forced down, and the lighter the load the greater the danger of breaking in the rebound, for such a spring will rebound above the natural set of the spring, and as they are not calculated to resist pulling apart the upper leaf or plate is liable to be broken. A locomotive spring, however, is never relieved of enough weight to make it rebound, and I should judge is broken by a sudden deflection below its limit of elasticity.

"Dr. Wilson" has given us another installment on this subject and concludes that he has demonstrated that horse power should be calculated by assuming a constant pull of 150 pounds at 220 feet per minute, which really amounts to Watts' 33,000 foot pounds, and really is nothing new nor any better, because while the "Doctor's" rule would have to be changed for every variation in speed, Watts' rule furnishes a constant factor. As I have before shown, the "Doctor" does not act fair toward steam, for while he admits a constant pressure on the piston of over 34,000 pounds he says this is only a little over one horse power. Then again, while he wishes the horses to be credited with every foot that they move

the train, he says the piston speed is all that steam should be credited with. A piston may move but four feet, yet still by the revolution of the driver the train may be pulled four times as far. This is so unfair as to need no further comments.

The idea that the "Doctor" claims to have demonstrated that the amount of steam claimed is never used; that it is not possible to make it; that there would not be store-rooms for it; that the steam could not be delivered to the cylinders, and that if delivered it would take nearly the whole force of the new steam to expel the exhaust on the other side do not require any arguments to refute, for the amount of steam and its mean effective pressure, after deducting back pressure, has been determined as frequently and with as great an accuracy as our own weights have been noted on the scales, and no amount of argument could convince a strong, healthy man that the scales have made a mistake, and that instead of 150 pounds he only weighs about two pounds, as the "Doctor" would have us believe is the case with steam. The indicator shows that a part of the expansive force of the steam does do work, and the best thing the "Doctor" can do will be to procure an indicator and learn how to use it, and it would soon furnish the "Doctor" "with facts which cannot be controverted."

In order to try to make a strong case the "Doctor" makes the astonishing statement that a train pulled at 20 miles takes only $\frac{1}{4}$ as much power as it would if pulled at 24 miles per hour, whereas any well-informed mechanic will at once inform you that the "boot is on the other foot" and that it takes more power in exact ratio as the speed is increased.

The "Doctor" lays a great deal of stress on the help given by momentum in pulling a train and treats it as if it were a force not furnished by the locomotive. I have never considered momentum as an outside force but as emanating from the locomotive. For instance, I am running a heavy train at 15 miles per hour and am approaching a heavy grade. I give her a little more steam so as to increase the speed of the train and thus obtain more momentum to surmount the grade, but it is obtained from the locomotive by the use of steam.

While we cannot help admiring the courage with which the "Doctor" has attacked "almost all laws of mechanical philosophy," we fail to find that he has seriously wounded any of them, for his arguments were generally founded on wrong premises, and having a bad foundation no good superstructure could be evolved.

Vulcan.

The Fusee Signal.

In a recent issue information was called for in regard to the "Fusee," and as if in answer to it our valued exchange, the *Railroad Gazette*, has an illustrated article giving a full description of the "Fusee" and its merits as a safety appliance. The article and editorial comments on the use of the "Fusee," which we copy below, seem to indicate, that by a proper use of "Fusees," a road might have almost as great a security against accidents from rear end collisions as can be obtained by the block systems, and the "Fusee" is certainly far in advance of the torpedo, which will snap its note of warning even when the cause has been removed hours ago, and which, from their frequent and unnecessary alarms, have practically become useless. We recommend a careful perusal of the article to our readers who are certainly interested in anything leading to great safety in railroad traffic:

The fusees of which an illustration is shown herewith, are now used by a number of roads, some of which are named below. This fusee was given a test on the Cincinnati, Hamilton & Dayton, on the night of October 28, in the presence of a number of officers of the road. The five-minute torch was timed and found to show a red flame for 6½ minutes. The manufacturers calculate to have each torch burn a little longer than the time guaranteed, and the 10-minute torches burn nearly 12 minutes. A test was made to determine the effect of rain upon the light. Water was poured upon the burning torch from a sprinkling can, and the fire was finally put out, but the officer making the test says that it was not a fair one, as the quantity and force of the water was greater than that of any rain. A lighted torch was viewed from a distance of one-half mile, at which distance the red color was perfect, and the apparent size of the light about that of a headlight. The light is so thoroughly diffused that as a signal its conspicuousness does not diminish in proportion to its distance from the observer. The next test was to try to extinguish the light by fanning it with a hat and with a coat, but this apparently had no effect upon it. Finally, a fusee was thrown from a moving train and found to burn as well as those handled more carefully.

Among roads from which orders have recently been received by the manufacturers for this device are the Norfolk & Western, Chesapeake & Ohio and Southern Pacific; also the Cheshire, Concord, Chicago, Rock Island & Pacific, Chicago, Milwaukee & St. Paul, Michigan Central, Cleveland, Cincinnati, Chicago & St. Louis, Cincinnati, Hamilton & Dayton, New York Central & Hudson River, New York, Lake Erie & Western.

"Fusee signals are not much used on roads of the United States, generally. In making this statement in an article printed in our issue of November 15 the word *torpedoes* was, by a slip of the tongue or of the type-writer, used instead of *fusees*. The use of torpedoes is so common that the error did not, we trust, deceive the careful reader. But our statement is further criticised as to its substance. It appears that fusees are in use on some roads which we had not in mind at the time of writing, and that a number of them are in the Northern States, as will appear from a statement in another column of this issue. We believe it still to be true, however, that the use of this signal is properly to be regarded as exceptional. Many of the roads which now have fusees have introduced them very lately, and we do not learn that the signals have been placed in the hands of brakemen for common use. They cost twenty or thirty cents apiece, and most superintendents are chary about authorizing such expenditures by brakemen except under pretty definite restrictions."

"But whatever the facts about the actual use of the fusee, it is true that this kind of signal is calculated to 'fill a long felt want.' *Where the block system is not used* : and another correspondent criticises our position as unfair by reason of its scant recognition of the merits of a signal which can be given while the train is in motion. On this point it is true that we spoke more at length from the standpoint of the superintendent, considering the matter in its practical aspects, rather than with reference to any theoretical advantage. We said that practical managers desire a signal which can be used under rules applicable at all times and in all places, while not denying that in the hands of an alert brakeman a good fusee is a desirable safeguard. We were speaking more especially with reference to a uniform rule and of practical methods of enforcing it, and, therefore, laid stress on the importance of having no rule which cannot be enforced. It certainly is questionable to employ a fusee or any other signal which cannot be used according to rule, and the difficulty of formulating a good rule on the point under consideration still remains to be met. It is all very well to provide fusees on private cars and palatial "Limiteds," but railroads need some means of preventing collisions under ordinary, every-day circumstances. The front ends of passenger trains as well as the rear ends frequently get entangled with freight trains, and fusees are no help then unless supplied to all trains. Supplying them to, say, 10 trains, and in sufficient quantity, involves an expense of sufficient magnitude to at once raise the question whether the same money would not be better spent in block signaling. And after freely acknowledging all the merits claimed for the fusee, the contingencies of careless brakemen and of engineers who fail to keep a good lookout still remain, and we therefore still maintain that all devices means for preserving a time interval must be regarded as makeshifts and compromises to be used only when one finds himself utterly unable to get a space-interval system. If our correspondent will again read the article of November 15, he will find additional support for this statement."

MR. EDITOR:—In the December issue "Fireman" gives the weight of his engine, the size of the cylinders, the steam pressure in the boiler and the diameter of driving wheels; he states that the locomotive in question has pulled thirty-nine twenty-ton cars up a sixty-foot grade at the rate of fifteen miles per hour, but he omits to state the speed at which they were running when they struck the grade. By the tractive force of a locomotive we mean the load it can start, not what it can pull, when moving at the rate of thirty miles per hour. Striking a sixty-foot grade at the above speed the momentum of the train would force it a considerable distance up the hill without the locomotive exerting any tractive force whatever. Forney says that the tractive force of a locomotive is the force with which it is urged in a horizontal direction by the pressure of the steam in the cylinders, not by the pressure of the steam in the boiler. "Fireman" gives the boiler pressure but omits to give the average pressure in the cylinders, without which it is impossible to calculate the tractive force of a locomotive. If the train had stopped at the foot of the grade, I think that it would require all the tractive force of "Fireman's" locomotive to pull it up.

Fred Taylor.

OTTUMWA, IOWA.

MR. EDITOR:—In the January *Magazine*, page 24, A. T. Conkling asks some questions. A boiler with 60 pounds steam gauge pressure has 60 pounds above the atmospheric pressure, or 74.6936 pounds per \square'' . The steam gauge shows *apparent* pressure. The pressure that actually exists is *absolute*, or *apparent*, plus the atmospheric pressure of 2116.3 pounds per square foot, usually called 15 pounds, or 14.7 pounds; the exact difference cannot be measured with a two-foot rule, but it is there.

His question about safety valve is not plain in its meaning. The safety valve should be loaded to 60 pounds, because the atmosphere is on top of the "lift" as well as in the boiler, and if the boiler pressure was 61, then $61 \times 14.6936 = 75.6936$ and the 60 pounds and atmosphere together make only 74.6936, and she would "ciss" or get ready to blow. Measure the surface exposed to the steam in diameter and then get the area in square inches. The calculations are all made from the area of the surface exposed. If the face of the valve is flat or stepped or circular in section it can only have the area of its diameter. "Smart Alecks" and newspaper editors sometimes spring such squibs on "the boys" to bother them, and sometimes they don't know any better. If the face of the safety valve is made like Fig. A it has only the same square inches as though made like Fig. B.

Fig. A

Fig. B.

Caliper the throat from the boiler to the seat of the safety valve, get at its diameter, then square the diameter and multiply it by .7854, and the result is the square inches—thusly: Diameter is 2 inches, then $2 \times 2 = 4$ and $4 \times .7854, 3.1416 \square$ inches. If you wish to get at the weight and length of lever and all that, look in some of the books that have it all down—"Twenty Years with the Indicator" or "Hassel's Pocket Book." If this isn't what you want, and Brother Debs is willing, you must come again. Ask for it and you will get it square out from the shoulder.

If a pump has a $1\frac{1}{2}''$ piston + 20-inch stroke, how many gallons a minute will it throw at 60 strokes a minute?

Rule: The area of the piston \times by the travel $\div 231$ gives gallons per stroke. See how easy it is? *Reason why:* The area of the piston gives \square inches, and when you multiply the area by distance, then each inch of travel gives you cubic inches, and 231 cubic inches gives you a gallon United

States standard. A piston $1\frac{1}{2}$ inches in diameter has 1.7671 inches of area, 20-inch stroke = 35.3420 cubic inches, or 70.6840 cubic inches for one revolution, and as A. T. C. says strokes, I presume he means 30 ups and 30 downs, or 60 strokes or 30 revolutions, then $70.6840 \times 60 = 4241.0400$ cubic inches, or $4241.04 \text{ cubic inches} : 231 = 18:359$ gallons.

His next question is a stumper—"What constitutes a H. P. in a boiler?" Men have argued, quarreled, fought lawsuits and done innumerable foolish things over their *ideas* on this question. There is no recognized unit of what constitutes a H. P. in a boiler. People call it 10 feet, 12 feet, 15 feet, or some other amount of heating surface, and some people count the top and bottom of a tube as heating surface; and a society of so-called engineers undertook to say that a boiler should evaporate 30 pounds of water per hour from and at 70 pounds of steam per horse power, and when the engines in the country use 50 or 60 pounds of water per H. P. (quite too many of them), the 30 pounds would only do on the best engines and not on the "old pelters" that carry steam from footboard to pilot and exhaust next week. The H. P. of a boiler is as much an unsettled question as the certainty of Annanias Cobra Corbin ever doing the fair thing by the boys.

"How many square inches to the horse power of a cylinder?"

That depends upon the pressure on the piston and the speed at which the piston travels. There can be no rule for that. If a locomotive ran 368 revolutions per minute with a steam pressure of 80 pounds, the number of inches would be very much less for a H. P. than at 210 revolutions and 120 pounds of steam. The January number, page 23, tells what a H. P. is.

The questions referred to are such as the student in search of information is continually stumbling over. Reliable and authentic data is not always given, and in many cases the men who write for such men as firemen or engineers are people with no experience practically—never ran an engine an inch—couldn't fire a "Long Tom" or a class "O" for one trip without making the engineer commit murder—but when questions are asked they can play the "mouth organ" at the rate of 92 miles an hour, stops all in.

One of these newspaper editor fools lately opened up on the front page of a paper published in New York the reason why indicators should only be made *one-handed*, not right and left. Why men don't get information is a conundrum to an "old rooter" who has been at it for these many years and just now "larnin' suthin'."

Boys, I ain't a minister, but if I was to preach to the firemen it would be thusly:

Don't strike, don't drink, don't chew and spit and smoke and make hogs of yourselves. Don't eternally be kicking and growling. Don't think you can't "get thar." But if you want to know my honest opinion of firemen and why they don't "get thar" faster see next month's *Magazine*.

Uncle Silas.

PHILADELPHIA, December 29, 1889.

MR. EDITOR:—In looking over the *Magazine* I see a notice of a book entitled "Twenty Years with the Indicator," by Thomas Pray, Jr.

It gives me great pleasure to see that you have given your opinion of the merits of the book, for it contains all that is beneficial to a man who is desirous of learning the most economical way of using steam, and I advise the members of the Brotherhood of Locomotive Firemen who are ambitious to increase their knowledge of the use of steam, the action of steam in the cylinder and the action of the valves, whether it be in a locomotive, marine or stationary engine, to procure one of the books. From it they will learn how to use the indicator, to read the cards taken by the indicator, and how to make the calculations which are shown in a simple and practical way. I know by personal experience that the *Firemen's Magazine* lays on the table of the author of "Twenty Years with the Indicator," which speaks well for the *Magazine*.

Firemen, let us increase our knowledge and keep up with the times and improvements, so that we will be ready when called upon to take hold.

Fairmount.

EAST SAGINAW, MICH., Dec. 26, 1889.

MR. EDITOR:—The December *Magazine* is at hand and full of good things as it always is, and looking through it I was struck by L. A. Wilson's question: "How much steam is used in a 10x16 engine."

I do not intend to try and show much steam is used, but I do not agree with all Mr. Wilson says, and if I am not right, here is a good place to find out.

He says the boys can find out how long it takes to get up a pressure of 150 lbs. by watching how long it takes the steam to run up from 140 to 150 lbs. Now let us look at steam, and how it acts. Steam confined, and heat applied will expand until the boiler is full and if there is no outlet, and we still continue to apply heat, the effect will be an increase of pressure, but I know of no rule by which to find how much heat it will take to raise the pressure 10 lbs. He places the cut-off at half stroke with 200 revolutions per minute, then supposes while the port is open during the half stroke, the cylinder is filled to that

point (half full) with steam at the same pressure as in the boiler. I differ from the writer on this point. The pressure is 140 pounds on the boiler and is kept at that pressure by the continued application of heat. Now, from the time the steam enters the steam-pipe until it is forced into the exhaust cavity of the valve, it is continually losing heat; and another loss of power to steam is the friction it has to overcome in its travel through the steam-pipe; and also to find the amount of steam taken into the cylinder, he must find the average port opening and the average resistance given by the steam in the cylinder, for when the port begins to open, and the cylinder is empty the steam will rush in, but how is it when the port begins to close? By his figures, we find one side uses 251,328 cubic inches of steam in a minute, and that is more than the boiler will make. Let us see if that is so. One cubic inch of water raised to a steam pressure of 140 lbs., will fill a space of 218 cubic inches. Now, if we divide 251,328 by 218 we have the amount of water used in one minute $251,328 \div 218 = 1,152$ and a fraction over a half. We will multiply $1,152\frac{1}{2}$ by 60 = 69,150, the amount used in one hour. Rule for finding how many gallons cubic inches multiplied .004329 = U. S. gallons 69,150 the amount used in one hour, multiplied .004329 = 299; 350.-350, the amount of water used by one side 299.35 multiplied by 2 = 598.70, the amount of water used by both sides. I think his boiler would evaporate that much water; 200 revolutions a minute makes quite a draft.

Fred. J. Hill

HUDSON, O., January, 24, 1890.

MR. EDITOR:—On page 14 of the January *Magazine* Wm. Lockwood had quite an article (thanks to him) in regard to the "slipping of locomotive drivers" without the use of steam. I asked the question in the October *Magazine*, and had come to the conclusion that no one intended to answer it. "Vulcan" says he don't see how this can be, as it always takes power to overcome the adhesion. "Vulcan" would think different if he saw the wheels making fifty miles per hour and the train hardly thirty—sometimes slipping so badly that, to insure safety to ourselves, and not caring to be on the seat in case a rod should be let loose, we rest ourselves standing up. What does "Vulcan" think of Mr. Lockwood's views on the subject? He suggests I may have an overcounter-balanced engine, over-cylindered by excessively large cylinders or very high pressure—either one, or all in combination. I would ask Mr. Lockwood: if an engine is over counter-balanced, would she not show it? Would there not be a jerk every time she passed her centers that could be noticed by the man in charge?

But there is none in this case. Her cylinders are 16x24 and 5-foot wheel. It cannot be in the cylinders being excessively large, and I cannot see what high pressure has to do with it. I may show my ignorance, but that is the only way for a fireman to learn; and if there are readers of this who have had a similar experience with their engines, let them air their views in the *Magazine*, for what they know may be news to others. A few months ago, while in Meadville, Pa., I met a Brother belonging to 207 who claimed he fired an engine on the N. Y., P. & O. R. R. that did the same thing. This Brother is running now. Let us hear from him on the subject; and I hope "Vulcan" sees where he was wrong, and that locomotive drivers have been known to slip with power entirely shut off. Fraternally,

W. L.

Further Answering A. H. Tucker's Question.

MR. EDITOR:—In the December *Magazine*, 1889, page 1079, Mr. Tucker asks: "Is it an answer to A. H. Tucker's question?" referring to my article in the October *Magazine*, pages 884 to 886. My reference to the "earth's movement" in that article will at this time possess a new interest because of the return by the west of Miss "Nellie Bly" from around the world—going east—in seventy-two days, six hours and eleven minutes, and the coming from the east—having gone by the west—of Miss Bissland. In the article to which Mr. Tucker refers I find I quoted both his and Eccentric's questions, and tried to answer them. That I have done so then, and think so now, I have used the identical words I used then in this article, with a little fuller explanation.

As "Vulcan," in the January number, counts himself out in this discussion, it remains for Mr. Tucker and myself "to fight it out on these (wave) lines if it takes all summer."

Mr. Tucker says: "I am not trying to dispute the perfect balance of the Shaw engine (Brother Tucker calls it a locomotive). I wish Mr. Tucker would dispute this proposition, because he does so by implication in the following sentence: 'What I contend for is, that one weight moving at 75 miles per hour and a duplicate weight moving at 25 miles per hour, cannot balance.' Mr. Tucker will admit that steam is effective to move the driving wheels of a locomotive, and that, by its inherent property of expansion—take, say, the present effort of using steam by compounding—the last example is that 150 pounds pressure in a 12 inch cylinder, 24 inch stroke, is the equivalent of 20 inch cylinder, 24 inch stroke; i.e., the second expansion acting on a large-

er area of surface is the equivalent of the first expansion by reduced pressure. This true, we have established a maximum and minimum, or degree, of expansion. I shall now ask Mr. Tucker to apply this principle to the following illustration of the October article:

Figure 6.

The steam chest, being filled with steam, supplies the same by a single valve to the opposite ends of a pair of twin cylinders—the movement through a double cross-head, double piston-head, piston, connecting and parallel rods. Moving in opposite directions to each other, by a maximum and minimum of steam expansion, is indicated in Fig. 6, in one revolution of the driver, from vertical line C^1 to C^2 . C is the center line. When these lines, C^1 and C^2 , are at their upper limit they are moving at 75 miles per hour, at their lowest limit 25 miles per hour. The degree of steam expansion varies and adapts itself to this changed condition alternately in each cylinder, and in each revolution of the driver these lines, in practice, show this to be a fact, and I cannot see how it can be questioned. If Mr. Tucker can, and prove his proposition, we will all be that much wiser.

One other statement of Mr. Tucker is such a self-evident error that it must be a printer's mistake: "Mr. Lockwood has made it appear still more impossible for them to balance by declaring that the cross-head connected to the top pin is moving, while the one connected to the lower pin is standing still."

The points at rest for "an imperceptible" instant of time, of these moving bodies, are, the point of the driver in contact with the rail, when the two crank-pins of the Shaw are at forward and backward centers and in-line with the center line, then each piston head is at the limit of its strike in either the forward or backward head of each cylinder, and about reversing their movements as indicated by the directions of the arms on lines C^1 & C^2 , Fig. 6.

Again I repeat the summing up of my October article in its last six lines. "When both piston-heads are at the limit of their stroke, as in Figs. B and C forward and back centers, then all differences have been compensated for, because both piston-heads must, and do, reach the end of each cylinder the same time."

I have delayed my answer to Mr. Tucker, awaiting his request that some of the other

writers for this department say if I has (have) given a fair answer to my (Mr. Tucker) question. Please Mr. Tucker have no fears or concern as to its effects upon me of what you are pleased to call "compromising your (my) dignity" "as an expounder of" "correct mechanical principles." One of my very best friends, high in railroad circles and railroad mechanics, said to me in my early work in this connection, "I have no concern about you on a defeat, but my — what would you do with a victory." Only last week he said again, you are right, now press on over a short road to victory. When that time comes, as it surely will, if I live, then will my best sources of knowledge have come from the practical men in locomotive mechanics, locomotives engineers and firemen, and last but by no means least, the friendly difference of opinion in the Mechanical Department of the *Locomotive Firemen's Magazine*. I wish to say in closing this article, I have endeavored heretofore to fairly answer all questions put to me in connection with the locomotive, which I have even made a pretence of understanding, if any have remained unanswered it has not been intentional on my part that this has occurred, and if any one will recall a single unanswered question, or an unfilled promise, answer or explanation, I will gladly answer further or point out where the intended answer may be found.

William E. Lockwood.

LOCH ERIE, JANUARY 27, 1890.

The Fusee.

MR. EDITOR: I have just been reading the article in the January *Magazine* in regard to the fusee, and I see you would like a little information about them. They are used here on the Fitchburg, and I don't think that the brakemen would like to part with them, as they save a good many steps. They have the Standard and hand fusees. The first is a pasteboard tube about 18 inches long by 1 inch in diameter, which is filled with a chemical preparation that looks like sawdust, which burns a beautiful red light. This fusee has a brad on one end which (when thrown off from the rear end of the train) will stick up in a tie or the ground, and burns ten minutes. The hand fusee is not so long as the Standard, and does not have the brad, and burns but five minutes. The fusee is lighted by rubbing a cap (that is on all of them) and the end of the fusee together, which ignites a small ball of acid, which in turn ignites the fusee proper. They can be lit in all kinds of weather. On this road, when a train is not making its running time, or the brakeman thinks another train is getting too close, he drops off a Standard fusee, which tells an engineer on a following train that a train

has passed that point within ten minutes, and to run slow, so that he can stop on short notice, until he is sure the track is clear. When a flagman goes back he takes with him a Standard and a hand fusee. If his red light should happen to go out, he can use the hand fusee to stop a train, lighting it when a train comes in sight. If he is called in he leaves the Standard to protect him until he can get back to his train, and the train is started. I hope you can judge something by this poor description, of what a fusee is. I am a poor descriptive writer, but I have been as plain as I can. Yours fraternally,

W. H. Bigelow.

CHARLESTON, MASS.

Problem of the Moving Wheel.

INSTANTANEOUS PHOTOGRAPHY SOLVES IT TO THE SATISFACTION OF SOME PEOPLE.

Every now and then, says the *New York Sun*, somebody will write to a newspaper this question: "Does the top of a buggy wheel in motion travel faster than the bottom?" Sometimes the correspondence editor says no, and sometimes yes. When he says yes he is right. Sometimes he tries to explain why he is right, but unless the reader is of a mathematical turn of mind he can't grasp the situation. Here is proof positive that the top of a buggy or bicycle wheel does go faster than the bottom:

The above picture was traced from an "instantaneous" photograph of a bicycle in motion. The photographic dry plate was exposed about the fiftieth part of a second. That was quick enough to catch a good picture of the bicycle and its rider, in all but one particular. The upper spokes of the wheels were not taken. They were moving so rapidly that the speed of the shutter was not sufficient to permit the lens to throw the outlines on their negative. The lower spokes were plainly photographed because their motion was not so rapid. *Philadelphia Record*.

MR. EDITOR: In the *Scientific American*, February 1, 1890, in answer to a statement concerning a photograph of a moving bicycle, I note the following:

"[Photos like the above are often seen. The reason why the spokes in the lower portion are distinct while the upper spokes are blurred is because the lower portion of the wheel moves slower than the upper portion. In all wheeled vehicles running along on the ground, the upper parts of the wheels have a much higher velocity than the lower parts of the wheels. Ed. *Scientific American*.]"

Please correct the Editor of the *Scientific American* on this point. Tell him that "Eccentric Strap" has proved that such a wheel would fly to pieces; and that "Vulcan" and A. H. Tucker have proved, concerning the diameters, or spokes of a rolling wheel, that the point of rest, or fulcrum, is in the middle of the lever, at the center of the wheel, and therefore points equally distant above and below must move with equal velocities. For the Editor of the *Scientific American* to assert that "the lower portion of the wheel moves slower than the upper portion" would seem to imply that the point at rest was at the bottom, and that the fulcrum was on the rail, and that would be to endorse the view of

Amboy Division.

MR. EDITOR: In the January *Magazine*, 1890, page 14, in making mention of "Art Work in Iron," I failed to describe the process or mention the prices of the wheels.

Prices of the Locomotive Paper Weight Wheels.—Messrs. Burnham & Neilson, of the Standard Steel works, 220 South Fourth street, Philadelphia, Pa., will send to any address of locomotive engineers or firemen, United States postage paid, one wheel, upon the receipt of a postal money order for eighty cents (80c). I know this to be *net* cost to them. If, following my suggestion, they are wanted for machinery or lodge purposes, they should specify *coated* or *uncoated*.

The Rustless Iron Process.—It has now been demonstrated, says the *Pittsburgh Dispatch*, that the process of making rustless iron can be extended to any article constructed of that metal. The method is very peculiar. After the article is made it is put into a furnace about three and a half feet high, fifteen feet long and eight feet broad. The furnace is made in an oval shape, air tight. When the iron has been in the furnace for ten hours, and has attained almost a white heat, the air that comes through regenerators and air valves is shut securely off, and the furnace is made air tight. After the air has been shut off, the super-heater, which is located in the combustion chamber at the rear of the furnace, is filled with steam, and

kept in this condition for eight hours. At short intervals a small valve is opened, so as to allow an exodus of steam from the furnace, allowing fresh steam to be put into the furnace. When the articles have been ten hours in the furnace then has been accomplished the formation of magnetic oxide upon the iron surface. They are then put into an acid well, which is the last treatment. *William E. Lockwood.*

LOCH. ERIE, December 14, 1889.

Expired Railway Patents.

The following list of railway patents, furnished by B. F. Brock, Patent Attorney, Washington, D. C., expired during the month of February, 1890, and are now free to be used by anyone, viz:

Lock for freight car doors, W. S. Brewster.
Car truck, W. Youmans.
Railway tank feeder, A. Grochan.
Freight car, B. P. Lamason.
Safety car truck, B. P. Lamason.
Railroad gate, J. Beamislarier.
Railway dust preventer, J. Welby.
Railroad crossing, G. Elliott.
Rail joint, W. B. Clark.
Track lifter, A. H. Arnot.
Safety hatch for cars, R. Liston.

Persons desiring copies of patents, drawings and specifications, can obtain the same for fifteen cents by applying to Mr. Brock, whose address is as above.

Locomotives at the Paris Exposition.

Mr. Angus Sinclair, editor of the *National Car and Locomotive Builder* in the December issue of his paper devotes considerable space to the construction and merits of locomotives, which we doubt not will be of great interest to the readers of the *Mechanical Department of the Magazine*. The views of Mr. Sinclair, will be accepted as high authority and conclusive, and should have a wide reading. He says:

All departments of railway machinery were particularly well represented in the exhibition. In rolling stock, France and Belgium displays were much ahead of other countries. The workmanship seen on locomotives and carriages was excellent, but there was little in the designs that our railroad companies or builders would be likely to imitate with advantage, so it would hardly be edifying to our readers to enter much into constructive details. Simplicity of design is not a strong point with French railway machinery. Nor is the production of graceful forms. Some of the locomotives have motion that is ridiculously complicated and the shapes of domes, sand boxes, cabs, smoke stacks, and other prominent parts are generally ingeniously ugly. The French railway machinery generally looks as if it were designed by amateurs with prejudices against all pleasing forms and then put into the hands of constructive workmen who were highly skilled in fine finishing. I never saw anything to excel the finish on the working parts—the machinist work—but some of the other work was inferior. Some of the engines had jackets of polished sheet brass, which evidently were fitted by carpenters. Some of the boiler work appeared as if it had been finished by blacksmiths. There is a curious practice among French engineers of placing the steam pipes outside the boilers, and in some cases where double domes are used outside pipes connect them. These pipes are generally well

lagged and are made as homely as Gallic ingenuity can devise. The most common type of French locomotive has outside cylinders with steam chests inside, two pair of coupled driving wheels behind and a single pair of leading wheels. The valve motion is all outside and is hung from the crank pins. The Crampton type of locomotive, with one pair of driving wheels located behind the fire box, is also very common, and has led to the prevailing practice of placing the valve gear outside the driving wheels.

There were several compound locomotives of French make exhibited. Although the French were the first to make the compound locomotive operate successfully, the specimens to be seen there from French workshops are not likely to be much imitated. There is too decided a tendency among the designers to make the machinery complicated. The railway that traversed the grounds was operated by small compound locomotives designed by M. Mallet, who first made the compound locomotive a success; but they are very complicated little traps of engines. A large Woolf locomotive in the exhibition attracted considerable attention, and appeared to be regarded as a particularly fine machine. The cylinders are tandem, the low-pressure cylinders being in front, with the piston connecting to the cross-heads by two rods. The steam chest is above the cylinder, and the valve gearing is all outside the wheels. The engine is very large, carried on four coupled wheels without any truck. The impression conveyed to an onlooker is that the front end is tremendously overhung. Imagine a consolidation locomotive, without the truck, with a very large extra cylinder stuck in front of the common one, with a steam chest to match, and you see the Woolf compound exhibited as a model of good design.

A notable feature about all the French freight locomotives shown was their great size. In this respect they approach American practice. Most European freight locomotives would be called small in America.

Belgian makers displayed a great variety of locomotives. They were decidedly better designed than the French engines, and the workmanship was quite as good, and certain details were better finished. The most notable feature about Belgian locomotives is their large fire boxes, most of them being of the Belpaire form, but in some instances spread out very wide. This was all the more conspicuous as all the locomotives from other countries had what we would consider very small fire boxes in relation to the capacity of boiler and cylinders. The Walschert valve motion appears to be in favor of British locomotive engineers, and it is generally placed outside the wheels.

For plain, sensible looking machines, the British locomotives exhibited took the lead. The display was small but it reflected the very highest credit upon the designers, the builders and the country. Most of the engines were inside connected, beautifully proportioned and finished like machine tools. Nearly all the locomotives exhibited were conspicuous for elaboration of finish, but such a thing is to be expected of machinery specially got out for showing highly developed skill and elaborate workmanship. The bogle on which the front end of most British locomotives is carried is getting nearer and nearer to the American patterns, a fact which was impressed upon me at various railway shops in Britain. Mr. Aspinall, of the Lancashire & Yorkshire Railway, frankly said that he was using the plain American bogle. The tendency for some years was to make very heavy trucks of riveted steel plates.

The smoke stacks of most locomotives to be seen at the exhibition, and in fact all over Europe, were noticeable for their small diameter at the narrowest point, which is about ten inches above the smoke box. Above that it widens out rather more than the form made familiar to Americans by being the standard of the Richmond & Danville, the Erie and other roads. There are, however, a few curious exceptions from this common form of smoke stack. The Northern of France and some Belgium makers exhibited engines that had smoke stacks of rectangular section, very short and very large at the base. They are about as unsightly as the wood-burning

stack, but they are said to answer the purpose of their design satisfactorily. The engines with this form of stack all have unusually large fire-grate area.

One of the most handsome locomotives to be seen in the exhibition was a ten-wheel passenger engine built at Milan, in Italy. The cylinders are set back on the frames, with the front head about three feet from the smoke box, a plan that follows the Crampton design, and is adopted with several other engines. The front end is carried on an extremely massive four-wheel truck, and the engine has a particularly powerful appearance, with a good deal of the American style of design. The workmanship was excelled by nothing in the exhibition, very great attention having been bestowed upon minute details. Another engine that elicited our admiration was a compound locomotive of what has become known as the Worsdell type, built in Switzerland. The cylinders were outside, and the engine was notable for simplicity of design, fine proportions and excellent finish.

American readers of engineering journals were some years ago made familiar with the hobby of a French crank who insisted that the proper way to attain a high speed with railway trains was to make all the wheels of all the vehicles very large. He put his idea into practice by having an engine and car built with all the wheels 8 feet in diameter. Both were exhibited, and attracted considerable attention. The wheels of the engine are all coupled. The car has a long girder frame on which two-story passenger compartments are swung. Both engine and car are roughly constructed, but the inventor, of course, claims that they are a success, since a speed of sixty-six miles an hour has been attained with them, look as if they had languished a great part of their time on unsheltered sidings.

If the locomotives shown at the Paris exhibition are to be regarded as a fair reflection of locomotive engineering in Europe, the practice of using inside connected engines is on the increase. French, German and Belgian locomotives used to be nearly all outside connected, but the inside connected engines are becoming quite common. They are nearly all put together in such a way that the machinery is easily reached, British engines being particularly well arranged in this respect. Two merits are claimed for the inside connected locomotive. It rides particularly steady and affords a good opportunity for fastening the cylinders solidly. Outside connected locomotives all have the cylinders fastened to the frames, and they are much more given to working loose than the inside cylinders that are cast together or bolted securely into one piece. The indifferently secured outside cylinders cause side oscillation of the engine when working with a high piston speed, and this transmits severe strains that lead to breakage and high cost for repairs. Why European builders of locomotives do not bolt outside cylinders together is one of the mysteries that no American engineer can fathom.

Copper fire boxes and brass tubes are almost universally used, and there is no prospect of steel and iron taking the place of the more expensive material. I have talked to a great many locomotive superintendents about the economy of using steel, but with one accord they declare that steel will not stand. Even those who have water as pure as that found in New England insist that steel fire boxes would not last five years. They say that steel cracks so badly that the fire box is not safe.

It is not many years since the usual method of applying sand in Europe to prevent locomotives from slipping was for the fireman to sit on the sand box and drop the sand into the pipes by hand. Great improvements in this respect have been made lately, and dried sand, with automatic means of applying it, is universal. The sand blast for carrying the sand through the pipes and depositing it under the wheels is becoming very common. Where this method is employed very much less sand is necessary to keep the wheels from slipping than where the sand is dropped by gravity, as the particles of grit are deposited right under the wheel. I rode on one of the high speed engines belonging to the Caledonian that was employed in the first racing of trains between London and Glasgow, and although the train

was heavy and the rails particularly slippery and the engine had only one pair of drivers, she got along by using very little sand. The thick coating of sand generally put on in our practice increases the wheel resistance so greatly that time is often lost by it. The Chicago, Burlington & Quincy people have been experimenting with the sand blast, and it would be for others to find out the extent of its utility.

A notable thing about nearly all European locomotives is their fine wheels. They are all wrought iron or cast steel, and are generally beautifully made. A French engineering firm had in the exhibition a pyramid of wrought iron wheels that displayed wonderful triumphs of blacksmith skill. Some of the driving wheels were eight feet in diameter with the counter-balance weight wrought in and finely distributed. The wheels looked as smooth and clean as American buggy wheels. Wrought iron wheels for locomotives are, however, going out of use. They are very difficult to forge well, and therefore expensive, so they are giving place to centers made of mild steel. Krupp's people appear to be making the greater part of the driving wheel centers used at present not only on the Continent but in England also. Other steel makers do not get out the castings sufficiently free from blow holes to make them acceptable for parts subject to severe service.

In the methods of feeding the boilers, and with lubricators, we are decidedly ahead of European practice. There are few pumps used in Europe, although there are a few notable exceptions as on the London, Chatham & Dover, where pumps are used exclusively; but inventors on the other side do not appear to have been encouraged to develop the injector, as they have been with us, and consequently these instruments are, to a great extent, used that cannot be finely regulated. Valves and cylinders are generally oiled by open cups, and the use of lubricators that give a continuous supply is very limited.

New Locomotive Shops at Horwich, England.

One of the most interesting places which the American engineers have visited in England is the new locomotive shops of the Lancashire & Yorkshire, at Horwich, a few miles from Manchester. These shops are of particular interest, because they were designed from the past experience of two well known railroad men, Mr. Ramsbottom and Mr. Aspinwall, who has charge of the shops and is the Locomotive Superintendent of the Lancashire & Yorkshire Railroad. These shops cover 13½ acres and are fitted in the most complete manner with modern tools of all descriptions.

They have been erected for the purpose of repairing and renewing the whole of the locomotive stock and carrying out the mechanical engineering work of the road. The carriage of materials from stores and work to their several shops is done by means of tramways, 18-inch gauge, of which there is five miles, the heavy work being drawn by small locomotive engines specially built for the purpose. The whole of the furnaces in the steel foundry and forge are heated by gas made from a series of Wilson's gas producers. The iron foundry is 212 feet long and 111 feet wide, fitted with two cupolas, supplied with blasts from a Root's blower. Hydraulic power is used for working the rams, in addition to which there are two overhead rope-power traveling cranes. The natural formation of land which necessitates

the rail level at rear of foundries being considerably higher than the floors of foundries permits of coke and iron being unloaded and wheeled direct to the charge holes of the cupolas.

The erecting shops, 1,520 feet long by 118 feet wide, has been arranged for the repairing of existing and the building of new engines and tenders, and is supplied with 20 30-ton overhead power cranes, driven by wall engines. Access for engines to the center portions of this long shop is obtained by two transfer tables driven by chains.

As a whole this shop is one of the most modern in the world. Without a visit to the works in actual operation a full comprehension of the vastness and completeness of detail cannot be had; and one must see the special machinery at work upon the various details of construction in order to obtain a realization of the value of special machinery for this class of work. Among the many interesting features of the shops may be mentioned planers with special beds to receive special work, large milling machines for the bodies and stub ends of connecting and parallel rods, long lathe beds, 75 feet, with several heads and tail stocks at any desired distance apart, with shifting countershaft on long, cast-iron brackets to allow the head stock to be moved at will; special grinding machines for bushings and holes in valve gear connections; special cylinder borer, drills and port milling machine; a new design of combined boiler sheet edge planer and boring mill for facing curved sheets after flanging; hydraulic press for shaping steel plate; metal saws, both cold and hot, at high speed, and cold with sharp teeth to cut steel and iron as with a milling cutter; special boiler sheet drills, and, not the least important, a most ingenious device for drilling and tapping stay bolt holes and screwing in the bolts.

An erroneous statement is going the rounds of the press that a large cylinder will condense more steam in proportion to the total amount used than a small one for the reason that it has a larger amount of surface. To show the falsity of this statement, it is only necessary to point out the fact that the steam used in a cylinder is nearly in proportion to its volume, while the condensing surface depends upon the area of the surface of the cylinder. The volume of a cylinder, when the length is constant, varies as the square of the diameter, while the surface varies directly as the diameter. From this it is easily seen that the proportion of the area or condensing surface is made larger, and, therefore, less condensation of steam is to be expected, as a result of the cooling effect of the walls of the cylinder, from large than from small cylinders, in proportion to the steam used.

Woman's Department.

EDITED BY IDA A. HARPER.

Letters pertaining to Woman's work, such as education, temperance, home and fireside, and kindred topics, are solicited.

Correspondents are requested to write plainly, on one side of the paper only, and forward their manuscript so as to reach the Editor not later than the tenth day of each month, directing all communications for this Department to

MRS. IDA A. HARPER,
TERRE HAUTE, INDIANA.

"A PLEA FOR BACHELORS."

The letter in the December *Magazine* with the above heading quite touched my heart, and I have no doubt many of our lady readers would be glad to extend to its author sympathy and perhaps companionship. Some of the statements were amusing, for instance, "The writer has undoubtedly traveled little or none at all, and knows nothing of the world." "She is a thoughtless person who has not given the great scope embraced in the subject one serious moment." "Probably I want to marry worse than she does," etc. I shall not attempt to refute any of these charges but, as our correspondent seems very much in earnest, I hope he will permit me to modify or explain some of my objectionable remarks. They were written, it will be remembered, in reply to a very flippant letter, ridiculing home, wife and children, and extolling a bachelor's life because of its entire freedom from care and responsibility, and the "scoring" to which our friend objects was intended altogether for this class of men.

I call to mind half a dozen of the most worthy men among my acquaintances, industrious, brave, generous, affectionate by nature, domestic in disposition, men who would have made most exemplary husbands and devoted fathers. I have seen these same persons, through the cruel force of circumstances, denied forever the love and happiness of a wife and family of their own. In several instances the father has died leaving a large family dependent upon the oldest son; in another a brother became insane, leaving a wife and children to be cared for; in another there was a widowed mother of so peculiar a temperament the son knew he did not dare ask any other woman to live with her. In each of these cases the man accepted the situation with a noble spirit, toiled patiently and steadfastly to support his charges and when, after many years, his duty was fulfilled, he found himself at an age when he felt it was the part of wisdom to continue through life a lonely and solitary bachelor.

For such men one cannot entertain any

sentiment but one of profound respect and sympathy. They have experienced all of life's hard requirements without any of its sweet recompense. Toil and privation are infinitely lightened when endured for those we love and who love us. Earth holds no blessing so rich as a comfortable home, a congenial wife and affectionate children. The man who would rather forego all of these joys than accept the accompanying responsibility is a selfish animal and deserves the forlorn fate of an old bachelor, one who has outlived the pleasures of society and convivial life and has no fireside, no home nest which he can call his own. But those whose environments have been such as to make marriage an impossibility and have not for this reason permitted their lives to become a wreck but have performed their part in the great workshop of life are, as our correspondent truly said, "deserving of as grand a monument as ever graced a hero's grave."

There is also another class of men for whom I always feel a deep interest and sympathy, bright, ambitious young fellows, willing to work but unable to command a salary sufficient to justify them in assuming the expenses of married life. I know a number of such cases, the boys steady, temperate, industrious, but compelled to take subordinate positions in which it will require years to enable them to reach a place where they will feel secure in marrying. They have too much common sense to attempt to support a family on what is scarcely sufficient to maintain one. And so they struggle along and sometimes get discouraged and form habits which might have been avoided if they had had the restraint of home life and the influence of wife and children. And somewhere are pretty, capable young girls, who would make most excellent wives and mothers but must go through life with their mission unfulfilled because of that fatal impediment of poverty which stands between them and their would be husbands. There is surely something amiss in a social system which permits these wrongs. Every incentive should be given to promote healthful, sensible and appropriate marriages, for they lie at the very foundation of the country's purity and prosperity. May those who are working earnestly for the improvement of the condition of mankind be divinely inspired to find a solution of this problem which is of vital importance to the future of our nation.

Two descriptions of Thanksgiving had have been received, but they are out of date. Our readers would not be interested in an account of a social event which has happened several months ago. Let our correspondents try again with something of a recent occurrence.

We would like to know how many of our contributors read the daily newspapers. It would be a gratification to hear a unanimous "I." We can scarcely imagine a man who does not do so, and even among the uneducated workmen will be found a general knowledge of current events that is not possessed by any people in the world outside of America; while in the higher grades is a degree of information that shows us where we are to look for the statesmen of the future. But even among educated women is found an ignorance of the topics which are engaging the attention of the times that is very discouraging to those who have lofty ideas and ambitions for their sex. It sometimes seems that the working women have a more extended knowledge of transpiring events than those whose leisure and culture would make it so easy for them to acquire information. Every family takes a daily paper and every woman can snatch a few minutes each day for reading. Instead of wasting time over novels and fashion plates we would urge upon women to make themselves familiar with the leading events that are taking place throughout the world. The newspapers are vast freight trains of knowledge daily unloaded at your door. After reading long enough to become familiar with them, each issue will be as interesting as a fresh chapter in a romance. Read the stories and the anecdotes and the poetry, they are put in for that purpose, but do not, after the manner of women, avoid the telegraph and the editorial. The former will give you a world-wide information and the latter will assist you in forming an intelligent opinion. Keep the run of Congressional business and do not neglect politics. Many of the women of to-day will be called upon to vote on state and national questions. When that time comes let it find you prepared to exercise an individual judgment and not led up to the polls "like dumb, driven cattle," as is the case with so many men. The wide and varied information, such as can be obtained only by continued newspaper reading, adds wonderfully to a woman's conversational powers and mental attractiveness. This daily reading can be accomplished without the omission of a single household duty, only use your time wisely, abbreviate the gossip over the back fence, do a little less fancy work, gather up the wasted moments. In the coming years you will feel amply repaid for any sacrifices it may have required and both yourself and those about you will have derived much pleasure and profit from the information you have gained.

We are told that the country is afraid of the vote of bad and ignorant women. Surely, nobody thinks there are more bad women in the land than good. As a rule, man believes in woman. He knows he can trust her as well with a ballot as with a baby.—*Rev. C. B. Pitblado.*

ST. LOUIS, MO., February 3, 1890.

For Woman's Department:

On December 11th, 1889, Harmonia Lodge, No. 5, B. of L. F., gave their third annual and most successful ball. The grand march was led by Brother Gelas, of No. 21, and sister, Ida Deimert, of Harmonia. The members of Industrial Lodge, No. 21, with ladies, were well represented. Brother Deimert acting as musical director. Much of the success of the ball was due to Brother Myrtle, master of 21, also to the B. of R. B. and S. M. A., all of whom attended in full dress and rendered all the assistance in their power.

Brother Murphy, of 21, and Brother Mahoney, of 44, acted as door-keepers. Brother George Deimert, of 109, officiated in the cloak room, where his courage was kept up by Brother L. Fisher, of 109. Dancing was continued until daylight, everyone declaring they had a glorious time. *Ella Mahoney,*

Secretary Harmonia Lodge, No. 5, B. of L. F.

[We will publish the list of officers and any particulars about your lodge that you may send. Ed.]

To the Woman's Department:

I read your excellent *Magazine* last year and have just received the number for 1890. I take greater pleasure in the "Woman's Department," under the unsurpassed management of Mrs. Harper, than any other part of the *Magazine*.

I know very little of the B. of L. F., but think it must be a worthy order, the members of which are noble, energetic, true hearted gentlemen, if I may judge all the Brotherhood by my big cousin Guy, who is a member of Guide Lodge, No. 125, and to whom I am indebted for the enjoyment derived from these columns.

I fear I cannot say much on the "management of husbands." I might possibly say more on the management of children, as I have a goodly number of the latter under my control for six hours in the day and five days in the week. Now I've told it, haven't I? But I am not so *very* cross, and am not nearly an "old maid."

I have been teaching almost three years, and like the occupation very much, although it is much harder work than many will believe. I think it is easier for me to gain a livelihood in that way than any other. Therefore, I teach.

I find it very advisable to practice economy, upon the merits of which Mrs. Lee spoke so sensibly and well. One of the things for which I am most thankful is that I have a mother who has taught me how to economize in all things. There is so much money expended for dress, which, if the wardrobe were rightly managed, might be saved. Every woman should be her own dress maker. If she cannot cut and fit the garments she should at least be able to *make* them. Girls should know how to do sewing, cooking and housekeeping and it is the mother's duty to teach them. It is all nonsense for mothers to say they will do the work, for the "poor girls will have enough to do some day." It is certain they *will* have to work some time and if they now become accustomed to it 'twill not be so hard when that time comes. I believe in accomplishment in all the various branches which form an education, rather

than in excellence in a special line. I would be ashamed to be a teacher and a graduate if I could not make my own clothes or take charge of the cooking and housekeeping during my mother's absence from home.

I like the poems of Mrs. Bloom and Shandy McGuire very much, and shall watch with interest to see their opinions on the new topic before the Department. I have some "theories" on the subject, but would like to hear from those who have had experience.

Hoping I have not been so tedious as to be assigned to the waste basket, I bid you good evening.

Nellie J. Gregg.

GLASGOW, IOWA.

[A young lady, entertaining as sensible ideas as the above, should have no difficulty in finding a husband, but perhaps she is too sensible to get married.—Ed.]

To Woman's Department:

My last letter to the *Magazine* made me so tired when I came to see it in print that I swore off, but like old "Rip" I am at it again. I think we amateurs make the mistake of trying to work from the top of the ladder instead of from the ground where we belong, that is, we try to write on all the leading subjects of the day which we can't possibly do justice to, and neglect the simpler and more fitting subjects on which we might write something quite creditable if we put heart into the work.

I take it for granted we are a band of home women and whatever one is doing to brighten and beautify her home will interest the other. I think an exchange of ideas as to ways and means would be very pleasant and profitable. I have very little talent for elaborate fancy work and I imagine but few of us could afford the material to indulge a taste for it. There are so many pretty things to be made from inexpensive material, but which lend a charm to a room however plainly furnished. I am anxious to get a few such made before house-cleaning time comes. I think it very discouraging to work hard and get the house nice and clean, then be obliged to put the same furniture back in the same places with nothing new to change the effect. We get so little credit for our work. We can't all have new furniture each season but we can brighten up the old wonderfully at small expense and little work. I am going to make a large paper fan for a wall ornament, not because it will be anything uncommon but because a friend presented me with a quantity of lovely wall paper.

For tidies I like the linen and which can be bought already stamped for outlining, and at still less expense one can get butcher's linen and fringe and stamp them one's self. They wear well and launder beautifully. I have in view a bed room which will look as neat and airy as possible with screen furnishings, the bed spread and shams lined with pale blue silicia, the shams trimmed with lace and pretty bows of ribbon placed where they will look cute. The dressing-case will be furnished in the same manner, but I prefer something heavier for washstand and splashier.

A very cheap and quite pretty picture throw may

be made of white sheet wadding. Cut the desired size and slash along the sides, (back from the edge,) every half inch, then weave narrow ribbon through the slashes, the ends may be scalloped and finished with ribbon fringe. It should be tied in the center with ribbons to match. I wish some one would tell me how to make pretty light frames for cabinet pictures.

I crochet nearly all the trimming I use for myself and daughter and would like to exchange patterns with some of the sisters. I wonder how many of you take the *Housekeeper*, published in Minneapolis. I have taken it for years and think it well worth the price. Anything that can be written, said or sung that will increase woman's interest in housekeeping and home-making must be of some benefit.

I trust neither you nor your husbands are suffering with La Grippe. The R. R. men in some parts of the country are completely disabled. But few cases have been reported on the I. C.

I am decidedly in favor of a "query column," and should it be established I will patronize it to such an extent you will think me a personified interrogation point.

Mrs. L. H.

CLINTON, ILL.

[Your personal letter was used because of its merit. Come often.—Ed.]

THE BEST WAY OF MANAGING A HUSBAND.

CLINTON, IOWA, January 16, 1890.

To Woman's Department:

In the January number I find a request for letters on the subject of the best method of managing a husband. Why, I wonder, is it supposed that wives always manage their husbands.

If a man is a model husband it is generally supposed the wife has had a hand in bringing it about. If he stays out late, drinks, abuses his wife, it is said she is to blame herself.

Managing a husband lies a great deal in whether he wishes to be managed. A man would not admit that he were managed any more than a conquered child would admit being conquered.

In the first place a woman must never let her husband know she is trying to manage him. If he proposes going down street try and have an errand for him to do. If he thinks you are willing for him to go he will come home sooner or perhaps not go at all. If he invites you to accompany him always go.

If he wishes to invite a few friends to spend the evening always be ready to entertain them. If he brings a friend, unexpected to you, for dinner, smile and be congenial, don't make apologies, let the meal pass off quietly and sociably.

Don't stay in the kitchen all day, if you do your own work. Do it in the forenoon and always change your kitchen dress after dinner. Put on a collar with a knot of bright ribbon, and comb your hair becomingly. It will pay you, when your husband says, "How fresh you look." If he does not compliment you he would notice it if you did not do so, and perhaps tell you how neat somebody else's wife always looked. You wouldn't like that.

Keep your house so neat and attractive, that when the lamps are lit he will look at his easy chair, hang up his hat and conclude it is too much trouble to

go down town. Then take the paper, read all interesting news or hand the paper to him while you listen with a little fancy work or mending. Then chat about what has happened during the day and lay plans for the future. Suppose they are never realized. I believe in building castles in the air. It encourages and gives ambition, where if we never looked for anything different, we would be rather dull sometimes. I could write a volume about how nicely my husband and I get along and really I could not say whether it was I that managed or he that wished to be managed.

I once heard my husband say, "My wife always meets me with a smile." Then again he boastfully said, "I never found my wife gone when I came home but once in almost five years." (he is a railroad man.)

You see men think a great deal of such little things. I go out visiting, shopping and calling, but take times when I am sure he will not come home. I must close for fear you will think I take too much credit to myself. I will say though that I have a *model* man; perhaps he was born so, perhaps I helped make him so. I don't care how he came so, so that he remains so.

Kittie B.

[Very good indeed. Let us have some more letters on this subject. Ed.]

TYLER, TEXAS, JANUARY 28, 1890.

To the Editor of *Woman's Department*:

I have read the January *Magazine* and see where you want the ladies' best method of managing husbands. Well, I find that kindness is the best but then some husbands cannot be managed that way. Some men think that wives are just to keep house and say nothing about what the men do. But the best way I find is when they come in tired and hungry, always meet them with a smile and show them there is some one that is glad to see them. Then if he is tired and sleepy don't worry him about anything, just wait until he gets rest and a good meal. I know that is the way I can get my hubby to do anything I want to that is reasonable. I never demand anything else. Kindness is better and goes farther than anything else. I will write on this again.

Well, Sunny South is booming. J. W. Bain and M. O. Rannon have had a spell of La Grippe.

Yours,

Sunny South.

SIoux CITY, February 1, IOWA, 1890.

To the Editor of *Woman's Department*:

As the editor has requested the readers of the *Magazine* to write something concerning the best way of managing a husband, I will offer a few home-made ideas, although it is quite difficult for one who has had no experience to discuss the matter without a certain degree of embarrassment, therefore I will be brief on the subject. In the first place, that human frailty, love, should reign supreme in every household. Wives who love your husbands, be assured that the current of married life will not be obstructed by huge stones, but on the contrary will flow along harmoniously blended with peace and happiness. In some instances let Cupid fold his wings and be si-

lent while you take up the other of the ingredients, kindness, encouragement and self-sacrifice. True, husbands are not disposed to be alike, therefore different methods of managing are required, but apply the restoratives I have prescribed and surely if that husband, as he represents himself to be, has a true heart, he will in every respect comply with the vows made at the altar and consequently will submit to be managed by the endearing power of the woman who has secured a pretty good way of managing a husband. As I leave on the next train I will obey one of the code of railroad laws, I think it is the red signal and I guess that means stop. With all the best wishes of a long and happy life to the editor and a golden road of prosperity to the B. of L. F., I remain,

Short-hand Reporter.

FRANKFORT, N. Y., February 1, 1890.

To *Woman's Department*:

I saw in the January number of the *Magazine* that the editor calls attention to the all important question of how to manage a husband. Of course, they can't all be managed alike, but here are a few suggestions which may be of interest to some.

If your husband is half human make it a point to be pleasant when he comes home from work, for you need not have any doubts as to his being tired. Don't tell him before he gets his coat off how cross baby is and you haven't slept any since he went away, and Frankie washed the windows up as far as he could reach with buttermilk, and Howard dumped your bread that was so nice and light all out in his lap, and Kate fell down stairs and came so near killing herself that she wasn't hurt a bit, and, oh, dear, oh, dear, you never saw such children in all your born days, for he never saw anything like them either. Don't make them believe he is going to annihilate them when he does come. Teach them to run to the door to meet him instead of going under the table when they hear him coming. Try and be at home when he comes and have things in shape so you can get him something warm to eat inside of half an hour, for whoever saw a railroad man who wasn't hungry? Make a slipper or shoe bag out of burlap canvas with three or four pockets, work it with red Germantown yarn, fasten it up behind the parlor stove in winter, so his slippers will be warm and see to it that they are kept in their place.

If he is kind enough to let you handle the cash, don't ask him every time he wants ten cents what in the world he wants to do with it. Let him have free access to the bureau drawers and trunks. Don't keep them locked and carry the keys in your pocket. If he complains of the grocery bill being too large and you know that you waste nothing, feed him cheaper for a month and see how he likes that. If he is made up of the kind of material most railroaders are he won't fail to notice little acts of kindness and repay them in more ways than one. Some men seem to be managed about the way you would manage a dog, but they are in the minority.

I remember one evening in the early part of June, 1889, of going shopping with a neighbor and as we started, to my great surprise, she turned and addressed her husband, saying, "Here, you go behind and carry these umbrellas." He obeyed and when

we reached our destination she stopped and looked to see if the umbrella holder was on hand. She discovered him, however, with those detestable umbrellas, which of course we hadn't needed, grasped firmly by the cloth about in the center. I nearly fainted as she jerked them away from him with a look I never shall forget, exclaiming, "There, you carry them by the handle, do you hear?" Now, dear sisters, this is only one instance in a thousand I could mention, but if I had been that husband I would have hung tight to those weather protectors, and when I reached home I would have given her the benefit of the wooden part. I have one of the kindest of husbands. I don't know whether I cooked him or if he was already cooked when I got him. I can always look for him at the time he promises and he generally finds me at home. I make it a point to have the children clean and whole. I can do that if my pocketbook won't let me dress them as I would like to. I teach them to think there is something else of more importance in this world than dress. *Mate.*

[Sensible and to the point. Let us hear from the rest of the sisters.—Ed.]

WAYCROSS, GA., January 25, 1890.

To the Editor of *Woman's Department*:

I have been reading many interesting pieces and letters in the *Magazine* and I take pleasure in reading them. I have been a silent admirer of the Woman's Department for quite a while but now I will attempt to let '35 be heard from. The boys love their lodge and try to make everything pleasant for those who join their Order. They love to be called Brotherhood men and if every man would define that word "brotherhood!" I was thinking about this not long since, and it caused me to pause a while and reflect. It means just the same as brother stand up for your brother, love one another with a brotherly love, stay by him through thick and thin, stand by him as if he was your own, dear blood brother. Oh! it must be very hard for a brother to see another brother get into trouble. And if it lies in your power to help this brother, do all you can to persuade him to do better, in a mild, gentle and kind way. Tell him for the sake of his brother to do better. Help him all you can.

I oftentimes tell my husband to "Do unto others as he would have others do to him." Of course we like to be treated well and if we like this, why not treat others as we would have others treat us? Love each other with brotherly love. Well, my letter is already too long. I know there are a lot of mistakes but it is my first and I hope you will feel kindly toward me and overlook all my mistakes. With all the good luck I can wish a *Magazine* and a department I will close.

May the good Lord bless the B. of L. E. is the prayer of a fireman's wife.

Mrs. W. L. Stuckry.

Rev. Carrie J. Bartlett, pastor of the Unitarian Church at Kalamazoo, Mich., celebrated New Year's Day by performing her first marriage ceremony. It is described as unique and beautiful, and was the first instance in that city of a marriage performed by a woman.

ARGENTA, ARKANSAS, January 17, 1890.

To *Woman's Department*:

I wish to say a few words in regard to kissing mother. It is as little a thing as we can do to kiss dear, old mother, anyway when we leave home. Many a boy and girl give mother a good home after father's death, but very few give mother a kiss or a sweet smile when going from or coming home. Oh! boys, you who are railroad men, never again while you live leave home where your mother or your wife is without a kiss and a smile. Always remember that it takes something besides a house and plenty to eat to make home happy, and remember that a boy's best friend is his mother.

Jessie Constance.

[We endorse every word of this.—Ed.]

HARRISBURG, PA., January 27, 1890.

Editor *Woman's Department*:

I am a constant reader of the *Firemen's Magazine* and I can scarcely wait from one month to another till it arrives, and especially to see the letters in the Woman's Department. I think the Keokuk (Iowa) letter about kissing a mother just grand. Think of a mother, those that have one yet, how they can brighten their lives by coming to her and giving her a parting kiss. Remember there is no love like a mother's love.

Sister, I hope you will soon write again. I would like very much to hear of some of the Lodges out west including the ladies of the B. of L. E. how they are getting along with their Woman's Lodges. We organized one here a year ago. Our gathering is not great but we take the word as "stickability" and we mean to stick just for the honor of the brotherhood. By that word we have formed a sisterhood, and by that we will stand not like a post, nor stand around like a tramp, but stand firm nor waver, nor retreat back, but like brave women to our convictions stand by our rights and stand by our truth and justice. When I write now I not only speak to the Woman's Department, I also speak in regard of the Illinois letter. I congratulate the brother of 176 that says the name of Brotherhood of Locomotive Firemen has been good enough for me. Just for one instant take the Brotherhood, let every man and woman study and realize that word beside their motto, which is Benevolence, Sobriety, Industry and Protection. If every Brotherhood man understands that motto he does not want to change it.

Vice Grand Master Hannahan—I think the brotherhood can be proud of such a man and the address he has made to the B. of L. E.

I am very sorry that the B. of L. E. are so distant towards the B. of L. F., but I presume they forget that they used to shovel coal. Forgetfulness can not be helped. We forget our fellow men and not only them but we forget God, where our protection lies. A friend to the Brotherhood.

Rocky.

Miss Amelia Given, of Carlisle, Pa., has built a handsome library building furnished it completely, filled the shelves with hundreds of well-selected volumes, and presented it to the town of Mt. Holly for the benefit of the working people and mill hands in the two large paper-mills projected by her father about fifty years ago.

TO SHANDY MAGUIRE.

I have just perused your poem in the *Firemen's Magazine*.
Which headed "Mrs. H. B. Jones." I suppose it's I
you mean :
It was not because you were Shandy I tried to take
your part,
But the Golden Rule I try to keep, it is sculptured
on my heart.

It has always been my maxim, I thought everybody
knew
To do to others as you would have another do to you.
And I admired your talents, never thought you
would spend your time
In thanking me so cordially or to write me up in
rhyme.

For years I have watched you Shandy, I have known
your every ruse.
And I felt you were doing your very best our readers
to amuse.
You thought that everyone possessed a spirit like
your own.
From which all selfish motives or suspicions low had
flown.

But there you were wrong, dear Shandy. In this
world you sure will find.
There are mean and narrow-minded folks to sneer
they are inclined.
And if they see a jolly soul who tries in pleasant
rhyme.
To pass our weary hours away, they'll down him
every time.

They see a wrong in every act, they watch, and fume,
and fret.
And use a magnifying glass, some gossip for to get :
They are like a temperance lecturer I once did know
for sure.
Who always kept a spirit jar behind his bedroom
door.

There are some who cannot brook a joke, but that's
not you or I.
Tho' really meaning nothing wrong, we many things
imply.
And then our rhymes are taken and roasted o'er the
coals.
If the Almighty judge us so, I say God help our
souls.

But I understand you, Shandy, I know you mean no
harm.
And you will ever hold my high regard and my
friendship true and warm,
But could it ever come to pass that we were young
again.
From making me an offer I think you would refrain.

You think you are safe, dear Shandy, but what about
divorce?
Do you think you would take me *then* for better or
for worse?
I think I see you shake your head, you did not think
of this.
But before you made the assertion, it would not have
been amiss.

That you had thought the pros and cons thoroughly
o'er, my friend.
And what may be, and what may not, or why or
how things end.
To be your wife, dear Shandy, there are many would
aspire
Who lately raked the writings of Jolly Shandy Maguire.

While at Chicago lately at a prominent jeweler's
store.
The owner's name is Townsend, you have heard of
him before.
He showed me a handsome present just ready for a
man
Who, he said was my admirer, now guess him if you
can.

In many things, dear Shandy, I own you take lead.
But in seeing *first* this splendid gift you'll own I'm
one ahead.

And here I leave you, Shandy, in darkness and in
doubt.

So set your brains a working my meaning to find
out.

So I thank you for your poem, may your shadow
ne'er grow less :

May your talent never fall you, may you and yours
be blest :

May the chilly frosts of winter and many a summer's
sun

Pass over you, my jolly friend, before He calls you
home.

And when we are in the balance, dear Shandy, you
and I.

Perhaps our weight will gain us a home above the
sky.

And those who seem such angels *now* that we have
roused their ire.

Will not be any further up than I or Shandy Maguire.
Your friend,

Mrs. H. B. Jones.

WASHINGTON, INDIANA.

MARRIED LIFE.

To the Woman's Department :

In domestic happiness the wife's influence is much
greater than her husband's; for the one, the first
cause—mutual love and confidence—being granted,
the whole comfort of the household depends upon
trifles more immediately under her jurisdiction. By
her management of small sums her husband's re-
spectability and credit are created or destroyed. No
income can stand the constant leakages of extrava-
gances and mismanagement, and more is spent in
trifles than women would easily believe. The one
great expense, whatever it may be, is turned over
and carefully reflected on ere incurred—the income
is prepared to meet it—but it is pennies impercept-
ibly sliding away which do the mischief, and this
the wife alone can stop, for it does not come within
the man's province. There is often an unsuspected
trifle to be saved in every household. It is not in
economy alone that the wife's attention is so neces-
sary, but in those niceties which make a well-regu-
lated house. An unfurnished cruet stand, a missing
key, a buttonless shirt, a soiled table cloth, a mus-
tard pot with its old contents sticking hard and
brown about it are severally nothings, but each can
raise an angry word or discomfort. Depend upon it
there's a great deal of domestic happiness in a well-
dressed mutton chop or a tidy breakfast table. Men
grow sated of beauty, tired of music, are often too
weary for conversation, however intellectual, but
they can always appreciate a well-kept hearth and
smiling comfort. A woman may love her husband
devotedly; may sacrifice fortune, friends, family and
country for him; she may have the genius of a Sap-
pho, the enchanting beauties of an Armida, but the
melancholy fact is if with these she fail to make his
home comfortable, his heart will inevitably escape
her; and woman lives so entirely in the affec-
tions that without love her existence is a void.
Better submit to household tasks, however repug-
nant they may be to your tastes, than doom your-
self to a loveless home. Women of a higher order
of mind will not run the risk; they know that their
feminine, their domestic, are their first duties.

Yours truly, MRS. R.

LINDSAY, ONT.

AN ALLEGED "FAKE."

Mrs. Ida A. Harper:

DEAR MADAM:—I deem it my duty as a member of the Brotherhood of Locomotive Firemen, and as one who is interested in the welfare of the *Magazine* in general and the Woman's Department in particular, to inform you that the communication entitled "Kissing Mother," published in the January number of the *Magazine*, in the woman's Department, was published several years ago over the name of Robert J. Burdette, of the Burlington *Hawkeye*. I do not remember the name of the periodical that published it, or the date of publication, but I am sure that it was not original with Kittle Wadden, of Keokuk, Iowa. Respectfully,

A Friend.

[Although this letter was marked "don't publish" I take the liberty of using it in order to give the above named writer a chance to defend herself if she has any defense to make. I was struck by the merit of the article but do not remember having seen it before. I will always be greatly obliged if some one of our many readers will notify us when we are imposed upon. We frequently detect such imposition and do not publish the stolen articles. The *Firemen's Magazine* has a hundred and fifty thousand readers and it would be impossible for a writer to pass a copied letter as original without detection.—Ed.]

IN MEMORIAM.

Lines on the death of Leontine Butler Blocker, who was accidentally shot, at Ellensburg, Wash., on January 20th, 1890, and died the afternoon of the same day, aged 16 years and 23 days:

Mournfully tolls the bell;
Gently bear earth to earth;
Solemnly chant the knell;
Death claims a mortal birth.

Virgins, strew early flowers,
Plucked from the snow in spring.
Emblems of her sad hours—
Smiling while withering.

She was a beautiful one,
Pure as a seraph's tear;
Too soon her task was done—
Born but to disappear.

Low chant her requiem:
Close o'er her breast the sod;
Angels, teach her your hymns
While winging her way to God.

Mary E. Clune.

Statistics show that among college-bred women who have married the divorce rate is less than the average, and the death-rate of their children exceptionally low. This seems to indicate that college women choose good husbands, from whom they do not need to be divorced; also that they make good wives, whose husbands do not want to be divorced from them; also that an educated mother knows better than an ignorant mother how to care for the health of her child. When the college-bred woman does not marry, as a rule it is not because she has no natural inclination that way, but simply because the right man has not presented himself. If Mr. Grant Allen could be put face to face with a bevy of blooming Vassar or Wellesley girls, he would blush to remember that he ever declared the sole result of the higher education thus far to be "a dulled and spiritless epicene automaton."

MISCELLANEOUS.

Josh Billings said: "Self-made men are almost alwuz apt tew be a leetle too proud uv the job."

Mudge—"For heaven's sake, Bosworth, have you been sand bagged, or in a railway accident?" Bosworth—"Neither. I hid under the bed the other night to scare my wife."

"It doesn't take me long to make up my mind. I can tell you," said a conceited fop. "It's always so where the stock of material to make up is small," quietly remarked a young lady.

Tired child—"Mamma, how much did you put in the collection-box?" Mother—"A quarter, my dear. Why?" Tired child—"Well, this preacher gives an awful lot for the money."

Mrs. Badger—"You must have a nice kind of a mother if she lets you fight in the street like this and get a black eye." Little Johnny—"I was fighting with your boy, ma'am, and he's got two black eyes."—*N. Y. Sun*.

A little Rochester girl drew the picture of a dog and cut on her slate, and, calling her mother's attention to it, said: "A cat oughtn't to have but four legs; but I drew it with six, so she could run away from the dog."

"Well, Johnny, I shall forgive you this time; and it's very pretty of you to write a letter to say you're sorry." "Yes, ma; but don't tear it up, please." "Why, Johnny?" "Because it will do for the next time."—*Christian Nation*.

"Young man," he said sonorously, "are you ever abroad in the early morning, when the great orb of day rises in all his majestic brilliant glory?" Well—yes, sir, sometimes," replied the young man. "but I generally try to get to bed earlier than that."—*N. Y. Sun*.

"In true marriage, husband and wife ought to be like twin stars in the heavens. You would not, if you could, have one fall into and become absorbed in the other. Let the two swing and shine together in their own sphere, each with its own peculiar brilliance, and then the heavens shall become glorious."—*Rev. M. J. Savage*.

An Ohio lady is the mother of a large family of children, all rather diminutive. A few days after the birth of the youngest, a little niece of the lady called to see the baby. After looking at the tiny specimen a few minutes, the child remarked: "Aunt Maria, don't you think it would better to have less of 'em and have 'em bigger?"

It renews one's hope in the future of American manhood to learn that no smoking cars were called for on the trains which bore to Philadelphia the delegates to the late National Convention of the Societies of Christian Endeavor. One train that contained nearly a thousand delegates, hundreds of them young men, had not a single smoker on board, "even in the baggage car."

It is related of a clergyman, the happy father of a charming daughter, that, while preparing his Sunday discourse, he was suddenly called away from his desk, leaving unfinished this sentence: "I never see a young man of splendid physique and the promise of a glorious manhood almost realized, but my heart is filled with rapture and delight." His daughter, happening to enter the study, read the words. Sitting down, she wrote underneath, "My sentiments, papa, exactly."

A little chap, whose love of Bible history is indulged in at all times and all places, was recently reproved by his mother for lack of order. "You must get into the habit of putting away your rubbers and overcoat," she said, "and not leave it for others to do." "Well, mamma," replied the young reasoner, "don't you know that a person's head can only contain just so much? Now, if I put rubbers and overcoats and such things into mine, then Moses and the Kings and the proverbs will have to be crowded out."

THE MAGAZINE.

Rejected Manuscripts are not returned unless accompanied with required postage.

Subscriptions must begin with the January, April, July or October number, and expire with the year.

Changes of Addresses of subscribers should be reported to us promptly to insure the safe delivery of the Magazine.

Contributors are required in all cases to give their real names, not necessarily for publication, but as a guarantee of good faith.

Subscribers failing to receive their Magazines will please notify us, giving name and location of Agent through whom they subscribed.

THE "ARRAIGNMENT, TRIAL AND CONVICTION" MATTER ONCE MORE.

The *Locomotive Firemen's Magazine* is being taken to task for publishing the proceedings of a meeting of the General Board of Adjustment of the Union Pacific system contained in a letter dated Pocatello, Idaho, and addressed to F. P. Sargent and E. V. Debs, G. M. and G. S. & T., B. of L. F., under date of October 20, 1889.

It should be borne in mind that this document was published in the *Magazine* December 1889, page 1090. We are writing history and must be particular, and we desire that the reader shall have an accurate understanding of the subject in hand. It will be seen that while the letter bears date of October 20, 1889, it did not appear in the *Magazine* until December 1889.

Just here the question arises, was there any good reason why the letter addressed to F. P. Sargent and E. V. Debs, G. M. and G. S. & T. of the B. of L. F. should be published in the *Magazine*? This is the vital question.

Were the proceedings of the General Board of Adjustment private? It is known that the General Board of Adjustment attacked the Supreme Council of the Federated Orders of Railroad Organizations, and in particular attacked the Grand Officers of the B. of L. F. who participated in the deliberations of the Chicago meeting and constituted a part of the Supreme Council, as follows:

We, the *Brotherhood Firemen* of the Union Pacific System, in annual session assembled, having exhaustively discussed the merits and demerits of the Constitution and By-Laws adopted by the "Supreme Council of the United Orders of Railway Employes," do hereby, *wholly and without reserve*, condemn the action of our *Grand Officers* in attaching their signature and the great seal of our organization to any such document, for the reasons herein set forth in detail.

Here was the arraignment, trial and conviction of the Grand Officers of the B. of L. F. without a hearing, without an opportunity to explain or to introduce any sort of testimony in defense of themselves, of federation or of the Supreme Council—and the

complaint is based upon the publicity the *Magazine* gave to the unheard-of proceedings. Now, bear in mind, dear reader, that the letter bears date of October 20th, 1889, and that in November, 1889, the *U. P. E. Magazine*, published the following most extraordinary article—(pages 206 and 207):

THE FEDERATION OF THE "SUPREME."

Nine grand officers of three organizations of railroad employes met in Chicago last June *supposedly* to prepare a plan of federation for railroad employes' organizations, but succeed only in federating themselves.

They formed an organization and called it "The Supreme Council of Railroad Employes." They created nine offices so there would be enough to go around. They made laws which they *shrouded with mystery*, for the guidance of the striking rank and file. They decreed that any of them having a grievance and concluding to strike they must submit their case to them, as they, "The Supreme," said it should be, and *dire vengeance* would be heaped on the disobedient. These laws must be revered in secret. Vulgar eyes must not see them. They were evidently ashamed of them. Where they got their authority would be hard to say.

Where federation for workmen is to come through this "Supreme," it will be hard to make those who are supposed to be governed by it understand. If they have got to wait till they are ready to strike before its benefits come in, they are not likely to wait longer but go on and strike.

Either a very erroneous idea of what federation is and what it is calculated to do, or a very large amount of egotism among "The Supreme" exists.

Federation must begin at the bottom not the top. Its foundation must rest among those on the engines, trains tracks, in the yard, shops, roundhouses and offices. It is these that have trouble and grievances, and it is those who know that they are much better than any Supreme Council thousands of miles away. They must fight the battles and must be the ones to try and prevent them.

Nine-tenths of the troubles are confined to *individuals* and are of a nature which, if taken in proper time, can be adjusted without going outside of the *local circle*, where federation must commence.

Representatives of their fellow workmen are the best calculated to set such matters to rights. They know all parties concerned, and the many imaginary grievances need never go beyond them. Much friction that is liable to set things in flames is checked. Little matters are not allowed to grow greater. Thus a great *strain* is taken from all organizations and from the relations between employer and employe.

Federation, as it should be, provides for this by bringing in the judgment of the unprejudiced fellow workman: the one who must suffer first and greatest if trouble comes, to pass on the matter. It creates a *brotherly relation* between all, something that the "Supreme" have failed to provide for or consider.

What is true of local matters is true of the handling of any trouble that might be serious enough to demand the attention of all fellow workmen on a division or whole system of a railroad.

Federation is purely democratic. The monarchial feature cannot be grafted to it. The "Supreme" flavors of it. Home rule is the order of all things possible.

Federation locally, federation of a division, federation of a system, and federation of systems must be the order of its work. With it *properly arranged* and managed it would be rare that trouble would pass beyond the system.

The "Supreme" provides for nothing of the kind. It leaves the conditions as they now exist, liable to a rupture at any time, that a few may be worked up to the proper pitch to do it, bringing hardships to all others involved by them. This is what true federation will prevent and what it must do. Through such federation the rank and file are perfectly capable of *governing themselves* with credit and with justice to their employers. When they fail it is time for the "Supreme" to be brought into action.

Federation is a government of the rank and file, by them and for them. The Supreme Council, created under the circumstances that it has been, and with the laws it announces, is only a mockery of the word federation.

Those who read the foregoing, will see at a glance that it is in every essential feature an echo of the proceedings of the General Board of Adjustment of the Union Pacific system, that it has the brands and ear marks; breathes the same spirit, is equally abusive of the Supreme Council, and its work to establish federation.

When this ungenerous and malignant article appeared, it was proof as positive as circumstances could produce, that a scheme had been concocted, to embarrass federation, and if possible, defeat it. It was manifest that the *U. P. E. Magazine* had been posted, that some one in the Order had *leaked*, and that the *U. P. E. Magazine* was to be used for the purpose of sowing discord in the ranks of the B. of L. F.; used for the purpose of denouncing federation and for denouncing the Grand Officers of the B. of L. F. To accomplish the purpose, things had been *fired*. The letter addressed to the Grand Officers of the B. of L. F., bears date of October 20, 1889, ten days later, comes the *U. P. E. Magazine* with its flatulent abuse.

Nor is this all. The Supreme Council, was organized in June, 1889. Two great Orders in the federation had unequivocally indorsed the action of their Grand Officers. Not one letter had been received from any of the more than four hundred Lodges of the B. of L. F. uttering so much as a *hint* of opposition to federation or the action of the Grand Officers who helped to establish it.

Now, then, comes the action of the General Board of Adjustment of the Union Pacific system, and as the thunder follows the flash, comes the *U. P. E. Magazine* following in the same track, with falsehood and fault-finding, manifestly designed to poison the minds not only of brotherhood firemen, against the Grand Officers of the Order, but all others who favored federation; evidently in the hope, that in the wrangle that would follow, the fellow who was in the *secret* and had *leaked* for a purpose would be able to straddle his windy hobby and ride into prominence.

The rank and file of the brotherhood, the men whose interests were involved, and who had a right to know, were to be kept in profound ignorance of the trap that had been set for them. They were to read the *U. P. E. Magazine* and understand that the Grand Officers had acted in bad faith, had exceeded their authority, had been untrue to their obligations and merited denunciation, heaped upon them through the columns of the *U. P. E. Magazine*.

This dangerous condition of things was brought into the boldest possible promi-

nence by the action of the General Board of Adjustment of the Union Pacific system and the publication immediately afterwards of the *echo* article in the *U. P. E. Magazine*.

To carry out the scheme a publication must be had. The *U. P. E. Magazine* was convenient and it was utilized.

At this supreme juncture, what could be done?

Manifestly, the duty of the hour was to expose the business;—to let brotherhood firemen know the trap that had been set for them; to put them on their guard.

To effectually do this, we published the letter addressed to the Grand Officers, (or to two of them) in the December *Magazine*.

As might have been expected, the scheme at once collapsed. The "fat was all in the fire."

Every one sees that the denunciation of the Grand Officers of the B. of L. F., was a shameful piece of business—gratuitous and undeserved.

All the talk about the right to criticise the Grand Officers, is subterfuge—special pleading. Grant all that is said, or that may be said in that direction, the fact remains, that it is a great outrage to arraign, try and condemn the humblest member of the Order without giving him a hearing—and it is equally shameful and outrageous to use a publication of any sort, for the purpose of maligning either men or officers, as the *U. P. E.'s Magazine* maligned the Supreme Council and the men who composed that body, of earnest and conscientious men.

Was it to be supposed that under such circumstances this *Magazine* would be silent? Was it to be supposed that this *Magazine* would join in their hue and cry against federation, and the men who had been instrumental in establishing it? If so, the men who so supposed, have long since discovered their mistake.

When the General Board of Adjustment of the Union Pacific system, conceived it to be their duty to charge, arraign, try and condemn the Grand Officers of the B. of L. F., if they had notified the defendants, the victims of their wrath to appear and show cause why they should not be denounced, why judgment should not be rendered against them, we should have been content. But this was not done. As a consequence, to make matters worse still, a publication was used to the base purpose of maligning federation and the men who had, in the name of the great brotherhoods they represented, established it.

Had the *U. P. E. Magazine* remained silent, had the article which we reproduced been withheld, the probabilities are that the letter addressed to two of the Grand Officers of the B. of L. F. would have remained a secret. We do not say that it

would so have remained—for it was of such a character that every brotherhood fireman had a right to know its contents.

If now the question is asked by any one who has a right to ask it, and all brotherhood firemen have that right, why we published the letter addressed to two of the Grand Officers of the B. of L. F., we answer most emphatically, because in its substance it had been given to the public in the columns of the *U. P. E. Magazine* for November, 1889; and because we regarded it a sacred duty, from which there was no escape except in cowardice, and treason to the Brotherhood, to expose a scheme, having a dangerous purpose in view.

We published it in justice to the rank and file of the Brotherhood—and here we will say, that in the term "rank and file," we include the great body of our brothers on the Union Pacific system, who intend to do right, but who may have been deflected by schemers to put up a deal totally at war with the best interests of the Order. These men are not to be criticised—and the *Magazine*, in what it has said makes no allusion to them.

There is such a thing as the performance of duty, however little importance it may be in the estimation of some men. As editor of the *Magazine*, our duty is to the Brotherhood, not only to its officials, but to the rank and file—to all.

To be convinced that a movement is on foot, that a scheme has been concocted, or is being hatched fraught with evil consequences to the Brotherhood; that it has gone beyond the reach of all ordinary means of suppression, it is then that duty demands the exercise of extraordinary means. To hesitate in the use of the remedy, is cowardice and treason combined. We are not built that way.

The case about which we have written is in point. A great wrong was being done. To the best of our ability, we have eliminated its power for mischief, and have given our reasons for the performance of an unwelcome duty. We erect no standard for the government of others, but in this case, the *Magazine* has simply performed a duty to the Brotherhood, from which it shirks no responsibility and for which it makes no apology.

"The further perusal of the Firemen's December issue gives us food for thought."—*U. P. E. Magazine*, January, 1890.

Just what we intended. Hope you have a good appetite. Eat hearty. Call in your friends and partake largely of the "food for thought."

"The writer" (that is the editor of the *Firemen's Magazine*) "attempts to kill two birds with one stone."—*U. P. E. Magazine*, January, 1890.

Oh, no, not "two birds," not winged insects of any kind—neither bugs nor beetles, mosquitoes nor gnats. Try it again.

KIND WORDS.

We take the following generous notice of the *Magazine* from the editorial columns of the *Switchmen's Journal* for February:

The *Locomotive Firemen's Magazine* begins the new year and volume fourteen with a new dress, new title page and otherwise improved. The *Magazine* is unquestionably the best railroad publication that comes to this office. While the policy of its editor may not please everybody, it would be hard to do that; you always know where to find him. Asking quarter at the hands of no one, seeking sympathy from none, believing he is right, you can always depend on solid shot in defense of that right. As long as the *Magazine* is under his control the Brotherhood can feel no uneasiness that their interests will be well looked after. Wherever in his judgment an enemy of the policy of the Brotherhood shows his head, whether he is in the order or out of it, you depend upon it that he will get a "crack" right on top of the head with very little ceremony.

What is said of the *Firemen's Magazine* may be said with equal propriety of the *Switchmen's Journal* and of the *Trainmen's Journal*. These publications stand squarely by their organizations, defend their laws and their policy, and permit no attacks upon either to go unrebuked. When a publication, the organ of an order, its official guardian, can't do that, it is unnecessary to say that it is useless and hopelessly paralyzed.

"MARKED COPIES."

Members of our Brotherhood in various portions of the country have forwarded to us the January number of the *U. P. E. Magazine*, on the cover of which is stamped, "Marked Copy."

The November issue of the *U. P. E. Magazine* contained an article designed to kill federation and cast odium upon the men, who, as the representatives of the federated Brotherhoods of Railroad Employés, had established it.

The December number of the *Firemen's Magazine* exposed the plot, and as a consequence the plotters were not as happy as clams at high tide. On the contrary they experienced great anguish, were sorely distressed.

Strange as may appear, the men who had tried to assassinate federation and failed, were not ashamed of themselves. Caught, exposed, baffled, their voice was still for war. They had a gun, smooth-bored and mounted, they had a little second-hand powder, and a lot of odds and ends, and these nondescript missiles they rammed into their captured gun, marked the charge, and with the command, "Let her go Gallagher," the gun went off; the load was widely scattered, but the returns, so far, do not show that anybody was killed or wounded. Federation exists as it was established; the Supreme Council is intact, and the Grand officers of the B. of L. F., are going about in the performance of their duties, as usual.

The "marked copies" of the *U. P. E.*

Magazine which were expected to produce consternation, to explode like bombs, derail the federated train, mangle the Supreme Council and everlastingly cripple the Grand Officers of the B. of L. F., didn't "pan out." The marked article was not "pay dirt," and we have been immensely amused by the comments of our friends who have sent us the "marked copies."

All things considered, we are inclined to the opinion that it is well enough that those whose ambition got the better of their discretion, sent out the "marked copies" of the *U. P. E. Magazine*. With their own hands they helped to uncover their plot. They are the flames who prepare halteres for others and find out when too late that their own necks are to be tickled.

The rank and file of the B. of L. F. see distinctly the pit that was being dug for the Brotherhood and are jubilant that the scheme was exposed in time.

For once vaulting ambition overreached itself. Envy and jealousy cannot stand investigation, and their triumphs are short lived.

It is the good fortune of the B. of L. F., so far, to have advanced, to have become powerful and influential by pursuing an honorable course, and for some time yet, it will continue to grow in strength and achieve good results. That it cannot be wrecked we do not say. That its secret foes cannot get command of its machinery we do not avow, but such calamities are not in the immediate future. The *U. P. E. Magazine* may continue to distribute "marked copies," but it will be remembered that Cain was also marked, and that the mark everywhere told of his crime.

THE SWITCHMEN'S JOURNAL ON FEDERATION AND THE SUPREME COUNCIL.

Three orders of railway employes have federated for mutual protection—Trainmen, Switchmen and Firemen. These orders represent the Supreme Council. They inaugurated federation as it exists to-day. A very small fraction and faction takes exceptions to federation as it has been established and wonder if they could overthrow it. The questions involved are being discussed. We have decided, notwithstanding it delays the publication of our March number, to let our readers know the views of the *Switchmen's Journal* and the *Trainmen's Journal* upon the subject. These publications are the official organs of the orders they represent. The views they express are of special value and significance and will be read with special interest. The article which we reproduce from the February number of the *Switchmen's Journal* discusses the subject thoroughly and logically. The article is mostly from first to last, and that must suffice as a reason for giving it in full. Here it is:

FEDERATION.

In September, 1886, when the *Switchmen's Journal* was but five months old, it contained a long editorial urging the formation of "a general brotherhood" of all railway employes. We urged then as a reason for this movement that "the larger railroad corporations having swallowed up the smaller ones" and having thus "centralized their forces to such an extent that they look with disdain upon anything that is not within itself powerful—the power to enforce a hearing is the only way one can be obtained." We argued that this brotherhood could be established without destroying existing organizations, each organization could retain its autonomy, while relegating certain powers to a supreme body. And as a result of this "unification of all the forces of the railroad service into one grand brotherhood," it would do more to promote harmony, peace and quietude in the railway service than all the statutory enactments that could be imagined.

When the C. B. & Q. strike convinced every thinking man who has the material interest of railway employes at heart that such centralizing of our power for at least defensive purposes had become an absolute necessity, the question of federation began to take shape, and in June last three important and powerful orders of railway employes were federated. Naturally, when the question of federation was being discussed and taking shape, numerous well meaning members of the different orders had seemingly well matured ideas as to what form it should take, and perhaps may have had adopted by their particular order the one in their judgment the wisest. But in this connection it is only necessary to remind them that each of the three orders had as much to say in the premises as the others, and it was necessary to formulate such plan as in the judgment of those assembled would meet with the least objection, and to adopt a policy of going slow until all had become acquainted with the new comer. The wisdom of the action is apparent. All railway managers looked upon the movement with suspicion. They apprehended serious upheavals among their employes, and general disturbance. A prominent railway manager said to the writer of this that if the railway employes federated he proposed to resign his position and go into other business, because he could see nothing but trouble before him. After two hours talk with him we left him with an entirely different opinion of federation. If the new comer had proclaimed its coming with blasts of trumpets and gone forth like a modern Goliath it would evidently have met its David. Hence wisdom and common sense dictated that we should go slow until railway managers were convinced that the claims made by the friends of federation were correct. That federation did not mean an offensive but a defensive policy. That it would reduce strikes to a minimum. That it was, figuratively speaking, but placing railway employes upon speaking terms with their employers. That the powerful will only recognize the powerful or treat with them.

It is not supposed for a moment that those who took part in the organization of the "Supreme Council of the United Order of Railway Employes" were infallible, or that in the short time allotted them they could formulate a plan of federation acceptable to every member of the organizations represented and railway employes in general, or that the plan they promulgated would stand for all time and eternity. They endeavored to lay the corner stones upon which a temple of "Mutual Justice" could be erected. How well they did their work the future will determine.

Recently, however, certain gentlemen have thought it their religious duty to ridicule and rant in print against the form of federation adopted, and those engaged in the task of its formation. One gentleman is even reckless enough to proclaim that he is father of the child and that it was born somewhere down in Georgia, and that any federation that has not his brand upon it is not genuine or the authorized. We were not aware that the Switchmen's Mutual Aid Association of North America authorized any one but the committee appointed at St. Louis to act for them, and we are aware that their action was endorsed at Columbus. We do not question the right of any member of the orders fed-

rated to criticize the work of their committee. It is said, however, that "discretion is the better part of valor," and that we do question the discretion of any pretended friend of federation that rushes into print with ridicule and heaps odium upon an honest effort to federate, because, forsooth, his particular ideas were not adhered to. Without desiring to reflect upon the motives that prompted such action, the fact stands out clear and bold that were he an enemy of federation he could not adopt a policy of attack so effective as the sowing of the seeds of discontent and dissatisfaction. If the present form of federation is not satisfactory to the majority of those concerned, there is a time, a place, a way of changing it without joining the ranks of the enemy even to the extent of cleansing soiled linen before the public.

There is evidently a misconception in some quarters as to who are eligible to membership in the federation adopted last June. While care was exercised in order to insure stability, yet the doors were thrown wide open to all *bona fide* organizations of railway employees. True, local bodies cannot be admitted, but it will take but a moment of actual thought to see the wisdom of this course, and we will not tire the reader by pointing it out; neither will we take up space in proclaiming the friendship of the S. M. A. A. of N. A. for the K. of L. This has been proven on many hard fought battlefields, and the occasion has never presented itself when they have shown anything else. The way is clear for them to be a part of this move for "Mutual Justice," and no one knows the way to proceed better than they themselves.

It seems to us, however, proper to state right here that it is our judgment that local federation, or the federation of systems, is not the best way to accomplish the desired end. Those who are familiar with the history of our organization will verify our assertion that the switchmen have been used to get the chestnuts out of the fire about enough. Their fingers are still tender from the effects of the scorching received while endeavoring to get the chestnuts out for other parties during the C. B. & Q. trouble. It is high time for them, to use a vulgar phrase, "to take a tumble to themselves." If the rank and file of the K. of L. E. desired federation why did they not elect delegates to the Denver convention that would endorse this proposition? But a short time previous to the Q. strike its official head proclaimed to the world, with no little amount of pomposity, that the order would not permit any "entangling alliances" with any other labor organization. And yet the strike was only a few days old when emissaries from that order swarmed around our office with the cry of "for heaven's sake and seven children help us out!" And the switchmen, forgetting past abuse and treachery, threw themselves into the breach, only to be aroused to their senses a short time after by a verification that it was but one more sell out. And now are the switchmen going to be hoodwinked again by the gauzy policy adopted at Denver? We hope not. At that convention they positively and unequivocally declared against federation, and then as a "sop" thrown to the dissatisfied element, and in order to open a way to get more chestnuts out of the fire, they condescended, if you please, enough not to prevent local, or system, federation. But to the least "entangle" the grand and sublime head of the order, oh! no, that would never do. What will be the result of these local federations? The engineers will get the benefit of all the power there is in local federation, while their chief is fawning before railway managers and proclaiming that the engineers have no affiliation with "the lower strata" of the railway service. And should the time come when an open rupture occurs between any of these federated bodies and a railway corporation, and appearances indicated that the federated bodies were going to get the worst of it, then the great chief will come to the front with constitution in hand, and under its provisions order the faithful back to work, leaving the others to hold the sack.

We want no federation that has a "string to it." We want no federation founded upon deception. We want it clear-cut, well-defined, and the organizations entering into it must not retain in their constitutions provisions in contravention to the author-

ity vested in such federation. Local federation, or a federation of systems, can only be considered as combines, and their lives depend wholly on the tolerance of the heads of the different orders, and so long as one of these heads has openly declared itself against federation, we can see no other results from such combinations than whenever it comes to a positive "show down," the members of that particular order (however in earnest and loyal the individual member may feel) will be given to understand that they must obey the mandates of the powers that be, and no compromising of the dignity by engaging in any "entangling alliances" will be permitted. Our opposition to local or system federation is the result of experience, not founded on any ill feeling we may have for any individual. Ask the old C. B. & Q. switchmen what they think of local combines.

It will be noticed that the switchmen's association is loyal to law and order, as is the Brotherhood of Trainmen, and the great body of the Brotherhood of Locomotive Firemen are equally true to federation as it exists. The debate goes bravely on. So far no friend of federation has assailed the position taken by the *Firemen's Magazine*. Only enemies croak, and as the months go by their whines grow faint, while the demand for federation is loud and resounding, presaging victory.

THE QUEEN AND CRESCENT.

Proceedings Leading to a Settlement of Trouble —A Splendid Victory for Federation.

If there is one man left in all the Brotherhoods of Railway Employés who is opposed to federation, he is invited to read the following brief history of the settlement of troubles on the Queen and Crescent, resulting from the arbitrary discharge of a number of conductors, members of the Brotherhood of Railway Conductors.

Somerset Division of the B. of R. C., was organized at Somerset, Ky., in October, 1889. About two months later, December 18th, 1889, the managers of the Q. & C. began to discharge conductors until twenty of them were set adrift.

At this juncture the members of Somerset Division requested Grand Chief Howard, of the B. of R. C. to visit them, also Grand Chief S. E. Wilkinson, of the B. of R. T., as some of the discharged conductors were members of that Order. During the latter part of December these officials responded to the call and were given to understand that the conductors were discharged because they were members of the B. of R. C.

This action on the part of the officials of the Q. & C., as might have been expected, and as should always be the case, aroused the members of all railway organizations on the road, and, as a consequence, a conference of engineers, firemen, conductors and brakemen was held at Cincinnati. At this meeting it was found that the engineers were not federated. As a consequence, the engineers promptly took a vote of the men on the Q. & C. system, pursuant to the action of the Denver Convention relating to federation, and they decided unanimously to federate.

The conference reconvened on January 28th, 1890. At this meeting Messrs. Arthur, Sargent, Wilkinson and Howard were present with the committees, and it was decided to present the matter to the Q. & C. company.

At first, the company, prior to the arrival of the Grand Officers, refused to recognize or treat with the federated committee. Messrs. Chas. Schiff, President, and Richard Carroll, General Manager, were not disposed to make concessions.

The Grand Chiefs sent Grand Chief Howard, with his committee, to call on the officials and try to bring about a settlement. Five conferences were held. During the intervals President Schiff convened his Board of Directors three times.

It is needless to say that when a railroad President convenes the Board of Directors even *once* to deliberate upon a proposition, great importance is attached to the subject.

In this instance, men had been discharged because they were members of the B. of R. C., for exercising an unquestioned right of a citizen. Railroad employes comprehended the magnitude of the outrage. They saw that it was a blow aimed at organized labor—at the rights of workmen, and they determined to resist it.

On February 1st the officials of the Q. & C. decided they could not reinstate the men, but offered to carry them on their pay rolls till February 18th, to give them a chance to find employment elsewhere. This offer was declined on the part of the federated committee.

The conductors then reconvened the Grand Chiefs, and reported the final result of their conferences, and thereupon the Grand Chiefs called on the officials of the company to make a final effort to amicably settle the difficulty. F. P. Sargent, President of the Supreme Council of the Federated Orders, requested an interview, which was readily granted. He met the officials of the company and after a conference of two and a half hours, the company proposed to arbitrate the questions at issue—the company to select one man, the Grand Chief of the B. of R. C. to select one man, and these two men to select a third.

This was agreed to by the company and by the federated board, both sides binding themselves to abide by the decision of the arbitrators. The gentlemen selected were: J. D. Hearne, President of the Third National bank, Cincinnati, was chosen by the Q. & C. company; Rev. J. M. Mackey, of Cincinnati, was chosen by the federated Board, and these two selected H. C. Erner, a prominent insurance man of Cincinnati, and made him chairman of the Board of Arbitration. Both the company and the conductors were requested to prepare a type-written statement of their side of the case,

one copy of each for each of the arbitrators. This was done.

After due deliberation the Board of Arbitrators rendered their decision—February 8th. By this decision sixteen conductors were to be reinstated and paid in full for all the time they had lost, or, the company was required to pay them *four* months wages at the rate of \$90 per month.

Here let it be said that the engineers on the Q. & C. are entitled to the largest possible measure of credit and praise for the course they pursued throughout the difficulties we have narrated. Thoroughly organized, watchful, and appreciative of conditions and rights, they stood by the conductors to the last, and results show what may be accomplished when the right is in peril.

With all our heart we congratulate Brother Howard and the young Brotherhood over which he presides. We congratulate the engineers, and brakemen, and switchmen, and firemen. Federation does not mean headlong precipitation of strikes. On the contrary, as is seen in the Q. & C. difficulty, it means patient, laborious effort to avoid strikes. It does not mean unjust demands upon railroad corporations. On the contrary, it means a willingness to place matters in controversy which admit of arbitration, into the hands of fair-minded men, and to abide by their decision.

Which ever way the officials of the Q. & C. decide, whether to reinstate the discharged conductors or pay them four months' wages, the young Order, the B. of R. C., gained a splendid victory.

THE RAILROAD TRAINMEN'S JOURNAL, THE U. P. E.'S MAGAZINE AND FEDERATION.

Manifestly, the most important question now demanding the attention of the organizations of railroad employes is that of federation. Three organizations have federated and constitute the Supreme Council. This Supreme Council has been attacked and shamefully abused in the columns of the *Union Pacific Employes Magazine*, for no purpose whatever to any fair minded man, except to create dissension, and if possible defeat federation, and this is done by professed friends of federation.

In this connection the *Firemen's Magazine* welcomes to the defense of federation and to the defense of the Supreme Council the vigorous pen of the editor of the *Railroad Trainmen's Journal*, the official organ of one of the great Brotherhoods identified with the Supreme Council. The article, which we reproduce from the columns of the *Trainmen's Journal* of February, in reply to the U. P. E.'s criticism, while it indicates the position of the *Journal*, is also a triumphant vindication of the course pursued by the *Locomotive*

Firemen's Magazine, and is entitled to and will receive a careful perusal. It is as follows:

THE SUPREME COUNCIL AGAIN.

The *Trainmen's Journal* is now under editorial charge of L. W. Rogers, formerly editor of the *Denver Patriot*. We are pleased to see Bro. Rogers to the front. He did noble work while in Denver to advance real federation among railroad men, and he will now again have a good opportunity to advocate it, and spread a knowledge of what it means. However, his attempt in his first issue in charge to sustain the Supreme Council may be politic for him personally, but does not correspond with his efforts for federation while in the West. We doubt very much whether he has yet had time to compare the supreme plan with federation, and perhaps, being somewhat rattled by his new surroundings, accounts for his first attempt at criticism. He surely knows better.—*Union Pacific Employes' Magazine*.

A carload of thanks, Bro. Corbin, for that pronouncement in italics. It is really nice to think that we know better than we speak, while others err through ignorance. We trust the compliment is not intended to soothe us into silence, for we have something to say. And right in the beginning let us ask the *U. P. Employes' Magazine* if it thinks it is just the proper thing to answer an argument or a defense of the Supreme Council, if it prefers the term, by saying that it may be policy for us to defend it? In other words is it fair and square to question our motives instead of replying to arguments? In the same issue the *Magazine* devotes several pages to an attempt to show that the *Firemen's Magazine* has not reasoned, but abused, in replying to the criticism of the *Employes' Magazine*. It occurs to us that the editor of the latter publication is not quite consistent in this. If it enjoys argument why doesn't it occasionally produce a little. If it worships at the shrine of logic it should certainly favor its readers with a featherweight sample of it once in a while.

The case fairly stated, is this: Under the caption, "Federation of the Supreme," the *Employes' Magazine* presented an article ridiculing the Supreme Council, consisting of representatives of the B. L. F., B. R. T. and S. M. A. A., and asserted flatly that the whole thing was an office-grabbing affair. The *Journal* replied, defending the legislation of the Council, and calling attention to the fact that it is composed of a number of the ablest men in the labor world—men whose successful records convert abusive ridicule into a boomerang that returns to the thrower with disastrous force. The *Magazine* now replies as quoted above.

The *Magazine* is so complimentary as to credit us with having done "noble work" for federation in Denver. It then asserts that our defense of the Council may be "politic," "personally." The two assertions would make it appear that we have made a change of base in federation tactics since leaving Denver. The suggestion is as unjust to us as it is unworthy of Editor Corbin. The truth is, that in the federation meetings in Denver we vigorously opposed the ideas of those who believed in the theories which oppose the plans adopted by the Council. The *Employes' Magazine*, in its reply to the *Firemen's Magazine*, refers to the fact that William F. Hynes was chairman of the committee which drafted the original scheme of federation, and speaks of him as a man whose name is honorably known wherever the B. L. F. has a lodge. We have the honor of numbering that gentleman and scholar among our personal friends, and if we have ever grasped the hand of a truer, manlier man we are not aware of it. But we honestly and sincerely differ from Mr. Hynes on one point in federation, and the editor of the *Employes' Magazine*, who represented the Knights of Labor in these federation meetings, surely remembers it, for it led to heated discussions, in which he participated.

That one point of difference, which forms the basis of the original criticism in the *Employes' Magazine*, is the question of where the supreme power shall rest—with the Supreme Council or with the employes of a certain railway system. The firemen, trainmen and yardmen of the United States and Canada are federated in one vast body, whose united power may be thrown in one direction for a common

cause. If any branch of either of these organizations has a grievance, the moral force of which makes it of mutual concern, the entire strength of this giant federation may be used to sustain that branch in its efforts to right the wrong. Now the question arises, Who shall direct the use and application of this supreme power? We unhesitatingly assert that the authority should rest only in a council composed of an equal representation from each of the organizations forming the federation. But the opposing idea, if we understand its advocates, is that when trouble occurs on any one system the employes of that system shall possess the power to direct the movement of the national force. On the ground that the local committees would best understand the situation, it is proposed to invest them with the supreme authority. This is most certainly democracy to the limit, but we do not believe it would ever work in practice. We can conceive of no government by the people that does not have one fixed center. To allow it to shift from one point to another as occasion demands, would, in our opinion, give rise to many difficulties; and to have a dozen local tribunals where supreme power may rest, would certainly give birth to never-ending trouble.

But that we may not by any possibility misrepresent the views which prompt criticism of the Supreme Council, we invite the *U. P. Employes' Magazine* to set them forth in full. If it has a better scheme of federation than the one which proposes a strong central government, it ought to give it to the public. Too much discussion on this very important subject there cannot be. Let the *Magazine* set forth its arguments. The *Journal's* 20,000 readers will gladly give it audience. Let it step into the arena with the sword of logic, and may the weakest theory perish.

It would afford us special pleasure at this writing to call special attention to some of the points made by Brother Rogers in his reply to the U. P. E.'s position, but time forbids. But they will not be overlooked in future issues of the *Magazine*.

SPOTTERS ON THE HANNIBAL AND ST. JOE
B. R.

The St. Joe, *Herald*, of recent date, contains the following:

For several days past, rumors have been flying about to the effect that war would shortly break out on the Hannibal & St. Joseph railroad, and several freight and a number of passenger conductors would be summarily dropped from the pay roll of the company. No special reasons were assigned for such sudden changes, but it is said the financial interests of the company are not being carefully enough looked after. It was further stated that spotters have been employed on the road for some time, and in consequence of their labors twenty-eight freight and passenger conductors are on the "dead list." Be that as it may there was a wonderful lack of familiar faces on the Hannibal passenger trains which rolled into the Union depot yesterday. No less than three faces were missed, and strangers took their runs out. It is not known if the war was carried into the ranks of the freight men running out of this city.

We regard such paragraphs going the rounds of the press, as specially well calculated to utterly destroy the reputations of conductors.

The "spotter" is a most disreputable character. His vocation is to make money by destroying character, and the more reputations he wrecks the more money he receives. His victims find themselves discharged with their reputations smirched, and they are without redress. The whole business is an infamous piece of despotism.

EMINENTLY CORRECT.

John A. Hall, Esq., Grand Organizer and Instructor of the S. M. A. of N. A., writing to his journal, from Leadville, Col., among other things has this to say about the *Firemen's Magazine*:

Some days ago while in your office I opened a copy of the *U. P. Employes' Magazine* and I noticed that the wrapper was a type-written copy of a letter which appeared in the correspondence columns of the same number. The letter was well written, from St. Louis, and signed by a fireman. Now, I wonder why that man employed a type-writer? The letter was an attack upon the grand officers of the Brotherhood of Firemen. The man who could write that article could also write a legible hand, and putting the two points together makes me doubt that Uncle Sam ever transported it before printed in the *U. P. Employes' Magazine*.

I receive and read the *Firemen's Magazine*, and consider it the best labor journal in America, and the last two numbers have been an eye-opener to me. I had supposed that in the matter of federation the rank and file of the Brotherhood were in advance of their more cautious officers, but such apparently is not the case, judging from the action of the board of adjustment on the Union Pacific. This board condemns Messrs. Sargent, Debs and Hannahan for not federating on the plans laid down by the firemen at the Atlanta convention. They assume that Messrs. Sargent, Debs and Hannahan were not only capable but had the opportunity to make laws for the Switchmen's Mutual Aid Association and the Brotherhood of Trainmen. Is it possible that the Board of Adjustment of the B. of L. F. on the U. P. entertain the idea that this association is, ever was, or ever will be controlled by Messrs. Sargent, Debs and Hannahan, or by any convention other than our own? Brother Sargent, on behalf of the firemen, did present the Atlanta plan, and it was most thoroughly canvassed by the nine representatives of the three orders, whose conventions had authorized them to act. The plan of local federation was conceded to be inadequate, and a national system adopted in its place. This national system may not be perfect, but will be perfected just as our various constitutions have been evolved, growing out of the light of experience and the demands of the future; but it is now as far in advance of the condition that preceded it. We had local federation to perfection on the "Q," and several thousand men dropped their jobs there, which never could have happened had there been a national federation of those three organizations, with the necessary discipline to maintain it. Can we forget the action taken by the local federation on the "Q," and the prompt counter action taken by the "advisory board?" The local action at Indianapolis and the prompt counter action which scattered the switchmen to the four quarters of the continent? Well, hardly! The switchmen will carry their memories along with them in the future, and while we are willing to overlook the errors of the past in all organizations, we are not willing to be continually bumping against the same old rocks. If the U. P. board actually believe that Sargent, Debs and Hannahan could have forced anything they chose down the throats of the switchmen and trainmen, I am sorry for their ignorance. If the board will take a little trouble to look into the working of our association, they will find five thousand men who have January's receipts in their pockets, and five thousand more strong, determined men who will respond as one man to the call of Grand Master Sweeney if such an emergency should arise. That is what the Mutual Aid Association has been doing for the past year, and that is what brotherhood means with the switchmen. They will find no divided interests here. To make federation effective you must first have strong, light, compact organizations, and it will not be effective otherwise. As for the Knights of Labor, we are strong enough to take by the hand every class of organized labor which owes allegiance to that order. Why cannot the Knights aid the general cause by forming a national assembly of railroad labor, and joining hands, hearts and purposes with

the federated railway orders, giving them strength and receiving equal protection from them. The supreme council of the federated orders of railway employes does not oppose the entrance of the Knights of Labor, nor the Brotherhoods of Engineers and Conductors, but the earth was not created for any one class of men, nor will they be permitted to occupy it. Now, let the U. P. firemen give Brother Sargent, Debs and Hannahan their due, as fair-minded, honest men who are willing to do absolute justice to all men. If they had not been acting so much for the welfare of the switchmen and trainmen as they were for the firemen, there would have been no federation to-day, which would have been perfectly satisfactory to our enemies, both in corporations and organizations.

THE KNIGHTS OF LABOR.

The Supreme Council is blamed for not including the Knights of Labor.

The Knights of Labor is a great and growing organization, knows its business and moving in lines it has chosen to perform such work as it has mapped out for itself.

When did the Knights of Labor ask to federate with the Brotherhoods of railroad employes?

When has Master Workman Powderly intimated that the order of which he is the head, was shown any discourtesy by the Supreme Council?

Does the idea prevail that a local or District Assembly of the Knights of Labor can federate, independent of the action of the Supreme authority of that great order?

Let the order of Knights of Labor share things so that its members who are railroad employes, engineers, firemen, switchmen, trainmen, etc., can federate and have the great order of which they are members back them, and then if they are not permitted to federate, it will be in order to know the reason why.

To howl in advance of such proceeding on the part of the Knights of Labor disclosure on the part of those who make the racket purpose to embarrass, and defeat federation on the part of those who hope to profit in anarchy and confusion.

They are of the same class of malcontent who in the Knights of Labor sought the destruction of the order, by abusing grand officers, and who are still barking at the heels of Mr. Powderly. They have not succeeded in destroying the Knights of Labor, and the miserable faction engaged in trying to defeat federation by denouncing the Supreme Council and the men who compose it, are doomed to still more disastrous failure.

TIME.

That October Meeting of the General or Joint Board of Adjustment of the Union Pacific System.

The Constitution of the B. of L. F. (sec. 209, page 61) provides that "The Chairman of the Joint Board shall, during the month of September in each year, convene the Board for the purpose," &c. But in the constitutional provision of the Brother

hood relating to the matter was disregarded. Why?

Some one can answer that question.

Was it for the purpose of having the meeting held in Denver at the time the B. of L. E. convention was in session?

Was it assumed that such a time would be specially auspicious for denouncing federation and the Supreme Council?

Was it not known that Grand Chief Arthur and many of the delegates to the B. of L. E. convention were opposed to federation and would listen with great composure to denunciations of the Supreme Council?

Was not the scheme for overthrowing federation, as it had been established by the Supreme Council, originated with the idea of finding favor with delegates to the B. of L. E. convention? thereby strengthening the plans of those who chuckled over the arraignment and conviction of the Grand officers of the B. of L. F. by the General Board of Adjustment of the Union Pacific System, and which was so vehemently indorsed by the *U. P. E. Magazine* of a few days later—in November?

Any unprejudiced mind, in all of this, will see the wheel within a wheel of a scheme that had for its purpose the boosting of some one into prominence and the defeat of federation as established, and the Grand officers of the B. of L. F. who had contributed to its inauguration.

In addition to the action of the General Board of Adjustment it was evidently arranged that the *U. P. E.'s Magazine* should come out with a ringing editorial denunciation of federation and the Supreme Council and of the men who composed it, and this would suffice to accomplish the purpose. Alas for the

"Best laid plans of mice and men."

The thing did not pan out according to expectations, and when the *Firemen's Magazine* exposed the whole business, there has been, as might have been expected, a deal of squealing.

Still the question recurs, why was not the meeting of the General Board of Adjustment held in September, as the Constitution provides *shall* be done?

THAT MEETING.

Bro. Hannahan Vs. that "Brotherhood Man."

"A Brotherhood man," at least so signing himself, in a letter to the *Union Pacific Employes Magazine*, dated Salida, Colo., December 22, 1889, and printed in the *U. P. E. Magazine* for January, 1890, page 381, says:

"I am a member of the Brotherhood for seven years and I attended the Denver meeting that Bro. Debs goes out of his way to condemn. That meeting was called at the request of Bro. Hannahan and *did not* discuss a plan of federation to be submitted to the convention of the engineers then in

session. *Nobody* knows better than Bro. Hannahan how that report of the meeting came into the press."

It will be noticed that the writer who signs himself "A Brotherhood Man," says the "Denver meeting" was called at the request of Bro. Hannahan.

Now Bro. Hannahan most positively asserts that he "knew nothing of the meeting till he got off the train at Denver," and Bro. Hannahan further says: "The person who wrote the article, in my opinion, is unworthy of recognition. A man who assails as he has the Grand Officers of the organization he is a member of, and too cowardly to sign his name, is too contemptible a creature to be noticed by any member of the Order."

In our mind that settles the question. Bro. Hannahan's veracity in our opinion is without a blemish. He therefore *did not*, as the writer, signing himself "A Brotherhood Man," asserts, request the calling of the meeting referred to. Bro. Hannahan has put him in a hole, let him stay there.

We know of no "knave, hypocrite or slanderer of an insect" that has been hanging round our office. "Who can it be?" "There is one in Denver that might be the one." "He has honored our office."—*U. P. E. Magazine*, January, 1890.

Is that what you call a "compound hypothesis?"

Literary Notes.

We call the attention of our subscribers to the ad. of the Cactus Blood Cure, the name having been changed from Alva's Brazilian Blood Specific Co. It is strongly endorsed by members of Division 159, O. R. C., City of Mexico, and also by members of the Brotherhood of Locomotive Engineers, and perhaps among the endorses you may find the names of old companions, who are now in Mexico. H. H. Moran, an old conductor, is interested in the Company, and we wish them the success that a remedy so strongly endorsed deserves.

Read this Unsolicited Testimonial.

S. W. Lord & Co.:

GENTLEMEN:—I am so well pleased with your "BOILER CLEANSING COMPOUND," after six months trial, that I give my unsolicited testimony as to its merits. Experience is authority, and over 31 years continuous service as a Railroad, Steamship, Mining and Stationary Engineer, entitles my testimony to a hearing at least. I always speak of persons and things as I prove them.

I have used many Boiler Scale Solvents, liquids and solids, (have not used all of the many kinds advertised as the best—and therefore will not condemn them as worthless,) but yours is the VERY BEST I ever used for that purpose. It does its work speedily and thoroughly (even more than you claimed for it), does not injure the iron, and that is all that anybody can wish or expect.

Six months ago, portions of my boiler tubes, (Zell's Patent) were coated with a $\frac{1}{4}$ inch scale, now they are perfectly clean, boiler steams rapidly and with less fuel. There are 51 gum joints on the boilers that come in direct contact with your "Compound," and I can not see that it in any way injuriously effects them. I unhesitatingly recommend your "Compound" to the engineering fraternity as a first class, safe article. Respectfully,

EMANUEL M. JONES,
Engineer in Charge.

Communications should be written on one side of the paper only, and forwarded so as to reach the Editor not later than the *fifteenth day* of each month.

Reason versus Railbery.

LOCATELLO, IDAHO, JANUARY 3, 1890.

MR. EDITOR:—There appeared in the December issue of the *Firemen's Magazine*, an article captioned "Facts versus Faction." Inasmuch as the editor saw fit in the article referred to, to bring my name into some prominence, in a manner at once vulgar and insulting, I take occasion to make some little reply. I would first call the attention of my readers to the introductory paragraph of the article on page 1,060.

The editor deals with men of the "Fault finding school of philosophy," introduces this article to "state facts" and "rebuke faction," for the purpose of preventing "anarchy and chaos," and the destruction of the Order by the cyclonic process. This the "Brotherhood" will not allow. Who compose the Brotherhood, may I ask? Suppose the "singular and extraordinary document" emanating from the firemen of the Union Pacific System, had been signed by the firemen of the several large systems, would the editor have used the same same language? Does the Brotherhood consist of the rank and file, or simply of a few Grand Officers? When did the Brotherhood of Locomotive Firemen become an institution for the suppression of the opinions of its membership?

The editor indites this abusive editorial in answer to a gentlemanly and *private* communication, protesting against certain public acts of the Grand Officers, from a "sense of duty to the Brotherhood." It certainly is a peculiar duty the editor owes the Brotherhood, to make it, falsely appear to the outside world that a large body of true and loyal Brotherhood men, have created a faction for the purpose of overthrowing the Organization. Such intentionally misleading language, so injurious to the best interests of the Brotherhood at large, is a duty that were better left unfulfilled in my opinion.

To begin with the main body of the editorial, the first objection to our letter of protest is, that we omitted Bro. Hannahan's name in the address. We humbly ask our friend John's pardon, but he knows full well that it was not an intentional slight. There are, no doubt, men on this System, who are as the editor claims, in accord with his views, but the vast majority are not, and it seems that in this, as in all other instances, any one man or any body of men, who oppose his views, merit, or at least receive at his hands, a torrent of ridiculous abuse.

The General Board charges, arraigns, tries and condemns the Grand Officers after playing informer, spotter, jury and judge." Now then kind reader, please go carefully and without prejudice, through the entire letter, copied in the December *Magazine*. Do you find any charges, any arraignment or any

trial in that document? Do you find any harsh, insulting abuse, any vulgar epithets applied to the Grand Officers? Do you find anything but hearty condemnation of official public acts, that the perpetrators of this "wicked work" believed were without the sanction of the Brotherhood? Go farther my friends into this choice list of epithets heaped on the members of the General Board, and you find two, the mere mention of which, are abhorrent to all honest workingmen.

Upon whom did the General Board turn informer, in what capacity did they play the spotter? Such language is an insult to the pages of our *Magazine*. It is a dastardly, cowardly lie. It is simply ignorant, unreasoning abuse of honest men; deserves, and will receive the condemnation of every intelligent reader.

By all the gods, were we playing spotter, even to read the Constitution of the Supreme Council? Were we not allowed to turn informer long enough to tell the originator of that document, that we had the courage to criticize and condemn unlawful acts. Such language as Editor Debs uses throughout the article sounds like the outpourings from a vicious, passionate nature, that would in days gone by, have said to a rebellious slave, die thou fool, for my will is inscrutable law, from which there is no appeal. He takes occasion to quote a motion, that was passed at the Atlanta Convention, and italicizes certain words. The motion distinctly says that the Committee "be given full power to act in all things necessary to effect federation with the several organizations named." Now read the original plan and see what organizations were named. Was T. V. Powderly invited to be present the 6th of June in Chicago? We believe not, and we know that section 20 of the Constitution of the Supreme Council absolutely excludes the Knights of Labor. On this point any lawyer will tell you that the Committee did violate the express instructions of the Convention. What is the meaning of the words, concessions and modifications? Can they by any process of defining be made to mean that the fundamental principles, the foundation and very ground work of a proposition, be undermined and utterly cast away? The foundation of the original plan was for local or systematic federation, yet the action of the Committee has entirely wiped out the possibility of such a project being carried out. Criticism of this action appears to the editor like "inconsiderate, vaunting and vain ambition." Ambition for what may I ask. Is there any single word in our whole letter to indicate any ambition, except that we go on record first, last and all the time as opposing ostracism in every form, and laboring always for the broad principles of equality. Be that ambition "vain and vaunting, we are proud of it." The editor's task surely should have been done here, but as it was not, we will follow him in his absurd wanderings to the end. In his reference to the preamble of the federation plan, hundreds of old Brotherhood men will recall incidents of the past, and appreciate the half hidden insult it contains. We understand fully the principles of our Government, of the States and the United States. Our Convention followed this plan to the letter, each system of rail

ways was to be a State, and the whole to be controlled by a General Government. Most certainly Congress declares war and negotiates for peace, but Congress is composed of delegates from all the States. Is the Supreme Council so constituted? No, but not the authorities of different States have power to exhaust their own resources in quelling riots and internal rebellions? Does each system of railways, under the Supreme Council law? Surely not. Does not the minority in Congress submit to the will of the majority? How about the Council? But I will pass on as this letter is not intended to deal with all the intricacies of federation as I see them. We come now to an admission on the part of the editor that surprises us. "The employees of the Union Pacific System can federate if they wish, they can strike if they wish, but the Council will not foot the bills." This question has been asked every member of the Council, I believe, with widely varying answers. There are within my reach letters from different members of the Council, positively forbidding local federation, on constitutional grounds. "Oh consistency thou art a jewel." "If they want to strike they can do that, the Supreme Council has no authority to interfere." Mark the language please, and then turn ye favored few, to section 14, of the Constitution of the Supreme Council. Please don't render a verdict on this discrepancy, or you will be a "blind factionist" guilty of "vain ambition." We quite agree with the editor in his condemnation of strikes, and will do all in our power to assist him obliterating this curse to workmen, but we decide from his language that in his opinion any plan of federation not in accord with his own, is looking toward strikes. The editor quotes the words "mutual equality" from our letter, and says the Supreme Council has provided for this with all "federating organizations." Such attempted hoodwinking as this is an insult to every intelligent reader of the *Magazine*. He simply means mutual equality for all those federating with the Supreme Council, but the said Council has judiciously provided that no *objectionable* characters shall be admitted. We now come to the closing paragraph of this wonderful conquest of facts over fiction, and find the expression, "None but fools claim perfection." Let me add to this that none but the most vain and insolent bigots, attempt to silence by blatant and vulgar abuse, manly criticism of public acts. Communities speak through their daily papers and criticize in the strongest terms, public acts of our President and all public officials. The freedom of speech and of the press is the greatest purifier of public men and public policy. The General Board of Adjustment of the Union Pacific System, attempted in a perfectly proper manner, and please remember, within the secrecy of our own order, to exercise this freedom of speech, to criticize our highest officials in their manner of discharging certain duties. Now I ask every Brotherhood fireman to study carefully the questions under dispute, to compare in a spirit of justice and fairness, the language, the arguments, and the deductions drawn, in the original letter and its answer as appearing in the December *Magazine*. In the answer of the Editor there is no argument, no reason.

It is rallery, unmerited sarcastic abuse from first to last. It is an unprovoked attack on a large body of loyal Brotherhood men, who have in every instance proven their fidelity, and will continue to do so in the future, firm in the faith, that the power behind, will live longer than the power on the throne, that our Order will outlive all trifling injuries, crush in their incipency all attempts at tyranny, so broaden and elevate our principles, that the very grandeur of the Organization will draw to its support all other labor organizations, and in massing this great power, the workmen's millenium will be near at hand.
Frank Walton.

In presenting the foregoing communication of Bro. Frank Walton, we have, for convenience, numbered the paragraphs from 1 to 7.

In paragraph (1) Brother Walton displays more zeal than prudence. He says:

"Inasmuch as the editor saw fit, in the article referred to, to bring my name into some prominence, in a manner at once vulgar and insulting, I take occasion to make some little reply."

Now the fact is, as the article in question shows, the name of Brother Walton appears only as signed by himself and appended to the document issued by the General Board of the U. P. System, as follows: "Frank Walton, Sec. and Treas." To what extent the appearance of Brother Walton's name is "vulgar and insulting" Brother Walton ought to know, for he alone is responsible for affixing it to a document which, in justice to his head and heart, ought never to have been written. The total failure of Brother Walton to make the editor responsible for the appearance of his name, "at once vulgar and insulting," will be found the first of a string of failures which characterize his communication in all of its paragraphs.

In paragraph (2) we notice nothing of importance, nothing demanding comment except perhaps the question, "Does the Brotherhood consist of the rank and file, or simply of a few Grand Officers?"

Manifestly, the Brotherhood consists of the "rank and file." The "rank and file," elect delegates to represent them in Biennial Conventions, make laws, elect "Grand Officers," confer upon the "Grand Officers," certain power and duties. To arraign, try, and condemn these "Grand Officers" without a hearing is just what the rank and file don't believe in. Such a proceeding is in the line of anarchy and chaos. If tolerated the Brotherhood would disappear like a hay stack in the grasp of a cyclone.

Again, asks Brother Walton:

"When did the Brotherhood of Locomotive Firemen become an institution for the suppression of the opinions of its members?"

Why does Brother Walton ask such a question? If the *Magazine* desired to sup-

press "the opinions of its membership" the document issued by the General Board of Adjustment of the U. P. system would not have been published. But, instead of suppressing "opinions," they are given in full to the Brotherhood, and this, we apprehend, is just where the shoe pinches. The Grand Officers were charged, arraigned, tried, condemned—no notice was given, no opportunity to make a defense—an explanation—to give a reason for the acts complained of, and to this extraordinary proceeding Bro. Frank Walton affixes his signature, and then, because it is given to the "rank and file" of the Brotherhood, exclaims that "the editor saw fit, in the article referred to, to bring my name into some prominence in a manner at once vulgar and insulting." What "manner"? We published the document. That's all. Brother Walton's name was appended to it. Was that "vulgar and insulting"?

In paragraph (3) Brother Walton begins to get down to work, and his misfortunes increase. Hear him:

"The editor indites this abusive editorial in answer to a gentlemanly and *private* (italics Brother Walton's) communication, protesting against certain public acts of the Grand Officers from a sense of duty to the Brotherhood."

Was there ever such a muddle? Here we are told that the communication—which charged, tried and condemned the Grand Officers for "public acts"—was *private*, and that this *private* trial was for "public acts." And yet Brother Walton asks, "When did the Brotherhood of Locomotive Firemen become an institution for the suppression of the opinions of its membership?"

Would it not be far better for Brother Walton to ask, When did the Brotherhood of Locomotive Firemen become an institution for the trial and condemnation of its Grand Officers in *private*, without a hearing and without opportunity to make a defense?

The *Magazine* permitted the Brotherhood, the "rank and file," to know of the *private* proceedings—of the trial and condemnation of the Grand Officers for having sought, as best they could, under the circumstances, to inaugurate federation. They accomplished the purpose in view. They set the ball in motion. Two of the great Brotherhoods in the alliance, in annual convention, have indorsed the action of their Grand Officers, and from the center to the circumference of the jurisdiction of the Brotherhood of Locomotive Firemen not a Lodge has revolted.

But in paragraph (3) Brother Walton refers to an "abusive editorial." He certainly should have pointed out the "abusive" words, sentences or paragraphs. Now, if we were to charge Brother Walton with

being "abusive" we should quote the abusive words. That he does not do it is proof positive that he can't do it—that he can't find the abusive words. He simply makes the charge and hopes it will stick.

Now, we desire that our readers shall bestow upon the article which Brother Walton criticises, beginning on page 1090, December *Magazine*, the most searching investigation for the purpose of finding anything "abusive," and when found, make a note of it—let us know it. We have read the article carefully, weighed our words, and we challenge criticism.

Referring again to paragraph (3), Brother Walton thinks it a "peculiar duty of the editor to make it falsely appear to the outside world that a large body of true and loyal Brotherhood men have created a faction for the purpose of overthrowing the organization."

Here, again, Brother Walton is at fault. We published a document gotten up in *private*, showing that some men, not a "large body," had charged, arraigned, tried and convicted the Grand Officers without giving them an opportunity to be heard. If this was not in the line of "faction," a "combination against government," what was it? Certainly a mistake, and we do not blame Brother Walton for feeling unpleasantly about it. But he should be man enough to accept all the responsibilities of his action without squealing. Silence, with or without contrition, would be becoming.

Paragraph (4), like a cipher after a decimal point, amounts to less than nothing, but paragraph (5), like a harlequin, vaults into the ring, turns four double somersaults, and then listens for applause. In paragraph (5) Brother Walton quotes and comments as follows:

The "General Board charges, arraigns, tries and condemns" the Grand Officers after playing informer, spotter, jury and judge.

"Now then, kind reader, please go carefully and without prejudice through the entire letter copied in the December *Magazine*. Do you find any charges, any arraignment or any trial in that document? Do you find any harsh, insulting abuse, any vulgar epithets applied to the Grand Officers? Do you find anything but hearty condemnation of official acts?"

When a man attempts the feat of biting off more than he can masticate, however much we may enjoy the performance, the victim of inordinate appetite has our sympathy. In paragraph (5) Brother Walton, to use a phrase, puts himself in the soup, or, to bring his mistake into sharper distinctness, he digs a hole for the editor of the *Magazine*, and then deliberately jumps in and occupies it himself. Brother Walton, referring to the document formulated by the General Board, asks, "Do you find any

charges, any arraignment or any trial in that document?" Well, we should smile. There isn't anything else in it of importance. He further asks, "Do you find anything but hearty condemnation of official acts?" Brother Walton would have it *all* "hearty condemnation," without any "charge," without any arraignment," and without any "trial"—just "condemnation." Does Brother Walton know the meaning of "condemnation?" Putting it tersely, "condemnation" means "sentence of punishment." Can there be a sentence of punishment without charge, without arraignment, without trial? Brother Walton seems to be of that opinion. He so puts himself on record. He asks his readers, "Do you find any charges, any arraignment or any trial in that document?" In answer, read the following:

We, the *Brotherhood Firemen* of the Union Pacific system, in annual session assembled, having exhaustively discussed the merits and demerits of the constitution and by laws adopted by the "Supreme Council of the United Order of Railway Employees," do hereby, *wholly and without reserve*, condemn the action of our *Grand Officers* in attaching their signature and the *great seal* of our organization to any such document, for the reasons herein set forth in detail.

There is charge, arraignment, trial and sentence all in a bunch, condemnation, so stated, the *charge*, "attaching their signature and the great seal of our organization to any such document." With such proceedings in full view, what becomes of Bro. Walton's inquiry, "Do you find any charges, any arraignment, or any trial in that document?" It will be observed that the condemnation is "wholly and without reserve," no mitigating circumstances are admissible, as Brother Walton well says, it was "hearty condemnation." It was setting down on the Grand officers like a land slide; it was jumping onto them with both feet; it was condemnation "wholly and without reserve," and that too without affording the Grand Officers an opportunity to be heard in their own defense. Notwithstanding this, Bro. Walton seeks to defend the unheard of outrage.

And here we ask, what fireman of the Brotherhood deems it just to be "wholly and without reserve, condemned" without a hearing, without a chance to explain? To be charged, tried and condemned in your absence is a monstrous wrong, and that is just what the "General Board of Adjustment," to the extent of its ability, did in its treatment of the Grand Officers.

Again, Brother Walton, who talks ceaselessly of "abuse," "vulgar epithets," etc., asks if the reader finds anything of that sort in the "document." The reader will find the following:

Section 19 empowers the three Chief Executives to declare a strike at an end, and in the event of their failure to agree, said section gives to any two members of either organization the power to declare said strike off.

This policy, we believe, leaves a *broad opening for bribery and treachery*, and furthermore, that Sections 16 and 19 establishes at the head of free and progressive labor organizations a despotic and absolute monarchy.

It may not be "abuse," it may not be in the nature of "vulgar epithets" to charge the Grand Officers of the B. of L. F. of being guilty of formulating a document favorable for "bribery and treachery," and of establishing "a despotic and absolute monarchy." Brother Walton looks with entire complacency upon such utterances. They be generous words, in his estimation, as also the following sublime peroration, the conclusion, in which is embodied a charge, and many of the figures of speech known to pyrotechnic rhetoric:

In conclusion, we wish to say, that in our opinion and with evidence at hand to abundantly substantiate the same, the policy adopted by the Supreme Council tends, in every essential particular, to widen the breach between organized labor rather than draw them closer together, and that it has placed so far beyond the reach of the rank and file the final Court of Appeals as to appear in its obscurity like a powerful Throne, conceived in the minds of men for the glorification of the minority rather than for the emancipation of the majority.

In Paragraph (6) Brother Walton continues to ask questions. We are not surprised, nor do we object. Our Brother is writing a defense of the "document" printed in the December *Magazine*. It needs defending, needs it badly and sadly. We can't defend it, and Brother Walton makes a sorry mess of it. He asks: "Upon whom did the General Board turn informer; in what capacity did they play spotter?" And just here we ask, who brought the charge, or charges, upon which the "General Board" "wholly and without reserve" condemned the Grand Officers? Answer that, Brother Walton, and you have the "informer" and the "spotter."

Some one brought the charge or charges, which secured the sentence of condemnation. The term "informer" is mild, it is not abusive, as for "spotter," it represents one who makes charges in secret, and if possible obtains condemnation "wholly and without reserve," and without giving his victim a chance to explain. "Such language," says Brother Walton "is an insult to the pages of the *Magazine*," (and now then, for the climax from the man who objects to abuse and vulgar epithets) "it is a dastardly, cowardly lie."

Now, it would be easy to say to Brother Walton, "You're another." It would be easy to retort—to be even more severe. We appreciate Brother Walton's feelings. Caught in a trap of his own setting, in a pit of his own digging withering under the exposure of a scheme concocted in *private* to injure his brothers, who entertained for him only the highest regard, he flounders about in deep water until almost drowned, and then—with gurgling accents, says "lie"

—the last words usually uttered by those who lack the courage to confess an error and receive the pardon of those whom they had sought to injure. But it takes a great big man to do that.

We now come to paragraph (7), and here again Brother Walton, metaphorically, opens his mouth and puts both feet in it. Let it be understood that a spotter is an "informer"—then the questions in paragraph (7): "By all the gods, were we playing spotter even to read the constitution of the Supreme Council? Were we not allowed to *turn informer* long enough to tell the organization of that document, that we had the courage to criticise and condemn unlawful acts."

Brother Walton ought to see that he is continually giving himself away. He demands the right to "turn informer." He, in fact, eulogizes the work of an "informer," while in a previous paragraph he condemns such language as an insult to the pages of the magazine and as "a dastardly cowardly lie." Now, paragraph (7) reiterates the charge of "unlawful acts" on the part of the Grand Officers, which received the sentence of condemnation, "wholly and without reserve." The trouble was and is that having "turned informer," after having formulated the charges and appointed a day for trial, the "General Board" should have had the courage to notify the Grand Officers of the pending cause. This was not done. The "General Board" condemned "wholly and without reserve" in "*private*." It was a shameful proceeding. It is without defense. Having done such a thing, and having been caught in it and exposed, how foolish it sounds to charge "Editor Debs" with using language in exposing the miserable business, like the outpourings of a vicious passionate nature."

After paragraph (7) there is nothing in Brother Walton's communication demanding comment, though we are glad to notice that its tone is more in consonance with the proprieties of speech, which ought to be observed. Any reference to abuse, epithets, etc., are the same old chestnuts, flung in when the writer feels weary.

The flummery about the "Knights of Labor" is of no consequence. The "Knights of Labor" is a great and powerful organization which has just perfected an alliance with the farmers of the country, and do not, we presume, require the championship of Brother Walton or the "General Board."

As for consulting lawyers, there is not a pettifogger in the land, who would not tell Brother Walton to "wholly and without reserve" condemn anybody without a hearing, would be a shameless piece of business, worthy of such men as Austin Corbin.

As for discussing the principles of government with Brother Walton, he ought to

know that one of the fundamental principles, is to give the party charged with an offense, a chance to confront his accusers, ask questions and offer evidence. When a man disputes even this unalienable right of the humblest individual, "wholly and without reserve" condemns his victim, he is in poor plight to talk about free government. In defending such proceedings he plays into the hands of the Czar of the anthracite coal regions.

We are pleased to notice a sort of a left hand approval by Brother Walton, of the proposition, that "none but fools claim perfection." It is axiomatic, and we might add in Brother Walton's vigorous language that "none but the most vain and insolent bigots, attempt" to defend a proceeding in which men accused of wrong doing, falsely or otherwise, are "wholly and without reserve" condemned without a hearing, without an opportunity to defend themselves against fault-finders and factionists; men who plot the downfall of others in "*private*" and get mad and act foolish, when they are exposed and worse still, seek to defend a proceeding that is universally anathematized by all men, except those who favor autocracy.

Brother Walton winds up by telling his readers, that "in the answer of the editor there is no argument, no reason;" that it is railery unmerited, sarcastic abuse from first to last."

There may be occasionally a sprinkling of good humored satire, a spice of sarcasm but never abuse.

The "General Board" committed a wrong; we regret it. By exposing it, we made it harmless. The *real purpose* of condemning the Grand Officers was made apparent and is now well understood.

Bring charges against men if you want to. It is a right no one denies but in the name of all that is fair and honest and of good report, do not proceed to "wholly and without reserve" condemn, without giving the accused an opportunity to be heard.

That's the question, Brother Walton. Do not shirk it. Do not seek to evade it. The General Board of Adjustment of the U. F. system did "*wholly and without reserve condemn men*"—brotherhood men, bound to them by fraternal ties, *without giving them* a chance to be heard in their own defense. This *Magazine*, true to duty, exposed the wrong, and every word uttered in defense of the outrage, only expands it to greater proportions.

WINSLOW, ARIZONA, February 1, 1890.

Editor *Firemen's Magazine*:

For the information of the membership of all the Lodges, I desire to say, that Pacific Lodge, No. 12 is progressing. We have about sixty members but they are so scattered that we do not have regular meetings. We have a 200 mile mountain Division to fire over, which is no picnic.

M. Suerle-Chicago.

TAYLOR, TEXAS, January 17, 1890.

MR. EDITOR:—I have passed the ordeal, but, alas! what a wreck of humanity remains. I am but the débris of a cyclone of sarcasm. Like the school-boy's fly, I have been *stabbed with a pen and drowned in ink*. Verily, Mr. Editor, you are the "Jack the Ripper" of American literature, from the fact that the sentiments of your "victims" are so horribly mutilated that they can not be "identified," even by their author.

When I addressed my communication to you last November, in which I had the audacity to criticize some of your plans and ideas, I fully expected to be "Russianized" in every sense of the word, even to being classed among the "Nihilists." Two months' suspense has terminated in having my expectations more than realized. But, as "Czar" of the *Magazine*, you will surely allow me space to explain why I should not be "exiled to Siberia."

Your editorial comment upon my article published in the January *Magazine* proves conclusively that as a debater you are without a peer, and also makes evident the fact that you are proficient at legerdemain, for by a "twist of the wrist" you transform the meaning of my sentences and make them appear so heinous that I shudder to think that I could have been so base as to have made such false accusations. I hand you a wand, when, "presto, change!" it becomes a writhing, hissing serpent which transfixes your audience with horror and causes them to shed great *gobs* of grief because of the apparent wounds that the "Professor" has received from the fangs of so hideous a reptile. "But if some gentleman will but step upon the stage" he will see that which our worthy Editor holds up before their agonizing gaze as a "philippic against the B. of L. F." is in reality but an intimation that it is *possible* for him to be wrong. Yes, Mr. Editor, *my* statements, with the construction that *you* place upon them, are totally at variance with all things just.

In misconstruing nearly every line of my criticism of some of your "plans" and "ideas," I hope that you have done so innocently and not with "malice and aforethought." I hope that you have been actuated by no sinister motive. If your purpose was to place me upon the defensive you have succeeded admirably. If you assumed the attitude of a martyr so as to secure the sympathy and commiseration of our Brothers, success will crown your efforts. If you have conveyed the idea that I have charged you with "treason" and have written "philippics against the B. of L. F." as a means of crushing one who dare oppose your desire to change the name of our Order, you certainly have reason to be proud. But while you have been so successful have you not exposed a "trait of character" that is hardly consistent with your standing in our Brotherhood?

I assure you that it was foreign to my intent to prefer the charges against you that you take six columns to refute. As you have published what you deem a "philippic against the B. of L. F." it is due me that I have an opportunity to explain.

When I said:

"Brother Debs is a man whom I have always greatly admired for his intelligence and his every trait of character except extreme radicalism and a lack of diplomacy"—

I was honest in my convictions. I truthfully believe that you are "Intelligent" and are the possessor of many "enviable traits of character," but I also consider you "extremely radical." *My* Webster's unabridged dictionary says that "radicalism" is "the doctrine or principle of making radical reform in government by overturning and 'changing the present state of things.'" Mr. Editor, if you are not in favor of making a radical reform in the government of the B. of L. F. and are not in favor of changing the present state of things I have wronged you, for which I apologize. I have stated that you lacked "diplomacy." Webster says that diplomacy is "dexterity or skill in managing negotiations." If you are not more of a "warrior" than a "diplomat" please include this charge in the former apology.

In the January number I say:

"Because I think that the B. of L. F. must and shall be preserved, some of 'Frank Walton's' ilk will no doubt shout themselves hoarse with cries of 'treason,' etc."

Mr. Editor, if you inferred from this that I believed you a traitor, it pains me that I should not have been more explicit. If I have written a line in which there is the least suspicion of treason to the B. of L. F. assigned to you, I implore your pardon, for it was unintentional.

Again I quote:

"This organization owes a greater part of its past success to his (the Editor's) able efforts in its behalf, but he should not permit his injured feelings to sacrifice the fruits of his labor—he should not tear down in a day what he has labored years to build up."

Do I err when I assign the authorship of our past success to you? Have I accused you of treason when I state that your feelings have been injured by the insults that have been heaped upon us by the B. of L. F.? Would you not "sacrifice the fruits of your labor"—would you not "tear down" that which you have "built up" if you should take from the Firemen and give to the Engineers the grand old Brotherhood of Locomotive Firemen? Do I write a "philippic against the B. of L. F." when I beseech you not to "tear down" a Firemen's organization to build up one for Engineers?

Mr. Editor, if I have been guilty of any of the crimes of which you accuse me a lack of perception on my part conceals them from my view. If you, with your "wheel," "rack," "thumb screw" or "red hot pincers," can "torture" out of my article a word that intimates that the B. of L. F. has injured your feelings, or that you have been a traitor to it, please point it out.

Another quotation:

"A delegate to the Engineers' Convention at Denver, and a man in favor of Federation and the repeal of all laws unjust to the Firemen, told me that the greatest difficulty they had in accomplishing their purpose was in pacifying the intense ill-feeling that existed at the convention against Eugene V. Debs."

You accept this as the only truth that I have written and seem to think that the ill-feelings against you led to the repeal of their most objectionable law. I am credibly informed that a resolution to repeal this law was defeated—completely "snowed under"—by the anti-Debs element, and not until Bro. John J. Hannahan addressed the delegates in our be-

half did they recede one iota from the position they had assumed.

I stated that our worthy Editor—

* * * "has so 'Russanized' the columns of the *Magazine* that those who differ with him fear to express their views in the Brotherhood Department, for they know full well the ridicule and abuse that awaits them."

Mr. Editor, since writing the above I have concluded to add to the words "ridicule and abuse" the word "misrepresentation," and give the *January Magazine* as my witness.

I said that—

* * * "He that dares differ on any subject is flayed with the Editor's pen."

To the process of "flaying" I will add "embowel-ing," and refer all to my sad experience for proof.

Mr. Editor, you state in your comment on my January article that you "claim membership in the ranks of 'perfectionists'." Had I known this I would not have had the temerity to have questioned your wisdom—I certainly would not have criticised you.

I believe that it is impolitic to carry on a "war" with any other labor organization in the columns of the *Magazine*, because it exposes the vulnerable points in our structure—it widens the breach that it seeks to heal and causes personal enmity between the members of the respective organizations which would not otherwise exist. By proclaiming our woes from the "house tops" Corbin, Livingston & Co. have learned that the "motive power department" of this country is in no condition to defend its rights, on account of internal dissensions. Although you have stated facts in the *Magazine* concerning our treatment from the B. of L. E., many a poor, weary fireman has shoveled an extra scoop of coal to pay for each and every word you have written. The truthful sentences that you pen while sitting in your cosy office result in vain efforts on the part of many a fireman to "cook water" on some hill side for an angry engineer. You do not perceive the insults that our Brotherhood has received more than I, but I also perceive that where once friendship prevailed personal enmity is springing up on account of disputes arising from discussion in regard to the present course of the *Magazine*. It is needless to say that in *some manner* the fireman gets the *worst of the discussion*.

The present strained position of the B. of L. F. and B. of L. E. would be greatly intensified if we should organize a rival organization. It could only result in a "war," in which the scab would take a prominent part. This would be "pleasing" to Corbin, Livingston & Co., although you say that the position I have taken is pleasing to them. On probably half of the railway systems of the country the B. of L. E. would crush its rival out of existence. They would resort to every means, fair or foul, to annihilate the new engineers' order, and on roads where an engineer can get a fireman discharged by simply "kicking" against him they would be successful. Do you not think that C. L. & Co. would take advantage of the situation, especially if they were kept posted in minute detail through the columns of our *Magazine*? You will probably say that a fireman will not scab under any circumstances. Mr.

Editor, when the spirit of revenge seizes upon a man's mind he will do anything—even commit murder.

So you think that such men as Corbin will be pleased with the position I take in the *January Magazine*? Which would please them best—for the *Magazine* to continue its present course or that it should resume the policy which you for so many years guarded with care? Which would suit their fancy most—that you should succeed in organizing a second engineers' order or that I should offer arguments that would defeat your plan?

Those of our Brothers who have the back numbers of the *Magazine* on file will please refer to page 140, March, 1886, and see what one Eugene V. Debs thinks of the *present policy of the Magazine*. He says:

*"Without the support of their engineers firemen can accomplish nothing, and the same can be said and with equal truth respecting the dependency of engineers upon their firemen. They have got to be united and act together. * * * All measures calculated to arouse prejudice and ill-feeling are vulgarly out of place. Arbitrary legislation should be avoided and the most considerate and generous legislation prevail."*

Brother Debs can criticise without fear of a castigation; he can call our Editor "*vulgarly out of place*" and not receive six columns of misrepresentation. Mr. Editor, my preceptor has been Brother Debs, and I will follow the principles that he "labored for years to build up."

Mr. Editor, I have hopes that in the dim, distant future I may regain your friendship. The day will come when you will know that I am sincere in my motives. I have the most fraternal feelings for you, that I hope will some day be reciprocated.

I see that you are highly complimentary to Mr. J. A. Phelan of late and *seem* to esteem him highly. Mr. Editor, just four summers have passed since his poor, helpless form was left withered and seared upon the sands of the desert of journalism by the scorching blast of an editorial sirrocco, of which you were the author. Column after column you poured upon his head your wrath. He has regained your friendship—why not I?

No doubt when you reviewed your comment upon my January article you thought that I would never have the audacity to reply. You pictured to yourself the ludicrous scene of me "going up an alley and kicking myself." Not so, Brother Debs! I have come to stay. Of course, if at any time I should pen a sentence that would lead our Brothers to believe that *I am the one that has been "falsely accused"* or would prove that instead of writing "philippics against the B. of L. F.," I am striving to preserve it intact, you can exercise the prerogative of your office and refuse to publish my articles; but of this, Mr. Editor, I have no fear, for that is not one of your "traits of character."

Now that the B. of L. E. has commenced to repeal the laws unjust to the B. of L. F., let us cease our bickering. That element of the B. of L. E. that is friendly disposed to us has commenced its work at the Denver convention. Let us treat them as friends and the good work will be continued at Pittsburgh, and some day the two great Brotherhoods will be *as one*, if not *one*.

W. S. Carter, of '23.

[Our Brother Carter, of "263," comes again. The fact is a source of satisfaction, inasmuch as having been "stabbed with a pen and drowned with ink," having been "Russianized" he is still alive, sound, wind and limb, ready for combat, an athlete anxious to win laurels in any arena that offers him an opportunity to display his prowess. We are not particular about sobriquets, but Brother Carter in honoring us with that of "Jack the Ripper," does himself great injustice. Our recollection is, that "Jack" never troubles men, and the victims of his knife have been only those whose habits of life were such as to deprive them of good repute. We doubt if Brother Carter, of "263," desires to go upon record as being that sort of a citizen.

Assuming that Brother Carter, of "263," is of the masculine gender, and wears whiskers, not having been "Corbinized," we felicitate him upon having had his "expectations more than realized." His letter, like a bud that blossoms, bore fruit. The frosts did not bite it, the sun did not scorch it, the hail did not beat upon it, the wind did not blow it away. He wrote it, he mailed it; we received it, planted it in the garden of the *Magazine*. We nursed it, watered it, pointed out its beauties, called attention to its delicious aroma, and placed it where it will live in perennial greenness while the years go by. This we did as "Czar of the *Magazine*." We would not, if we could, exile Brother Carter, of "263," to "Siberia." We would preserve him, but not on ice. We would not have him leave the sunny south, the land of cotton and cane, of the magnolia and the mocking-bird. Nor will we again by a "twist of the wrist" make him "shudder" at the hideous "appearance" of his "sentences." The "wand" he may hand us in the future shall not become a "writhing, hissing serpent," but shall remain a "stick," nothing more. And the audience shall retain their "gobs of grief," and "the wolf shall dwell with the lamb, and the leopard shall lie down with the kid" and the Texas steer and the lion shall eat strawberries.

We assure Brother Carter, of "263," that in the spirit they are offered, we accept every apology. It is human to err; it is divine to forgive, but life is too short to write all the pardon that ought to be demanded at our hands by those who *unintentionally* engage in the business of lampooning the editor of the *Magazine*. We are awfully human, and therefore don't always know when our dear brothers are in *earnest* or just in *fun*.

Just here let us say that Brother Carter quotes us as saying that "we claim membership in the ranks of perfectionists." The types did make us say that, but we have a lurking suspicion that Brother Carter knew

it was a *misprint*. If the types had been honest they would have made us say what we actually did write: "He (the editor) does *not* claim membership in the ranks of perfectionists," and this is deducible from the declaration immediately preceding, in which we said: "The editor of the *Magazine* does not claim to be immaculate"—that is to say "without fault." To see the consistency of this we quote (page 48).

This may be just a little cruel towards Brother Carter, but since he took advantage of a typographical "lapse," he will be *happy*, no doubt, to see the correction.

To those who feel profoundly interested in Brother Carter's literary efforts and what the editor of the *Magazine* has to say when treating them seriously, we refer them to the January *Magazine*, page 48. As Brother Carter's two letters, that of November 13th, 1889, and of January 17th, 1890, are virtually the same, we have neither time nor inclination to be serious at this writing.

The reference of Brother Carter to a "withered," "scared," "poor," "helpless form," upon the sands of the desert of journalism, is equal to the soaring genius of a Milton, a Dante, or a Byron. Brother Phelan will appreciate the coruscating effort of Brother Carter, of "263." As the cockney said of Niagara, "It's dom foine. Well got up." But when Brother Carter refers to the "scorching blast of an editorial sirocco," hyperbole, like a scared prairie dog, wiggles its tail and takes to its hole. After all, we are happy to say Brother Phelan is so as to be about, has been promoted and that the editor of the *Magazine* entertains only the friendliest *phelans* towards him. And now, as our pen is demanded for other duties, we bid Brother Carter for the present a fraternal good-bye.—ED. MAGAZINE.]

POPULAR BELIEF, Mo., January 25, 1890.

Editor *Firemen's Magazine*:

Presuming that you think the boys of No. 272 are all dead, owing to their silence, I write to inform you, such is not the case. We are in the land of the living and on New Year's eve we had our grand Brotherhood ball at Ferguson's Hall, and it was in all regards a splendid success for our first attempt at anything of the kind, but, as a general rule, the B. of L. E. boys never do anything without making it a success.

The hall was beautifully decorated by the ladies and the music was furnished by the Harry O'Brien cornet and string band of Cairo, Ill. At 9 o'clock the dancing begun and at 12 o'clock supper was spread at the Morris House, and it was sumptuous. Considering the inclemency of the weather the attendance was all that could have been expected. After supper, dancing was resumed and kept up to a late hour, when the ladies and gentlemen retired to their homes through a drenching rain; but they were not discouraged, and will meet and try it again.

C. N. Kidd.

NEATNESS.

I love to see thy gentle hand,
Dispose with modest grace,
The household things around thy home,
And each thing in its place.

And then thine own trim, modest form,
Is always neatly clad,
Thou sure will make the tidest wife
That ever husband had.

No costly splendor needest thou,
To make thine home look bright,
For neatness on the humblest spot
Can shed a sunny light.

M. Sweete—Chicago.

A New Name.

CHICAGO, ILL., January 30, 1890.

MR. EDITOR:—A new name, which I believe the Editor claims is original with him, is to say the least, not a new question with the organization, as all members may learn by a reference to the proceedings of the Minneapolis Convention. At that time the writer advocated the change of name, not with the feeling that a new name in itself would add any dignity to our Order, but with the firm belief that results would preserve it from decay or absolute ruin, which I fear would ultimately have been the outcome had not the Burlington strike suggested the plan of federation adopted by the Atlanta Convention.

If we take a retrospective glance and review the period between the Philadelphia and Atlanta Conventions, we are forced to conclude that the Order lost dignity, was fast decaying, in fact, as far as practical results were concerned, its very existence was threatened. In order to arrest this retrograde movement I advocated the change of name. While I will admit that it was what might be termed a very radical procedure, it was justifiable under those circumstances and in full accord with the first law of nature; self preservation.

Had the change been made at that time I will submit that very few of our young engineers would have deserted our ranks, as the very nature of things would have educated our members to protect the interests of this class in addition to the interests of firemen. As I write I imagine I see some young hero arise and hear him exclaim, "Let them go; the Order will be benefitted by their withdrawal." But let me say, my young brother, that I am sure you are mistaken, for I am personally acquainted with many good men who have withdrawn for the reason they were not protected, and on account of the loss of dignity caused by the policy pursued by our Grand Lodge Officers, which I will refer to at some future time.

While I claim that we were injured directly by those withdrawals, I am sure you will agree with me that the indirect injury received can scarcely be computed when we consider that they joined with the radical element of the B. of L. E. in discouraging the new firemen from joining our ranks. The results must have been very gratifying to many B. of L. E. men, for on some lines entering this city the firemen did not join us, which fact introduced a new order of things by placing a premium upon perfidy. It seemed that sucroism reigned supreme, that the ambition of those firemen was to become engineers,

no matter if they had to sacrifice all honor in order to achieve such results.

The withdrawal of so many of our members during the above named period had still another demoralizing effect, viz: It encouraged the members of the B. of L. E. who supported the exclusion policy of that Organization, to renewed hostility. Their gratification seemed so complete that they neglected to give their exclusive legislation the study it demanded. Had the circumstances been different and our young engineers remained with our Order, those B. of L. E. men would have been forced to study the question. To study the question would simply mean a repeal of their anti-B. of L. E. laws three years ago, hence, in all probability, the writer of the history of the "Q." strike might have written victory instead of defeat. In order to obviate the dangers pictured above, and to save the life of our Order, which was seriously threatened by the B. of L. E. I would have hailed with delight a new name at the Minneapolis convention. I desired a change then for the benefit of our Order in particular, and all railway organizations in general, and for this same reason I now oppose a change. Time in its flight has wrought many changes; members of the B. of L. E. who were hostile to our Order, who enacted laws with the intention of annihilating us; men who were calmly calculating the length of time required to obliterate us, have been aroused from their slumber by the battle on the "Q."; their eyes are now wide open, they perceive that to destroy the usefulness of our Order, which they might have done in the course of five or six years had not the great strike occurred, would simply place them in a position to be "Readingized," hence it is politic for them to be on friendly terms with locomotive firemen. With the friendly attitude of the B. of L. E. and federation I cannot conceive how our Order can be seriously injured unless it would be by changing the name, which simply means the creation of a rival institution to the B. of L. E. This, brother firemen, would destroy the fundamental principles of federation, viz: That all classes of employes should be thoroughly organized and cooperate with each other through federation. I believe the ultimatum is federation or burst, and any act on our part that would impede its progress or prevent its consummation would not, to say the least, be in consonance with the position we aim to occupy in the history of labor organizations. The fight on this question will be between logic on one side and eloquence on the other. The experience I have had in convention has taught me that eloquence nearly always triumphs. I could enumerate many instances in the history of our Order to prove the correctness of this statement. I believe our Grand Lodge Officers favor a change of name and as they represent the eloquence of our Order it is quite natural to fear that we will witness a change of name. This state of affairs is to be deplored, but is nevertheless true however. For once, at least, I will depend upon the good sense of our representatives in the next convention to put a quietus upon this project in order to prevent complications which would arise to the injury of all classes of railway employes. Brother firemen, if we drop the spectacles of prejudice

must be clear to us that the fireman of to-day is the engineer of the future and any injury done the position of engineer at this time, would shortly be a direct injury to ourselves. The battle between the different classes of employes is happily nearing an end; fights between individuals may continue, but as an organization seeking to dignify the position of men on locomotive engines, we cannot afford to renew hostilities.

In conclusion I will say that at some future time I may write in reference to the policy pursued by the *Magazine* during that period between the Philadelphia and Minneapolis conventions, which will be in the nature of a reply to Bro. W. S. Carter's charge that the Editor failed to use diplomacy.

Yours for the B. of L. E.,

W. E. Burns.

The new name proposition ought to stand on its merits. It ought to be discussed on its merits.

Those who discuss the question should first state the central, pivotal fact relating to the membership of the Brotherhood. This done, let the debate proceed:

1st. When the Brotherhood of Locomotive Firemen was organized its members were all firemen. Then the name was significant and appropriate. The name expressed a fact.

2d. As the years went by, members who were firemen, ceased to be firemen and became engineers; an engineer is not a fireman. Hence, when the Brotherhood has a membership of firemen and engineers it ceased to be a Brotherhood of Locomotive Firemen and the name ceased then and there to truthfully represent the membership.

3d. A hostler occupies a position between that of a fireman and an engineer, not a fireman, nor yet a full-fledged engineer. This fact adds strength to the declaration that the name, "Brotherhood of Locomotive Firemen," does not, and in the very nature of things, cannot represent the membership of the Order.

4th. It is characteristic of human nature, and there is a great deal of it in railroad employes, to be known as just what they are. While a man is a fireman he does not aspire to be called an engineer, and when he is promoted to be an engineer he does not desire to be known as a fireman.

The question has arisen, can a name be suggested which, while it concedes no principle, right or prerogative, which, while surrendering nothing essential and erecting no barriers to progress, truthfully represents real conditions existing in the Brotherhood?

This question has been answered affirmatively by the suggestion of several new names, such as "The Brotherhood of Enginemen," "The Brotherhood of the Footboard" and "The Brotherhood of Locomotive Men."

Such names, it is affirmed, meet the demand, and the affirmation is supported by

many cogent arguments based upon the facts we have stated.

If there was ever a question submitted to the Brotherhood which should be discussed upon its merits, the new name question is one of them.

The occasion and outcome of strikes, legitimately, have nothing to do with the demand for a new name. The same is true as regards the B. of L. E. and its legislation.

Manifestly Bro. Burns places the B. of L. E. in a false position. Hear him:

If we take a retrospective glance and review the period between the Philadelphia and Atlanta Conventions, we are forced to conclude that the Order lost dignity, was fast decaying. In fact, as far as practical results were concerned, its very existence was threatened.

This is simply flapdoodle. Between Philadelphia and Atlanta, the Brotherhood of Locomotive Firemen did not "lose dignity," nor was it "fast decaying."

What was it that "threatened the very existence" of the Brotherhood between "Philadelphia and Atlanta?" Was it the fact that Bro. Burns had ceased to be Vice Grand Master? Bro. Burns don't specify. We commend his discretion. It is one thing to make a sweeping charge; it is another and a different thing to prove it.

But was the charge of "the loss of dignity," the charge of "fast decaying," and the charge that the "very existence of the Order was threatened," set adrift to enable Bro. Burns to inject his panacea of a new name into the Minneapolis Convention, and by intimation, at least, claim the glory of its rescuing properties?

Bro. Burns knows, or ought to know, that the new name idea antedates his connection with the Order several years, and this fact gives piquancy to the reasons which he says he urged for its adoption at the time he refers to, not one of which has the remotest relation to the fact that the present name is not sufficiently broad to include engineers and hostlers.

Away back, to a period between "Philadelphia and Atlanta," the "new name" possessed salvation properties of most extraordinary force. It could restore "lost dignity," arrest decay, and roll back the tidal wave which "threatened the very existence" of the Order. Nor was this all. It could arrest a "retrograde movement" and keep "young engineers" in the Order.

Suddenly Bro. Burns has experienced a change of heart. He is now against a new name.

The "prestige" of the Order was maintained clean down to Atlanta. There was no evidence of "decaying," nothing "threatened" the "very existence" of the Order. Hear what Mr. P. M. Arthur, Grand Chief of the B. of L. E., said at Atlanta, when addressing the representatives of our great Brotherhood:

"I am proud of you to-night, and I can only say that if you continue to improve and increase in the future as you have in the past, nothing can prevent your success."

Mr. Arthur could see no "fast decaying" going on, no circumstance threatening the "very existence" of the "Order." He saw an Order *improving* and *increasing* to an extent that made him feel "proud" of it.

Not so with Brother Burns. He had seen loss of *dignity*, *decay* and threatened death—all of which he was going to prevent with a new name—but with sufficient dignity left to challenge a splendid eulogy from the Governor of Georgia, with so little appearance of *decay*, that Grand Chief Arthur felt "proud" of the Order, possessed of such abundant vitality that he believed the Order would live to see its enemies "mouldering in the grave." We believe so, whether within or without the Order.

Now, then, we ask what becomes of Brother Burns' charges of loss of *dignity*, *decay* and death? Does not every brother behold in these gratuitous charges purpose as foreign to the good of the Order as it is possible to conceive? Are they not mischievous vagaries unworthy of a place in a communication written by any friend of the Brotherhood? But it is this sort of literature that we are constantly called upon, of late, to scotch. The task is by no means agreeable, and is simply performed from a sense of duty to the Brotherhood.

But, suppose the charges, made by Brother Burns had the semblance of truth in them, why recite them, when, as he confesses, they are past and gone?

We can inform Brother Burns, when he says, "I believe our Grand Officers favor a change of name," that Grand Master Sargent, is, and has been from the first, a pronounced opponent of a "change of name."

Brother Burns, "in conclusion," says: "I will say that at some future time, I may write in reference to the policy pursued by the *Magazine*," etc.

Come right along Brother Burns, you are just the man whom we shall be more than happy to welcome to the arena. Don't say you "*may write*," say *you will write* and then write. You shall have a hearing. If you haven't "eloquence," give us some more of your "logic," such as you put into the communication of January 30th, or, something more forcible would be preferred. "The policy pursued by the *Magazine*" under our charge, is an inviting theme, and you are welcome to attack it, and the sooner you do it the better we shall like it. One thing you will find before you get through with your job, will be, that the *Magazine's* policy is not to write down the B. of L. F., that it has not observed loss of "dignity," that it has not been alarmed by evidences of *decay*, nor seen anything to *threaten* the *existence* of the Order.

You will find that the *Magazine* has not drawn upon its imagination for "young heroes," but has found plenty of them in the ranks of the Brotherhood to talk to, indeed, we assure you, Brother Burns, if you want to distinguish yourself in the way designated, choose the referee and bottle-holder and begin the work; you shall have all the gate money, and all the glory you can achieve.—ED. MAGAZINE.]

COLLINGSWOOD, OHIO, Jan. 23, 1890.

Editor *Firemen's Magazine*:

I request room in *your Magazine* to congratulate Brother Carter of 263 for having had manhood enough to assert his views in the face of the fiery ordeal of the editor's pen. He has hit my idea very nearly, but expressed it in better shape.

I also want to ask Geo. De Forrest why it is that so many of the B. of L. F. members (on the U. P.) go to the U. P. E's Magazine for room to write, if it is not because they cannot be heard in *our own organ* without great abuse?

Yours,

W. H. Cross, 183

I also want to know why the old cover was so good enough for the *Magazine*? W. H. C.

Brother Cross is the brotherhood fireman who announced in the November *Magazine* that "The B. of L. F. was organized for a *Breeding Pen*."

Words are said to be signs of ideas. In using the term "breeding pen," we have Brother Cross' ideas. A "pen" is a small enclosure for beasts, cows, sheep, swine, etc. and therefore, we hear the terms frequently "pig pens," "sheep pens," "cow pens," &c. Brother Cross it occurs to us was strangely unfortunate, when he applied the term "breeding pen" to the B. of L. F. We supposed that Brother was careless, was in a hurry, did not have time to consult his lexicon, but it appears that he was really in earnest, and that he sticks to it, and is greatly obliged to Brother Carter, who he surmises regards the "breeding pen" suggestion as a happy thought, but we doubt very much if Brother Carter will feel very highly complimented by the intimation that he too regards the B. of L. F. as a "breeding pen," or a "pen" of any sort. Brother Cross ought to see that he made a mistake, and long ere this, he ought to have modified his language. He fails to see that he has given the Brotherhood a "new name" that he has made it possible for other organizations to apply to our Brotherhood as an odious sobriquet.

Brother Cross asks Brother De Forrest "why it is" that so many of the B. of L. F. members on the U. P. go to the U. P. E Magazine for room to write? The term "many" probably means *one* possibly two—that's all, and whether one or two, they have gone to the U. P. E's Magazine to *write* for the purpose of injuring the B. of L. F.; but with all their malignity they have *not* yet

denounced the B. of L. F. as a "breeding pen." Brother Cross should remember that Christ had his *Judas*, and Washington his *Benedict Arnold*—and that ought to satisfy him.

Brother Cross does not seem to be happy, and says "I want also to know why the old cover was not good enough for the *Magazine*?" Possibly the reason why is akin to the reason why Brother Cross changes his coat sometimes, or his hat, or his shoes, or washes his face, or his feet, or changes the cut of his whiskers. Brother Cross must see that we are disposed to respond, but we do not expect to escape the stereotyped charge of "abuse." Brother Cross is always welcome, but he must permit us to correct his mistakes, even though we may not in such labor of love win his approval.—[ED. MAGAZINE.

CHICAGO, ILL., January 14, 1890.

Editor Firemen's Magazine:

I take pleasure in writing a few notes for publication. Brother John F. Doyle, Secretary Chicago Lodge, No. 35, by the death of his father has become I think the richest man who belongs to our Brotherhood. On November 14th, 1889, Brother Doyle's father died possessed of a large fortune, leaving a wife and two children, a son and a daughter. His estate is valued at \$125,000, consisting of real estate, one block from our new Board of Trade Building, and 17,000 dollars in life insurance policy, all of which has been paid. As a consequence, Brother Doyle's share is \$50,000. I wish to say that Brother Doyle's father was the man who used to furnish the delegates to conventions, who passed through Chicago, with free transportation on the omnibus line, of which he was the Superintendent, and which is run under the name of "Frank Parmlee's Omnibus Line. He never allowed his employees to charge Brotherhood men who showed their traveling cards.

Brother Doyle is to be congratulated upon his good fortune. He is a noble, free-hearted boy, who says he will do the next convention justice and help Brother Leavitt, our delegate, to get there.

Yours fraternally,

W. R. Stewart.

In memory of Ada May and Charles Lambert Davis:

These lovely buds, so young, so fair,
Called forth by earthly doom.
Just came to show how sweet a flower
In Paradise would bloom.

Ere sin could harm or sorrow fade,
Death came with friendly care.
The opening buds to Heaven conveyed.
And bade them blossom there.

One by one earth's ties are broken.
As we see our love decay,
And the hopes so fondly cherished,
Brighten but to pass away.

One by one our hopes grow brighter
As we near the shining shore,
For we know across the river
Wait the loved ones gone before.

G. E. C.

TORONTO, ONT., February 1.

Federation.

MR. EDITOR: Federation—a good, strong word, is it not? a word which not only conveys the idea of union, but also of strength. Ever since the time that we have any authentic history of mankind, we find them joined, or federated for mutual protection and advancement. Among the most ignorant and uncivilized people of the world, we find that instinct and reason combined have taught them that they must band together or perish. Out of this union come strength and peace, and with them come industry, genius and enlightenment, till those people are no longer an uncivilized tribe, but a civilized nation.

If, when the thirteen colonies rebelled from the authority of England, one of these colonies had alone rebelled and attempted to gain an acknowledgment of her rights, do you suppose it would have been successful? But when they federated, and said, We will have our rights—we will fight for them, they got justice in the end, which, without federation, would never have been obtained. Patrick Henry did not say, Virginia must fight, but, "I repeat it, sir, we must fight." And that is just what the labor organizations of to day must do; not, however, with the knife or pistol, but with all the mental and moral force which can be brought together. Like the uncivilized tribes and the colonies, we must federate, and grow strong, or stand jealously aloof from one another, and fall.

If a difficulty arises between labor and capital, the right being with labor, the people will quickly recognize the fact, and we have the moral force. Educate the laboring men, and you give each of them the mental force. Join all the mental power together, and you have the mental force to join with the moral; and these two factors in the hands of tens of thousands of workmen, will win the battles of labor as nothing else can. "Oh, impossible," cries the mock agitator, "it never can be done; workmen differ so in occupation and wants that it would be impossible, impracticable to unite them." What if their occupations do differ? Is it not to the benefit of the man that makes the hammer, that he who uses it should receive fair wages for his work? Certainly it is. Should the man who uses the hammer only receive enough wages to barely support himself and family by practicing the strictest economy, he needs must use the old tools as long as he can possibly make them do, and as it is with him, so it is with the rest of his craft. The tool market is glutted, the business is dead. The mill owners say, "We must shut down, we are losing money; we must shut down for ninety days, or cut the men's wages 10 or 15 per cent." So you see the tool makers suffer by the poor wages of the tool users. "Oh," you say, "this is just drawn for the occasion." Is it? If the farmer receives a good price for his products, he can afford to buy new farming tools as he needs them, and many household luxuries and necessities which he cannot spare the money to buy when prices are down. Thus good prices to the farmer cause the merchant to bring on more goods, and the tool makers to make more tools; the railroads, too, run more trains to accommodate their increased traffic. Therefore, the

prosperity of one set of tradesmen has been the prosperity of many.

Monopolists find it beneficial to unite in trusts and combinations to force lower prices for labor and increase the cost of living. Is it not beneficial to the laboring people to unite to resist these unjust demands and measures?

Let all organizations maintain their individuality, as has been done by the three federated orders, and follow the plan advocated by the able editor of the *Magazine*, of a general board forped of members from each member of the federated body. As a little leaven leaveneth the whole lump, so the federation already commenced will eventually spread to all labor organizations.

Aristocracy of labor in this country must fall. Its day is done. Where an organization wins one battle alone it will lose ten; and the day is drawing near when one cannot win at all. As long as there is a variance between certain labor organizations, just so long will their work be fruitless, for one will defeat the other. "United we stand, divided we fall," and once let organized labor fall with a crash, and who will ever lift it up again and place it in its old place of power before the world? Bury the past—it is dead; the present and the future demand our attention, and must receive it.

Let Federation be your watchword, Justice and Equity your laws, and Arbitration your court in which to settle all disputes, which may arise.

X. Q.

LOVELAND, IOWA, February 6th, 1890.

Look and Live.

MR. EDITOR:—Success! The way to be successful is to try—keep up with the age. Make a mark—try to reach it. Doubtless our editor has made his mark and is endeavoring to reach it by advocating the change of our name. Why? Let us look. When a fireman obtains a situation on a railroad he looks ahead for promotion to the position of engineer. I hope there is not a member of the B. of L. F. who is a fireman who does not aspire to be an engineer. If there is such a member, we should vote to expel him.

Can you see any advantage in belonging to the B. of L. E. after you become an engineer? Yes, say you. We will experience it in traveling, which is the only weapon they have to fight with. As the firemen are all workers for the interests of the Order we succeed in getting members. Are we done after securing them? No, a thousand times no. We must keep them. The rule works just the same in a Sabbath school, of which I am superintendent. We want to get the children (firemen) in and keep them by educating them into the church. Should we change our name, it would be for the express purpose of retaining our members, which no man can object to unless he is in sympathy with the B. of L. E.

While I am still writing on the first word, "Look," can you not see away—a far? Look sharp. Can you see the mighty host marching to the front with banners flying and inscribed "Brotherhood of Conductors," with whom we are on friendly terms? Don't infer from this that I am fighting the B. of L. E., but just ask any reasonable thinking Q. striker if we did not have the strike won when P. M. Arthur

says, "Santa Fé men, go back to work?" I hope Mr. Arthur will remember that the greatest man on earth came from the lowly, and remained among them doing good until his death on the cross. How nice it is to drill up our men and then hand them over to Mr. Arthur. He has captured some of our best men and just the same the other way, men who were expelled from our Order he gladly picked up. I will say to Brother Carter, of Taylor, Texas, better go fire for Mr. Arthur. The men who love the B. of L. F. are the men who work for its interests.

A few words about 43. L. Mooney is in Taylor, Texas; John Blair, Nashville; John Carson, New Mexico; C. Christopher, Omaha; Jno. Toohey, Utah; C. Dorsey, Minnesota. See where P. M. has got the boys. But the G. I. and Santa Fé furnish No. 4 with good material. Mr. McNeil, of the Grand Island Ry., deserves to be remembered by the B. of L. F. for kindness shown a representative of No. 43, and our late Bro. P. H. Kelly, of No. 320.

In conclusion I can say: Hurrah for the Grand officers. W. E. Sullivan.

MOBERLY, MO., February 1st, 1890.

Editor Firemen's Magazine:

You will no doubt be somewhat surprised to receive a letter from a fireman of Anchor Lodge, No. 54. I have, in fact, been anxiously waiting to see if some other brother would take a spare moment to drop a few lines in regard to 54. Anchor Lodge is one of the booming lodges of the West. She has nearly 100 members, and has candidates to initiate nearly every meeting.

New Year's Eve was the fixed time for our ball, and, as usual, it was one of the leading balls of the West. It was well attended, and well enjoyed by those who were present. It would take too much space to give any further account of the ball, and will only say it was a great success.

Now, Mr. Editor, in regard to the question, how to manage a husband. I have just put the question before my wife. I told her that some writer would like to be informed how to manage a husband. She promptly replied, "Let them do as I did." "How was that?" I asked her. "Give them enough room and they'll thank themselves," was the reply. This is not satisfactory to the writer, I would like to know, as I am expecting to visit my mother-in-law soon, and probably can get better information from her on this subject, as she has had six different ones and it seems that she managed them all pretty well. Hoping to hear some more opinions on this question, I remain, as ever,

McGINTY.

ASHTABULA, O., January 26, 1890.

Editor Firemen's Magazine:

I just want to say that Western Reserve Lodge, No. 248, is composed of the boys on the P. Y. & A. A. A. J. & F., and that they are all good men who take an interest in the B. of L. F. Our engines on the A. & F. are large six wheel connected with 24-inch cylinders, and are anything but pleasant to fire.

There have been about fifteen of the boys to go to the right hand side within a year, and we have all made good time. Our runs are from Ashtabula to Youngstown.

Yours fraternally,

H. S. B.

Editor Firemen's Magazine:

"Long heads may thrive by sober rules
Because they think and drink not;
But headlong are our thriving fools
Who only drink and think not."

After the close of the Toronto convention I took occasion to express my views on certain matters relative to the selection of delegates by Subordinate Lodges. I also took it on myself to denounce, through the columns of the *Magazine*, a certain system of hero-worship which had been fostered and encouraged for a purpose by some of the then Grand Officers of the Brotherhood.

From that time to the present I have been a close observer of the drift of events and have not allowed symptoms of this tendency to escape me. I admit I have been isolated to a lamentable degree so that opportunity for extensive observation was denied me. Nevertheless I have seen enough to convince me of the fact that such hero-worship still exists and is fostered and encouraged by those who expect to profit by it. What I said then about the childish fancy of the weak-minded and unthinking that the Brotherhood of Locomotive Firemen was depending for its existence on the retention of any one man or any coterie of men in the Grand Lodge offices, could with equal propriety be uttered to-day.

Out upon such confounded nonsense! The Brotherhood has long since ceased to be a suckling babe and can live, prosper and advance, guided by the aggregated average of its own intelligence. It is not dependent on the meteoric glare of any transcendent genius, but has that in itself which lights its course.

When the Philadelphia convention had appointed the Grand Officers a committee to revise the Constitution and By-Laws of the Order, "X. L. C. R.," through the *Magazine*, commended the wisdom of that act. I had withdrawn from the *Magazine* when his communication appeared, but I induced my admired personal friend, "Sprague," to take the matter up and controvert "X. L. C. R." He did it ably and well, heartily denouncing the transfer of the legislative power from the convention to the Grand office, and lucidly pointed out the dangers of such a course. I endorse every word and sentence of that excellent letter, and add that the Atlanta convention blundered equally as bad as her Philadelphia sister when she appointed none but Grand Officers as a committee to bring about federation.

This shirking of responsibilities is dangerous and reprehensible. The conventions should never seek to shift its legislative functions onto the executive department of the government of our Order. Those who are deputed to execute the laws should not be permitted to make them; otherwise free government is at an end. Advice and suggestions coming from the executive head in annual report it is well to consider and digest; but the conception, the framing and formulation of laws should be attended to by the convention as the only authorized legislative body under our Constitution within the Brotherhood. The rank and file should have been represented on that committee appointed at Philadelphia; the rank and file should have been represented on that committee appointed at Atlanta. It were well

enough to have the Grand Master a member of that committee because of the position he holds relative to the Protective Department, but the other two should have come from among the active working members of the Order. This transfer of functions and blending of the legislative with the executive is bound to have a demoralizing effect on the entire Order, and the effect will be twofold in its nature.

On the one hand those who have shirked their duties become careless of results and do not burden their minds with thoughts relative to the laws of the Order, content to abide by whatever Providence and the geniuses see fit to impose on them. In this manner a lot of dependent, thoughtless and passive neuters are engendered, those qualities most essential to the perpetuation of free government are weakened or destroyed and the way is paved to the usurpation of power and prerogative.

On the other hand are officials who see themselves looked upon as prodigies, all-wise and far-seeing, deputed to transact all business pertaining to the Order, legislative and otherwise; is it any more than natural that they should become egotistic, jealous of interference and furlous at criticism? It is only by keeping the law-making power close to the active working members; maintaining a healthy, independent spirit—though not capacious or over-meddlesome—quick to discover wrong, and enter vigorous protest against injustice, that honest government can be secured to us.

No administration will be just, economical or efficient unless the general opinion requires that it shall be so. The possession of power easily demoralizes the best and wisest of men and they will not long remain efficient or honest who are not made to feel and fear the force of general indignation. I want it distinctly understood that I am not making an attack on our Grand Officers. I have no desire to injure them or create any feeling of distrust in the minds of members. I have no wish, hope, or inclination to detract one iota from their actual merit as officials. I speak not of them. I am dealing with symptoms and tendencies and refer only to officials because in the nature of things they have become connected with my subject. If the mind of any reader is so obtuse that it cannot comprehend this distinction I pity its scope. Before closing this part of my letter let me quote a description from Swift's *Gulliver*: "In choosing persons for all employments they have more regard to good morals than to great abilities; for since government is necessary to mankind, they believe that the common size of human understanding is fitted to some station or other; and that Providence never intended to make the management of public affairs a mystery to be comprehended only by a few persons of sublime genius, of whom not more than three are born in an age; but they suppose truth, justice, temperance and the like to be in every man's power, the practice of which virtues, assisted by experience and a good intention would qualify any man for the service of his country. But they thought the want of moral virtues was so far from being supplied by superior endowments of the mind that employment could never be put into such dangerous hands as those of persons so qualified; and at least that the mistakes

committed by ignorance in a virtuous disposition would never be of such fatal consequence to the public weal as the practice of a man whose inclinations led him to be corrupt, and who had great abilities to manage, to multiply and defend his corruptions."

In the December *Magazine* much space is consumed and some vigorous language exhausted because of a certain document therein published which emanated from the General Board of Adjustment of the U. P. R. R. relative to federation. The said document is referred as a "ridiculous but innocent ukase;" if so, why so much foam and sputter?

One point I wish to make. By way of introduction to that document and comments thereon the writer says among other things: "We write for the purpose of defending against misrepresentation the laws of the Brotherhood." More follows in like strain, and much that will not bear repetition about "informers," "spotters," "hangmen" and other bad people whom we have no desire to become acquainted with and who, to tell the truth, have no business being introduced into such company. When I read about this "rebellious faction" on the the Union Pacific, I at once dug up my Constitution and By-Laws of the Brotherhood of Locomotive Firemen to see wherein they had been guilty of rebellion and misrepresentation of law, and I failed to find a single sentence in the Constitution relating to the matter. Neither is it provided for in the Laws of the Protective Department or in the Ritual. Those are the only laws the Brotherhood of Locomotive Firemen is governed by, those are the only laws enacted by our legislative body, to which as Brotherhood men we owe allegiance. They have not been transgressed or tampered with; then where is the rebellion and misrepresentation? You, gentlemen, were appointed a committee to present federation in a tangible form to other organizations of railway employes and given power to perfect an organization should other Orders be found in accord. The convention you were appointed to represent stated clearly and distinctly what orders were to be federated with and in what manner. Of course, it would be absurd for any one Order to say how the several Orders mentioned were to organize and compel all to accept its single formula. That would be an insult to the intelligence of the other and they would be justified in resenting it even to the end of no federation. All constitutions emanating from assemblies of divergent views are the results of compromise. There must be mutual concessions and yielding or there can be no progress. But when the work is completed and given to us as the sum total of the intelligence centered in its construction: as reasoning mortals we are at liberty to judge it on its merits and accept or reject it according to our convictions and as the majority may determine. The Brotherhood of Locomotive Firemen did not pledge itself in advance to abide by whatever might emanate from that federation convention. To have done so would have been madness of the most malignant type. It was pledged though, by adoption to a certain plan of federation which if perfected and made the governing law of the federated bodies would be binding and in full force. But inasmuch as that plan was

rejected and another of different complexion and import adopted it has no force or effect as *Law* on the Brotherhood of Locomotive Firemen, notwithstanding the signatures and Grand seal attached, until such time as a convention of the Brotherhood ratifies the action of its committee. You have made a *Treaty* which does not become *Law* on your mere *ipse dixit*; and cannot rise to the dignity of a law until passed upon by a convention. You would have just as much right to tell us the Constitution you had drafted in accordance with the wish of the Philadelphia convention was the law of the Order before it was passed upon at Minneapolis. You had just as good ground to stand upon then as now and your position would have been equally as tenable. Let me ask you a question, Brother Sargent. In the present chaotic state of your Federal organization, should the switchmen strike, and lawfully, according to the new system, their action being approved of the Supreme Council and all the dogs of war unchained, could you, as Grand Master of the Brotherhood of Locomotive Firemen and head of its Protective Department, legally use any of the money contributed to that fund to sustain such strike? I mean as things now stand. I am convinced that I owe no allegiance to the Supreme Council and I will refuse to look on the U. P. men as rebels until some future convention ratifies this mere shadow of a system of federation.

T. P. O'Rourke.

[First it snow, then it thaw, then it blew, then it friz.]

—Byron.

We have read Bro. O'Rourke's communication with refreshing gusto. It reminds us of a boarder's comment on his dinner when he said "everything was sour but the vinegar;" but Bro. O'Rourke's vinegar is sour.

Beginning at Toronto he saw a "certain system of hero worship fostered and encouraged for a purpose by some of the then Grand Officers of the Brotherhood," and Bro. O'Rourke "took it upon himself to denounce this hero worship." How successful Bro. O'Rourke was in doing away with this "hero worship" on the part of the representatives of the Brotherhood he does not inform his readers, but we infer from what he says that his achievements were not entirely satisfactory.

From Toronto to Philadelphia, from Philadelphia to Minneapolis, from Minneapolis to Atlanta, and from Atlanta to the writing of his communication, Bro. O'Rourke says he has been "isolated to a lamentable degree," he has been "denied opportunity for extensive observation," and yet, all the way from Toronto "to the present" he has "been a close observer of the drift of events," and has "not allowed symptoms of this tendency (hero worship) to escape" him. Lamentably "isolated," still Bro. O'Rourke has watched "symptoms with ceaseless solicitude." This tendency to hero worship must be stamped out, eradicated, root and

branch, or the Order will go where the woodbine twineth.

It is easy to see that Bro. O'Rourke has been greatly vexed over the diseased condition of the Order. His "denunciation" had no effect, for he says "hero worship still exists." Bro. O'Rourke has "denounced hero worship" for the benefit of the members of the Order afflicted with "childish fancy," for the benefit of the "weak-minded and unthinking" members who favor the retention in office of "one man," and that "one man" is not of Bro. O'Rourke's choice. We say, with Bro. O'Rourke, "out upon such confounded nonsense." This ceaseless maligning the Brotherhood, this reference to the membership as "weak-minded and unthinking" is something worse than "nonsense." It is the outgrowth of envy that "hates the excellence it cannot reach."

Bro. O'Rourke continues his dissertation as follows:

When the Philadelphia Convention had appointed the Grand Officers a committee to revise the Constitution and By-Laws of the Order, "X. L. C. R.," through the *Magazine*, commended the wisdom of that act. I had withdrawn from the *Magazine* when his communication appeared, but I induced my admired personal friend, "Sprague," to take the matter up and controvert "X. L. C. R." He did it ably and well, heartily denouncing the transfer of the legislative power from the Convention to the Grand office, and lucidly pointed out the dangers of such a course.

In the foregoing, Bro. O'Rourke, as usual, is mistaken. His purpose is to arraign the Brotherhood and make it odious in its own eyes and in the eyes of the world. Bro. O'Rourke still further says: "The rank and file should have been represented on that committee appointed at Philadelphia." Here we have ignorance to a lamentable degree or deliberate perversion of the facts. Does not Bro. O'Rourke know that a *majority* of that committee were selected from the "rank and file;" that the Grand Officers were merely advisory and could not adopt a single section or clause without the consent and approval of the "rank and file" members of the committee?

Again Bro. O'Rourke says: "When the Philadelphia Convention had appointed the Grand Officers a committee to revise the Constitution and By-Laws." What are the facts? The committee to revise the Constitution and By-Laws, appointed by the Philadelphia Convention, was constituted as follows:

GRAND OFFICERS.	"RANK AND FILE."
F. P. Sargent, G. M.	Wm. Hugo.
E. V. Debs, G. S. and T.	C. W. Gardner.
	W. E. Taylor.

It will be observed that the Grand Officers were not the committee; that the untitled membership were in the majority, and that the charge falls to the ground without one fact to support it.

Manifestly one of Bro. O'Rourke's hallucinations is "hero worship" in the Order.

Another is the "rank and file," whom he styles "weak-minded and unthinking," and then says they are not properly recognized. Still another vagary which has taken possession of Bro. O'Rourke is, that the Conventions delegate to the Grand Officers legislative power. No such delegated powers were ever conferred upon the Grand Officers nor exercised by them. The work of the revision committee, appointed at Philadelphia, was ordered by the Convention to be submitted to the next Convention at Minneapolis, subject to the approval of that body, and was so submitted, and so much of the work as was adopted and became the law of the Order, was done by the representatives in Convention assembled. Why misrepresentation? Why seek to falsify the record? Why seek to make the *Magazine* the sewer through which a muddy stream of ignorance and stupidity, venom and malignity may flow? Is it for the purpose of seeing if the editor of the *Magazine* will permit it to go unchallenged and unrebuked? If that is the purpose, those who are animated by malevolence, are welcome to their trophies. While we are in charge of the *Magazine*, those who insult and malign the Brotherhood, shall not escape exposure.

The great body of the Brotherhood is made up of men who deserve ceaseless commendation. They are loyal to law and order. They work, they watch, they pay. They are not men of "childish fancies," they are not, as Bro. O'Rourke says, "weak-minded, unthinking" men. They do not deserve such insults, such ribald denunciation, nor shall it be heaped upon them while we are in charge of the *Magazine* and escape such excommunications as it deserves. The men whom Bro. O'Rourke stigmatized as "weak-minded and unthinking," are his peers intellectually, and in earnest solicitude for the good of the Order; are examples of honest endeavor, which, were Bro. O'Rourke to follow, would be of incalculable benefit to him.

Bro. O'Rourke having charged that at the close of the Toronto Convention he had discovered a "system of hero worship fostered and encouraged for a purpose by some of the then Grand Officers," and having charged that the "hero worship still exists," and upon this "hero worship" having based his entire superstructure of misrepresentation and detraction; having exhausted his stock of censure, having disparaged everything and aspersed everybody; having classed the members of the Brotherhood as "weak-minded and unthinking," a herd of degraded hero worshipers, poor creatures of "childish fancies," he says: "I have no desire to create any feelings of distrust in the minds of members," and he wants it "distinctly understood that" he is "not making" an attack on the Grand "Officers,"

and having said this, he quotes in support of his declaration from Gulliver's travels.

Bro. O'Rourke has evidently studied Gulliver to advantage, and has adopted the policy of the people of the "Kingdom of Tribenor." First suspect of "fostering hero worship," for instance, then boldly accuse of the plot, then write it out for the *Magazine*, and get the victim "in chains," if possible. But be certain to say, for the benefit of those who are "so obtuse" that they can't see the plot, that you are not making war upon the Grand Officers, but simply "dealing with symptoms and tendencies," and in support of the dodge quote Gulliver, the monumental liar of the ages. That sort of a thing is the way to advance the interests of the Brotherhood of Locomotive Firemen. Bro. O'Rourke has not set the Grand Lodge on fire yet, and if he should, we hope he will let it burn, rather than resort to Gulliver's method of extinguishing the fire in the palace of the King of Lilliput.

Bro. O'Rourke, drawing his inspiration from Gulliver, is of the opinion that to keep an administration "just, economical and efficient it is necessary to apply the force of general indignation." If this is not done Bro. O'Rourke is of the opinion no administration will long "remain efficient and honest." Now, here are declarations eminently characteristic of a class of men who are honest because a whip is suspended over them, and handcuffs and prisons are in sight. They are men who never had any faith in their fellowmen. They have no more conception of the virtue of inherent, inborn integrity, honesty, than so many paving stones. Cold, callous, suspicious; they measure others by the low standard by which they measure themselves, and declare "*they will not long remain efficient or honest, who are not made to feel and fear the force of general indignation.*" "General indignation" is general anger, wrath, ire, resentment, fury, rage, exasperation, and to create this general indignation against the administration of the affairs of the Brotherhood is the reason why Bro. O'Rourke writes to the *Magazine*. And yet, he says, "I want it distinctly understood that I am not making an attack on our Grand officers."

Bro. O'Rourke refers to the "ukase" of the U. P. Board of Adjustment. If he thinks too much has been said about it, why does he "sputter?" "Informers" and "spotters" will do, but "hangmen" is a creation of Bro. O'Rourke, and as for the rest, we have this to say, that the action of the U. P. Board of Adjustment in arraigning the Grand Officers for their action in the matter of federation is indefensible. The Atlanta Convention gave the Grand Officers power to act, and in their action they did not transcend the power conferred

upon them, this much for the purpose of introducing the following to Bro. F. P. Sargent, Grand Master, and to which we append Grand Master Sargent's reply.

Let me ask you a question, Bro. Sargent. In the present chaotic state of your federated organization should the switchmen strike, and lawfully, according to the new system, their action being approved of the Supreme Council and all the dogs of war unchained, could you, as Grand Master of the Brotherhood of Locomotive Firemen and head of its Protective Department, legally use any of the money contributed to that fund to sustain such strike? I mean as things now stand—

(Emphatically, Yes! F. P. Sargent, G. M.)

The "present chaos" alluded to exists nowhere except in Bro. O'Rourke's mind. That there are those who are opposed to federation as established at Chicago in June last we cheerfully concede, but they are a very small minority of the membership, and wholly incapable, were they so disposed, of inaugurating chaos. The Brotherhood as a whole is harmonious, united, self-reliant, self-poised; entirely free from "symptoms" of chaos or decay.

The revision committee were instructed to revise and report. The committee on federation was empowered to act—to inaugurate federation. This has been done. Three brotherhoods federated. They are bound by the action of those to whom they delegated the authority to act. Anyone of them can withdraw from the Supreme Council and thereby declare against federation but until such withdrawal, they are bound by the action of the Supreme Council.

Bro. O'Rourke says, "I am convinced that I owe no allegiance to the Supreme Council." This he can say with impunity, but should circumstances occur of a character to test his allegiance, he would acknowledge it and respond, or he would go out of the Brotherhood. Bravado, bluster, rant, would be of no avail. Bro. O'Rourke would be retired and again permitted to "isolate himself" to any degree agreeable, and we should indulge the hope, that should he ever come forth again it would be when the mellowing influences of years and meditation, had taught him, that the era of "general indignation" to make men "efficient and honest" had passed away; that "hero worship" was a myth, and that the men of the scoop and throttle are not the "weak mind, unthinking" imbeciles he thought them when he last observed "symptoms"; that the Brotherhood which they manage has marched steadily forward in spite of croakers, and will live and flourish when they are dead and forgotten.—ED. MAGAZINE.]

Union Meetings.

Union meetings will be held as follows: Sedalia, Mo., March 17th; St. Joseph, Mo., March 19th; Elmira, N. Y., April 6th. The Grand Officers will be in attendance and all members of the Order are cordially invited.

ROCHESTER, N. Y., November 17, 1889.

Editor Firemen's Magazine :

We have heard considerable from No. 99 of late, but it has all been from the R. and P. side of the house, and while glad the R. and P. boys are awake, for they are first-rate fellows. I will try to give a little general information. No. 99 is situated in this pleasant little city of Rochester. She numbers nearly 100 men, under Capt. Pruyn. Ed makes a first-rate Master, as is evident from his constant reelection to that office. He is and always has been a hard worker, and while popular in the Order is even more so in the temperance cause now booming in this city. Brother Walter Couch is our Scribe, one of those kind who will answer a communication or attend to any other business promptly—one of the kind it would be well if every lodge in the Order could have his counterpart. He is in the employ of the Postoffice in this city and is well known and liked. As an appreciation of his faithful and unremunerative service, the boys lately presented him with a very pretty B of L. F. badge, which he wears on the heart side of his vest. Kingsley is our money man. He is a fireman runner, and is sure to be around the lodge at least every three months, but we excuse men who are in the rounds on the New York Central. He gets a little hot-headed at times, but he is an awful nice fellow, and one we trust.

Lute fires passenger—tall, lean and dark, full of the "old Nick," but with lots of good sense and judgment. He takes nearly all the coal prizes on the R. and P., and seems to be a kind of expert in his business. Johnny Ward has been back from the West but a short time. He is also an engineer, and considered a good, sound, smart, sensible fellow—a good colleague for Pruyn in running the Lodge.

Oh! by gosh, I nearly forgot Harvey. Harvey has taken unto himself a wife, one of Rochester's belles and a lady of influence and wealth. We got the cigars.

We are doing well now, both in point of numbers and money, and are just recovering our lost balance, having had a little difficulty in our money matters—"another man gone wrong," shaped like a receiver. We are also listening to the last echoes of the "Q" strike, and are calling down forcibly men who received favors during that little difficulty.

Our attendance is fair and improving. We attempted the fine system here, but it was "no go." New York boys do not stand that kind of business, and we think it must be a very strange specimen of a man who will either be compelled to go to lodge or submit to be questioned as to his absence. At any rate, had this law passed here it would have ruined the Lodge, for although it is a "hard nut to crack," it is none the less true that the Brotherhood is hardly a necessity here, and is at times a barrier to a man's promotion. Rather do this, boys, instead of fining men: Make your Lodge rooms places of interest and entertainment. The time card is a good subject to discuss. The Locomotive, not hammer blow, is a good subject. Let the Brothers bring in essays on the machine and its parts. The boiler, firing and running an engine, are also good subjects

for discussion. Study these matters; bring in authority on these subjects and you will surely find out how little you know, but what you must find out to be an intelligent workman.

As for a change of name—we have canvassed this matter pretty thoroughly. Our boys, engineers and all, are not in favor of it, and they certainly give just as good reasons in the negative as have ever been given in the affirmative; but some want it, and it is very liable to be, so long as the present miserable and unjust system of representation in convention is endured, for the Lodge of two hundred men has no more to say than one of fifteen; but, boys, all the gabble in the *Magazine* for and against this subject amounts to bosh—you only lay yourselves open to ridicule and criticism. Attend to the matter in convention; send men who are sound thinkers—men who have a mind of their own. By no means send a man who has been there before. Instruct him well before he goes, that he may vote for his Lodge and not for himself on such points and you may get results satisfactory to the Brotherhood at large, and do away with a great deal of this undertone kicking that goes on after the laws are passed and put in force. But this will do—suffice it to say that No. 99 is all right.

Fraternally,

N. Y. C.

HOLINGTON, KAN., December 30, 1889.

Editor Locomotive Firemen's Magazine :

I shall be thankful for sufficient space in our valued *Magazine*, to say to the Brotherhood at large that Brother N. B. Scrogins has been in the employ of the Missouri Pacific R. R. for a number of years and has given entire satisfaction. His employers have discovered in him those qualities which merit promotion, and now, from hostler, he has been promoted to the honorable position of engineer. Since Brother Scrogins has stepped to the throttle, we, his friends and brothers, join in wishing him success and prosperity. He is a member of Long Division, No. 397, and his brothers of the foot board, are proud to know that one of our number has been promoted.

Yours fraternally,

J. H. M.

PERU, IND., January 5, 1890.

Editor Locomotive Firemen's Magazine :

Echo Lodge, No. 157, B. of L. F., gave its fourth annual ball on New Year's Eve, which met every expectation, and by all was pronounced a success. The arrangements were of a character to reflect great credit upon the Lodge, and upon the Committee of arrangements, whose zeal and attention to the welfare of the Brotherhood is worthy of high commendation. Bro. J. H. Martin, of Mt. Tacoma Lodge, No. 192, visiting here, took in the ball and enjoyed himself greatly. Our Master Mechanic, J. W. Kuntz, Esq., has our thanks for favors in the past and for his assistance in the decoration of our hall on the occasion of the ball, and is known to be a courteous and considerate gentleman.

Our members are all employed on the Lake Erie & Western R. R. and are making good time.

Committee.

Memorial.

MR. EDITOR:—What means the draped engines? What means the sad faces? Why are our jolly firemen so grave, and why do our old friends pass us by with so mournful a smile?

It means that the John Hickey Lodge No. 266, B. of L. F., has been called upon for the first time since its origin to mourn the loss of a beloved brother. Only a switch left open—that was all: a little matter to some, but oh, how great in the eyes of the noble men of the road, for by this little act of forgetfulness Anthony Kelley, our loved and mourned brother, was taken from our midst. As the news of the accident flashed over the wires it was heard on all sides, and the first fears were banished when it was learned that he was with his confessor at Antigo, alive and conscious.

But was it human strength that kept those loving eyes opened? Was it mortal power that cleared the brain and gave the noble engineer power to speak? No. It was a time when all power save His, who rules the universe, He who says, "On time," when the train of life reaches the last station, was as nothing. For once the brave firemen and engineers stood by powerless to alleviate the sufferings of a brother. It was in vain they offered him stimulants, the only answer they received was, "I can take nothing that will deprive me of consciousness, for I must know my mother when I meet her." Oh! generous, noble heart! was thy goodness and nobility all unknown, these words would endear thee to the hearts of every son, even amidst thy unbearable sufferings thy thoughts were of thy God and mother.

In the prime of manhood he started on his railroad career. With "Fear of God" for his headlight, "Honesty and Faithfulness" for his locomotive, he made the stations, and as he neared the end of his route his Guardian Angel, recognizing his faithfulness, came forth to meet him. In the arms of the mother he loved so well, surrounded by relatives and friends, he closed his eyes and passed to the land where all trains are on time, and where men like he who has left a vacant chair in "266" meet their reward.

It is needless to tell of the many friends he had from north to south; one glance at the heavily draped engines and charter show the esteem and love in which his brothers and friends held him. As I think of the day he went from his needed rest to meet the officers and make arrangements whereby he could hear mass every Sunday the words of the poet come unbidden to my mind:

"Oh! grave, where is thy victory?
Oh! death, where is thy sting?"

OSHKOSH, WIS.

Forget-me-not.

BRECKENRIDGE, MINN., January 14, 1890.

Editor Locomotive Firemen's Magazine:

We are in receipt of a letter of thanks from the family of our late Brother Kivolanen for the kindness of the Brothers in their late trouble, and especially to Brother George Adkins for the brotherly kindness and aid rendered during their trial. Bro. Adkins was dispatched to the scene of the wreck and accompanied the remains to the sorrowing relatives and lent valuable aid and gave comforting words to the grief-stricken father and sister in the hour of need, thereby endearing himself and our Order by his kind acts more than pen can portray.

Fraternally,

W. C. Hall.

Personal.

CHAS. COWDRICK, of No. 149, mourns the death of his mother, who departed this life on January 31st. Bro. Cowdrick has the warmest sympathy of all who know him.

N. B. SCROGIN has been elected Master of Long Division Lodge, No. 337, and will make a good one. Bro. Scrogin has also been promoted and is meeting with success.

At a regular meeting of Dominion Lodge, No. 67, held January 12th, 1890, the officers and members presented their worthy Past Master, W. Brent, with a handsome collar as a token of esteem for the able manner in which he had filled the office of Master for the year 1889.

BROTHER ALLWARD, of Dominion Lodge, No. 67, is to be congratulated upon his good fortune in the advent of a beautiful daughter to bless and beautify his home. The boys of "Dominion" are already discussing which of them will be the fortunate winner of her heart and hand.

AS MASTER of Ceremonies when the light fantastic is being tripped, Bro. J. J. Knauff, Master of Buffalo Lodge, No. 12, is a second Chesterfield. The late ball given by that Lodge was an immense success, due largely to Chairman Knauff and his efficient committee.

C. H. TORPEY, who has charge of the *Magazine* at Trenton, Mo., is happy. On December 24th he was presented with a nine pound boy. C. H. is a hustler and it is not often he gets left. May the new arrival grow up to be as good a man as his father.

D. L. FORSYTH and Chas. A. Crane, of Ft. Pickering Lodge at Memphis, are widely known as zealous workers in the interest of the Order. They are active and wide-awake and if their Lodge does not rank with the best it will certainly not be their fault.

From all accounts Bro. John Quinn, of Ft. Pickering Lodge, is getting along swimmingly with the fair sex along the line. He is made the recipient of numerous bouquets and other testimonials of esteem and the boys are contemplating an investigation of his case. John has doubtless aroused the jealousy of his less favored rivals.

GEORGE ALEXANDER, of Capital Lodge, No. 46, Springfield, Ill., on the evening of December 11th, 1889, was married at Jerseyville, Ill., to Miss Eva L. Cadwallder, at the residence of the bride's mother. The bride is handsome and accomplished and the groom in all regards worthy the treasure that in the matrimonial lottery he has secured. The *Magazine* wishes the happy couple a prosperous and happy voyage of life.

Visiting the Lodges.

Occasionally, it so happens, that the Editor of the *Magazine* can afford himself the gratification of greeting brotherhood men beyond the limited boundaries of Terre Haute, and interchange views with them regarding matters intimately connected with the welfare of the Order.

One of the dates which permitted us to accept the privilege, was Sunday, February 2, 1890, when we packed our "grip," and in company with Grand Master Sargent *lit out* for

TOLEDO,

a railroad center which enjoys immense water privileges, as do all our cities on the coasts of our inter oceans.

At Danville, Ills., we were so unfortunate as to miss connections, ordinarily a source of vexation

but in our case, we were reconciled to the delay, by the generous treatment of the boys of the Brotherhood, who took us in hand, and made our detention as free from anxiety as was possible by a sumptuous dinner and pleasant companionship. As a matter of course, the hours went by rapidly, but we did not reach Toledo until 9:30 P. M. Notwithstanding the lateness of the hour, we found the boys awaiting our arrival, and the anticipated meeting with Safety Lodge 142, was held, at which the "good of the Order" was discussed with good results.

We left Toledo February 31, with pleasing recollections of our brief sojourn and started for

JACKSON,

Mich., where we arrived on time and held a meeting with Gilbert Lodge 249, in the afternoon. At night, an open meeting was held with the railroad men of the city, at which all the Orders were represented. Mr. George Royal, of the B. of L. E., presided, and made a most excellent address which was well received. Grand Master Sargent addressed the meeting in his usual happy style, his principal topic being federation, which received unbroken attention. "Brother Debs" also added a few remarks on the subject of labor, and had no reason to complain for any lack of attention on the part of the audience.

On February 4th we took our departure from Jackson, en route for

ELKHART,

Indiana, a thriving city, where Prospect Lodge 162 is located. During the afternoon, a closed meeting was held with the Lodge, and at night another meeting was held, which in addition to the members of Prospect Lodge, a number of members of sister Lodges were present. The meetings were in all regards, pleasant and profitable. From Elkhart, Grand Master Sargent was called to Cincinnati, on important business connected with the troubles on the "Queen and Crescent," but Brother Hannahan, our Vice Grand Master took the place of Brother Sargent, and was present at the night meeting which was specially enthusiastic for the success of the Order.

On February 5th we arrived at

FORT WAYNE,

During the afternoon an open meeting was held of the various railroad Brotherhoods, at which addresses were made by Brothers Hannahan and Debs. The attendance was large, and the reception cordial. In the evening a meeting was held with A. G. Porter Lodge 141. A good attendance was a pleasant feature of the meeting, and the Lodge is in good working order.

We were delighted with the trip from first to last. We found the affairs of the Brotherhood in excellent shape, and hope at no distant day to have the great satisfaction of a more extended tour.

We have on our table the "New Year Greeting to the B. of R. C." In the shape of a "Directory for January, 1890," issued by Central Division, No. 44, New Jersey, instituted January 22, 1890. We notice that the Brotherhood of Railroad Conductors has already forty-four Divisions and is steadily moving forward and gaining victories. It is founded on

correct principles. It recognizes facts as they exist. Its members are in full accord with the great army of wage-workers who have resolved to resist wrong, and we hope the members of the B. of L. E. will do all they can to advance its interests and help it in its great work.

Addresses Wanted.

Peter Rudisell—Anyone knowing his whereabouts will please correspond with George H. Tucker, secretary of Lodge No. 83, Box 406, Fort Worth, Tex.

S. T. Goodell—Anyone knowing his whereabouts will confer a favor by corresponding with B. R. Goodell, corner 24th and Eddy sts., Cheyenne, Wyoming.

James P. Hackett—Anyone knowing his whereabouts will please correspond with S. Mangin, secretary of Fortune Lodge, No. 129, 720 Otisco street, Syracuse, N. Y.

Peter J. Smith—Formerly a member of Lodge 255, at McCook, Neb. Anyone knowing his whereabouts will please communicate with A. W. Allison, Box 218, Raton, New Mexico.

R. C. Burns—When last heard from was running an engine on Northern Pacific. Anyone knowing his address will confer a great favor by communicating with E. J. Summers, Lock Box 48, Beardstown, Ill.

James Casey—Was employed as fireman and switchman in 1882-83 on the St. P. M. & M. R. R. Any information concerning his present whereabouts will be thankfully received by Walter W. Bosard, Brown's Valley, Minn.

Geo. H. Steineman—An engineer, when last heard from was running a stone crusher in Jersey City. Anyone knowing his whereabouts will please correspond with J. B. Brennan, Secretary of Bartholdi Lodge, No. 309, 76 East Avenue, Long Island City, N. Y.

A. L. Rodgers—A member of Golden Gate Lodge, No. 91, has not been heard from since November. Anyone knowing his whereabouts will please correspond with W. S. Runyan, secretary of Lodge No. 91, 175 Sixteenth street, San Francisco, Cal.

Amusements.

On December 20, 1889, the members of Blue Mountain Lodge, No. 318, of LaGrande, Oregon, aided by the ladies' Auxiliary, presented LaGrande Lodge, No. 315, B. of R. (now B. of R. T.), with a beautiful altar cloth, tastefully and appropriately embroidered. The occasion was in all regards delightful, and made doubly so from the fact that LaGrande Lodge, No. 315, was also presented with a beautiful Bible by Blue Mountain Lodge, No. 348, B. of L. E.

A number of addresses were delivered, all glowing with expressions of fraternal regard for the various Brotherhoods of railroad employes, and voicing sentiments of the heartiest approval of federation.

Such interchange of courtesies are of the highest value. They bring the members of the various organizations into harmonious relations and help forward the grand work of federation. It affords the *Magazine* great satisfaction to chronicle such events.

After the speech-making, which was indulged in by firemen, engineers, brakemen, conductors and representatives of the Knights of Labor, in which there was displayed a full comprehension of the purposes of organized labor, the happy company indulged in music, songs and recitations, which made the hours go by unnoticed. Such things are in the direction of social, moral and intellectual improvement, and proclaimed that federation promotes friendship and good will.

A FEDERATION BALL.

It is always a source of satisfaction for the *Magazine* to record instances of harmonious association of Brotherhood men who are employed in the transportation service of the railroads, and this brotherly harmony finds an illustration in the splendid ball given New Year's at Medicine Hat, Northwest Ter-

ritory, by the members of the B. of L. F. and the B. of R. T. Referring to the occasion, a local paper pronounces the ball a grand success, eclipsing anything of this kind hitherto given at Medicine Hat. Continuing, the paper says the ball "was held in Government Hall, where every arrangement had been perfected for the comfort of the guests. The whole of the north half of the lower part of this immense building was converted into a handsome ball room. Beautiful pictures hung from the walls. The windows and doors were gracefully draped with curtains, while the comfortable easy chairs and sofas arranged in corners and out-of-the-way places gave a homelike appearance to the old room. The decorations were very elaborate. On every wall circles and festoons of evergreens were tastefully arranged, while from the center of the ceiling large streamers in red, white and blue were carried to the corners and sides of the room. Between these were hung large Chinese lanterns. Emblematical decorations had not been forgotten. On the wall facing the entrance was a large shield with the monograms of the two orders, while brake-wheels, lunch-pins, shovels and other emblems of their respective crafts were artistically arranged in appropriate groups on all the walls. Occupying nearly one-half of the north side of the hall was a splendid painting of a locomotive and caboose descending a maximum grade. On the tender of the engine were the letters B. L. F., with 342 (the number of the Medicine Hat Lodge), underneath. The red caboose had painted on it in black, B. R. B. and the number 304." Dancing commenced early, and when the first part of the programme was finished supper was announced, after which dancing was resumed. The enjoyment was kept up to a late hour. Success to all such fraternal enjoyments!

The boys of Buffalo Lodge, No. 12, B. of L. F., gave their 15th annual ball at Masonic hall, which the press of the city pronounced a triumphant display of refinement and social enjoyment. One paper says "The stage was beautifully decorated. In the center was a model of engine 12. Kuhn's orchestra was stationed on the stage, leaving the space under the balcony clear for onlookers. The families of officials of the different roads occupied the boxes. Good order prevailed throughout, and everything was done to contribute to the enjoyment of those present. The railroad officials who were present were: I. H. Murphy, master mechanic; J. H. Barrett, general yard master, and Charles Davis, traveling engineer of the Erie; Amos Gould, Jr., L. H. Sandford, engine dispatchers, and E. F. Sabin, of the New York Central; F. D. Griffith, master mechanic; F. A. Seibert, assistant superintendent; Ed Ryan, track foreman and A. L. Skinner, engine dispatcher of the D. L. & W.; John Robinson, master mechanic; W. W. Buffon, assistant superintendent; T. P. Fowler, foreman of the machine shops; D. J. Ross, yard master and Wm. Van Sykes, of the Lake Shore; master mechanic W. B. Hickman, yard master Tom Glennins and Sam Schooley, engine dispatcher of Sayre, Pa., of the Lehigh Valley; C. M. Paul, William Conlon, Daniel Mack and Jerry Keepe represented the Elmhurst Lodge, and many members from other cities were present. Dancing was continued until 4 this morning." During the evening more than a thousand persons were present, and the various committees who had the business in charge were equal to the occasion, and as a consequence the ball realized the most sanguine expectations of the vast assemblage.

Acknowledgments.

ULYSSES, N.E., December 1, 1889.

To the Officers and Members of the Brotherhood of Locomotive Firemen:

GENTLEMEN:—I desire to return my sincere thanks for the payment of \$1,500.00, the insurance which I received on the 24th day of October, 1889, due me upon the policy of my son, William H. Hoyt, of Guide Lodge, No. 125, who died on the 12th day of September, 1889. May God, in His mercy, deal kindly with you all, and God speed the noble Brotherhood on its many missions of mercy. Is the wish of

MRS. W. H. HOYT.

SAYRE, PA., January 11th, 1890.

To J. N. Weaver Lodge, No. 379, B. of L. F.:

GENTLEMEN:—I hereby return my sincere thanks for the payment of the \$1,500.00; also to the officers and members for kindness shown to me at the sad death of my husband, Dennis Hayes.

MRS. NORA HAYES.

TEXARKANA, ARK., January 3, 1890.

To the Officers and Members of J. H. Selby Lodge, No. 243, B. of L. F.:

GENTLEMEN:—We take this method of acknowledging the receipt of a draft for fifteen hundred dollars (\$1,500.00), it being the amount of the policy held by my late husband, J. D. Lingold, and which has been promptly paid by the Lodge of which he was a member. Please accept our heartfelt thanks and best wishes for your noble Brotherhood, and may you ever prosper in our earnest wish.

KATE LINGOLD,
MRS. S. A. LINGOLD.

PORT HURON, December 8, 1889.

To the Officers and Members of the Brotherhood of Locomotive Firemen:

GENTLEMEN:—Permit me to thank you for the prompt payment of fifteen hundred dollars (\$1,500) due me on the policy held by my dear brother, James Halloran. I also desire to extend my sincere thanks to the officers and members of St. Clair lodge, No. 116, for kindness shown us in our late bereavement and for floral tributes. May heaven's blessings rest upon the Brotherhood of Locomotive Firemen, one and all, is the wish of yours, respectfully,

MARY F. HALLORAN.

FREEMONT, ILL., January 16, 1890.

To the Brotherhood of Locomotive Firemen:

GENTLEMEN:—Please allow me to return my sincere thanks for the \$1,500 insurance due me on account of the death of my husband, Louis Rame, who died on the 11th of October, 1889.

I also wish to express my gratitude to the members of Union Lodge, No. 138, for their brotherly attention to my husband and their many kind acts to me in the time of my trouble. May God bless you all, and may the Brotherhood long continue a blessing to firemen and their families. Very respectfully,

MRS. GERTRUDE RAME.

BRIDGE HAMPTON, N. Y., January 6, 1890.

To the Officers and Members of the Brotherhood of Locomotive Firemen:

GENTLEMEN:—I wish to acknowledge the receipt of a draft for \$1,500 from Mr. William J. Simon, Receiver of Bartholdi Lodge, No. 390. I also wish to thank you for your many acts of kindness and attention since the death of my husband, Franklin C. Ryder.

With the kindest thoughts and wishes for the welfare and future prosperity of the officers and members of Bartholdi Lodge, and the Brotherhood of Locomotive Firemen, I remain

Yours gratefully and sincerely,

ROSALIE LIVINGSTON RYDER.

CROSS PLAINS, TEX., January 19, 1890.

To Signal Mount Lodge, No. 372, B. of L. F.:

GENTLEMEN:—With heartfelt gratitude I desire to return my sincere thanks to your honored Order for the payment of the \$1,500 fifteen hundred dollars insurance due me on the death of my beloved husband, R. J. Bible, who met his untimely death while in the faithful discharge of his duties on the T. & P. R. R. on October 15, 1889. And I also wish to thank the members of Lodge 135, El Paso, Texas, for their gentlemanly behavior and brotherly kindness to me while alone and a stranger in their city. No tongue could express the gratitude I feel toward those gentlemen for their kind attention and trouble extended toward me in my terrible bereavement. May God bless and prosper your noble Order is the prayer of your sincere friend,

SARAH E. BIBLE.

GRAND LODGE.

These columns are reserved as the official department of the Grand Lodge.

All Official Documents, including notices of dues and assessments and other notices, reports and statements will be published in this department.

Officers and Members of Subordinate Lodges are requested to note carefully each month the contents of this department.

MARCH, 1890.

Assessment Notice for March.

OFFICE OF GRAND LODGE, B. OF L. F.
TERRE HAUTE, IND., March 1, 1890. }

ASSESSMENT No. 10, \$2.00.

To Receivers of Subordinate Lodges:

DEAR SIRS AND BROTHERS:—You are hereby notified of the death and disability of the following members entitled to all the benefits of the Order, viz.:

CLAIM No. 194. Albert W. Stuckenrath, of Loyal Lodge, No. 207, died of Consumption, November 20, 1889.

CLAIM No. 195. Edgar W. Norton, of A. G. Porter Lodge, No. 141, died of Typhus Fever, November 21, 1889.

CLAIM No. 196. Richard J. Murray, of Clinton Lodge, No. 34, died of Diphtheria, December 14, 1889.

CLAIM No. 197. Benjamin Bachman, of Adopted Daughter Lodge, No. 3, was killed by being struck by Cattle Pen while looking out of engine cab, December 17, 1889.

CLAIM No. 198. Thomas D. Baker, of Royal Gorge Lodge, No. 59, was killed by Railway Accident, December 17, 1889.

CLAIM No. 199. Virgil E. Cooper, of Monte Sano Lodge, No. 279, was killed by Railroad Accident, December 26, 1889.

CLAIM No. 200. Benjamin W. Furber, of Stone Mountain Lodge, No. 332, died of Septicæmia, December 28, 1889.

CLAIM No. 201. Gustav H. Ende, of Mahoning Lodge, No. 193, died of Typhoid Fever, December 29, 1889.

CLAIM No. 202. Geo. G. Cumming, of Good Will Lodge, No. 52, was killed by Railroad Accident, December 31, 1889.

CLAIM No. 203. Peter Doyle, of Holbrook Lodge, No. 378, died of Phthisis Pulmonalis, January 5, 1890.

CLAIM No. 204. Omer F. Horton, of Keystone Lodge, No. 208, was killed by being struck while standing on Step of Engine, January 8, 1890.

CLAIM No. 205. John C. Burroughs, of Hercules Lodge, No. 63, died of Injuries received in a Railroad Accident, January 12, 1890.

CLAIM No. 206. Thomas Cottrell, of Challenge Lodge, No. 66, died of Inflammation of Lungs, January 14, 1890.

CLAIM No. 207. Fred Wellman, of Blue Mountain Lodge, No. 348, was killed in Railroad Accident January 16, 1890.

CLAIM No. 208. Harry A. Page, of Charter Oak Lodge, No. 285, was killed by being struck by a Passing Train, January 22, 1890.

CLAIM No. 209. Fred A. Speelman, of Safety Lodge, No. 142, was declared totally disabled by Loss of Leg, January 23, 1890.

CLAIM No. 210. Jno. French, of Rocky Mountain Lodge, No. 77, was killed in a Railroad Accident, January 25, 1890.

CLAIM No. 211. P. H. Kelley, of Arbitration Lodge, No. 320, was killed in a Railroad Accident, January 25, 1890.

CLAIM No. 212. Chas. E. Galliher, of Frontier City Lodge, No. 92, died of Pneumonia, January 26, 1890.

CLAIM No. 213. Leonard H. Crouch, of Granite State Lodge, No. 306, was scalded to death in a Railway Accident, January 31, 1890.

CLAIM No. 214. William F. Phillips, of Loyal Lodge, No. 207, died of Consumption, February 1, 1890.

CLAIM No. 215. Eli M. Prey, of Adopted Daughter Lodge, No. 3, was killed by being struck by Bridge while leaning from Cab, February 7, 1890.

CLAIM No. 216. Henry Crow, of Mt. Lookout Lodge, No. 289, was killed in a Collision, February 15, 1890.

An assessment of Two Dollars (\$2.00) has been levied for the payment of the above claims, and you are required to forward said amount, for each member whose name appears on the rolls March 1, 1890, as provided in Section 52 of the Constitution; said remittance to reach the Grand Lodge not later than March 20th, 1890. Any Lodge failing to make returns as above provided will stand suspended from all the benefits of the Order, as per Section 54 of the Constitution.

Yours fraternally,

F. P. SARGENT, G. M.

EUGENE V. DEBS, G. S. & T.

RAILROAD Patent Square Ventilated Dinner Pail.

BEST PAIL MADE,

We have many testimonials like the following:

WHEELING, W. VA., August 19, 1889.

Reardon & Ennis:

I received my Dinner Pail some three months ago, and have given it a good trial. I have carried it in a tank-box, where it is cool, and I have carried it on the engine, where it is very hot; it is about the same. It keeps the victuals nice and fresh, and if I could not get another I would not take Five Dollars for the one I have. I can not recommend your pail too highly to Railroad men who want victuals that are fresh and

healthy to eat.

Yours truly,

HARRY J. DRUMMOND, B. & O. R. R.

Size of No. 2 pail is 9¼ inches long by 5½ inches wide by 9¼ inches high, when locked up.

TO INTRODUCE THESE PAIRS, UNTIL FURTHER NOTICE we will deliver ONE NO. 2 VENTILATED PAIL, boxed and expressage paid, at any express point in the United States, on receipt of P. O. Order for one dollar and fifty cents, and for every fifteenth Pail order received we will refund the money and send the Pail free of expense. Try one.

REARDON & ENNIS,
Sole Manufacturers, TROY, NEW YORK.

FIREMEN, IMPROVE YOUR POSITIONS

Do you know how to think?

Of course you think. But do you really know how to think? Wouldn't you give a good round sum for anything that would help you to think on any subject in an easy way that masters the subject?

We have that very thing. You can make it yours for \$1.00. So can everybody. Of it *The Scientific American* says: "There is really a great deal in the method; its best proof is to apply it to some subject, when it will be found surprising how it draws out one's ideas."

A two-page cloth book, with detachable pages, on six subjects of thought showing how you apply it to 30,000 other subjects of thought in daily life, and reading or lessons. You will not learn how by any other method than contained in our *Wherewithal*—not in the schools, certainly.

Mailed to any address on receipt of price.

Remit by check, postal or money order, a small round sum, one dollar.

ADDRESS,

THE WHEREWITHAL CO.

Broad and Chestnut Sts.,

(GIRARD BUILDING,) PHILADELPHIA, PA.

Weight 15 lbs. Adjustable. Many Thousands long in use.

Actual Size Bath. Agents wanted everywhere.

Old Baths Renewed.

A STAMPEDE.

Corralling a drove of horses gives you plenty of work for hours. You don't have time to think what the weather is. You let everything slide, till the work is over. But the cowboy is never unprepared. When this "picnic" happens, whatever the weather, he is not drenched and wet to the skin before it's over, because he is always prepared with a "Fish Brand Pommel Slicker." With one of these saddle coats on, you can't get wet if you try. Your entire saddle will be inside the coat, and it will be dry, too. Did you ever try the Pommel Slicker? Just try one, they cost very little. Then no more colds, fevers, rheumatism, and other results to exposure of weather. Every garment stamped with "Fish Brand" Trade Mark. Don't accept any inferior coat when you can have the "Fish Brand Slicker" delivered without extra cost. Particulars and illustrated catalogue free.

tent july; I have commended the rubber foot and hand for their remarkable advantages.

Awarded the highest prizes at every competitive exhibition.

Endorsed and purchased by the U. S. Government.

A treatise of 400 pages with 200 illustrations and copyright formula, SENT FREE.

Fig. 1 is from an instantaneous photograph of a man ascending a ladder; he has two artificial legs substituting his natural ones, which were crushed by a railroad accident and amputated. Fig. 2 exposes his stumps. With his rubber feet he can ascend or descend a ladder, and balance himself on the rungs. He can walk and mingle with persons without betraying his loss; in fact, he is restored to his former self for all practical purposes.

With the old methods of complicated ankle-joints these results could not be so thoroughly attained.

Over 9000 in practical use, scattered in all parts of the world. Many of these have been supplied without presenting themselves to us, simply by sending measurements on a copyright formula which any one can easily fill out. Eminent surgeons and compe-

Castner & Curran,

General Tide Water Coal Agts.

CELEBRATED

Pocahontas Semi-Bituminous Coal.

1 Broadway, New York. 308 Walnut St., Philadelphia.
70 Kilby St., Boston. 36 Main St., Norfolk, Va.
1 Fenchurch Avenue, London, England.

The Pocahontas Coal is acknowledged by all Railroads that have used it to be the best American coal for Locomotive use. It generates steam with great rapidity, and at the same time holds the fire an unusually long time. The merits of the coal are shown by the unprecedented growth of the mines, which were not opened until 1883. Since that time the outputs have increased over 1,200 per cent., amounting in 1887 to 1,300,000 tons. During the present year it will be at least 2,000,000 tons. We are therefore prepared to fill all orders with prompt dispatch.

STILL ON TOP.

PRICES REDUCED.

BAKER'S :: TRIPOLINE

The Best Metal Polish in the World.

For this year prices to Firemen (as agents) will be one pound boxes, per dozen, \$2.25. One-half gross lots, \$12.00. Gross lots, \$22.50. Three pound pails, \$5.50 per dozen. Five pound pails, \$8.75 per dozen.

Still cheaper (our new Polish)—Baker's Standard—A splendid Polish for heavy work. One pound boxes, \$2.00 per dozen. One-half gross lots, \$11.00. Gross lots, \$20.00. Five pound pails, \$8.00 per dozen.

Cash Must Always Come With Orders to Avoid Delays.

Bed rock prices are here, given to Firemen as agents and they cannot and must not expect to buy from dealers at these prices. Samples sent free on application.

Copy from Original Letter Received from Division 95, Cincinnati, O.

Brotherhood of Locomotive Engineers.

[SEAL]

CINCINNATI DIVISION, No. 95.

CINCINNATI, OHIO, September 5th, 1889.

This is to Certify, That Brother Chas. T. Brown is a member of this Division, No. 95, B. of L. E., and has been a member of the B. of L. E. for twelve years, and we can recommend him as an upright, honorable and worthy brother.

He has lately connected himself with the Railway Officials' and Conductors' Accident Association, of Indianapolis, Ind., and said Association has no connection whatever with the Order of Railway Conductors, or any other order or society—it being a distinct organization for the purpose of insuring railway employes in the United States, Canada and Mexico, against accidents. Brother Brown has been appointed Special Agent for the United States, Canada and Mexico, for the Mechanical Department of railroads. We feel confident that you will find anything Brother Brown represents to be just what he says.

E. E. McMILLAN, C. E. [SEAL.]
G. BAKER, F. A. E.

INDIANAPOLIS, IND., September 15th, 1889.

To BROTHER ENGINEERS:—Having been appointed Special Agent for the United States, Canada and Mexico, for the RAILWAY OFFICIALS' AND CONDUCTORS' ACCIDENT ASSOCIATION, of Indianapolis, Ind., for the Mechanical Department of Railroads, and having been informed by reliable authority that some of the unprincipled representatives of other accident companies have circulated the report among Engineers and Firemen that this Association is connected with certain Orders and Societies; on account of such representations, which are untrue in every respect, I publish copy of above letter from Cincinnati Division, No. 95, B. of L. E., which will be sufficient without further explanation.

As all business from Mechanical Department of Railroads comes through my agency, I will furnish every Agent a copy of the above letter, and any application given to an Agent who has this letter in his possession may be the same as given to me in person.

Trusting that I may receive a share of your patronage, and will be more than pleased to add your name, and all, to our list of membership, assuring you that I will use every honest and honorable means to secure your patronage. For rates, etc., address

CHAS. T. BROWN,

Lock Box 49. Special Agent, Mechanical Department of Railroads, Indianapolis, Ind.

ANNUAL CAPACITY 800.

LOCOMOTIVE ENGINES,

Adapted to every variety of service, and built accurately to standard gauges and templates. Like all parts of different engines of same class perfectly interchangeable. Broad and Narrow Gauge Locomotives; Mine Locomotives by Steam or Compressed Air; Plantation Locomotives; Noiseless Motors for Street Railways, Furnaces, etc.

**BURNHAM, PARRY, WILLIAMS & CO., Proprietors,
PHILADELPHIA, PA.**

WM. SELLERS & COMPANY,
(INCORPORATED.)

SOLE PATENTEES AND MAKERS OF

Self-Acting Injector of '87

Range of Capacity over 60 per cent., and can be regulated, therefore, to work continuously for light or heavy trains. Never fails to promptly lift hot or cold water.

No service on a locomotive sufficiently severe to permanently stop its working.

IT WILL RE-START ITSELF

should the Jet break from interruption of the steam or water supply, as soon as the supply is resumed.

ADJUSTS ITSELF

to varying steam pressures without waste of water. Increases quantity of water with increase of steam, and vice versa.

Very easily operated—Started by pulling out the lever, and stopped by pushing the lever in.
Descriptive Circular and Price List sent on application to Office and Works.

ALVA'S BRAZILIAN SPECIFIC.

Or Cactus Blood Cure.

What the Mexican National Conductors Say.

We, the undersigned, CONDUCTORS of the of the MEXICAN NATIONAL RAILWAYS, and members of City of Mexico DIVISION 159, ORDER OF RAILROAD CONDUCTORS, take pleasure in certifying that we have used the herb medicine known as "Cactus Blood Cure," with wonderful success, and we have also known many others to have used it with a like result.

Appreciating its value, we cheerfully recommend it to ALL BROTHERS, and others requiring a remedy for the purification of the blood, as the best known; and we guarantee that a trial will convince all of its merit.

H. H. MORAN,
H. H. GREENLEAF,
M. E. EGAN,
C. H. STARR,

Members of Div. 159, Order of Railroad Conductors, City of Mexico.

A Parish Priest's Certificate, Certified to by the Archbishop of Mexico.

CELAYA, October 1st, 1889.

I, Parochial Priest and Ecclesiastical Judge of Celaya, State of Guanajuato, hereby certify that I know several people who have been cured by Don Ramon Alva's remedy.

It radically and effectually dispels all impurities in the blood.

FRANCO M. GONGORA,

Parochial Priest and Ecclesiastical Judge of Celaya.

The above signature is that which he uses in all his business, officially and otherwise, and he is an old pupil of mine.

✠ P. A. ARCHBISHOP OF MEXICO.

This medicine has never failed in a single instance to cure the most virulent cases of Scrofula and Contagious Blood Disease.

In cases of diseases which have been treated with mercury by physicians, it requires a few weeks longer to effect a cure, but a perfect cure is absolutely certain in any case, and when once cured, you will find that all traces of mercury have disappeared.

It is perfectly harmless, and is as good for children as for adults.

After you have been cured by it, we ask, as a favor, that you will give your friends the benefit of your experience, by recommending it.

RETAIL PRICE, \$2.00 PER BOTTLE.

NEW YORK; U. S. A.

While you are hesitating about Buying a Filled Watch Case, let us,

PUT A FLEA IN YOUR EAR.

First, DURABILITY—You need have no doubt here. Our filled cases will not fail you in this respect. Take this as a warranty; we mean it. What we say of the different grades of the Boss cases we guarantee. "But," say you, "it is easy to say 'guarantee' at the front end of a trade." We wish you to understand that we are at the hind end of all the guarantees we make as well as at the front end. We're easy on this point for

We've made Boss Cases long enough to know what's safe to promise about them.

Now, CONSTRUCTION—UTILITY. Boss filled cases keep the dirt out. They're "built that way." The Dust Bands do it—in all our cases. Your fine movement is as safe from dust and cinders as if in the innermost chamber of the Great Pyramid!

The Third Point Is Beauty. We've spoken of Durability and Utility, you want the pleasing quality also. If "a thing of beauty is a joy forever," as Keats said, you may find a good many "joys forever" among the Boss case designs; your jeweler will show you if you ask him. This is a point we needn't dwell on. You can tell what pleases you—we can't. Only, look at the patterns—that's all we ask

Keystone Watch Case Co.,

EUGENE V. DEBS, . . . *Editor and Manager.*

THE RELATION OF RAILROAD EMPLOYEES TO RAILROAD OPERATION.

In referring to railroad employes we omit all reference to Presidents, Vice-Presidents, Directors and other high officials, and confine ourselves to employes who may be properly designated as workingmen, whose wages barely suffice for their support, with here and there an exception, where something is laid by for a rainy day.

We assume and expect to demonstrate the proposition that railroad employes, as we have designated them, have never been properly appreciated by railroad owners and officials. Their work, their skill, their responsibilities, have uniformly been undervalued, undervalued and underpaid, and in confirmation of these declarations we herewith print a letter written some time ago by Charles Francis Adams, of the Union Pacific railroad, to the Brotherhood of Locomotive Engineers. He says:

I think it very clear that, as compared with twenty or twenty-five years ago, a much greater interval exists between the leading officers and the mass of em-

ployes of railroad corporations. This could not otherwise than be so. Twenty years ago the largest railroad corporation in the country was small compared with many of those which now exist. It is one thing to handle a railroad of 50 or 100 miles in length, employing a few hundred men, nearly every individual of whom is personally known to the highest officers of the company, and it is a wholly different thing to manage the affairs of a company operating, perhaps, 5,000 or 6,000 miles of track and employing 15,000 or 20,000 men, but a small percentage of whom can ever come in personal contact with any leading official. To this growth, and the lack of personal contact and acquaintance entailed by it, I attribute in no small degree the jealousies which have of late existed, and the labor organizations which have grown out of them. They are a natural outcome.

The difficulty is that the growth of our railroads has out-stripped the organizing capacity of those who have had them in charge. We have gone on with the system of labor adapted to small corporations until we have wholly out-grown them, and something else has been forced to take their place. This something else has not shown the work of either an organizing or kindly hand. As a rule it has been a make-shift based upon the operation of the harsh law of supply and demand. It has seemed to me that, in connection with our large companies, at least, a regular service should ere this have been devised; a service in which its rights and duties, position and permanence would all have been fully regarded and carefully provided for.

My theoretical idea of the permanent service of a great railroad corporation would be as of one in which men would only be received after passing through a period of temporary probation. When, however, they did at last enter regularly into the permanent service of the company they would be entitled not only to regular promotion and to stated increase of pay as the period of service increased, but also to a stipulated provision in case of disability or retirement from age. Moreover, they would be protected against summary dismissal except for cause; and on the other hand, the company should have security against strikes or combinations. The rights of each party should be recognized, established in advance and carefully observed.

I have never seen any good reason why some system such as this should not, as the result of a sufficient number of experiments and failures, be developed in time to a high degree of perfection. Since I have been personally connected with the management of a company, other, and much less attractive, matters have engrossed my attention, and to this I have been able to give neither the time nor the thought it deserved. That I have been unable to do so has been a source of much regret to me.

The letter of Mr. Adams is conclusive. The men who have had charge of the great railroad enterprises of the country have been wanting in "organizing capacity." The question of "supply and demand" has usurped the place of fidelity and capacity, and that which has been "forced to take the place" of skill, appreciation of responsibility, has been *cheap labor*, and this mistake has demonstrated that on the part of those who have made it, there was neither a capable nor "kindly hand" at the helm.

Mr. Adams admits the importance of competent employes. "Makeshift" measures to secure men have prevailed, and this "makeshift" business, this total disregard or large disregard of fundamental principles has resulted in "jealousies" and "labor organizations," and he might have added, strikes and disturbances which have widely prevailed. What, we ask, has been the spectacle time and again presented for the contemplation of the country? There was never an over supply of competent railroad employes, wage men, any more than there has been an over supply of competent railroad Presidents. But when competent railroad wage men have demanded fair pay and honorable, just treatment, they have too frequently been denied their just demands, and then the "makeshift" policy has been inaugurated and the supply of incompetent men being always large, and as such men are always willing to *work* at Chinese prices, they have been accepted and competency has been required to stand aside.

In this connection it is eminently worthy of remark that Mr. Adams hits the nail on the head when he says that such a policy has resulted in "labor organizations," an effort on the part of skill, competency, fidelity to trust, loyalty to obligation, to do something to guard against the crushing effects of a "makeshift" policy and organi-

zations of railroad operatives that exhibited no "kindly hand."

And here, we ask, because the question is pertinent, what is the character of the organizations of railroad wage men? In answering the question we are disposed to indulge in eulogistic phrase. The Brotherhoods of railroad wage men pass in majestic review. Every banner floating in the breeze is inscribed in letters of living light with mottoes which the world must approve. And these mottoes tell the story of the fundamental principles upon which they rest. "SOBRIETY," "INDUSTRY," "BENEVOLENCE," "FIDELITY TO TRUST," "FEALTY TO OBLIGATION," "RECOGNITION OF RESPONSIBILITIES," and these majestic words demonstrate that railroad wage men are animated by no "makeshift" policy, that they stand ready to supply the demand of railroads with men competent to meet every demand and fulfill every trust.

But our purpose at this writing is to show that the railroads of the United States and Canada are absolutely dependent upon their employes, their wage men, for every dollar of their earnings, annually about \$900,000,000, dependent as no other investments are dependent on employes for success. A moment's reflection will satisfy the most skeptical mind that our proposition demands consideration. Every day in the round year, it is safe to say, there are in the United States and Canada, forty thousand railroad trains in operation, and every one of them, with all their treasures of life and property, are in the custody of railroad wage men—not of Presidents, Vice-Presidents, Directors, stockholders and bondholders, but of wage men. We confess that it is difficult to grasp the full significance of the situation. It is unlike anything connected with any other of the great enterprises of the times. A man, or a company of men, may own a mine of fabulous richness, and the President may in person give all the operatives daily inspection, and the same is true of any of the great manufacturing enterprises of the age. A man may own a steam ship and command her; a cattle ranch and superintend it in person, and so on to the end of the chapter. Not so with a railroad train. From the moment the engineer opens the

throttle valve and the wheels begin to turn, all is in the hands of wage men—life and death, profit and loss, success or defeat—all, all, is committed to workingmen. In the matter of skill, competency, trustworthiness, courage, unbending fealty to obligation, peril, risk, all things considered, it has no parallel. The engineer, the fireman, the conductor, the brakeman, each must be equal to his task, and until the "run" is made there is no let up of mental strain, and the switchman must be at his post, and the train dispatcher must be sleepless, and at the station the workman must be ready night and day with his hammer to test every wheel, and with his oil to lubricate the axles. Viewing all these things in their naked seriousness, how stands the railroad workingman, on the train, around curves, through tunnels, over chasms, up the mountain sides, on bridge and trestle? We think his figure is colossal. We measure him by the work he performs, by the responsibilities he assumes, by the skill he displays, by the fidelity which dignifies him, and as we contemplate what he daily accomplishes, we assign him a front place in the grand army of progress.

In the nature of things, the time is not, cannot be distant, when the railroad wage man will be awarded by railroad magnates his rights to be heard in all matters pertaining to the operation of the railroads of the continent. Owners of railroads will see to it that snipper-snapper officials treat them with the respect and consideration earned by their skill, and devotion to duty. This done, the "makeshift" methods even now too much in vogue, will disappear. This done, the demand will be for competent men, and the supply will come from the Brotherhoods of railroad workingmen. This done, "jealousies" and strikes will disappear, the reign of justice will be inaugurated and losses by wrecks will be reduced to the minimum.

THE people of the United States, during 1889, smoked 3,955,955,773 cigars, which, at 5c. each, cost the consumers \$167,788,686.10. This sum, at \$20,000 a mile, would have built 8,686 miles of railroad, and at \$8,000 each, would have purchased 20,973 locomotives.

WHAT CAN WE DO FOR WORKING PEOPLE?

In one form or another certain persons are continually asking, "What can we do, or, What can be done for working people?" Why should such a question be asked at all in the United States? What gives rise to it? Are there circumstances and conditions warranting such an interrogatory? Who propounds it?

In old slave times there were men who counted their human chattels by the hundred, and the question was common among them, "What can we do for these people?" They said, "by virtue of the mysterious ways of Providence these descendants of Ham have been committed to our care. It is a great responsibility," and some of the more pious owners of "these people" thought that they would have to give an account at the Day of Judgment for the way they treated "these people." But the slaves were kept at work raising cotton, sugar, tobacco, peanuts, hemp, etc. They went on multiplying. The slave whip, the slave pens and the slave blocks maintained their places, and the prices of "niggers" fluctuated little. The "nigger," male or female, was a valuable piece of property, and something had to be done for him. What? Simply clothe, feed and shelter him. Keep him at work. If he was refractory, whip him; if funds were wanted, sell him. The question, what can we do for "these people?" was easily answered. The slave owner owned his labor—owned his workingmen. The slave market was the *labor market*. The "labor market" was never over-stocked. A "nigger" would always sell for something.

Negro slavery has been abolished in the United States, but according to some writers on labor questions we still have the "labor market," and now the question is asked "up North" as well as "down South," continually, by certain persons, in a kind of a slobbering, deprecatory way, "What can we do, or, What can be done for working people?" In religious circles, in the pulpit, the question is asked, "What can be done to get *nearer* working people?" Is the question answered by building palatial church edifices, for the display of pomp and

pride and fashion? Is it answered by paying "fat salaries," and to raise the funds sell the seats to the highest bidder and institute an aristocracy of piety?

Philanthropists of a certain type ask, "What can be done for working people?" and recommend soup houses, free baths and more stringent laws against idleness and tramping, together with improved machinery in penitentiaries.

Another class devote time and investigation to diet, to show if wages decline that a man can live on ten cents a day and keep his revolting soul within his wretched body.

Another class, in answering the question, "What can we do for working people?" reply by saying, "We will organize an Insurance Bureau which shall insure workingmen against accident, sickness and death. We will supply them with medicine, doctors and hospitals, taking so much from their wages to maintain the Bureau, and then, by compelling them to sign a contract which virtually reduces them to chattels, and makes them a part of our machinery, we will permit them to work for such pay as we choose to determine."

Another class answer the question, "What can we do for working people?" by telling them that unless they consent to abandon their labor organizations, absolve themselves from all obligations to such organizations, so far as they are concerned they shall have no work at all.

There are others, still, who discuss schemes for doing great and good things for working people, excepting, so far as it has come under the notice of the writer, to pay fair, honest wages.

This whole business of doing something for working people is disgusting and degrading to the last degree. It is not desirable to deny that in some quarters the question is asked honestly, but in such cases it is always in order to manifest pity for the questioner. He is not inconvenienced by a surplus of brains. The question, "What can we do for working people?" as a general proposition, finds its resemblance in a question that might be asked by the owner of a sheep ranch, "What can I do for these sheep?" The reply would

be, doubtless, "shear them." The ranch man takes care of the sheep that he may shear them, and it will be found that the men who ask with so much pharisaical solicitude, "What can we do for working men?" are the very ones who shear them the closest when opportunity offers—strip them of everything of value that they may the more easily subjugate them by necessities of cold and hunger and nakedness, degrade and brutalize them to a degree that they become as fixed in their servitude as the wheels, cogs, cranks and pins in the machinery they purchase and operate.

The real question to be propounded is, "What can workingmen do for themselves?" The answer is ready. They can do all things required, if they are independent, self-respecting, self-reliant men.

Workingmen can organize. Workingmen can combine, federate, unify, cooperate, harmonize, act in concert. This done, workingmen could control governmental affairs. They could elect honest men to office. They could make wise constitutions, enact just laws and repeal vicious laws. By acting together they could overthrow monopolies and trusts. They could squeeze the water out of stocks, and decree that dividends shall be declared only upon cash investments. They could make the cornering of the food products of the country a crime, and send the scoundrels guilty of the crime to the penitentiary. Such things are not vagaries. They are not Utopian dreams. They are practical. They are honest, they are things of good report.

Workingmen are in the majority. They have the most votes. In this God favored land, where the ballot is all powerful, peaceful revolutions can be achieved. Wrongs can be crushed—sent to their native hell, and the right can be enthroned by workingmen acting together, pulling together.

What can workingmen do for themselves? They can teach capitalists that they do not want and will not accept their guardianship; that they are capable of self-management, and that they simply want fair pay for an honest day's work, and this done, "honors are easy." Fidelity to obligation is not a one-sided affair. Mutual respect is not the offspring of arrogance. There may

have been a time when it was proper for the Southern slave owner to ask himself, "What can I do to better the condition of my slaves?" He owned them, they were his property; he controlled their destiny. He made them work as he did his cattle, mules and horses, and appropriated all their earnings. Their children were his property as were the calves and colts of his cows and mares. But there never was a time beyond the dark boundary line of slavery when an employer of American workmen could ask himself such a question without offering a degrading insult to every self-respecting workingman, and when a workingman hears it or anything like it and his cheek does not burn with righteous indignation he may know that he is on the road to subjugation, and if there exists a more humiliating spectacle within the boundaries of all the zones that belt the earth, what is it?

At every turn the question recurs, "What can workmen do for themselves?" The question demands an answer, and unbidden a thousand are ready. We have not space for them. Let each workingman answer for himself. For one, we say the workingman can educate himself. He can read, study and vote. He can improve his time and perfect his skill. He can see as clearly as others coming events, and prepare for their advent.

THE *Commoner* writes of the "scab" as follows:

A few years ago a celebrated English jurist, in defining a scab, said: "A scab to his trade is what a traitor is to his nation. Though his services are sometimes sought after, and while employed apparently appreciated, yet in the end he was discarded by his employer as something too loathsome for further recognition or respect." This is a practically correct definition of such characters. The average employer knows that if a scab betrays the union he would surely betray the employer if opportunity afforded. The word scab has found its way into the English vocabulary, and is destined to be a permanent part of our language. It was born of the devil, rocked in the cradle of treachery, reared upon the gall of human meanness, and soon drags its pernicious carcass about peddling its services to those who seek its hire. I often wonder when Shakespeare was contemplating life's drama if he had in view any part to assign to the modern scab.

If the foregoing is a good picture of the "scab" the artist should paint one of the man who hires the "scab" for the purpose of downing a union man, for a companion piece.

At Red Bluff, California, railroad laborers receive \$30 a month and board.

THE COMMON LABORER.

We use the term "common laborer," in no derogatory sense. There are a vast number of workmen who are without trades; termed, not always rightfully, "unskilled" laborers. Their importance, in carrying forward the great industrial enterprises of the world, has not been recognized in the past, and is not appreciated now. In this fact, lies the germ of discontent and danger. This *Magazine* is the organ of a body of workmen, of whom it has been said, they are not "skilled laborers," and that they do not become such until they are promoted to the position of engineers. Manifestly, this is an error. No one at all capable of giving an opinion in the matter, hesitates to say that it requires skill to properly fire a locomotive. The term "skill" is often used in a sense, which does great injustice to men who do not wear the badge of some particular trade, and hence, the term "skilled laborer," is never applied to men who are known as "common laborers."

The *Firemen's Magazine* is watchful of the interests of the great body of men who are members of the Brotherhood of Locomotive Firemen. It observes with profound interest the movements of all labor organizations, because in such movements it professes to behold the redemption of labor from oppression and degradation. We make no apology for asserting that the welfare of the country centers in the one fact of doing absolute justice in all matters relating to fair wages for work, by which we mean, such wages as shall make the home of the American workingman, exempt from the ceaseless peril of mendicancy.

The American idea is to obtain such wages for work, as will make the American home comfortable, where there shall be an abundance of food, decent clothing, apartments for rest and recreation—not shanties—not tenement houses, fit only for beasts and bats—but dwellings, fit places for American children to be born and reared, and when the wages are sufficient to secure such needs the American idea is to maintain them, and when wages fall below securing such requirements, the American idea is to organize for the purpose of obtaining them. It is clear, therefore, that the

American idea is the betterment of the American workingman regardless of trade. In saying this, we state the whole case.

The American workingman is an American citizen. He has the same sovereign rights and prerogatives as any other citizen. If he can secure sufficient wages, he will be in a position to appreciate his privileges and dignity, his sovereignty. If circumstances are created, which deny him such wages, which compel him to live like a pagan, like a degraded Hungarian, Italian or Pole, who have no more conception of American citizenship than savages, those who create them and profit by them, are not only enemies of workingmen, but are enemies of their government, and if their purposes cannot be thwarted, they will ultimately inaugurate revolution.

We have said the hopes of the country center in the emancipation of workingmen from conditions which compel them to accept such wages as keep them forever on the ragged edge of mendicancy, bring them in close contact with famine, make life a ceaseless burden and horror.

The organization of men of the same trade or calling, has a cheering significance. It means resistance to wrong; it means federation to secure and to maintain the right. It means fair wages, but those organizations leave out the common laborer, that vast army of workingmen, who work and whose work is necessary to enable the skilled laborer to work, and without whose work, every industrial enterprise in all lands would cease.

Do we over-estimate the importance of the common laborer? They perform the initial work in all enterprises. We need not particularize. No intelligent reader will be at a loss for illustration. We do not care where the reader begins. It may be the statue of Michael Angelo, the painting of Raphael or St. Peters, from foundation to dome; it may be the most delicate piece of mechanism seen in the Paris Exposition or the ponderous engine, whose mighty arms set in motion the wheels and spindles and lathes of the mills; all, all, everywhere, from the deep solemnity of the mine to the cap stone of monuments; cottage, palace steeped church, domed capitols and cathedrals,

the steamship and the steam-car, the bridge, the tunnel, the canal, the steel highways, the telegraph, the telephone, the fruitful fields, where the bearded wheat and the tasselled corn nod in the breeze, tell of the work and importance of the common laborer.

Well, what is the world doing for the common laborer? Who will answer? He has been left out in the cold. He does not organize. We have had, and we hope still to have words of appreciation for the organization, known as the Knights of Labor. We glory in its growth. We deprecate anything that hinders its advancement. The Knights of Labor organization, takes in the common laborer. In doing this, it meets a requirement of incalculable importance and is deserving of the highest commendation.

In the organization of the Knights of Labor, the common, or the unskilled laborer, finds a home, a retreat where he can do that for himself, which the skilled laborer does for himself in his organization. If the labor organization confers benefits, and none doubt the fact who know anything of their operations, why should not the common laborer, the unskilled workingman participate in such blessings? Why should not the home of the common laborer be made bright and beautiful? Why should not the wife and children, of the common laborer be surrounded with the comforts of life? No good reason why such should not be the case ever was furnished, nor will it ever be supplied. And the Knights of Labor, comprehending the importance of having such men organized, take them in, and incalculable good is to result from the movement. The labor organization is in many regards a school, an educating, elevating force; and the fact that the common laborer is to enjoy the advantages of such an organization is well calculated to inspire hopefulness in the future for the common laborer of the country. The work in which the Knights of Labor are engaged is a noble one, and all friends of the toiling masses, will rejoice to see the organization achieve success.

THE Organization of Knights of Labor was twenty years old December, 1889.

ROBERT GARRETT.

The papers report the mental condition of Robert Garrett, of B. & O. fame, as most anomalous. From his elegant home at Upland, Mr. Garrett frequently visits Baltimore. Upon a great many subjects he is entirely rational, and yet, he is known to be mentally unsound, and when any reference is made to certain subjects his imbecility or insanity, is at once made apparent, and mental irresponsibility is confirmed. Physically, the millionaire and late railroad king, is pronounced satisfactory. He lives surrounded by every comfort and luxury that great wealth can provide. His companions, properly, his watchers, are athletes, men of culture and refinement, who aid in making the unfortunate man contented and happy, all the more so, because the poor imbecile does not suspect the reason for their presence in and about his home.

His wife, a superior woman, in all regards, gives up everything in the way of social enjoyments, that she may contribute to the enjoyment of her husband, for, says the report, social life is banished from Upland.

This man, trained from his youth by a doting father to master great problems in finance and business, and at one time regarded as a master mind, is now a mental wreck, gradually drifting into mental darkness, and creating profound sympathy in a large circle of friends.

His father left him a task which he could not perform. He tried and failed. Strange, but not more strange than true, the magnificent business men, are not, as a general thing, born with gold spoons in their mouths. Millionaires may be the fathers of millionaires, but it is generally because the sons inherit the millions. The homes of wealth and luxury do not produce the men of the required fiber mentally or physically to win battles in such times as the present. Nor is it true of the past. The plebeian, not the patrician boys, are the ones who achieve success. It is said that Robert Garrett, before his mental infirmities were discovered, "lived generously," and just what "generously" means when a man has millions at his control, need not be discussed. In spite of the best medical skill and every attention wealth can be-

stow, the verdict is, that the doom of Robert Garrett is sealed. His malady is incurable and his life is useless. In the midst of wealth, his life is a blank.

Columns will be written of him and universal sympathy will be expressed; such things speak well for human nature. No one can read the mournful record without feeling pangs of regret.

But who talks of the men with wives and children, trying to live on a dollar a day? Forever confronted with destitution, they too get mentally sick, and end their days by their own hands or rave their way to a grave in a mad house.

To better their condition and make life worth living, is the sublime work committed to labor organizations.

"In 1886" says the *Labor Leader*, "in the eight hour struggle there were 387 strikes reported in the vicinity of Chicago, nearly all for a reduction of the hours of labor. There were involved directly in these strikes 50,315 persons who gained a reduction of 261,671 hours per week at a sacrifice in wages of \$2,437.75 per day. The hours gained by this struggle reckoning eight hours a day would give employment to 5,451 extra persons, and to secure this the parties engaged sacrificed an average of five cents a day each. The above figures are as reported by the United States National Bureau of Labor." The eight hour agitation is in the right direction, and victory is destined to crown the efforts of those who labor for the wise provision.

In the march of events and the triumphs of science, civilization and invention, alligator hides have become a source of wealth to the countries where the reptiles exist. This is encouraging, and suggests that, possibly, the time may come when such reptiles as Cobra Corbin will be skinned and their hides tanned for razor straps or backbands for mine mules.

THE Rochester coopers went on a strike, when suddenly it was found that even a tub couldn't stand on its own bottom, and employers were confronted with a staving time, as there was no one to hoop 'em up.

Promoted.

T N a home secure and cosy,
By the fireside's cheerful glow,
Where the embers look so rosy
As their flushes come and go,
A dutiful son sits there by the one
Who cared for his sisters and brother:
With his hand on her brow is telling her now
What he longs to do for his mother.

For the father had been taken
When the children were too young
For their sorrow to awaken
Aught but grief from sad hearts wrung.
But up from the heart of the mother would start
Emotions far deeper than sorrow;
She only could feel the future reveal
The solitude of the to-morrow.

The weary years were passing slowly
Till at last the elier boy
In the home still sad and lowly,
Filled each aching heart with joy.
Their home long denied were fully supplied,
Their home now began to be brighter;
Though hard was the work, he deigned not to shirk,
Nor sighed that his burdens were lighter.

They were talking—son and mother,
Laying plans for future days;
And the stalwart son and brother
Interrupts her words of praise,
Says he with a smile, "Wait, after a while,
If I am but true and devoted,
I'll get better pay, for they told me to-day
That some one will soon be promoted.

With a parting kiss he leaves her—
She so feeble, he so strong—
But his cheerful smile relieves her:
There is comfort in his song.
Yet deep in her breast is a sense of unrest,
As she sees the proud figure departing;
And wiping her eyes, the fond mother tries
To keep back the tears that are starting.

See the manly form now bending
In the cab as on they go!
Wildly now the grade descending,
How the cars rock to and fro!
In the darkness a flash and a terrible crash,
The cars madly crush one another,
'Mid the roar of the steam, hark! is it a scream?
God comfort his heart-broken mother!

Yes; he was indeed promoted;
In a brighter, better land,
He, the true, the brave, devoted,
Has a place at God's right hand.
And angels of light descended that night
And brought him a passage to glory,
He has taken a run where troubles are done,
And sorrow an obsolete story.

Geo. W. Hall.

STANBERRY, MO., March, 1, 1890.

IN Japan straw sandals, which are worn for shoes, cost 1½ cents a pair, and wear as long as some Massachusetts shoes which cost \$1.25 a pair. In this case the pagan can say to the christian, "shoe fly, don't bodder me."

According to the report of the New York Bureau of Labor, it appears that labor organizations in the Empire state secured the advance of wages in at least 300 instances in the year 1889.

The Uses and Abuses of Fiction.

T HE world is real—not fictitious. The sun shining in his strength, and by his life-giving rays causing the green carpet of the earth to put on its loveliest hues, tells us that life, although enigmatical, is real. The perfumed flowers that bedeck the mossy bank, and from which the honey bee sips nectar, speak the same truth. Fair Luna lends her rays to adorn a fictitious landscape. As we look at nature's works through the mystical light in which she shrouds them, how lovely do they appear. How beautifully the placid lake reflects the silvery rays, upon whose fair banks wave the bows of lofty trees which, stooping, kiss the watery mirror. All this how lovely, yet how real. Again, we see the buried seed sending forth the tender blade; we watch its progress until it arrives at maturity. It yields a plentiful harvest of richest fruit. But who can unravel all the mysteries of vegetation? Still, there is nothing found fictitious, but a reality, which tells us that truth is much more strange than fiction. Then thought turns in upon ourselves, and we perceive that we are not mere creatures of fancy and ideal only. We are veritable human beings; the occupants of corporeal bodies, inhabitants of a material world. Thus, at every step, by all we see, or hear, or feel, we are reminded that life is real. But, although reality is thus plainly stamped on the face of nature, yet fiction has often tried to gloss the indelible impress with a false, but a more enchanting exterior. She would fain to bear us away on her light but unsteady pinions from the real shores, and fix our dwelling where skies with brighter azure smile, and flowers with unearthly beauty bloom. But anon, perhaps, this fickle-minded goddess may plunge us down some dark abyss of unreal woe, where brooding melancholy sits linked with grim despair. Thick clouds are overhead, and storm-blasts rock those branches whose cypress shades cast gloom o'er all. But even this varying phantom has been an accomplice in many a good deed. By her aid many a moral precept has been conveyed to hearts that else would not have listened. Many a legend has been written, interwoven with truth most sublime. Allegorical writings are a most worthy class of fictitious works. And here, again, may be seen the use of fiction to inculcate moral truth. Similar to these are the parables interspersed throughout the sacred volume. Much has also been said about fiction as an aid to refinement of taste and cultivation of the imagination. Look on her then, as soon as she appears before you, and see if her form is not comely, and her mission a noble one. Would that we might ever gaze on her in this her loveliest dress! But, go ask that father why

his son, gifted with natural powers that might have ranked him among the world's most truly great, has squandered his talents and become dissipated in his habits and worse than useless in society? He will tell you that it was too much intimacy with works of fiction that caused this waste of immortal powers. Inquire of that mother why it is that her daughter has become so mutable? why the rosy hue has departed from her cheek, and real life has become so insipid? why she has no sympathy for the hearts around her o'ercharged with sorrow? why no tears to weep with those who weep on earth? Hear the mother's answer: "Novel reading has done this." Fiction has bereft the soul of the image of the beautiful, and stamped thereon instead her own impress, pampering the mental appetite with the most pernicious food, transporting her victim to an ideal world where all her sympathies are lavished on false scenes; where all her tears are shed over imaginative sorrows. Why is it that the wife and mother has lost a relish for the performance of her duties? Why has home lost its attraction for that husband? Because that wife and mother has become a devotee to novel reading. She has allowed herself to get within the limits of the peace-destroying whirlpool, and now finds that she can not extricate herself. But it is only occasionally that the wife and mother is found whirling within the vortex. Not a few of the fair daughters of our land are found bound with her fascinating chains. Many sons, the hope of our country, have fallen prey to her wiles. Thousands upon thousands have been her victims. Have their tastes been improved? Is the imagination more pure, or does it soar with a more heavenward flight? Nay; we are forced to abandon the idea if it ever had a lodgement in our breasts. As well might we look for the water of life to flow from Lethe's turbid pool, as to think that those who sip of the poisonous waters flowing from the stream of fictitious literature should have mental health. We may fancy we are quaffing the pure breath of heaven while we are only inhaling the baleful miasma, but ere long we shall be fearfully undeceived. Is fiction, then, the cause of so much evil? Let not those, then, be deemed unjust, who heap curses on her head; who would fain to blot her out of existence, but can not. A little while ago we saw her in lovely attitude; now she stands before us a deformed and hated thing. Wherefore this change? Does she delight to sport with the passions of humanity? transform herself from an angel of light to a fiend of darkness? Censure not too harshly, but know that it is not man himself who makes fiction what she is—either an almoner of good or a procurer of evil. She has no power to determine by

whom she shall be used, or to what purpose. Like the clay of the potter, the former stamps upon her whatever impress he chooses. Nay, he stamps his own likeness thereon—so that fiction, in her own varying forms, is a faithful mirror in which we see reflected the minds of those to whom she has lent her aid. The good, whose ideas are chaste and pure, transfer the pleasing imagery of their own minds to their writings, and those who read shall rise from the pleasing task with better hearts—and thus fiction proves useful. But she has been abused—grossly abused, when pressed into service of those whose minds are corrupt. They may be talented. If they are, so much the worse, since all their genius must be spent in forming distorted pictures of life scenes. What though Byron and Eugene Sue were gifted with godlike powers? Were they happier or the world better on that account? Talented they were, and they did much to swell the list of fictitious works, thus scattering broadcast seed which has borne and will continue to bear most pernicious fruits. They have caused many to look upon her as one in whom no redeeming trait of character can be found, although, in herself repulsive, and not an enemy to mankind, yet she is liable to abuse, and will be while man remains depraved. What need have we of fiction? The world is full of wonders. Here is found sufficient food for the most lively imagination. We may roam o'er the earth from pole to pole, we may explore the ethereal vault, or dive down into the ocean's depths, and everywhere shall we find new cause for astonishment and new scenes of pleasure. We will find the beautiful and the sublime at every step in real character. Can we, in our imagination, create anything more beautiful than the All-wise has already created? How vain the thought! Finally, then, although fiction may not be hurtful at all times, but may be beneficial, yet an intimacy with nature is far more desirable, and here is found something far more ennobling than the choicest entertainment of fiction. *G. H. Whitney.*

THE working men and women of New York want weekly pay of wages, and a bill to bring about a policy so eminently just has been introduced in the Legislature of that State.

Those who oppose Labor organizations and federation, would bring about conditions such as exist in China, Japan and India, where blacksmiths receive 13 cents a day.

LOUISVILLE, KY., has the reputation of "imprisoning idlers." What else is there left but idleness for a man who can't get work.

MECHANICAL.

Communications relating to Locomotive Running, Firing and Management, and other mechanical topics, are solicited for this Department.

Contributors are requested to be brief as possible, to write on one side of the paper only, and to forward copy so as to reach the Editor not later than the *tenth day* of each month.

Review of March Magazine.

It was with great pleasure that I received the advance sheets of the March issue of the Mechanical Department, which was augmented when I found it well filled, and changed to joy at the sight of the well-known signature of "Eccentric Strap" appended to the first and leading article.

Not having heard from E. S. for some time, either in these pages or by letter, and as E. S.'s last personal note was written by him, while in a very despondent mood, just as if about to leave this mundane sphere and drop into the grave, it was truly a matter of joy to find sickness and despair had given place to health and that this has so changed the inner man that the lines penned by him seem imbued with a new life and vitality, which is as ready as of yore to battle for the right. I am sure our Editor, as well as all the contributors and readers, will be glad to hear from E. S. regularly, even if he should make a mistake once in a while, which some one would be sure to discover and point out, and thus make it a means to help all to avoid similar blunders. E. S. says I was considerate enough to excuse his blunder on the ground of overwork. Now, as I seem to have run

against a snag, through lack of experience in that line, I hope "SHUT OFF." it will be excused, as I honestly confessed that I had never heard of or seen such a thing as a locomotive slipping while running down hill with steam shut off. As E. S. and others corroborated W. L. we shall have to accept it as a fact, but as I stated before, while I have no theory by which I can bring myself to believe that power to slip the wheels is generated in the cylinders when the action of the piston is rather to retard than to accelerate motion I cannot accept Mr. Lockwood's dictum, that it is all owing to the counterbalance, for Mr. Lockwood only admits that it lifts during the one half of the stroke, while it imparts its blow during the other half. E. S. is inclined to give some credit to Mr. Lockwood's theory, but if the pin and rod have an upward tendency on one side they would on the other part of the stroke have a correspondingly increased downward pressure and take such a hold that a slip would not occur. In trying to

solve the puzzle E. S. writes of vacuum. Let us consider where it is and how it would act. In running with steam shut off, correct practice is to run with the lever in the corner, giving the valve full travel. Suppose the piston to be leaving the back centre, the back steam port will be open and remain so while the piston moves twenty-two inches. Whatever is in the steam chest or steam pipes will rush after the piston as long as it possesses any expansive force, and at the end of the stroke it will be cut off from its return to the steam chest and pipes, and by the action of the piston will be forced out through the exhaust nozzles. A few strokes of the piston will thus produce a vacuum in the chest and pipes and as this is ever behind the piston and as the outer air is ever on the opposite side (down the stack and nozzles) it makes it plain to me why locomotives run down grades much slower than cars. Some of our freight trains would run down our grades at sixty miles an hour, if unchecked by brakes, while but few of our locomotives would run down the same grades at a greater speed than fifteen miles per hour, even if entirely unchecked by brakes. I hope the brothers who have such "slippery" machines will carefully note all future "slips" and endeavor to ascertain its cause, for it always takes causes to produce effects.

E. S. says he has known cylinder heads to be blown out by this identical condition. Does he mean to say while running down hill without reversing, as the question was put? E. S. gives his reasons for believing that a spring breaks while subjected to heavy down pressure, thus fully coinciding in my views as already expressed.

In writing of opposition to Mr. Hartman I supposed he would rather enjoy argument for the purpose of ascertaining truth, and believe I have made no mistake in my estimate of his character, for while implicit faith in formulas and doctrines prescribed may please autocrats and despots a student would be better pleased to have others ponder and think for themselves, rather than accept everything simply because they were told so, even by very good authority. Dr. Wilson says that he did not expect his articles on steam to be accepted by everyone without objections, and hence it would seem that he should surely have good reasons to advance for his theories, instead of resting them on guesswork, assumption and a bold denial of incontrovertible facts.

ARGUMENT
FOR TRUTH.

DR. WILSON
AS
REVIEWER.

TRACTION. I said I did not believe a loaded car would start on a gradient of only eighteen feet to the mile, and to rebut this he brings "Thurston," who is quoted as saying "that a train is not safe against starting—when in good order, on a good track—unless the gradient is less than eighteen or twenty feet to the mile. In my case, I took ordinary trains, on ordinary roads. Here the case is taken in its most favorable aspects, and it is not then stated that they would start, but it simply says it *might not be safe against starting*, and there is usually quite a margin between working and safety. The Doctor admits that he has not seen a Dinagraph car, and DINAGRAPH. does not know how it is used. I would assure him that the force of the pull is measured at the link by which the train is attached to the tender and can be weighed as accurately as the Doctor's prescriptions. As the Doctor says this is the proper place for the pulling test we hope he will be satisfied to accept it as correct and give the locomotive credit for doing *just a little more than one old horse*.

POWER OF STEAM. The Doctor says that "Philadelphia's" locomotive ought to start 1,417 tons without slack, and in support he does some tall figuring with his usual unfairness toward steam. He takes the full size of piston and nearly full boiler pressure, and does not take into account the difference between the piston speed and train speed. He is ever careful to give his horses credit for every foot the train is moved by them, but when he calculates for steam he wishes to calculate only piston speed, ignoring the fact that the train speed is over four times as great, and that if a piston with 2 ft. stroke or 4 ft. movement communicates its power to a wheel 16 feet in circumference, it will move only one-fourth of its load, and still display as much horsepower. When we divide the 1,417 tons by 4—the ratio of piston to train speed—we have 354 tons, or about fourteen cars of 25 tons each, and all engineers know that we can and do start such trains without slack every day. Again, in the next paragraph, the Doctor repeats his former tactics and multiplies 250 tons by 12, equaling 3,000, and then multiplies it by piston speed when he ought to know and no doubt does know, this force of 3,000 pounds is exerted at train speed, or over four times the piston speed and that instead of 112 $\frac{7}{8}$ horse-power it would show over 450 horse-power, and an average pressure of 54 pounds instead of 13 $\frac{1}{2}$, as the Doctor is pleased to figure, therefore we may well ask: Is the Dinagraph right, or the Doctor?

The Doctor takes me to task quoting tables showing it required 12 pounds per ton at a

COMPARISON speed of 50, while at 5 miles it would take but a trifle over 6, OF POWER and at 2 $\frac{1}{2}$ only a little over 3, AND SPEED. and then sportively suggests that it might start itself, or that I might puff it away. When I started to write for these columns, I did not propose to upset all laws of philosophy that were well founded and established by facts proven by daily practice, and hence did not deem it worth while to cultivate my wind with the expectation of puffing a railroad train, but leave such an undertaking to others who may have been in training to accomplish great undertakings by the aid of wind.

ADMISSION OF STEAM. The Doctor reasoning on a thing which he has admitted before he can only guess at, thinks steam has not time to act at high speeds of the valve, and could not by any means fill the cylinders in the short time that the valve is open. Will he please go back to his opening chapters, where he has guessed that steam might travel a mile a minute, and then tell us how long it would take to travel one foot, which is about the distance from the port to the cylinder? While the Doctor sometimes introduces good maxims, he does not use them to good purpose. While "it ever takes an equal force to perform a certain amount of work," yet if the work be done in a less period of time, it makes it harder work, and this is the case in pulling a train, making the rounds among your patients, or if you please in turning a grindstone. Suppose a certain quantity of steel has to be ground away to take out a nick in the edge of an axle. If it is to be done in thirty minutes much more pressure will have to be applied, and the stone will have to rotate at greater speed than if sixty minute's time were at disposal, and yet the work done is the same. But even the Doctor will admit that they had to work harder during the shorter time. I have turned a grindstone, and would much rather turn a small one than a large, heavy one, for the reasons that when small the handle gives a better leverage, and although a large one may run longer by its momentum, yet every bit of momentum that it has implies that much force in addition to the force used for grinding, and said force has to be furnished by the person at the handle. It takes more power to start and accelerate motion, as the doctor will find if he tries it, on a grindstone, or a balanced wheel, but after starting and obtaining a momentum, unless it is desired to accumulate still more, a part of the force before necessary, can be dispensed with; all that is necessary is enough force to equal the resistance employed, and keep up the momentum. The doctor says speed up a wheel to a great velocity and then see

whether you are turning the wheel or the wheel turning you. Does he mean to say that the wheel has any power which was not given it by the arm that gave it velocity, and will not this velocity become less just as quickly as the power is removed?

The Doctor again finds fault with Mr. Watt's rule of 33,000 HORSEPOWER. foot pounds per minute constituting a horse-power, but offers nothing better than 150 pounds pull at 220 feet per minute, which expresses the same thing by two figures, which amount to the same product as the Watt's rule. As the Watt's rule has been considered "good horse sense" by all the world for several generations, we hope that the Doctor will trot out those 600 feet jumpers. As for firemen raising 10,000 pounds of coal—why, that's nothing more than most of us have done or are doing every day, but I don't see how that helps the Doctor's point.

As the Doctor admitted that he knew nothing about the Dinagraph, it seems that he must be equally ignorant in regard to the indicator and its uses, for any one who had used it or seen its records would not attempt to say "it is not so," when the tests are so plainly made and the pressure weighed and recorded with as great an accuracy as a man's weight on a scale or the temperature in a thermometer. When a man reasons against facts made so plain, how can you convince him? The Doctor says it is not so and Dinagraph, diagrams and dynameter to the contrary, make no difference with him. If a man gets weighed on several scales and they agree in registering his weight at 160 pounds, but he persists in saying it is impossible that I should weigh more than that from 2 to 13½ pounds, what would be the decision of a court on his sanity in regard to his weight?

The Doctor objects to my query as to whether the amount of steam raised when at a standstill, was a test of the boiler's capacity, and says I failed to answer it. I presented the case and asked whether it was a test, because I thought the answer was self-evident, namely that it is no test whatever. With a dormant fire, steam is generated slower than with a live fire, and again the addition of a few pounds of pressure means a large increase of steam, for enough has been produced to compress the steam previously in the boiler into a smaller space, and thus make room for itself. If the Doctor had ever handled locomotives or boilers, he would be far slower to make assertions, which facts will disprove in spite of his protest, that it never has been done. The Doctor takes my locomotive (complaining of its size; if he were posted he would know that we have them of that length here) and goes to prove that five turns of

the wheel will use up all my steam. I will venture to make the assertion, that I will knock all the fire out of a locomotive, and give the Doctor a mile ride on her, and suppose every engineer and fireman in the land will back me up in this. If asked to explain how it is done, let me say that a cylinder full of steam taken from the steam space does not leave it empty, for even if no steam be generated at all the rest of steam will expand, and occupy all the steam space yet, but of course at a less pressure. Now let us assume that we have a locomotive with 140 lbs. of steam and no fire, and that the water has ceased to boil. We take out as much steam as the steam space holds and what is the result? Our boiler is still full of steam, but one-half of its pressure is lost, and we have only seventy pounds on the gauge. Take out another amount equal to the steam space and your boiler is still full but at only 35, while the next reduction would be to 17½ pounds and the next to 8½ pounds, which is enough to move some locomotives. Instead of five revolutions you can easily make 25 or more, which again proves that the Doctor is not willing to credit steam with one-quarter its work. Illustrating the amount of steam made, I wrote that one minute's work would lower the water level in a hard-worked locomotive one-half an inch, or fifteen minutes would boil up all the water in a boiler, at still the Doctor says, "it is not so," and even if so much water is used there is no proof that it becomes 179 times as much simply because our steam space is not large enough to hold a big supply. If we have a steam supply for our wants we do not need a reserve supply, and that this supply does exist is proven by the work done, the pressure measured, the pressure weighed and the water used and all the assertions of the Doctor to the contrary avail nothing. The Doctor would only view all this testimony from a common sense point, and leave "horse sense" alone, it might convince him that he has made a mistake, and that it is the Doctor who must revise his rules instead of all the rest of the world.

Fred Taylor in cogitating over "Fireman's" problem, comes to the conclusion that something helped the tractive power of "Fireman's" locomotive over the grade and thus agrees with that the train must have had a good start momentum before it reached the grade. Its tractive force would not have been sufficient to surmount the grade.

"Uncle Silas" answers A. Conkling about boiler pressure and measuring safety valves in the same manner that I have done in a previous article. If

while we agree on these points our answer

on the quantity of water furnished to a boiler by a plunger $1\frac{1}{2}$ inches in diameter making sixty strokes of twenty inches per minute differ considerably. While "Uncle Silas" gives the area and the displacement of the plunger correctly he is wrong in taking the movement twice for each revolution, for in coming out of its barrel during the upper half of the pin's movement the plunger does not force any water but simply sucks the water into the barrel, which is to be forced into the boiler by the return movement of the plunger. The displacement of the plunger 35.3420 multiplied by 60 equals $2,120.52$ inches, and this divided by 231 yields a little over nine gallons, instead of over eighteen, as "Uncle Silas" inadvertently got it. This is only a slip of the pen, which "Uncle Silas" will no doubt correct as soon as his attention is called to it. After this little difference, I am glad to say I can say amen to every word of "Uncle's" article, sermon included.

"Fairmount" informs us that "TWENTY YEARS WITH THE INDICATOR." the *Magazine* is in favor with the author of this book, and I earnestly hope that his book has found favor with many and that their praises will induce still others to study this volume, for it will help to dispel some of the fogs which envelop valve motion and the action of steam.

EVAPORATING POWER OF BOILERS. Fred. J. Hill, by a fair train of reasoning, convinces himself that Dr. Wilson's 12×3 foot boiler, will make more than $14,658$ cubic inches of steam in fifteen minutes, because it would take less than seventy cubic inches of water to make that much steam, and if the Doctor would only consider the fact, that seventy cubic inches of water taken from the surface of 144 -inch by 36 -inch boiler, would only lower said surface $\frac{1}{4}$ of an inch, he would cease to talk about the absurdity of our claim, that a boiler produced steam enough to do all the work done by the engine. If the boiler produced only $14,658$ cubic inches of steam in fifteen minutes, and if this steam is made from seventy cubic inches of water, and if as we have shown it only takes $\frac{1}{4}$ of an inch in depth to equal seventy cubic inches, and if we have six inches of water over the crown-sheet to start with, we could run said engine 74 quarters of an hour to lose one-inch, or 444 quarters to lose six inches, and as 444 quarters will equal 111 hours, one boiler could be run eleven days of 10 hours each without pumping, and would then just be getting ready to drop his crown-sheet. Would the Doctor be willing to run his boiler one hour, without a supply of water to replace what had been used? and yet he would try to make us believe that it cannot supply more than $14,658$ inches of steam in

fifteen minutes, and at that rate the supply of water would be sufficient to run 111 hours. Is not this sufficient to convince the Doctor that "he is barking up a tree that has no game in it" as one of my friends has expressed it?

DRIVERS. W. L. again tells us his engine does slip, and says that I SLIPPING. did not see how it could be, nor can I yet make it clear, even with Mr. Lockwood's help, who is ever ready to ascribe every evil to the counterbalance. As I have given my views on the effects of the counterbalance according to Lockwood, I think we will have to look beyond that, and atmospheric pressure for a solution, and must look to W. L. for help in solving this matter, for if he will continue to watch he may yet find a key to solve the puzzle. I hope that W. L. will see the point that I made when answering his article, and that was this, that I was obliged to believe what W. L. stated, but did not see how it could be, or account for it.

HAMMER-BLOW. As Mr. Lockwood does not count me in this fight, I will leave it for him and Bro. Tucker to fight out, even if it should take a week of summers.

FUSEE. W. H. Bigelow gives us some information on the fusee, which I am sure is welcome to all of us who have not had a chance to become practically acquainted with their construction and use.

MOVING WHEEL. "Amboy Division," after a long silence again makes his appearance in the Mechanical Department, and is, as several times before, bringing illustrations to prove his points. This time he has forced instantaneous photography into his service to prove what "Vulcan" has never denied, and that is, that a rolling wheel comes to a rest for an infinitesimal period of time as each portion of its periphery touches the rail, but I have ever claimed that the work done by the rods in rolling the driving wheels of a locomotive along the rail, must be viewed from the machine itself and not from some place along the track where you can see it at one moment and the next moment it is gone and you—are left behind. Now let "Amboy Division" get a camera and get up with me on an engine—where he will be able to keep up with the machine—and I will arrange matters so that he can take any quantity of snap pictures, and I feel warranted in saying they all will indicate the centre of the wheel as the fulcrum.

MR. SINCLAIR ON LOCOMOTIVES AT PARIS. The extract from Mr. Sinclair's letter on the exhibit of locomotives at the Paris Exposition is good reading, and as Mr. Sinclair has made himself an authority on locomotives, his suggestions are worth more than passing attention. *Vulcan.*

The Cross-head Movement.

MR. EDITOR:—The imps show the cross-head movement with a four-foot driver and a four-foot stroke, pin at circumference. A B is the guides, four feet long, guide cup in the middle. First position is starting point. Scale of feet marked on rail. (The guides are shown under this scale for convenience of printer).

First movement, forward stroke, half revolution, brings the imps to second position. The guide cup imp has traveled 6 feet 3 inches in a straight line; the cross-head imp has traveled 10 feet 3 inches in a straight line, traveling from A to B in addition to the movement of the guides. The imp of the pin has traveled nearly 12 feet on a cycloid curve.

Second movement, backward stroke, half revolution, brings the imps to the third position. The guide cup imp has traveled, as before, 6 feet 3 inches; the cross-head imp has traveled only 2 feet 3 inches, the guide passing under and ahead of him, leaving him at A again. The imp of the pin has traveled only about 4 feet on cycloid curves. In the two movements, completing a revolution, the cup and cross-head imps have traveled 12 feet 6 inches—a circumference; the imp of the cup has traveled exactly 16 feet—a full cycloid branch, four diameters. The speed of the guide cup imp was uniform throughout the two movements. The pin and cross-head imps moved at a speed twice that of the cup in the middle of the first movement, then decreased in speed till at rest in the middle of the second movement, then increasing to third position. Except at the two middle points last mentioned the speed of the pin imp always exceeded that of the cross-head, and both were constantly varying. The imps say that, excepting as to fractions of inches, every statement they have made is mathematically and mechanically true and indisputable. The imps say further, that the movement will be proportionate but similar

in any variation of the position of pin. That is, if the stroke on a four-foot driver was 2 feet, the imp of the pin would travel 14 feet 5 inches, nearly. And if you will elevate the rail and put an outside flange on the driver, so as to place the pin at 3 feet 1½ inches from center—that is, get a 6 feet 3 inches stroke on a four-foot driver—then the imp of the cross-head would be in exactly the same place at the end of the second movement that he was at the beginning of it, the pin being over the same spot on the rail at the end as at the beginning of the backward stroke of the piston.

Anboy Division.

Expired Railway Patents.

The following list of railway patents, furnished by F. B. Brock, Patent Attorney, Washington, D. C., expired during the month of February, 1890, and are now free to be used by anyone, viz:

Car Ventilator, C. C. Gerhardt.
Car Roof, J. C. Wands.
Railway Car, H. Buck.
Splice for Rails, H. P. Adymf.
Rail Chair, D. D. Eldridge.
Locomotive, W. S. Hudson.
Locomotive cylinder sock, C. H. Hopkins.
Locomotive exhaust nozzle, G. W. Richardson.
Locomotive relief valve, G. W. Richardson.
Hand car, D. M. Hunt.
Snow plow, T. A. Davies.
Switch, C. S. and S. A. Shute.
Car replacer, H. Voth.
Car wheel, Wakefield & Berryman.
Switch, G. W. Billings.
Duplex railroad ticket, T. A. Jebb.
Railroad frog, J. H. Lackey.

Persons desiring copies of patents, drawings and specifications, can obtain the same for fifteen cents by applying to Mr. Brock, whose address is as given above.

TAYLOR, TEX., February 22, 1890.

MR. EDITOR:—If the steam be exhausted from a locomotive boiler, and a pressure of air (120 lbs.) be pumped into her, will the injector work?
E. P. C.

Hints On Firing.

My object in writing is for the edification of young firemen just learning to fire a locomotive. My advice is to have a system in doing your work; keep a place for everything and everything in its place; be dependable and truthful—always keep your lamps and cans ready for use, and when you get on your engine to go out on the road, see that there is none of your outfit missing; look at your tender to see that you have enough water, see that your ash-pan is clean and the sand-box well supplied with sand, and that you have your regular supply of stores; and before starting out look at your fire and see that it is spread all over the grates. Avoid using the poker when the engine is working, as there is nothing that will spoil your fire sooner. If you have any choice of shovels always choose a small one—No. 4; or a narrow, square mouth, one that widens at the back, I have found better still. The way I get up my fire when starting from a terminal point with fine coal, is to fire with four shovelfuls—one in each quarter of the fire-box, and I do not half fill the shovel. By firing with a small shovel you are not liable to choke your fire. If the pointer goes back, put your shovel inside the door with point down; that will form a current of air under your shovel, so that you will be able to see your fire, whether it is banked, or if there are any holes in it. And this is where a small shovel is of special advantage; you can fill up the holes better. With a small shovel you can drop the proper quantity of coal into a hole, whereas, with a large one you are more liable to put the coal where you do not want it; then you will have to get the poker to help you out, which means dirt and clinkers in your fire-box to prevent the air getting to the gases of the coal. There has been a good deal said about consuming smoke. By light firing and keeping the grates free and a clean ash-pan, as much can be done to gain that point as anything I know. I have fired an engine with brick arch and baffle plate with flappers in fire door. I had orders to keep the flapper partly open all the time when the engine was working, so as not to burn the baffle plate. Now, my idea is that the flapper should be left open for a little while to burn the smoke, and then closed till the next fire is put in. I would like to draw your attention to the evil results of heavy and poker firing, as often practiced by a new man making his first trip. He wants to do his best, as a rule; he realizes that it is his duty to put coal in the fire-box, and he does it the best he knows how. He may keep the pointer up, or he may not; if it goes back he will naturally think it is for the want of more coal, until he gets so much in that he will have to fire with the poker

for awhile, which will produce clinkers and dirt in the fire-box to prevent combustion or a proper mixture of common air with the gases of the coal. As an illustration, a coal oil lamp will burn without a chimney, and, if you notice, a black smoke will arise from it. By applying the chimney you form a current of air to mix with the gases of the coal oil to form combustion. Having holes in your fire will not only prevent the engine from steaming, but the cold air coming in contact with the flues will make them leak. I may say that I am used to a Standard Rhode Island, and Pittsburgh soft coal. *Thomas Reece.*

WINNIPEG, MANITOBA.

BROOKFIELD, MO., March 3, 1890.

MR. EDITOR:—In answer to A. T. Conkling, in January number, I would say, if a boiler has a pressure of 60 pounds of steam there is an outward pressure of 60 pounds to the square inch on all parts of the boiler with which the steam comes in contact, including the safety valve. His question, "How do you measure a safety valve to get at the pressure?" is rather vague. By knowing the size of the safety valve and the steam pressure in the boiler, there can be determined the weight required to hold down the valve; or, by knowing the size of valve and weight holding it down, one can determine the pressure required to raise it.

The capacity of a piston pump is calculated by multiplying the area of piston by length of stroke.

The horse-power of a boiler is sometimes calculated by the size, but generally by the heating surface.

The question, "How many square inches are there to the horse-power of a cylinder?" is too deep for me. Some of the contributors to this column have already explained how to compute the horse-power of an engine.

In answer to H. Duncan, in the same number: A direct acting engine is one where the power from the piston is applied directly to the crank-pin. A locomotive is an example. An indirect acting engine is one where the power is distributed through gearing or working beam, such as side-lever and beam engines used on vessels or water works.

The throw of an eccentric equals twice the width of one steam port with twice the lap of one side of the valve added.

Now, I will ask a few questions:

What is lead, and what advantage, if any, is it to an engine?

What effect would the entire absence of lead have on the machinery of an engine?

What position is the valve in when the engine is on the forward dead center?

What position in the cylinder is the piston when the crank-pin is on the upper or lower quarter, and why? *L. L. C.*

The Imp of the Cylinder, Again.

MR. EDITOR:—The Imp is experimenting, trying to overcome resistance R., and to cause a forward motion. His lever in Fig. 1

is P. F., P. C. being one-third its length. He pushes 50 with hands and feet. His backward or foot push is direct with R., and he counts it as 50. His forward or hand

Fig 1

push has the *advantage* of leverage and he counts it as 75. That leaves him a balance of 25 in favor of a forward movement. If

R. is less than 25 it is overcome. Note that the fulcrum is on the track and that he gets this 25 surplus, or *motive* power, at the pin.

Fig 2.

Now in Fig 2 his lever is C. F., P. F. being one-half of its length. He pushes 50 with hands and feet. His forward or foot push is direct against R. and he counts it as 50. His backward or hand push has the *disadvantage* of leverage and he counts it 25. That leaves him a balance of 25 in favor of the forward movement. Note that the fulcrum is on the track, and that he gets this 25 surplus, or *motive* power, at the center, by the frame.

Now, draw the dotted circle; call it a driver; let R. represent resistance, weight or train; call the Imp steam pressure; his foot-holds cylinder-heads; his hand-holds a piston. Draw other copies changing the pin farther from the center, clear out to the tire if you wish, and you will see that the Imp has the same surplus for a forward movement in Fig. 1 as in Fig. 2. Put him in back gear if you wish, that is, put the Imp ahead of the piston in Fig. 1 and behind it in Fig. 2. Whenever you change the pin in Fig. 1, change it in Fig. 2. You will find that you get similar results always, from the pin if it is above centre, from the frame if pin is nearer the fulcrum.

The Imp will help anyone who wants to understand the leverage of a *driver* of a *locomotive*

as compared with the *fly-wheel* of a *stationary engine*. Do not rush into print against the Imp. He has not invented these principles. You will find them in detail illustrated by Farney. Ash Hoe explained them fully in the *Magazine* last February, and F. T. endorsed them in March: Vulcan, Lockwood, Eccentric and Eccentric Strap have discussed them and A. H. Tucker has shown that he understands them. I have no quarrel with anyone. Only give the Imp a chance, study his experiment carefully, and just as surely as he moves that mule with his lever he will convince you that the fulcrum is at the rail. *Amboy Division.*

BELLEVUE, OHIO, March 10, 1890.

MR. EDITOR:—Would some of the mechanical contributors give me an answer to the following question: If you have an engine having 19x22 inch cylinder and you wish to change to 18x22 inch cylinder, what change will have to be made on engine? Have heard men argue that rods have to be shortened, others that wheels must be changed: would be pleased to get a correct answer.

J. L. S.

Locomotive Link Motion Model.

Through the courtesy of Mr. John A. Hill, editor of the *Locomotive Engineer*, and Messrs. Pedrick & Ayer, manufacturers of mechanical appliances, we are enabled to present to our readers drawings of a loco-

otive Link Valve Motion Model of approved design, with a detailed description of the new and useful device. We commend the illustrations and subject matter to our members as being worthy of their careful perusal.

This is the joint invention of Mr. John A. Hill, Editor "*The Locomotive Engineer*," and Mr. Fred J. Miller, Associate Editor "*The American Machinist*," and was designed to meet a growing demand for a Link Valve Motion, reasonable in price, yet accurate, and by means of which the principles of same and the distribution of steam in the locomotive can be systematically studied, and what is equivalent to practical experience in setting valves and eccentrics obtained. Every effort has been made to make the model as near like an every-day locomotive as possible, each part occupying the same place as on the engine itself.

All the principal dimensions and motions of the model are made just one-half those of a standard eight-wheeled 17" x 24" locomotive, and all the parts, which can be adjusted on such a locomotive in setting valves can be adjusted on the model; so that the operation of setting valves is in all essential points precisely the same upon each; the different parts of the model being placed in their true positions relative to each other, as found upon the actual locomotive. In order to set the valves on the model, precisely the same operations must be gone through with as are required in actual practice. The true dead centres must be determined in the same manner, after which the length of the eccentric blades and the position of the eccentrics must be adjusted until the valve is seen to be right, trams being furnished with the model for use in this operation.

The frame of the model is of wood, with the bearing for the rock-shaft bushed with brass. The bearing for the main shaft or axle is along cast sleeve attached to the back by means of a wide flange. A square shoulder is formed on the face of the wheel, to correspond to the inner surface of the tire where it projects over the wheel centre, this shoulder affording facilities for drawing arcs of circles and trammings to determine the true dead centres. Only

two arms are made in the wheel, so that the movement of the eccentrics may be more readily seen, and to make them convenient for access in setting. The eccentrics are fastened by set-screws, having copper disks under them to protect the axle from being bruised. The eccentric blades, connecting rod and valve stem are of polished brass tubing, threaded at the ends, and provided with knurled collars for locking them in position. The eccentric blades have right-hand threads at one end, and left-hand at the other, so that by loosening the knurled collars and turning the tubes, the length of the blades is adjusted. The plank, which forms the frame, is painted black, and the unfinished parts of the motion a lighter color. In order to form a contrast and make them plainly visible throughout an ordinary room or hall, and at the forward end a section of a cylinder, ports, valve seat and valve are represented, and two scales are provided—one reading to the right and the other to the left—over which the piston travels. These scales are divided and numbered to represent half inches of stroke. As the piston passes over them they indicate directly just what part of the stroke has been completed, and what part remains to be passed over, in either direction, and without the necessity for making subtractions. Though the common and generally approved practice is followed in proportioning the ports and valve, it is obvious that, for experimental or other purposes any desired proportions of either may be laid off on paper and attached in position by thumb tacks, covering the ports and valve already laid off. In this way, valves with more or less inside or outside lap, or ports of different proportions, may be experimented with, and their effects on steam distribution—admission, cut off, compression and exhaust—readily observed.

The model is a little over six feet long, stands about four feet high, and will weigh about seventy-five pounds; it is neatly painted or polished, and has the appearance of a machine and not a toy.

The travel of the valve is $2\frac{1}{2}$ inches, representing 5 inches travel on the engine, and the scales are so numbered as to read as the full-sized engine would: so that when any action of the valve takes place, the scales show directly the corresponding position of the piston in the engine, the same as though the model was full-size. The reverse lever and notched quadrant are replaced by the piece seen projecting above the frame at the back, which may be adjusted for any desired point of cut-off, and clamped by a thumb-nut. The point of cut-off is determined by moving the piston to the desired point in the stroke by the scale and then adjusting the reverse lever until the valve is seen to be in position to cut off. This construction is thought to be much preferable to having a notched quadrant for this purpose, because it can readily be set to cut off at any desired point, regardless of lost motion, and is equally well adapted for valves having different proportions. The reverse lever is made of such form and proportions as to counterbalance the link and its connections, and, in fact, the entire model is balanced so that it will stand in any position. The wheel can be turned from either side, there being a crank at the back, which does not show in the engraving.

On the back side of the valve-block is a device (shown above) which, when thrown into action, makes a distinct snap as the valve moves in either direction. The device may be so adjusted that this snap takes place at the moment of exhaust, so that, when studying the motion, any part of it, such as the piston or crank-pin, can be watched, and its position at the time of exhaust observed, which would not be possible if both points had to be watched for. This is effected by means of two swinging tappets, which travel with the valve, and which alternately engage and release small springs, which, as they strike upon seats provided, make the desired noise or snap. The swinging tappets can be turned up out of the reach of the springs when the device is not needed, and the springs are adjustable so that it may be made to suit valves having more or less inside lap, or may be made to announce admission or cut-off instead of exhaust, if desired.

This feature, together with the fact that all the working parts are at one side, where they are plainly visible, makes the model well adapted for use in lectures, or for explaining before an audience its action, or for use by lodges or other associations of engineers. By means of it, any one who may desire may set and re-set valves, studying the principles involved as he goes along, and at his leisure, until he becomes satisfied that he thoroughly comprehends the principles involved.

Complete directions for setting up the model,

measuring to get extreme of dead centre, setting eccentrics, setting valves, etc., will be sent with each Machine.

It will be observed that the model is so adjusted in all its parts as to make it invaluable in the study of valve motion. Lodges contemplating the purchase of such a model will do well to address Messrs. Pedrick & Ayer, 1025 Hamilton street, Philadelphia, Pa., the manufacturers of the above design.

Review of the Reviewers.

EXPANSION
OF
STEAM.

MR. EDITOR: "Vulcan" says I decry the expansive power of steam. If it can expand more than $9\frac{1}{2}$ times, let him prove it. Philosophy says $9\frac{1}{2}$ is the limit. Besides, we are not discussing the comparative expansibilities of different substances and his expression "much effective work at small expense" proves nothing. He looks in the wrong place for the "effective work at small expense." And now, when he comes to those little holes that let the steam all escape so quickly, it makes his head swim. Nobody has given him any formulas how to solve the problem. Now "Vulcan" let me put a flea in your ear. Philosophers say, a strong wind move seven miles an hour, a storm 36 miles; as you observe the visible effects of steam, as it escapes from the boiler at any point through the whistle, safety-valve, cylinder cocks, or any other place, which does not more resemble, a strong wind, or a storm. Then say honestly, don't you think I "suggested" too great a velocity for the steam?

And finally he quits my second article seemingly dissatisfied with himself, not having steam enough left to even try to blow the whistle.

STEAM FORCE. "Vulcan" says: "After having devoted much space of the January *Magazine* to Dr. Wilson there are a few points in the Doctor's January article that require attention." And he first calls attention to my objecting to make the estimate on both cylinders. If he had read my article closely I don't think he would have found any trouble. Also I have my reasons a little more definitely, perhaps, in my review article of March, but if he or any one else still fails to see the point, let him state through the columns of the *Magazine* where I am wrong, and if "Vulcan" is convinced let him say so, and if not, state plainly the trouble, and I will try and make it so plain that a blind man can see it.

Now, friend "Vulcan" you should not get into a pit, because I am battling against what are "supposed" to be well established laws, and misrepresent my plain statements; you have been doing fairly well in your criticisms, perhaps as well as any one could do. The trouble is you have a weak cause to defend. Accept my thanks for your criticisms.

When I said I could only find 34,020 pounds as a starting force, by using all the steam and taking 33,000 pounds as the measure of a horse-power, then it would only be a little more than a one horse-power. This does not say, and I did not say the engine was only a one horse-power; it is your estimate of horse-power that makes it so. But I estimated the starting force of a horse at 600 pounds, and gave good logical arguments to sustain my position, and applied it to the engine, which makes the engine about 57 horse power. And if you can prove that it is any more than that, let us have it.

But this starting force you ignore altogether, and jump at my estimate as a constant pull, and call the starting force a constant pull. Those two forces are very different things. After showing the folly of using 33,000 pounds as the tension of pull for a horse in starting a load, I said if we exercise a little common sense, and use the force that a horse can exert, as the measure, and I took the estimate for the horse very low, for the horse that can do 33,000 foot pounds of work in one minute, in all reason would be able to make a pull of twice 600 pounds to start. But if I had taken 1,200 pounds for the starting force of a horse, then your engine would only show about 28 horse-power, but I did not want to knock you out of the ring too soon. Then, he says, "taking the Doctor's own figures of 150 pounds as the constant pull of a horse," and divides by this number, and finds the engine to be 227 horse, then doubles it, and has a 454 horse engine, thinking he has made a point; but still it is only two-thirds of what his rules say it should be. Also he

forgets we must start first, afterwards comes the constant pull.

Yes, any machine operating two pistons has more power than one piston, just double if the pistons are of the same size; but he must remember every piston averages dead half the time. Then two living halves are equal to one; two dead halves equal to 0.

Then he says, "Does the Doctor mean to take leave of common sense, and believe it as he puts it, a little over one horse power." Read it again "Vulcan." The Doctor never put it that way; nor has he taken leave of common sense, but sticks right close to common sense, plain facts, and indisputable figures.

Then "Vulcan" asks, "Does he believe one horse will pull a locomotive?" I did not say so, and I scarcely believe one can. But read closely what I said, and you will find I allow 4½ horses to pull the locomotive. "Vulcan" swears by the Dinagraph that "48 pounds will start a ton, after starting 12 pounds will accelerate the speed to 50 miles per hour at the fifth mile." Then a locomotive of 60 tons requires a starter of 2,880 pounds; divide this by 600, which I estimated as a starting pull for a horse; this requires 4.8 horses, and after starting have only to keep up a constant pull of 150 pounds to get a speed of 50 miles, but after starting and moving at the rate of 2½ miles per hour only requires a pull of about 188½ pounds. (See "Vulcan" on traction, December number, page 1073). He says probably 110 pounds would keep a 35 ton car moving 2½ miles, then 35:60::110 is to 188.6 pounds only a little more than the constant pull of one horse, about equal to one horse and one man. Can they pull the locomotive? Or is your philosophy wrong? In no place have I confounded constant pull and foot pounds; nor did I ever say you had a constant pull of 34,020 pounds. You can not have a constant pull doing work until you are in motion and when in motion you have left the starting pull of 34,020 pounds which I assume you might have, but will now say you don't have for the drivers will slip, long before that point is attained. Nor do I discard the work done by one cylinder. One does as much work as the other, but when you apply all the force you can get from steam pushing against the piston, thence through the driving rod to the wrist-pin, when the crank presents the longest lever, and using that as your average force, which is done in all your estimates for the power of your engines, there is nothing left for the other, which you will find plainly stated in the February number, page 117, near the bottom.

Yes, I can make any kind of figures I please. But I don't choose to make any but that will express facts, which will bear honest investigation.

When "Vulcan" quits dreaming and becomes fully awake, perhaps then he can see I have made no "New Revelation," but have taken old doctrines long shrouded in mystery, and unfolded them to the open light of day, so that any one seeking after truth may understand easily things that are now obscure.

"Vulcan" has not denied that a horse can exert a force of 600 pounds in starting a load; then let him prove how the locomotive that is estimated as a 681.6 horse-power can start any heavier load than 56.7 horses can start.

I have read what "Vulcan" says in the January number about work done by locomotives, and believe I have replied to all his objections, so I hope "Vulcan" will not think of retreating. I expect no money for what I have written, nor is it an advertisement of a new scheme, but it is to express my honest convictions on *old errors*. If I am in error, let "Vulcan" or any one else prove it, but so far what I have said, stands yet firm as a rock.

Thus far I have been arguing from a common sense standpoint, and every day observations; but now I will cite some authorities, then make an application of what they say:

Rankin says, "the duty of an engine is the work performed by a given quantity of fuel—such as one pound." Water is not considered as it don't cost much—Then says, "The duty of a pound of coal varies in different classes of engines, from about 100,000 to 1,900,000 foot pounds, these are extreme results. In *good ordinary engines* the duty varies from 200,000 to 700,000 foot pounds. Our *best engines* only yielding an efficiency of about $\frac{1}{4}$ to $\frac{1}{3}$ of this force."

And Dana says, "A pound of coal produces upon combustion in the air," (not in furnace), "by change of chemical energy into heat about 7,500 heat units," and he takes Dr. Joules' heat unit as his standard, which is 772 foot pounds of work—Fah. scale. Yet I doubt Joules' method as being the proper way of arriving at the truth. I think he has the unit too high. Hence by Dana's estimate, one pound of coal would produce $7,500 \times 772 = 5,790,000$ foot pounds of work or heat energy. But he says "the *best steam engines* only utilize about 10 per cent. of this (heat energy) so far as useful effect goes," which is 579,000 foot pounds for every day work in the *best engines*, and is only a little more than Rankin's mean 450,000 pounds for *good ordinary engines*. Therefore they are about as near together as writers on this subject usually get. But we must remember Dana is speaking of the extreme possibility of heat energy in a pound of coal, while Rankin is discussing the practical results of a pound of coal for every day use. Therefore we will use Rankin's estimate, and apply it to every day work, and

I hope the figures are large enough to satisfy "Vulcan."

Let us take his extremes for good ordinary engines and find mean, $200,000 + 700,000 \div 2 = 450,000$, of this he says only about $\frac{1}{4}$ or $\frac{1}{3}$ is utilized; let us again take a mean and say $\frac{1}{2}$, is not this fair? Then $450,000 \div 2 = 225,000$ foot pounds of useful force or work for every pound of coal. Now apply this to every day work and what have we?

"A Fireman," on the Little Rock and Fort Smith road, which is through a hilly country with heavy grades, told me he went out from here (Argenta) with a $16'' \times 22''$ locomotive pulling four coaches, run to Russellville—75 miles—averaging about 20 miles per hour, and he used on the trip 72 scoopfuls of coal, No. 3 scoop, say 20 pounds to the scoopful. Now how much steam energy did they have?

Coal $1440 \text{ pounds} \times 225,000 = 324,000,000$ foot pounds. Time, 225 minutes. Force required per minute, 320,000; and this divided by $33,000 = 9.7$ horse power, all the steam force that was required of the locomotive, including *both cylinders*. Coal per minute 6.4 pounds. Again, on the same road with freight trains, full loads, one ton of coal is estimated to run 40 miles. Schedule time, 10 miles per hour. What is the steam force required? One ton of coal gives 100,000,000 foot pounds. Time, 240 minutes. Therefore each minute we have 416,666 pounds. This reduced to horse power gives a little less than 13 horse power to pull a full load of freight, using $18'' \times 24''$ ten wheeler locomotives. Coal per minute 8 pounds. Let us take another of something "real." Engine $18'' \times 24''$ run to Russellville and back again, full load of freight both ways; distance, 150 miles; time 12 hours, burning about $2\frac{1}{2}$ tons—50,000 pounds of coal. Then $5,000 \times 50,000 = 250,000,000$ foot pounds per minute. This reduced to horse power per minute gives 10.5 horse power of steam. Coal used per minute about 7 pounds.

Now one more example of something real: Firemen on express trains on the M. & L. R. road say they use about 3 tons of coal running from here (Argenta) to Memphis; distance 131 miles, time $5\frac{1}{2}$ hours. Then the steam energy is $60,000 \times 50,000 = 3,000,000,000$ foot pounds for $5\frac{1}{2}$ hours, or 330 minutes, and for one minute it would be 909,091 foot pounds, reduced to horse power is $27\frac{1}{2}$ horse work—coal per minute, 18 pounds; engines $14'' \times 24''$. This case seems to require more than twice as much coal, as is used on the L. R. & Ft. S. road, and I think the discrepancy is due to the fact that the firemen on this road have not had their attention particularly called to the amount of coal used, and I think if they will observe closely, they will greatly reduce that estimate. To burn more than half a ton of coal per hour keep up a pretty big fire, and

a fireman would have but little time to ring the bell and wipe the sweat from his face.

But by the rules for estimating horse power for engines, this locomotive with 140 pounds of steam is equal to 490 horse power.

Now, "Vulcan," *honestly, don't you think it poor economy to take a 490 horse locomotive to do 27½ horses work?*

Now, take what I said in the January *Magazine*, page 22, commencing near the bottom of first column, and if you could make 150 pounds of steam in your boilers in 15 minutes, then you could have ten pounds to use every minute. Now, if one pound of coal gives 50,000 pounds; and 8 pounds of coal (see estimate for freight trains) give 400,000 foot pounds of work it would be equal to 12.1 horses. But if every cubic inch of steam in the boiler could be used (and retain a pressure of 150 pounds) in one minute, it would give you for that minute 181½ horse power; but then you would have nothing left for the next 14 minutes.

Let us see how much coal "A Philadelphian's" 681.6 horse locomotive requires for 1 minute's work: $681.6 \times 33,000 = 20,448,000$ foot pounds, divide this by 50,000 gives 409 pounds of coal for each minute, 24,540 pounds or a little more than 12 tons per hour. Firemen, which of you want the job of shoveling in 12 tons of coal per hour to make that locomotive do 681 horses' work? Then here is another dilemma, and it has three horns: You must shovel in and burn 12 tons of coal per hour, go back on Rankin's teaching, or say you don't have any locomotives of 681 horse steam power. I cling to the last horn. Which will you take?

L. A. Wilson.

A. H. Tucker "Hollers" Enough!

Upon opening the pages of this department of the *March Magazine* to Mr. Lockwood's "further answer," and reading his corroboration of the everywhere printed statement that Miss Bly and Miss Bisland had been around the world, I confess to a feeling of disappointment. I have to own to a natural fondness for female society, but when I read Mr. L.'s repetition of this matter-of-course performance I felt much like saying to the "demnition bow wows" with Miss Bly and the rest. I want to read something about my question. What has her trip to do with counter-balancing a locomotive? If she had made the circuit by continuing north or south, which she might have done had she *known enough*, I would have excused Mr. Lockwood for speaking about it; but what purpose he intends the problems in longitude and time, which he has introduced into these discussions, to serve, I do not believe there is a reader of this book can tell. As inventors of tantalizing means of punishment I had supposed the Chinese could not be surpassed, but I don't

suppose even they ever thought of subjecting a victim to the punishment of listening to the same "lingo" forever, just because he was a little incredulous and inquisitive. Reaffirming his former answer to my question, Mr. Lockwood expresses his intention of making a "fuller explanation," the *fullness* of which, if we except his reference to the ladies, does not appear. It is true that he has quite adroitly tried to induce us to believe that the action of the steam in the cylinders of the Shaw engine equalizes the effect of the momentum of the masses of matter supported by the pins when such masses are equal in weight, but one is moving seventy-five and the other twenty-five miles per hour. This he clinches by saying that the lines in the figure prove it. The facts are, that the lines referred to represent the paths through which the pins pass, and steam pressure has no effect on them; they would be the same with the engine running by gravity as when running by steam. There is the further fact, too, that if I understand correctly, the Shaw engine takes steam at opposite ends of her cylinders at the same time, cuts off in each cylinder at the same point in the stroke, and exhausts at the same time. So the effect on the pins is the same at all points of the stroke.

Mr. Lockwood has said much, and said it so apparently for the purpose of establishing a point, without reference to its general application, that I am not surprised that he has forgotten that he ever claimed that while the pin is passing from the forward to the back centre the piston connected to that pin stood still and the cylinder passed over it. But he did claim just that, and we all know it without referring to page and number.

At the close of Mr. Lockwood's article he calls on any whose questions remain unanswered to reproduce them and he will reply. I can think of several of my own which he has never attempted to answer, nor can he answer them without admitting himself in error, and this there is not mules enough in Missouri to draw him into doing. Besides, there is no fun in hearing the old story told over again, so I have decided to throw up the sponge in this soft glove contest in hopes that something more entertaining may be introduced on the stage. I have no friend "high in railroad circles" to rub my ears and "sic" me on to victory, so I have to suffer defeat, "knocked out" by monotony alone.

By just what sign we are to know when Mr. L.'s victory is complete, or in just what it is to result he has not yet permitted us to know, but from the language of his "high friend" it must be something terrible. I can't help thinking that that "high friend" may be a humorist in a quiet sort of way.

CHILLICOTHE, MO.

A. H. Tucker.

"Amboy Division's" Call to "Eccentric Strap," "Vulcan," and "A. H. Tucker."

MR. EDITOR:—My old friend, "Amboy Division," is back in the traces again, and to me he is most welcome. The loud call of this able writer, in March *Magazine*, 1890, page 219, is of such a nature that those three equally able writers must come down or fight to the death.

In December *Magazine*, 1889, page 1072, "Vulcan" has an illustration which I should like reinserted in the Mechanical Department, for the purpose of asking a few questions to a better understanding of this "area of surface question," or "squaring the circle."

The diameter of the circle of the cut is 2½ inches, the length of its circumference in a plane is 6½ inches. Won't he please tell us where and how he gets the spaces C-2, 3-4, 5-6, and 7-8, of the square into the circle E?

Mr. Lockwood's illustration and answer to "W. L.'s" inquiry relating to "slippery drivers" running down hill is very interesting reading, and his accounting for this slipping is a very ingenious theory, which he calls "*Centrifugal Lift and Tangential Throw*." The illustration prompts me to ask of you a favor, and find illustrations to enable me to ask a few questions growing out of illustration of the wheel in the January *Magazine*, 1890. On receipt of proofs I will go on with my questions.

Eccentric.

Drawing Instruments.

Those of our readers desiring information in regard to the drawing instruments referred to in a previous issue of the Mechanical Department, should address Bro. Wm. Weiler, Box 25, Port Morris, N. J.

Locomotives.

The Staten Island Rapid Transit is asking bids on five locomotives.

The Boston & Albany has just added eight new Baldwin locomotives to its equipment.

The Iowa Central has received a number of locomotives from the Baldwin Locomotive Works.

The New York, Pennsylvania & Ohio has placed an order for one passenger and five freight locomotives.

The Baldwin Locomotive Works, Philadelphia, are building five freight engines for the Salt Lake & Eastern Railroad.

H. K. Porter & Company, in Pittsburgh, are building two light passenger engines for the Salt Lake & Eastern Railroad.

The Baldwin Locomotive Works this week delivered three light-weight locomotives to the Birmingham, Powderly & Bessemer.

The Louisville, St. Louis & Texas has received two freight consolidation engines ordered of the Pittsburgh Locomotive Works last fall.

The Schenectady Locomotive Works, Schenectady, N. Y., are building ten consolidation engines with 21x24 inch cylinders for the Chesapeake & Ohio Railroad.

The Canadian Pacific has finished seven large locomotives for service on the Western Division. Orders have been given for the construction of seventeen more engines.

The Louisville & Nashville has ordered twenty engines from the Rogers Locomotive Works, of Paterson, N. J. Ten are to be consolidation engines and ten switching.

The Baldwin Locomotive Works expect during the year 1890 to turn out not less than one thousand locomotives. During the month of October last the output was 104.

The Rio Grande Western has now received twelve of its standard gauge locomotives, and these are all in service on the part of the road which has been made standard gauge.

The Louisville, New Albany & Chicago has received two additional consolidation locomotives, part of an order recently placed in the East. The company expects four more engines next month.

The Sioux City & Northern has now in service six locomotives, six passenger and three baggage cars and five cabooses, all new. The company has also in service 100 platform, 100 box and 100 stock cars.

The Louisville & Nashville has placed an order with the Rhode Island Locomotive Works for a number of engines, in addition to the ten consolidation locomotives being built by the Rogers Locomotive Works.

The Brooks Locomotive Works have recently built some ten-wheel engines for Cuba. The engines attracted great attention, being very gorgeously finished in bright colors and a lavish quantity of polished brass.

The Central of Georgia have placed the building of twenty freight and two passenger locomotives with the Baldwin Locomotive Works and the Central of New Jersey have ordered sixteen locomotives from the same makers.

The Central of Georgia has just received thirteen locomotives, and will receive twenty more in the early part of next month. Of the latter sixteen will be for freight and two for passenger service. The other two are shifting engines.

The third of five engines for the Pennsylvania lines was turned out of the Columbus shops last week. The last of the five will be completed February 10, after which the construction of five more of the same class of engines will be begun.

Car Notes.

The Illinois Central is asking bids on 25 passenger cars.

The Missouri Pacific is in the market for 3,500 freight cars.

The Staten Island Rapid Transit will soon give out orders for 20 passenger cars.

The Texas & Pacific is building a number of new passenger cars at its shops at Marshall, Tex.

The St. Louis & San Francisco has received two handsome passenger cars from the Pullman shops.

The Boston & Albany and the Boston & Maine are in the market for new freight equipment.

Twelve of the cable cars on the Brooklyn bridge are to be sold and replaced by new and heavier ones.

Three parlor cars are to be built for the Inter-colonial. The contract is to be given to a private firm.

Stillwell, Millen & Co., of Savannah, Ga., have recently let a contract for 100 cars, for carrying lumber.

The New York & Northern intends to soon let the contracts for building a large number of new cars.

The New York, New Haven & Hartford is building six combination cars at its New Haven shops.

The Norfolk & Western has given an order to the Roanoke Machine Works for 15 passenger cars.

The Michigan Car Company, Detroit, Mich., is building box cars for the Flint & P're Marquette Railroad.

The Duluth & Winnipeg will soon award the contracts for building both its passenger and freight equipment.

The Toledo, Columbus & Cincinnati has placed in service 50 new flat oil tank cars and marked Lima Oil Co.

The Pennsylvania has completed at the shops at Altoona six chair cars, for use on the Camden & Atlantic line.

The Brooks Locomotive Works at Dunkirk, N. Y., have recently completed several new engines for export to Cuba.

The Northern Pacific will probably soon place orders for 25 passenger coaches, 10 baggage cars and 300 platform cars.

The Ohio & Big Sandy has 30 gondola and 100 coal cars building at the Ensign Car Works, Huntington, W. Va.

The Evansville & Terre Haute is having built the cars for two vestibuled trains for service between St. Louis and Louisville.

Contracts for the construction of two thousand new coal cars were recently let by the Lehigh Valley Railroad Co.

The Barney & Smith Mfg. Co. have the contract for building 25 passenger and 10 baggage cars for the Northern Pacific.

The New York, Ontario & Western has let a contract for building 1,000 freight cars to the Indianapolis Car & Manufacturing Co.

The Central of New Jersey has placed an order with the Baldwin Locomotive Works for five passenger and 11 freight engines.

The Kansas City, Fort Scott & Memphis has just placed in service three new passenger cars built at its shops near Kansas City.

The first consignment of ten new Pullman sleeping cars for the Northern Pacific road has been received and others will be received in a few days.

The Jackson & Sharp Co., of Wilmington, Del., has received the contract for 12 passenger cars for the New York, Ontario & Western.

Shop Items.

The Hot Springs, Ark., Railroad Company will build a roundhouse at Malvern.

The Canada Atlantic Railway Company will build shops at Valleyfield, Quebec.

The Richmond Locomotive and Machine Works, Richmond, Va., have recently put in new machinery to the value of \$150,000.

Alonzo Ellison has received the contract to erect a ten-stall roundhouse for the Canadian Pacific at London, Ont.

The Pennsylvania Railroad Company will, it is rumored, build shops for the McKeesport & Bessemer road, opposite McKeesport, Pa.

One hundred and seventy-five men, employed in the Erie shops at Susquehanna, Pa., were laid off last week. Nearly all are single men, and many non-residents.

The Middletown Car works, Middletown, Pa., are full of work, as also are the works of Schall & King, at York, Pa., having to work extra time.

The Central Railway Supply and Construction Company has been organized at Indianapolis, Ind., manufacture and deal in railroad equipment. The capital stock is \$500,000.

The American Fire-proof Steel Car Company will build extensive works near Chicago, Ill., having purchased 700 acres of land for shops and dwellings.

The shops of the Huntington & Broad Top road, at Saxton, Bedford county, Pa., were burned lately and a locomotive and three cars in the machine shop were destroyed. The loss is estimated at \$30,000.

Fire in Ottawa, Ont., on Monday last destroyed a car shed belonging to the Canadian Pacific, together with six cars, including Lady McDonald's private car and the official car "Ottawa." The loss is placed at \$90,000.

The Ohio Falls Car Company, Jeffersonville, Ind., have recently added to their works one of the largest saw mills in that part of the country, capable of cutting 50,000 to 60,000 feet of hard wood lumber per day. They are full of work in both passenger and freight departments.

The Bellmeyer & Small Car Company, of York, Pa., are busy on some day coaches for the Norfolk & Western, Atlantic & Danville and several other roads, as well as a number of freight cars. They are also building cars for railroads in Cuba and Mexico.

It is rumored that the Grant Locomotive Works Company, of Paterson, has been reorganized, and that new works will be built near Chicago. The greater part of the new capital put into the concern is said to come from the West, and it is reported that Mr. E. T. Jeffery, lately of the Illinois Central, will have charge as general manager.

A certificate of the incorporation of the Leslie Brothers' Steam Snow Plow Company has been filed in the county clerk's office, of Paterson, N. J. The company intend to manufacture steam snow plows, locomotives and general railroad appliances. The works will be located in Paterson, N. J. John P. Leslie and Edward Leslie are the principle stockholders, each having 2,250 shares. Mathew Sweetman, of Toronto, Canada, holds 500 shares. The company is composed of the three persons named, and begins operations with a cash capital of \$500,000.

The Pittsburgh Locomotive Works' people are making very important additions to their shops. A few years ago they built what is the finest and best equipped iron foundry in the country, and they have now erected a fine boiler shop that will have every facility that can be used to facilitate the construction of boilers. They are going to have the most improved hydraulic machinery for riveting and flanging, and their cranes will be operated by the same power. The intention is to build a new machine shop of sufficient size to double the capacity of the works. They are very busy with the building of locomotives that are nearly all particularly heavy.

Woman's Department.

EDITED BY IDA A. HARPER.

Letters pertaining to Woman's work, such as education, temperance, home and fireside, and kindred topics, are solicited.

Correspondents are requested to write plainly, on one side of the paper only, and forward their manuscript so as to reach the Editor not later than the tenth day of each month, directing all communications for this Department to

MRS. IDA A. HARPER,
TERRE HAUTE, INDIANA.

THE WIFE'S SMILE.

One might almost make the assertion that no article was ever written on the duties of a wife which did not contain the important injunction that she should "meet her husband with a smile." This has been repeated so often that it provokes a smile to read it. Before marriage girls laugh too much. The approach of a young man is the signal for a whole broadside of smiles and he is entertained by a succession of giggles. The girls seem to think this is attractive to the gentlemen and perhaps it is, but it sometimes occurs to one that if the thing could be evened up so that there was not so much smiling before marriage and a little more afterwards it would be better in many respects. In the former case, however, the man is always on his good behavior, doing all in his power to make the girl happy and cheerful, and showing only the best side of his nature. But there are times when the wife cannot meet the husband with a smile. When, for instance, he comes home in such a state of intoxication he could not distinguish between smiles and tears; or, when, unfortunately, she knows that he has been basking in the smiles of another, who has wrecked the happiness of her fireside; or, when, through idleness, or improvidence, or reckless habits, he comes home with empty pockets to an empty larder; or, when he enters the house with dark looks, cross words, and fault-finding, oblivious to all that has been done for his comfort and pleasure. These are some of the times when the wife cannot meet the husband with a smile, although so strong is the idea of duty in this regard that many a one smiles through tears and with a breaking heart.

But when the husband bravely and conscientiously fulfills his obligations and does his best, whether it be great or small, then no welcome can be too hearty or too loving when he returns from his daily toil. The value of a smile cannot be overrated. The enthusiastic greeting of children, the cheerful fire, the appetizing odor of the waiting meal, are like a glimpse of Paradise to the tired and hungry man; but sweeter than

all is the affectionate smile from a faithful wife. Its effect and influence cannot be exaggerated; indeed, they cannot be expressed in words. With all the cares and worries, the trials and burdens of daily life, this welcoming smile is sometimes neglected or forgotten. The wife is glad to hear her husband's footstep, thankful that he is safe at home once more, but she thinks he ought to take all these things for granted, just as he considers that she should understand his continued affection without his telling her of it. But we are so curiously constituted that we crave the outward manifestations. The importance of love between man and wife cannot be overestimated. "Perfect love casteth out fear," the Bible says, and it might have added that it dispels all the clouds that arise in married life. So long as the love remains pure and constant, every difficulty can be adjusted, every misfortune bravely met. It is the strongest and yet the finest and sweetest of the emotions, and needs to be guarded with the tenderest and most unremitting care. It is the foundation of domestic peace and contentment, the keystone of wedded happiness. No marriage should ever be contracted unless it exists in the highest degree, and all through life it should be cherished as the pearl of great price.

THE Quebec Legislature recently passed by a unanimous vote a bill giving to every father of twelve living children a bounty of one hundred acres of land. It is all very well to encourage the good work of populating the earth but in what way are the mother's services recognized? Is she not entitled to at least an equal reward with the father in the bearing and rearing of these twelve children?

THERE seems to be so much interest in our present topic relating to the management of husbands that we will invite communications upon this subject for another month. We hope our readers will not misunderstand its meaning. We do not wish to imply that husbands must be "bossed" or disciplined or anything so undesirable as this. We simply ask for an exchange of information upon the various methods which wives have found most effective in preserving harmony and happiness in domestic life. Many intricate problems arise in marriage and sometimes wives are lacking in the wisdom and judgment necessary for a successful solution. An interchange of ideas upon this subject cannot be otherwise than profitable. There is a great similarity in human nature the world over and it is a relief to a perplexed wife to learn that other women also are beset with doubts and difficulties and are seeking for light. Women cannot be too

careful about making public their home grievances or complaining of their husbands' shortcomings, but to compare experiences in a pleasant manner and to relate experiments that have produced desirable results cannot fail to be of mutual benefit. Such letters, for instance, as we publish this month are helpful and encouraging and show a pleasant phase of married life.

THERE seems to be some anxiety on the part of the sisters lest the "Woman's Department" should be abolished. There is not the least danger of this. The publishers realize that the *Magazine* has no warmer friends or more faithful supporters than its writers and readers among women. This department is considered one of the most readable in the *Magazine* and it brings in hundreds of subscribers. It is the desire to make the *Magazine* not only an authority upon all matters pertaining to the Brotherhood but also a book suitable for home and fireside reading. There is occasionally a selfish individual who grudges the few pages devoted especially to the interests of women, but the number of these men is very small compared to the great body who approve and sustain the "Woman's Department." Let every one of our readers put forth an effort to make the department as bright, readable and helpful as possible and they need have no fears of its being left out of the *Magazine*. Such a thing has never been contemplated.

A PRIVATE letter has been received from El Dorado, Ills., saying an article was sent for this department but it has failed to reach us.

FARGO, N. DAK., February 23, 1890.

Editor *Woman's Department*:

To-day is Saturday and after my usual Saturday's work and preparation for the Sabbath was completed I lay down to rest. As I did so my eyes caught sight of the January number of your *Magazine* lying near at hand, and I sometimes think a change of thought is more beneficial to the tired body than slumber to the eyelids. I suited action to thought, opened the *Magazine* and the first article meeting my eye in the Woman's Department was the request for a series of letters on the Best Way of Managing a Husband, and having been a reader of the *Magazine* for some time I take the present opportunity of writing you a short letter, wondering the while whether it will ever see daylight or end its journey in the waste basket. However, I will venture as I seldom see any article from Fargo, or at least have never noticed anything but once, and that written by a man, which was so highly appreciated by Fargo people that it was copied by one of the dailies of our city. I think it must have frightened the correspondent, however, for as we listened for the return of the visitant we heard nought but its expiring breath. But to return to our subject, "Best Method of Managing a Husband." First, I would say to the wife, manage thyself, and the husband will in nearly all cases profit by example, and you will find husbands are not hard to manage, or, in plainer words, do for and appreciate your husband as you would have him do for and appreciate you; as you know it has been proven that as sure as the sun rises in the east and sets in the west, just so sure we must have

cause to produce effect. Very well, if we require a good effect let us as true womanly women propagate a good cause, this then will follow as my second, and we ask this: Set your mark high. "Anything that is worth doing is worth doing well." Having never had any trouble in managing my husband, I will give you the method used, strictly adhering to the first two axioms already given. The next most essential thing is wifely sunshine, or in other words, let the wife of four or five birthdays meet the husband just as she met him four or five years before when she, a young, blushing and happy bride, imprinted the first wife's kiss upon the lips of him whom she had taken "for better or for worse until death do them part." Always remember to keep this stock on hand for the clouds of fault-finding are sure to creep in the heart if it is left empty by sour looks or too much trouble. Make yourself, the children and your home just as pretty and home-like as possible and always scrupulously neat. Of all things never neglect your own personal toilet, never meet husband at dinner with a soiled morning dress. If abundance is not at your disposal, all right, one does not have to follow the latest butterfly of fashion to meet the approval of any sensible man. Although the material may be cheap print let it fit neatly and you will find with a cheery face above it and a kind word of welcome it will bring the answering heart throb from your husband, and as I said before you will see he can manage himself and take the trouble off of your hands and like Shakespeare of old he will say, "kindness in woman, not their beauteous looks shall win my love." Never on any account let the children take your place. They are God's most choice gift to wife and mother, next to husband, but always put husband first and by so doing teach him your place in his heart. Do not be afraid to trust your children to other hands and when he asks you to accompany him out for an evening do not say, "Oh I am so tired," or "how do you think I can go out with the care of all these children on my mind, they are such a trial?" but rather reply, "with pleasure," and try to make yourself look as pretty as possible with the means at your disposal. But never make a wasteful use of funds, for in so doing you will soon lose your husband's confidence as a manager, and should it happen you are unable to go, say, "I am sorry, I should like to go, but Susie must have her apron for to-morrow and I promised Robert his new mittens should be finished to night," and I think in nearly all cases the husband will not leave the wife who can forego the pleasure of an evening entertainment for the sake of duty to himself or children. But will he not rather interest her on the news of the day, or rock baby while the wife and mother, obeying the promptings of conscience, walks the treadmill of duty. Further, take an interest in your husband's business and although it would be much more to your taste to be otherwise employed, remember it will not cost as much to keep your place in your husband's heart, and keep him at home evenings as it will to win him back after having sunk into dissipation or other vices because wife was cross or children a trouble, and necessarily home is not a pleasant place and husband seeks a more congenial company. But you will say is this the prescription, that is a cure for all unmanageable, diseased husbands? I answer, yes. I hear a mother say, "But I am sick." Very well, I can sympathize with you. Disease has been the only cloud to darken the sunshine of our home. But the husband then was able to manage himself long before this came and still remembers how, and I am able to see the broad cast upon the waters, not return after many days, but I have been able to have a full supply of bread all the time and now have a surplus and as an invalid I find it acceptable. Love begets love, sympathy begets sympathy, and I feel to thank God for my early christian home-training and the example I follow is the mother who never had to manage father, for he had early learned by precept and example how to manage himself. Firemen's wives, perhaps you will be surprised when I tell you I have left my work many times early in the morning to take a morning ride with my husband, he knowing well that to have me go would necessitate his having a cold dinner or even more that, after returning he must take

up the work I left undone and do it himself, all for the pleasure of having my company for his morning ride.

This subject is too deep to fully digest at one meal; a subject of which one is tempted to take a loaf instead of a cracker, but I think I have given you a bird's-eye view of my way of managing a husband and not find it hard work either.

The man who weds a loving wife,
Whatever betide him in this life,
Shall bear up under all,
But he that finds an evil mate,
No good can come within his gate,
His cup is filled with gall.

Yours truly,

Daisy.

[It would be hard to treat this subject in a more acceptable manner than is done in this letter. Let us hear from you again.—
Ed.]

ELDORADO, ILL., February 4, 1890.

Editor Woman's Department:

Although I am unmarried, I expect to marry if I live much longer, and I hope to have a husband, who is worthy of the name husband. I was taught when very young to do unto others, as I would that they should do unto me. I try to have this motto guide my daily acts. I have met many persons engaged in different pursuits and I have always observed, that in nine cases out of ten, a kind word will accomplish more than a scolding or a flood of tears. Had I a husband and he should come home now, this writing or any other work I might be doing would be laid aside; and my husband's wishes should be granted. All that could be done for his comfort and happiness I would do; no hired help should be allowed to prepare the delicacies for the meal, or grant any requests that might be made. Too many wives and mothers expect the servants to do the accommodating, because it is too much for them to leave their detective stories, novels, or perhaps their first-class beau in the parlor. Mother is the one to wait upon her children, but when her husband comes home she should meet him with a kiss and pleasant countenance, and let him know by her every look, act and word that he is more welcome than anyone else. He, our fireman, is home so little he should be loved and humored instead of the children. He was loved first and should be loved longest. I firmly believe in loving and humoring children, but I also believe in prompt obedience. Mothers, be loving, firm and strict with your children. Wives, be kind and loving, and trust your husbands and you will be lovable. Let your husband's wishes be your first thought; study his disposition, likes and dislikes; work for his interest, don't notice other women's husbands. Teach the children their duty to you and their father; teach them to love their father and look and long for his return, but do not permit them to take the place that belongs to you. The names, "papa" and "mamma" are well for little children, but no name is as sweet and respectful as Father and Mother. If a wife has her husband's love and confidence she will have his earnings to make home comfortable and happy. If he is asked to go with his wife to select articles and settle monthly bills he will realize that his wife is his equal and helpmate and not a heartless spendthrift who cares for nothing but dress. A wife must not abuse her husband's confidence and generosity; if she does she need not expect him to be so liberal as he was. She should use judgment in all things. I am a firm believer in what my mother taught me: "The less a man is asked to do and the fewer he has to provide for, the more selfish and stingy he is."

Because our firemen do rough, hard work, that is no sign they are hard and cruel-hearted. If their hands are hard and calloused inside they can and will give the pleasant and soothing touch upon the hair and forehead, and it will be accompanied by the love from the heart. Firemen's lives are rough on the road, and their homes should be more com-

forting and desirable than the homes of those who always have a pleasant, enjoyable time.

Wives, love your husbands; deserve their love and you will be appreciated, but if your love is false you need not expect to keep his love and confidence. You may expect to answer for the ruination of a man, and be your husband.

Grace Carroll.

[The writer of this has excellent ideas of married life. We hope she may find a husband who will appreciate her loving kindness and be worthy of her appreciation.
Ed.]

GRAND RAPIDS, February 13, 1890.

Editor Woman's Department:

As I was looking over the *Magazine* I saw where the wife of one of the Brothers thought as the new year was just beginning it would be a good time to begin a new work. I have the same opinion, for I think there are a great many more Lodges than we know of, and if we could correspond with each other we would know what each one thought, having a Grand Lodge and a charter to work under. We have been organized four years in June and have not had any charter. We have made our own constitution and By-Laws, and now I think we ought to have a charter. We have not got as large a Lodge here as I would like to see, but we have had lots of patience, have worked hard to keep together and hope before another year passes we will have more. We meet twice a month, the first and third Wednesday afternoons, in the I. O. G. T. hall. At a recent meeting the following officers were elected: President, Mrs. H. Norris, 39 River ave.; Vice-President, Mrs. H. L. Brown, 427 Cass street; Treasurer, Mrs. Leech; Secretary, Mrs. J. Kitselman, 68 California street; Chaplain, Mrs. George Nichols; Guard, Mr. A. E. Wilcox; Conductor, Mrs. C. Bentley.

I remain, a Fireman's Wife, *H. E. A.*

SAN ANTONIO, TEXAS, February 28, 1890.

Editor Woman's Department:

I have of late noticed some talk in the *Magazine* discarding the Woman's Department. Now, I am not a correspondent but read the *Magazine* and am much interested in the Woman's Department, and I think if the ladies would make it more interesting and not tell so much about their sweethearts, and whom they are interested in, and refrain from talking the gentlemen for flirting and so forth, they would not want to monopolize the whole *Magazine*. As I have said in a former letter, men are all like Father Adam, who had all the things in the garden except the forbidden tree, and was not satisfied until he had that also. The Brothers have the whole *Magazine* except a few pages which are given to the ladies, yet some of them want that.

Now, suppose we undertake to talk of something else for a while; something useful and beneficial for instance the best method of training children, or of cooking our husband's lunch (which is the most important subject at our house at present) or how to save a few dollars each month so that our husbands will not be "dead broke" the week after "pay day." Oh, there are a great many subjects on which we and our husbands would rather read than those about flirting and sweethearts. I am always discouraged when I am reading the *Magazine* and come to a letter where some silly girl has written something about some one "making a mash" on some one, or that she is "stuck" on some certain fireman, when the chances are that she does not know how to make a biscuit or boil an egg fit to eat. How much better that "certain fireman" would think of her if he had written to ask the best way of putting up a lunch, or of washing a fireman's overclothes. I think there are many ladies who have husbands who pay very little attention to such matters. There are some ladies of my acquaintance who think they ought not to work—that it is degrading; they rest their sit with folded hands, doing nothing (except to after the pay car has gone) while their husbands are wearing themselves out working day and night for their support. Now, I want to ask a question:

FEBRUARY 10, 1890.

it more degrading for us to work than our husbands, or is it a disgrace for any man or woman to work? No, it is ennobling, and I honor the woman who is not ashamed to work, to do her own work and to work for others if need be, and she can do so without neglecting her own family. It is a mistaken idea some women have that a woman should not work. I have heard some people remark that they would not work in another's kitchen if they had but one dress to their back. Now, somebody must work and so long as people must eat, some one must cook, and where is the disgrace? Where is the young lady with sense who will marry a young man who thinks work beneath him—who will wear the same suit until it is threadbare and shoes bursting out rather than do some honest labor to earn some new ones? I think they are few, as also are gentlemen who are willing to marry girls who marry to be supported; who must board because they do not know how, or think it beneath them to keep house. Now some one will curl her lip and say, "Pooh! She is a washwoman, or she is an old maid and can't get a husband, or she is a widow and wants the gentlemen to think she can and is willing to support a husband." I will say it is a mistake. I have a husband who is a fireman, earning as good wages as your husband does, still I am not above doing my own work and earning a few dollars besides, and I do not do it by washing, either; although I would if I could not earn it some other way and it was necessary that it should be earned, and I have never felt it a disgrace to me yet, and I am proud to say that I have earned the support of my family when my husband was sick and could not work, and I think it an honor to any woman who can feel that she is independent of any man's support. Now, I will tell you that I am a seamstress and do my own work, and some months I have earned \$35, not because I was compelled, or that my husband wished it, but because I like to feel independent, and while my husband is hard at work I like to know that I am not wasting my time in idleness. I clothe myself and children, that is, in general, (my husband does not ask it of me, but I like to know that the dress I have on was earned by myself.) I buy what I want and do not ask for 25 cents to buy a pair of hose and have my husband tell me he is "dead broke." I purchase anything I wish or need for the house, and put a little by for a rainy day, or perhaps, as railroad people would say, for the times when my husband has been laid off.

Now, I do not think my acquaintances think less of me, or that I have fewer friends because I say, "Yes, I am a dress-maker and am proud of it." I have had one lady request me not to call her a dress-maker because she was ashamed of the name. Well, I am sorry for her or anyone else who feels that it is a disgrace to make dresses. Perhaps some day it will be a disgrace to wear them too, but I suppose it is time I kept still or I will have some one writing me a warm letter.

Now, I shall write again and tell the ladies who care to know, how I manage to get along with my work and children, and sew for my friends, some of whom have no children, keep a servant and yet have no time to do their own sewing. I may also tell those who wish to know, how to make their own dresses, or their children's school clothes, or I could tell them how to put up a lunch or wash a suit of over clothes, but for goodness sake don't ask me how to sew buttons on them, for I must acknowledge that is a thing of which I know little. I can sew them on a dress, but on my husband's clothes! Oh, don't ask me, for I am afraid some times he has to sew them on himself. "Does he grumble?" do you ask? Well, he is a man, let that be answer enough.

One Who Is Not Ashamed to Work.

[There is a great deal of excellent good sense in this letter but such a smart woman as the writer should never confess that buttons get the best of her.—Ed.]

A prominent firm of wine growers at Mountain View, California, declares the opinion that California wine cannot be sold abroad because it contains too much alcohol and is too heavy for table use.

Editor Woman's Department:

Kat, tat! Do you hear my rapping. May I come in, or do you allow interlopers?

I'm not a railroader, and it is needless to say I've been reading the *Magazine*, for how would I have the audacity to ask for admission in your circle if I had not some assurance of admittance, and then I am fortunate enough to know a few of ye railroaders and they do not appear hostile to the friendship of outsiders. I do not want to find fault with the boys, far from it; but there are a few things I have observed I should like to mention.

Why is it boys, that you become so daring when on the road? Numberless times you place yourself in dangerous positions. Surely you do not think, and why not. Ah! again, do you think of the inner life. Do you realize this body of clay is the abode of the mind—of a soul? of that function which enables you to discriminate between right and wrong? Do you think of the dangers you risk your moral self when you turn aside in the path of life?

Ah! boys, stop and think. My acquaintance has been more with firemen than any other class of railroad men. I have met very few and heard of very few being addicted to drink. Let me congratulate you for that, boys; may the Almighty, who sees all things, still guide you. But, boys, why, oh why will you flirt? I do not mean waving the hand at one that gives a kindly greeting as the great iron horse rushes by. I mean why do you make love to a girl; why do you try to win her love, and having done so, cast it aside? I suppose you say when a girl is silly and foolish enough to believe all said to her, let her be fooled. Ah! you want to harden them, do you? In other words, you would have them "tough," and still you would not have the woman you take to protect and shield from the cruel world, your wife; you would not like to have that name applied to her. Beware, boys; some one might treat your sister (mayhap all you have in this world to love and care for you in the same cruel way. Now and then you find an old fashioned yet sweet, loving girl, who does not know the ways of the world; does not know when she is receiving attention from a man that would cause her ruin, and could such an individual be called a man? Hardly, for a true man could never act thus. So, boys, be a man in every sense of the word; in character, as well as in stature. Some men think if they lose their reputation for a good character they can build it up. But, beware; you may not be able to regain the friendship and esteem of friends once lost by one act which seems to you trivial, but to the offended a black scar will be left on the once thought unsullied name. "Friendship is like broken ware, it may be mended but the scar is still there." I might call this Alpha but it may be Omega. Alpha—Omega! Which shall it be?

[Let it be Alpha.—Ed.]

NEW YORK, February 16, 1890.

Editor Woman's Department:

I have just been reading the February *Magazine* for about two hours, and have again been disappointed at not seeing anything in it about Just in Time Lodge, No. 149. The Lodge is in a prosperous condition, and the members are as jolly a set of men as you will find in any Lodge. Although my husband does not attend the meetings very often, it is not his fault. He is very anxious to go, but he has a night run and can not get off. As this is my first attempt I will close with wishing the Brotherhood success.

I remain a Fireman's Wife. Mrs. J. H. C.

KEOKUK, IOWA, March 5th, 1890.

Editor Woman's Department:

Very recently the wives of the Brotherhoods of Locomotive Engineers and Firemen conducted a social and euchre party at the hall of these fraternal organizations, on Eighth and Main streets, which was largely attended. It was for purely social purposes, and not for money making. An informal programme of music and speaking was rendered, and choice refreshments served. It is the purpose of the ladies to organize auxiliary societies to those of the Brotherhoods, and a meeting for perfecting the organizations will probably be held in the near future. Now isn't that a good idea?

PRAIRIE DU CHIEN, WIS., February 4, 1890.

Editor Woman's Department:

Our editress has invited us all to express ourselves on "How to Manage a Husband," and I have accepted her invitation. I will say if he is a *man*, this one who has promised, to love, cherish and protect you, do not manage him, help him: be his companion not his master; let him find comfort in you: be a guard and guide for him, someone on whose bosom his head can lovingly and tenderly rest. Be his guardian angel, a quiet and guiding spirit, one that he can look to in joy or sadness. Shed an influence over him of which he is not aware: enthuse him with new life and energy by your presence, stand by his side through trials, fears, joy and tears, honor and blame. Be someone to keep him home, someone to watch for his coming with beating heart and cheerful smile. While he is wending his way homeward some night it makes the distance shorter when he thinks there is someone waiting his coming, who will have missed him so long was his stay. But you, sisters, you will be looking over the *Magazine* to find some new method of managing him. Will you, my friend, when the evening lamps are lighted and you come with noiseless step and nestle on a stool beside him, and gaze up to his face while he looks into those deep, tender eyes, which to him are so still and Saint-like, so like the stars, can you have the heart to hide from him the fact that you have been trying to manage him? Do not be a manager, be a soft, mellow light, shedding your radiance on his darker surroundings, and lighting up the darkest hours of his life's work. Make yourself worth loving: make virtue the price of your favor, and if he is a *man* he will need no managing.

Nora Bull.

HINTON, W. VA., February 8, 1890.

Editor Woman's Department:

With a sad and broken heart I will attempt to write a few lines for the *Magazine* in honor of Lodge No. 236. There is nothing that I can do since the death of my brother that gives me as much pleasure as reading his *Magazine* and going on the hill, where his precious body is laid and look down upon the sodded mound and say:

O! call my brother back to me,
I cannot stay alone,
My thoughts so often come to me,
Where is my brother gone?

His engine again is looking bright
Along this lonely track;
I care not how to keep its sight,
O, call my brother back.

He did not hear my voice unkind,
He may not come to me;
The face that once like spring time smiled
On earth no more I'll see.

And has he left his friends and flowers
And must I call in vain—
And through the long, long summer hours
Will he not come again?

When by myself and in my prayers
When all my wanderings o'er;
Oh, while my brother with me stayed
Would I had loved him more.

A rose bright, brief life of joy,
Such unto him was given.
Go, I must stay alone,
My brother is in heaven.

A Fireman's Friend, Ida Tyler.

LOUISVILLE, KY., February 6, 1890.

Editor Woman's Department:

I have been a reader of the *Firemen's Magazine* for some time and have never seen an item from Falls City Lodge, No. 103. Whether the boys are backward, or a little shy I can't say, but this I will say they need not be ashamed of their Lodge, for a finer set of men never lived. Of course my husband belongs, that is the reason I speak so freely about them. Now, boys brace up and let us hear from No. 103 once in a while.

Deacon, A Fire-boy's Wife.

ESCANABA, MICH., February 23, 1890.

Editor Woman's Department:

By the time this letter reaches the noble work termed the *Firemen's Magazine*, three months of the new year will have elapsed, bringing with it joys and blessings for the Brotherhood boys all over the land, and next for mothers, wives and families. Bound together as we all are by the self-same sympathies of hopes and fears, let us unite in lifting up our hearts to God who created us, and ask Him to bless the noble Brotherhood and take charge of our dear ones through the coming year. My husband is a member of Mineral King, No. 123, which I am proud to state has a membership of eighty or more, all in good standing. They are all active, energetic and generous brothers, ready to lend a helping hand in time of need. Much has been said and written concerning the Brotherhood. Now, the heart of every member should beat with pride to know he is one of the noble order. Mineral King Lodge is undoubtedly fortunate to possess such efficient officers. Their worthy Master, M. A. Harring, is a man to be proud of, and I hope the boys will profit by his good example. Next is their energetic and trustworthy man, J. F. Burns, the Secretary—well, he is envied by all the dudes of the city, because the ladies admire him so much. If he don't keep his eyes open some young lady will capture him and run away. Collector Quin, is a fine specimen of manhood and performs his duty creditably. He is a man about five feet and a half, weighs 225 pounds, and continually after the boys, who are never aware of his presence till they feel a gentle tip on the shoulder with a smiling how-de-do. J. Rogers, Receiver, a man who always meets his brothers with a kind and smiling face, as if making the best of every thing. He continually improves each moment in the interest of their cause. Last, but not least, comes the beauty, E. McLean. Well, the girls will give him a rest. He has taken unto himself one of mother Eve's daughters, and not seeing him lately, I have come to the conclusion he is out on the mountains.

I am sorry to have to chronicle the death of an esteemed member, L. Carney. He was liked by all who knew him. He died Tuesday morning, February 18, after a brief illness of three hours. He has worked in the employ of the N. W. a number of years and was a general favorite among them all. He was well known in Escanaba, having run a switch engine at different times. Words can not express the sympathy of his friends at his untimely death. How true that in the midst of life we are in death, and it is but a step from time to eternity. We should heed and take warning. Railroad boys especially should always be prepared in case of danger. Who knows the hour or manner of our death: none but God. You may start out in the morning in the full bloom of health and return in the cold embrace of death.

Wishing the railroad boys a long and happy life is the earnest request of a Fireman's wife.

Mary.

DENISON, TEXAS, February 2, 1890.

Editor Woman's Department:

I am a reader and well-wisher of the *Firemen's Magazine* and especially interested in Lodge No. 8. On Wednesday evening, February 5, the B. of L. E. boys and their ladies gave a social at their Lodge room. It was largely attended by the boys and their families and friends, and enjoyed by all. After an hour or two of social life, mingled with music and song was passed, a sumptuous lunch, consisting of good things, suitable for the occasion was served. But the happiest thought and brightest hope of our social is that not a breath of our brave boys was tainted with intoxicating liquors. This gives great pleasure to many of us when we recall the event of the evening. May we meet socially often is my sincere desire. While bestowing my best wishes on the B. of L. E.,

A Fireman's Wife.

Rev. Eliza Frye, of Wisconsin, recently preached thirty-two times in four weeks. Miss Fry is a Methodist, and is holding daily meetings in her church at Maiden Rock.

For Woman's Department:

THE DEAD PAST.

- "Let the dead past bury its dead,"
Though the grave be watered with tears.
And our hearts be torn with anguish—
Wrung with countless taunting fears.
Let us not, with mocking cadence,
Tell of passion and of strife;
But with loving words, whose radiance
Warms some frozen heart to life,
Strive to keep some weaker sister
From the gulf of black despair,
And by kindly deeds help others
To cheerfully their burden bear.
- "Let the dead past bury its dead,"
And resurrect it not,
Lest some unhallowed touch
Be laid upon the spot
Sore with bitter memories;
Haunted by an awakened conscience
Whose voice will not be still
By the fire of human passion,
Or the force of human will.
Like the raven at silent midnight
Still chants the sad refrain,
Till the tortured heart will break
'Neath the burden of its pain
- "Let the dead past bury its dead,"
Alike from good and evil eyes,
While from the ashes of our love
Will peace triumphant rise.
Then, when the fierce blasts of life's tempest
Have bowed our haughty heads o'er,
A calm content, like an angel of light,
Will dwell in our hearts evermore.
Gently, silently, close the golden casket.
That ever faithfully will hide
The struggle of good and evil
For mastery, side by side.
- "Let the dead past bury its dead,"
With solemn voice and slow
O'er the open grave a requiem sing
Enchantingly sweet and low.
For hearts by ceaseless passion rocked
Must beat on and on forever,
Till the Angel, Death, with pitying hand,
The silver cord shall sever.
And as the earthly tenement
Shall rest 'neath the daisy-starred sod,
The soul with its crown immortal
Will return to the giver, our God.

Vita.

HORNELLVILLE, February 10, 1890.

LONGVIEW, TEXAS, February 14, 1890.

Editor Woman's Department:

I have been reading your *Magazine* with growing interest for several months. My brother is a Fireman on the Texas & Pacific railroad, and has been for three or four years. I have often heard him speak of the Brotherhood, and of joining, but I never took such deep interest in the matter until my friends, Messrs. Watts & Oden, have been furnishing me with the *Magazine*. But now I shall urge him to join, for I think it is a noble Organization, and I believe God will prosper it. I see they are speaking of changing the name to that of Brotherhood of Enginemen; I think it would be a very appropriate name, for, after a fireman is promoted—or "set up," as they call it—they lose that name, and then engineman comes in very handy. I don't think it could have a more honorable name than it already bears. How often, when we are at home in our cozy, comfortable homes, which they have made for us by shoveling coal, and the rain is falling, how many of us think of the brave boys that are out on the road? Do we breathe a prayer for them? We should all ask ourselves that question and see if we can answer without blushing. With best wishes for all the Brotherhood men, and of Lone Star Lodge, No. 70, I sign myself
Annie L. R—.

KINDNESS.

Editor Woman's Department.

More hearts pine away in secret sorrow for want of kindness from those who should be their comforters, than from any other calamity in life. A word or two will make another one happy; must be wretches indeed if we do not give them.

There is nothing like kindness in this world; it is the very principle of love, and it should be encouraged in all our intercourse with our companions, not only in the home life among dear ones, but wherever we go we should not say a word or give the expression of the countenance, that will offend another. We are surrounded by sensitive beings, which a word or look even, might fill with sorrow. So many of us lose the chance of saying a kind word by waiting to weigh our words too long. Our impulses are too delicate for much handling. Speak kindly, whether it be to an honored guest, the servant girl, the gray haired, or the young. When we find ourselves far from home and loved ones, may some kind hearted being, by kind words and acts cause our hearts to thrill with gratitude. We never know how we love our friends or how good they are till they are gone. So we must praise them while we are with them and take every opportunity even at the sacrifice of our own pleasure, make them happy, knowing those that sacrifice most are the noblest, realizing how great are our blessings when properly accepted.

Hoping you will deem this worthy of space, with kind wishes from a fireman's wife.

OMAHA, NEB., February 28.

Mrs. G. N.

MCPIERSON, KAN., February 3, 1890.

Editor Woman's Department:

I am a regular reader of the *Magazine* from the first till last, and more especially the Woman's Department. Now, if this Department is set apart for ladies why do they not talk ladies' talk, and let boys and their Lodge alone? They will take care of the B. of L. F., and one thing sure, not ask our help. I do not know whether the "369" is progressive or not, let the boys talk for themselves. Now let me tell you how I wash my husband's over-clothes. I rub the dirt all out which is not so hard to do. I rinse all the dirty suds out, starch stiff and iron the seam in the middle of the leg. The starch makes them easier to wash next time and they do not get so dirty. Were I a man I should like to receive my clothes half-washed and not ironed. But I am proud to hand my husband a suit of clothes. Will some one please give me a receipt for a cheap but good white cake, for I am like Ella C. Fee—I watch my pennies. Each wife I think knows best how to manage her husband. Kind words, a pleasant, neat home do a great deal. I wish boys success, especially those that fire a scrap of paper and they will take care of the B. of L. F. for all it causes have success. I have already made my list too long, but if I am welcome I will come again.
A Fireman's Wife.

[Do so. We are always glad to get a sensible letter.—Ed.]

TORONTO, ONT., February 12, 1890.

Editor Woman's Department.

February's number of the *Magazine* has arrived. I have read it through (commencing at Woman's Department), and it strikes me here that I'll write a letter (such conceit, when it appears in the *Magazine* (that is if it ever does) my husband will be fully surprised. I like reading the letters very much indeed, K. B.'s especially, it is what the boys call "Bully." I read it to my husband and he enjoyed it every bit as much as I.

And that "Ghost Story" it really made me shudder (but then hubby says my reservoir was always full to my eyes, for I am sure it must be true (but of course) it seems so life like. Will any of the letters tell me how to make taffy—when I make it always goes to sugar, and I get quite discouraged. I am so fond of it, too (I mean the taffy). If any letter will kindly tell me "how" I will send an acknowledgment time a nice receipt for a pudding, that is if I come again. From a Fireman's Wife
R.

EAGLE BEND, MINN., February 11, 1890.

Editor Woman's Department:

I enclose a poem for the *Magazine*. Last night I received this month's number of the *Magazine*. You cannot imagine the pleasure it affords me to read it. I think it improves with each issue. I have been intending to write a letter to the Woman's Department so often lately, but time seems to fly. I barely have time to write to my relatives. It is a mystery to me how some women can do all the work where there are children and have plenty of leisure time besides. Perhaps it is because I am a poor house-keeper. I always try to make our little home look bright and cheerful by keeping it clean and tidy. I think that goes a long way in making it a happy home. I heartily agree with that gentleman over the border in regard to women being reasonably jealous of their husbands. I think that a woman who becomes jealous of her husband over such trifles is placing her own attractions at a very low level indeed. Some people think there is no true love without jealousy, but I know that is not true because I speak from experience. I notice that Mrs. Nellie Bloom's poems, which are always so good, have a sad, hopeless ring in them lately. I have often wondered if she really felt so herself, or just mere fancy to write in that strain. She must compose readily. I haven't composed one poem since that one which appeared in the December number. I received from Mr. and Mrs. Mailloux a lovely X-mas gift, which was a great surprise to me. Indeed, I must really stop writing to-night: as usual, it is late and I must rise early in the morning. With very best wishes, believe me.

Very sincerely yours,

A. B. M.

A WELCOME TO SPRING.

We welcome thy advent, oh, sweet, vernal spring.
Fresh hope to our hearts thy presence still brings.
As the snow melts like magic before thy sun's rays
So the gloom from our thoughts is dispelled and allayed.

Though the trees are still bare and the leaflets lie
We know soon the buds will burst forth and appear.
Undisturbed though the dead leaves have lain since
last fall.
From beneath them the grass will spring verdant and tall.

What pleasure awaits us! Enjoyment will be ours.
When inhaling the sweet fragrance of the beautiful flowers.
The birds already are warbling their songs
Of praise to Him to whom homage belongs.

If all nature rejoices, then why should not we?
'Tis a privilege God bestows on you and me;
so with songs of thanksgiving we'll join in the strain,
And bless the good Giver again and again.

Mrs. C. S. Miller.

LIVINGSTON, MONT., February 13, 1890.

Editor Woman's Department:

As this is my first attempt I hope it will find a little corner in your department. The *Magazine* has grown with the years. I have a few old *Magazines* from 1878. They are very small compared with the one of the present year, and is proof of the way the B. of L. F. is prospering. I hope to see them prosper and grow stronger every year, for it is a noble Order, and God will bless such a good cause as yours. You certainly should be proud of your motto, the grandest I ever read—"Benevolence, Sobriety and Industry." How many a poor mother, wife or sister have cause to bless you for the benevolent way in which they were remembered after their dear loved ones were laid to rest. Sobriety: ah! how many live up to your precious motto! Most of you, I am proud to say. There may be a few who just step in for a "friendly glass." Let it be your last as well as first, for the day at least. If you would stop one moment before you take the next, and think, I am sure there are a great many of you who would lay it aside and be satisfied with one; but you drink the second glass and forget yourself and all who depend on the clear eye and steady nerve which

you possess. Let Sobriety dance before your eyes in letters of fire. How many poor souls who were not prepared have gone to meet their God, hurled into eternity just through a "friendly glass." It is taken and given in your whole souled, friendly way. You never think of harm until it is too late; then you may well say, "Oh, God! why did I drink the accursed stuff?" But, too late; death in its most horrible form lies before you, and around on every side.

You are an industrious class of people. Even in your most leisure time you cannot leave the engine out of your mind; you think of it always. The most of the boys of 191 are a jolly, good crowd, and temperate. Could they have a better example of their motto than Tom Brown? There are several others who are staunch B. of L. F. men, but I'll not tell their names or they may become too vain. They showed good judgment in electing Jimmie Martin for their Master. I hope you will always study and think who is the most interested in the Lodge, and then you will prosper and be proud of your good judgment. I am greatly interested in the Lodge here, as it was my husband who first proposed to start a Lodge in this place. It was a wild enough place then (six years ago), as Mr. Sargent knows, for he came here to organize the little band. Of those who then belonged there are only three left, H. Mayhew, Tom Brown and Will Field: all the others have joined the B. of L. E.

With kind wishes, hoping to see you travel on in your loyal way, I am yours ever.

Mrs. Wm. T. Field.

MEDICINE HAT, NORTHWEST TERRITORY, CANADA,)
February 20, 1890.)*Editor Woman's Department:*

We receive your interesting *Magazine* every month, but I never see anything from Medicine Hat, so I thought I would write a few lines. This is a nice little town; it is surrounded by hills, and the Saskatchewan river flows through it. There is a fine iron bridge crossing the river, built by the Canadian Pacific Railway company. Their road runs through here. We are 600 miles from Winnipeg, and two or three days traveling would bring us to the Pacific coast. We have four churches, a fine brick school house, and a large stone hospital. The brick is made here and the stone is plentiful around here. There are some very nice private houses and stores. We have an Agricultural Society, and have had two or three annual fairs. We have not very many farmers yet, but they keep coming. There is a German settlement about thirty miles from here. The people have formed a Board of Trade, and are thinking about incorporating the town. Not many of the people are opposed to it, so it is not a bad town. Seven years ago it only had a few tents; now it has about 800 inhabitants. The Firemen have a Lodge here, and gave their first annual ball on New Year's Eve. The hall was nicely decorated with evergreens, headlights, shovels and brakes, and all fixed up with bunting, so that it looked very nice, and every one said it was a grand success. I will now stop, and if I see this in print I may try again. It will surprise the boys; they will wonder who would write from here.

A Well Wisher.

PORFIERO DIAZ, MEXICO, February 13, 1890.

Editor Woman's Department:

I have noticed in reading the *Firemen's Magazine* letters from most all Lodges in the United States and Canada and thinking some one would like to hear something from 308, the only Fireman's Lodge in Mexico, I ask for a small place in your columns.

We are so completely shut out from all the world and society here in Mexico that we have become very timid and bashful and nothing would help us more than to see our first letter in print.

Our Lodge is still very young, it was organized April 18, 1889. We have twenty members in good standing, and several applications for membership. No doubt some of the many readers will laugh when they hear our Lodge room is built of mud and hay, with grass for the roof and the floor of Mother Earth.

The members are a jolly set of boys all single, but

it's not all our fault, and I will say right here that if Brown Eyes, of Bowling Green, Ky., did not get her fireman for a Xmas present and still insists on having a fireman, she can come to Mexico and if she is not a fireman's wife it will be because she says "No" when asked to fill that position, and I will say for inducement she can have her pick of most all. "The writer" has a previous engagement which prevents.

We all enjoy the Woman's Department and would not see it crowded out, for as we read the cheerful words of some fireman's mother or sister our thoughts turn fondly to our mother or sister who we know prays day and night for the safety of her son or brother. And some of us think of that one fair face and that fond farewell when we left with a promise to soon return. Will that promise be fulfilled? By some, yes; while others will meet their death in some awful wreck, but mother's prayers will help us even then.

A good many of the members of 308 are on the right hand side but they still remember when they only looked longingly in that direction and are ever ready with a helping hand to the less fortunate.

This road is 283 miles long, reaching from Porfiero Diaz to Torreon where it connects with the Mexican Central. It will soon be extended to Durango, a distance of about 160 miles.

As this is my first attempt I will not tire my readers "should it have the good luck to be printed." But if the readers care to know more of 308 and Mexico I will be happy to write again.

Like the Bro. from Missoula, Mont., I also say give the Woman's Department more room for I am proud of woman's friendship and advise. Were some of the brothers debarred from ladies' society as we are here in Mexico they would be but too glad to allow them their rights, for did man listen oftener to woman's counsel and advise it would save lots of bloodshed and sorrow. With best wishes for the Woman's Department and B. L. F., I remain

"In Mexico."

[We hope our correspondent will come again and tell us something of life in Mexico.—Ed.]

For Woman's Department.

MY MOTHER.

As I sit here in the gloaming, thinking of by gone, happy days,
My thoughts turn back to childhood and to the one who lays
In that lonely churchyard yonder many hundred miles away.

She passed away when I was but a child, knowing
Naught of mother's love.
The love of a mother's smile,
How her poor heart ached ne'er can be told
When she knew she would have to leave her children in this world so drear and cold.

In childhood sorrow must soon depart and we soon forget our trouble,
Or seem to in the lightness of our heart,
But in after years 'tis then we think of the dear ones, from whom we had to part
In our early childhood days.

Oft times when I have been on a hard run and returned tired and weak,
Returned to a cold and lonesome room with no loved one there to greet,
'Tis then I think of my mother dear who in that lonely churchyard sleeps.

Though it has been many years, dear mother, since you left us, your memory still we love,
And hope to make our life such that we can meet you in heaven above,
Where there will be no more parting in that glorious land of love.

MISSOULA, MONT., February 7.

NEW HAVEN, CONN., March 1, 1891

[Dedicated to Joseph H. Osmond, a member of No. 285, B. of L. F., by his sincere friend, Louis Gaffney Flannigan.]

Over hills and through valleys green,
By the mountain and the river side.
In the cab of his favorite engine
Does this brave young fireman ride.
He whistles a song of joy and peace
With a thought of mother and sister dear
He attends to his duty with a willing hand
And a cheery word from his engineer.
He speeds along as the north winds blow,
His cares and his sorrows are few,
For he is an honest fireman

And his best he tries to do.
With a noble heart and a sturdy frame
And a smile on his sunburnt face
I would rather grasp his toil stained hand
Than a king's, were it in its place.

Dear friend may you ever be happy
Nor know the depths of sorrow and distress
May God watch over and guard each day
The lad who "fires" the fast express.
In the long chain of memory and friendship
You are a link, Joe, I will hold most dear.
When you have made your last trip on this earth
May the golden beams of heaven shine on you clear.

WABASH, February 11, 1891

Editor Woman's Department:

I have heard a great many men ask, "What a model wife?" I hope a few may cast an eye these and see if they are right:

A model wife is the woman in whom the heart her husband doth safely trust and find rest. She makes friends and keeps them. She is the woman who looks after his household and makes her home a delight to him, and not a burden. Who learned that a soft answer turneth away wrath? Who keeps her sweetest smiles and loving words for her husband. Who is his confidant in sorrow or grief, and who does not feel the necessity of plaining her private affairs to her neighbors. Who is sympathetic in joy or in grief, and who finds work for her hands to do. Who is not made bitter by trouble, but, rather, strengthens and sweetens over it. Who knows that the strongest argument for her womanliness, and so cultivates it. Who respects the rights of her husband and children, and in return has due regard paid to her. Who tries to conceal the faults of her husband, rather than blast them forth to an uninterested public. The woman whose life-book has love written on every page. Who makes home for a man a home that he is proud of; a home that is full of love, presided over by a woman whose price is above rubles, and who, in this home, will always with a loving heart and a sweet welcome her husband at the door. And, if a man has such a wife, let him in return do and likewise to the end. She is a model wife.

Respectfully, Mrs. A. Little

LAWS FOR WOMEN.

Four women of prominence in literary and professional life, whose names would be familiar to most of my readers, have been compelled to apply to the courts for protection against their husbands who would have robbed them of their earnings while they were charged with the maintenance and education of the children. The impetuous education of wives, not alone among those whose husbands are men of small incomes, but among many whose means are ample, is one of the most fruitful sources of restlessness and unhappiness in married life. It is one of the underlying causes of frequent divorce. Only six of the United States allow a married woman to be an equal owner and guardian of the children with their father. In all other States the father is their sole owner and guardian. If a mother has no ownership in her little child she wins in the valley of death, at the risk of her own life, she is indeed pauperized, most abject, and wretched. Ah, if men were not, in most instances, better than the laws they have made for women, the world would be pandemonium itself.

THE MAGAZINE.

Rejected Manuscripts are not returned unless accompanied with required postage.

Subscriptions must begin with the January, April, July or October number, and expire with the year.

Changes of Addresses of subscribers should be reported to us promptly to insure the safe delivery of the Magazine.

Contributors are required in all cases to give their real names, not necessarily for publication, but as a guarantee of good faith.

Subscribers failing to receive their Magazines will please notify us, giving name and location of Agent through whom they subscribed.

A QUESTION OF PRIVILEGE.

"Words fitly spoken are like apples of gold in pictures of silver."

Possibly "words fitly spoken" are words timely and honestly spoken. Like a motion to adjourn, it is always in order to make words as precious, if not as pretty, as "apples of gold in pictures of silver."

We readily concede that there are members of our Brotherhood as of all other Brotherhoods who have crude conceptions of the duties, labors, anxieties and responsibilities of an editor. Nor do we hesitate to aver that their conceptions of the purposes of publishing a *Magazine*, an official organ of the order, are not a whit more lucid. And it is a stubborn fact that those who know the *least* about such matters are the most vociferous in their assumptions of knowledge. It has been written that

"The truest characters of ignorance
Are vanity and pride and arrogance."

This is our experience as editor of the *Magazine*. Such persons, fortunately, are *not* in the majority. More fortunately still, they constitute a *small minority*. But, unfortunately, they are noisy to a degree that makes life a burden. But their voices though attuned to hugag, horsefiddle and saw filing melody, could be borne with some degree of serenity, were it not for the fact that in numerous instances they are studiously discourteous, unjust and often malignant and venomous. They seem to think that the editor of the *Magazine* should be made to answer the same purpose as a "punching-bag," used by prize ring fighters when practicing for a fistic tournament, to be pounded, maligned and insulted *ad libitum*, because in their opinion he has been elected for that purpose, and is paid to take the knocks and be silent.

They seem to be wedded to the theory that it is the imperative duty of the editor to transform the *Magazine* into a slop-bucket for the reception of their malign excretions, as also a sewer to conduct them to the lodges

and to the outside world, and that the editor has no right to disinfest them or modify their objectionable character that the harm intended may be reduced to the minimum. And, forsooth, if such liberty is taken by the editor "for the good of the order," in the name of etymology and syntax; in the name of truth and decency; in the name of all things of good report among men and angels; in the name of the living and of the dead; in the name of logic and law; in the name of high endeavor and noble ambition, which have been the glory of the Brotherhood, then it is in order to pounce upon the editor with beak, and claw and fang, transform the editor's *sancium* into a slaughter house or a dissecting room and prepare the victim to be experimented upon, as a penalty for ceaseless guardianship of the character of the Brotherhood and the good name of the *Magazine*. These knights of scalpel letters, are never more delighted than when they, soliloquizing, say: "this letter will wake the editor up," and they are seldom less happy than when success has crowned their efforts. Like the esculent in the gutter, they exclaim: "How we potatoes swim," or, like the blue-tailed fly on the chariot wheel, they cry out, "see what a dust we kick up." But their felicity is short lived. The editor, exercising his prerogative neutralizes the venom of their sting, and then to say they are "miserable," but feebly express their mental condition.

But let it be understood that in the performance of such duties, in responding to such obligations to the Order, which cannot be avoided without flagrant disloyalty to the Brotherhood, the editor experiences only profound regret that such painful necessities arise. To defend the Order from outside foes is a task cheerfully performed: to be the target for the shafts of enmity and malice, aimed by men not of our household of faith arouses all our latent energies and intensifies defiance, but to be the victim of aspersions, nursed and warmed into life by Brotherhood (?) men is an affliction which ought not to be borne.

We owe the Brotherhood of Locomotive Firemen nothing under heaven but our good will, and that it has had, has now and will continue to have, in spite of the ungenerous few, who would rather "reign in hell than serve in Heaven." Men (?) who esteem it a right as well as a privilege to "knock down and drag out" in the interest of "harmony" and "good feeling," who professedly deplore wrong, and yet are hand in glove with those who perpetrate wrongs, and permit no opportunity to pass unimproved to belabor the editor of the *Magazine*, who, to the extent of his ability, has sought to gain victories for the Brotherhood. This being true, the pages of the *Magazine* being our witness, we claim, in all modesty and justice, that we have a

right to be judged by our work; that in simple fair play we have a right to claim exemption from the ceaseless attacks, direct and by innuendo, of a class of men who, for years, in convention and out of convention, in lodges and out of lodges, everywhere in highways and byways have carried the titles of "kickers," "croakers," "fault finders" and all because their natures were understood and appreciated, and because the good common sense of the Brotherhood consigned them to back seats in the synagogue.

We have said that we owe the Brotherhood nothing but good will. Official position in the Brotherhood we have never sought. It came unasked and unsought. When the Brotherhood had the means it paid us, and for the pay, it received honest work. In this, obligations are "easy." There are no balances to be adjusted.

We can live without the Order. The Order can live without our services. Again the books balance.

If it is desired to have an editor of the *Magazine* who has no opinions of his own, or, if he has opinions is too cowardly to express them, or too ignorant to put them in shape without creating a universal guffaw the Brotherhood can make the selection without the slightest embarrassment from any consideration of our position. There are men who seek to be editor. *We do not.* There are men who seek to be Grand Secretary and Treasurer. *We do not.*

As editor of the *Magazine*, let the books speak for us. As Grand Secretary and Treasurer, let the books speak for us. If improvements are desired in these departments of the Brotherhood's affairs let the Brotherhood make them.

No dollar of the Brotherhood's money has been stolen or misappropriated. The millions have come and gone, and the accounts challenge the most searching scrutiny.

The *Magazine* has fought a hundred battles for the Brotherhood and not *one* against it. Things are in excellent shape for a change. Let it come. No crape will hang upon our door knob, no corpse will be found in our dwelling, and the songs that we shall sing or whistle will not be dirges over blasted hopes or disappointed ambitions.

THE *Locomotive Firemen's Magazine* for 1890 is out with a new dress and a new cloak. The *Firemen's Magazine* never follows—it leads. It never does anything because some one else has, or because it hasn't. When an improvement is suggested, and, on investigation, looks well, it is adopted. Every New Year's since we have known it, it has come out in a new cover, and we think the last the handsomest and best. It is plain and business-like. The *Magazine* has 100 pages—and there is something worth reading on them.—*Locomotive Engineer.*

FINANCIAL AND INSURANCE INTERESTS.

The frequent allusions made by correspondents of the *Magazine* to the "decay" of the Order, to "retrograde" movements, to "hero worship," to the outrages perpetrated by the Grand Officers in "inaugurating federation," &c., &c., *ad libitum* and *ad nauseam*, must certainly have prepared the mental appetites of the readers of the *Magazine* for food better calculated to make healthy blood and stronger muscles.

This being our view of the subject, we propose giving some figures showing that the Brotherhood of Locomotive Firemen has the cheapest and best insurance system of any of the Brotherhoods of Railway employes.

It has often been urged, in opposition to the mutual insurance plan, that it was inherently weak and unreliable, and necessarily so, because totally dependent upon the *whim*, the *option* of the men holding policies to pay or not, as they might choose, when assessed. Manifestly, there is much in the statements worthy of consideration, and to the credit of the B. of L. F. it should be said that the matters involved were not permitted to pass unnoticed, and at the Atlanta Convention received attention.

The plan of insurance adopted at the Atlanta Convention absolutely silenced the question of optional payment of assessments for the payment of insurance policies. The plan adopted went into effect on the 1st day of February, 1889, and on the 1st day of February, 1890, had been in operation one year.

On the 1st day of February, 1889, every member of the Brotherhood held an insurance policy for \$1,500, and was required on, or before that day to pay to the Collector of his Lodge his quarterly dues, in advance, \$4.00 of which was to stand to his credit for the payment of assessments for the quarter ending April 30, and if the said amount was not paid in, on or before the first day of each quarter, then the member so delinquent, by the operation of the law, stood expelled from the Order. There were no dead-heads; no delinquents in the Order. It was not enough to say that if the member did not pay he rendered his policy void, but he went out of the Order—was no longer a member, and was cut off from all the benefits which membership secures.

Under such circumstances all questions previously arising as to whether members insured *would pay* are silenced. On the 1st of February all members insured *had paid*: the money was on hand, was ready to pay claims when any member died or became entitled to the amount of his policy. And what was incumbent on the 1st day of February was as absolutely required on the 1st days of May, August and November.

As a result, all doubts relating to the pay-

ment of policies certainly and promptly were eliminated. Every member who paid realized if he died, was killed or disabled, that his money was secure. It was a business proposition about which he had a right to feel secure. It involved the comfort and happiness of wife and children, dependent parents or sister. A proposition separate and apart from sympathy, fraternal condolence and brotherly acts which spring from association and fraternal regard and attest the nobility of human nature.

Having said this much we are prepared to furnish an exhibit of how the insurance

plan inaugurated by the Atlanta Convention in 1888, and which took effect February 1st, 1889, has worked.

We are also in a position to compare results with the operations of the insurance methods of the Brotherhood of Locomotive Engineers and the Brotherhood of Railroad Trainmen; and the comparisons we make, being drawn from official sources in every instance, show that the insurance of the B. of L. F. is the cheapest, and as for safety and certainty we cheerfully challenge comparison with any other plan.

EXHIBIT.

Showing the amount of Monthly Assessments made by the Brotherhoods of Locomotive Engineers, Locomotive Firemen, and the Brotherhood of Railroad Trainmen, for twelve months, beginning February 1, 1889, and ending January 31, 1890:

NAME OF ORDER.	MONTHLY ASSESSMENTS.											
	1889											1890
	February	March	April	May	June	July	August	September	October	November	December	January
Policy \$1,500, Locomotive Firemen .	\$2 00	\$2 00	..	\$2 00	\$2 00	..	\$2 00	\$2 00	..	\$2 00	\$2 00	..
Policy \$1,500, Locomotive Engineers	3 00	3 00	2 00	3 00	1 50	2 00	1 50	1 50	1 50	2 50	2 00	3 00
Policy \$1,000, Railroad Trainmen . .	2 00	2 00	2 00	2 00	1 00	2 00	1 00	2 00	1 00	2 00	2 00	2 00
												Total
												\$16 00
												26 50
												21 00

The exhibit, analyzed, shows that for the year named it cost a member of the B. of L. F. carrying an insurance policy for \$1,500, \$10.50, or 65.6 per cent. more than it cost a member of the B. of L. F. to carry a policy for the same amount. Or, a member of the B. of L. F. paid for carrying a policy of \$1,500 an amount which in the B. of L. F. would have carried a policy of \$2,484.

It is seen that a member of the B. of R. T. paid \$21.00 to carry a policy of \$1,000, which shows if the Trainman had carried a policy of \$1,500 it would have cost him \$31.50, or \$10.50 more than a Fireman paid to carry a policy of \$1,500.

Such figures cannot fail to satisfy members of the B. of L. F. that in the matter of insurance they have a plan that it would be difficult to improve upon. It is cheap, it is safe, it is business like. It challenges criticism, and the unfortunate men who suffer from defective eyesight, physical and mental, who croak of "symptoms," "decay," "hero worship," and "retrograde" movements, ought to be able to see that the Brotherhood, which causes them so much painful solicitude, is in a highly prosperous condition, financially, and that should they be required to join the silent majority their lives would receive the amount of their policies beyond a peradventure.

ANONYMOUS COMMUNICATIONS.

A number of communications, personals, verses, etc., are dropped into the waste basket every day because the *real name* of the writer is withheld. Remember that we publish nothing of an anonymous character. The writer's name must *invariably* be given, not for publication necessarily, but as a guarantee of good faith. The office basket is wide open for all anonymous communications and—don't forget it.

J. N. GALBRAITH, Esq., Superintendent of the Mexican National Railway, located at Laredo, Texas, is rapidly acquiring fame as a railroad official of large abilities and superior merit. Not only does he know how to manipulate the company's affairs to the best possible advantage, but he has a generous appreciation of the rights of the men in his employ and as a result there is mutual confidence and respect and the interests of the company are zealously guarded and promoted. Our Vice Grand Master, Bro. J. J. Hannahan, had occasion to meet Mr. Galbraith not long since and the interview was fruitful of the best of feelings. Mr. Galbraith expressed himself as being thoroughly in sympathy with the expressed purposes of the Brotherhood and it is safe to say that if our members in his employ live up to the teachings of the Order they will find in him a true and steadfast friend.

JOHN LIVINGSTON.

It is difficult to write of John Livingston as his acts and devices deserve.

It is difficult to compare John Livingston to any other specimen of animated nature.

John Livingston is a nondescript, *sui generis*. He has numerous traits, not one of which is manly. In this he differs from all the lower orders of mankind yet discovered on continent or island. He is viler than a Hottentot, more disgusting than a digger Indian. It would be a compliment to compare him to a gorilla, an orang-outang, a baboon, or any of the monkey tribe. We would not call him a dog, though he possesses some of the traits of a hound and of curs of low degree; nor is he a hog, though he has some of the scavenger traits of that animal. The American hog is valuable, particularly when dead, but, if John Livingston has any value alive or dead, we are totally oblivious of the fact. He is noisy, so is a jackass. He is venomous, the same is true of a rattle snake. He lives in a house and so do blue-tailed flies that contaminate everything they touch, until the demand is to exterminate them, just as there is a demand to exterminate the insect known as John Livingston.

We sympathize with the Inter-State Commerce Commission. The learned and dignified gentlemen composing that body, however, profoundly schooled in the philosophy of patience, must, at times, most devoutly pray to be delivered from such a compound of a rogue and rodent, wind and water as John Livingston.

This malodorous creature, has all along pretended that he is President of "the Railway Shareholders' Association," and he has played the fraud with the skill of a three card monte thief or a bunko steerer. No thimble-rigger ever played his deceptions more adroitly. He has imposed himself upon Senators Regan and Cullom and the Inter-State Commission and made them believe he was President of an association of railway shareholders, and has sent out printed copies of letters purporting to have been written by Messrs. Regan and Cullom, and which, whether forgeries or genuine, reflect precious little credit upon the writers.

But the point we make is this: that John Livingston is a brazen fraud. Let us see.

The "Railway Shareholders' Association" of which he claims to be president, is a myth; no such association exists, or ever did exist. It is a creation of John Livingston from behind which he has been keeping up a continuous fusillade at the Inter-State Commission, Senators, railways and railway employes for months past. This rogue, this impecunious rascal, this vagabond attorney and pestiferous pimp and shyster, in the name of law, has formulated all sorts of

charges and filed them for the consideration of the Inter-State Commission, ostensibly for the purpose of preventing railway corporations from exercising the right of permitting their employes to ride without charge, or at reduced fare on their railroads. In all of this, John Livingston has had but one purpose in view. As we have said, the Railway Shareholders' Association, of which he claims to be President is a fraud; a vulgar deception; a cunning device, well calculated to give the knave some standing court, and aid him in carrying out his swindling, blackmailing scheme.

There being no Railway Shareholders' Association in existence, no railway shareholder having complained, because a railway employe rode free on the trains, the whole thing being the concoction of a brazen scamp, we are forced to look about for the purpose of ascertaining in what way John Livingston, the cheat and sharp, expected to make money out of his dishonesty. No railway shareholder paid him, the railway corporations spurned him, and the Inter-State Commission must have regarded him with unmitigated contempt, and still, the impudent fellow pursued his railway employes as President of the Railway Shareholders' Association. Now comes the denouement.

Having formulated and filed all sorts of charges, as bogus President of a bogus association, and having had the same printed in the most improved and imposing style in legal documents, and having sent them to all the Divisions of Locomotive Engineers indicating that very valuable privilege were in danger, he is ready for business. He now proposes to bleed every Division of Locomotive Engineers to the tune of \$10 the following letter forwarded to us from Louisville, Ky., fully shows. If he could bleed all the Divisions of the Brotherhood of Locomotive Engineers \$10 each, he would pocket something over \$4,000. He went to Washington in the interest of the men whom he has sought to injure, and wants them to pay him for services which he proposes to render them in having the Inter-State law so amended that in the future they may ride free on railroad trains and the following is a copy of his letter in which the shyster gives himself and scheme away:

THE RAILWAY SHAREHOLDERS' ASSOCIATION
OFFICE OF THE PRESIDENT.

Direct Letters to)
JOHN LIVINGSTON, Pres., }
P. O. Box 2566, N. Y. } NEW YORK, Jan 21
PERSONAL.

Thomas Grady, C. E. :

DEAR SIR: Referring to the enclosed letter to say that your Division can secure my services as legislative counsel to promote the passage of amendment suggested by the Inter-State Commerce Commission for conferring the right to permit

members of the families of railroad employes to ride free or at reduced rates by remitting to me a fee of ten dollars, that being estimated as the fair proportion from Division No. 78 of the aggregate required for attendance at Washington, preparing, printing, circulating and presenting petitions, addresses, arguments, and briefs, and for the numerous other legitimate services and expenses in the matter.

Upon hearing from you the work will be undertaken and my best efforts devoted to carrying out your wishes.

Kindly make any suggestions desired and notify me of your views, and oblige.

Yours very respectfully,

JOHN LIVINGSTON.

We do not presume that the entire Brotherhood of Locomotive Engineers, would give him so much as *one cent* for his services, even if bond and security were furnished that John Livingston would not betray the interests of the Brotherhood, but considering John Livingston's character and methods, no amount of bonds would furnish assurances that after pocketing the money demanded, he would not, for more money, work for the other side, if there were another side to work for.

Taken all in all, John Livingston, the bogus President of a bogus association, is richly entitled to the detestation of railway employes, and of all honorable men.

WHISKERS.

Sultan and Slave.

We have on several occasions referred to the work of degradation going forward on the Philadelphia and Reading Railroad, nor have we omitted to notice the decree of Corbin, who aspires to irrevocable infamy by his autocratic rule relating to whiskers and closely buttoned coats.

The reader may desire to have as clear a comprehension of the subject as possible, and we therefore give a few extracts from newspapers printed in the Russianized dominion of Corbin. The *Easton Daily Argus* of January 9th says:

The tyrannical P. and R. railroad company has notified its baggagemasters and brakemen that they must shave off their beards at once. One of the brakemen quit the road and raised a sensation. On Supt. Bonzano's division, brakeman Wm. H. Welsh, on duty for six years, refused to take off his fine beard because he said he had throat troubles. He said he'd see Bonzano elsewhere before he'd do it. Bonzano directed Welsh to obey orders as others had done, and Welsh resigned. He says another foolish order is that compelling all coats to be buttoned up closely. This applies to all seasons, hot or cold.

A number of brakemen have already shaved off their beards. Baggagemasters are following suit. Others are still considering whether to sacrifice their beards or quit the company's service.

The brakemen and baggagemasters are at a loss to understand why they should be singled out in this "whisker order." It is said that there are several whiskered conductors and many bosses, high and low, on the road, but they have not received orders to visit the barber.

Another Philadelphia paper remarks:

The Reading must be a very windy road, or is the wind in the management! Certainly no railroad ever issued a more ridiculous order than the edict of the Reading to its brakemen and baggagemen,

against the wearing of beards. It was sent out about a year ago and only partially obeyed, but is now being enforced. A number of the men very naturally have resigned. This is only one of the many trifling orders that have been sent out from Superintendent Bonzano's office. Every train man has been ordered to keep his jacket buttoned at all times on the road. This order is imperative and has no relation to the weather whatever. The thermometer may be below zero or 100 degrees above, but the coat must be buttoned just the same.

That is the kind of literature which is issued along the line for the purpose of letting American workingmen comprehend the full meaning of the terms, "serf" or "slave," and to enable them to contrast them with such words as "freedom," "liberty," "independence," and the like words which once were dearer to Americans than life, dearer than home or kindred, but which are becoming obsolete now, meaningless, and no where more so than in Pennsylvania a proud state once, but now, a tract of country, than which, Stanley in his march across the dark continent of Africa, found no land where the nations were subjected to greater degradation—aye, all things considered, he found no tribe of savages required to submit to greater humiliations than have befallen Corbin's slaves.

The order is "shave," and off come the whiskers. The order is "button your coat," and it is buttoned, though the poor spineless victim, with less courage than a mosquito or a gnat, suffers by obedience. Thank God there were a "number of the men who resigned" rather than longer wear Corbin's collar. Here is the full text of a dispatch from Reading, Pa., under date of January 13.

The employes of a corporation have probably never been greeted by a stranger's order than that which has just been issued to the trainmen of the Reading railroad. The order is signed by Supt. Bonzano of the Bound Brook division, and is directed to baggage men, brakemen and conductors, who on the Reading system number probably 1000.

In effect it directs those who wear whiskers of any kind whatever to get rid of them by shaving them off.

Travelers on the Reading railroad, especially on the Bound Brook division, will recall the whiskered and bearded employes who are on duty on the trains. Many of these men have been on the road for many years, and a number have grown very luxuriant beards, whiskers and flowing burnisides. Several have hirsute adornments to their chin from five to eight inches in length, giving them a clerical appearance.

Now the orders are that they will have to come off.

There are probably 150 men who have whiskers, and a majority have already complied with the order.

Moustaches are allowed to stand, they, in the opinion of the company's officials, improving the appearance of the men.

Several officials who were interviewed stated that in their opinion whiskers were a useless personal adornment, not adding to a man's appearance and detracting from his usefulness as a railroader.

The best equipped roads, they say, only employ young men. Some of the men with long straggling whiskers, they say, look prematurely old, and that they do not stand in as much favor with the traveling public as clean-shaven, spruce and dandy moustached young men.

Ladies, they say, as a rule, object to be shown personal attentions by a railroad man with a beard like that of a patriarch. For these and other reasons, among them that the best railroads in the country

now employ neat-looking, clean-shaven conductors and brakemen, the order was issued, probably the first of the kind in the country.

The men are organized into orders of conductors and brakemen, and the new order has been variously discussed at their meetings, but no action as a body has been taken. A majority have already complied with the order, and now appear on duty clean-shaven and sprightly, with their moustaches wax-ended and wearing a generally better appearance than with their former long beards.

Several of the men who refused to comply with the order have been discharged.

One man told the officials that he does not intend shaving off his beard so long as President Corbin wears his, and that if such an order of things was intended to be inaugurated let the president take the initiative.

That man is no longer on duty.

As a general rule the men are taking very kindly to the order, and at many points along the line it has created a great deal of amusement. Old travelers often imagine that some of their friends are no longer on duty when they see railroaders with strange faces passing through the cars, and it was only upon being introduced or spoken to that they recognized old acquaintances.

The railroaders complain that the order is a hardship, because many of them wear a beard to protect their throats, and that it offered them a warmth around the neck.

One man who took off a long, luxuriant beard and chin whiskers caught the "grip," and is now very low with pneumonia.

The officials say that they have a right to say how their employes shall appear on the trains, and that men with long beards sometimes appear on duty not at all clean. The straggling hair is apt to catch dirt and dust, which settles on their clothing, and if they are habitual tobacco chewers the beard may be positively filthy.

The order contemplates that the men shall shave not less than twice a week, and also says that they shall keep their coats closely buttoned to the neck, and their clothing well brushed.

The Reading will soon have the dandiest set of railroad men in the United States.

The foregoing states the question fully and the reader will have no difficulty in comprehending the situation.

The point that Corbin makes, is stated as follows:

"The officials say that they have a right to say how their employes shall appear on the trains."

The term "appear" is the one that involves everything in the controversy. There may be those who will contend, if an employé concedes anything he concedes all, and hence that autocrat Corbin is sustained.

Suppose that Corbin says the conductors, brakemen and baggagemen on the P. & R. shall wear clothes of a certain color, regulation buttons and cups to match? That is a mere matter of taste involving no principle, and interfering with no natural right, subjects no man to inconvenience. It is not humiliating, it imperils neither life, health or limb. It applies only when an employé is on duty. It does not interfere with any natural, political, social or religious right. In a word, it does not touch the man as God made him. It is a mere regulation about which no grievance was ever formulated or presented.

But when the order is issued by Autocrat Corbin that his employes shall wear their coats always buttoned close to their chins,

regardless of times and seasons, regardless of health, comfort and convenience, his order should be resisted to the last.

The employé should be left to decide for himself when he will button or unbutton his coat. He should be left in such a matter to use his discretion and consult his health, comfort and convenience.

To issue an order that a railroad employé shall at all times and under all circumstances when on duty, have his coat buttoned up close to his chin, appears to all rational men as a *whim*, a mere matter of *caprice*, and it is just in this that the unspeakable meanness of the order appears. Austin Corbin, the vulgar villain, the monumental knave, the implacable enemy of workmen, growing in pride and pomp in proportion as he has been successful in his finances, conceives the idea that his slaves will appear still more like slaves and that he will be more exalted in the estimation of the cringing herd, if he can compel them to appear on parade with their coats closely buttoned to their chins. It is the whim of an autocrat, and autocrats have been renowned for such crotchets. They amuse the *court*, the *royal family*, the nobility, and when the stockholders and the bond holders of the P. & R. see to what extent Corbin has subjugated his employes, they may cry, "Long live the King."

But Corbin, not content with the "Buttoned Coat" order to regulate the *appearance* of his serfs, decrees that they shall shave off their whiskers.

When a poor devil, for any crime known to the code, is deprived of his liberty and sent to the penitentiary, he not only *appears* in regulation stripes, but has his whiskers removed and one-half of the hair on his head removed. A murderer, a rapist, a burglar, a footpad, a bigamist, a sneak thief, or any other sort of a felon—the warden of the prison issues his orders, and the convict has no choice; he simply submits. The warden of the prison, like Corbin to his employes, says he has "a right to say how his felons shall appear."

Autocrat Corbin sees no difference between a felon and an employé. He scouts the idea that an employé has any more right to wear beard than a convict or a slave, and orders them to shave. It is an autocratic whim, but it pleases the tyrant. His slaves look better, and as they have no rights that he is under any obligations to respect, the penalty of disobedience is exile and idleness.

And here we have the declaration that
"As a general rule the men are taking very kindly to the order, and at many points along the line it has created a great deal of amusement."

That announcement is, if possible, more humiliating than Corbin's decree. It shows

to what an alarming degree the work of degradation on the Reading has proceeded. The poor creatures take to tyranny *kindly*, and are *amused* as they crawl in the dirt and lick the boots that trample upon them. They sink to fathomless depths of degradation and laugh as they sink.

An esteemed friend, a member of the B. of L. E., a railroad employé, a man who abhors the semblance of tyranny, and who would welcome a fiery furnace rather than surrender a right, writes us, under date of January 13, 1890, as follows:

"I send you enclosed a subject for your matchless invective. I know you have handled the matter in the most torturing way with your pen on previous occasions, yet you are like a living spring. I never supposed outside the ranks of an army that such edicts ever issued. If America is coming to this in this generation what will a later day develop?"

Our friend is familiar with the maxim, "Like King, like people."

Corbin first struck at labor organizations and demolished them on the Reading. The employés submitted. In that Corbin gained a victory of far-reaching consequence. Then 15,000 railroad employes and 20,000 miners fell upon their faces prostrate at the feet of Corbin. Courage, independence, self respect, all—everything that distinguishes a freeman from a slave was swept away—and in slave times, in the "black belt" of the Union, in the days of block and pen and lash, there were not 35,000 slaves more abject, more degraded than Corbin's slaves. They dared not assert a right nor make a complaint. Conquered, degraded, they accepted fetters and collars, and from that day to this they have been sinking lower and still lower in the scale. As a result Corbin has grown more and more autocratic. Humiliations have accumulated until the order to shave has come, and his men "take very kindly to the order." It *amuses* them. When the order is issued to brand them they will take "very kindly" to that; when the order is issued to wear *anklets* and *wristlets* and *necklets* with bells, they will take "very kindly" to that; and when Corbin decrees to use the lash on their bare backs they will take "very kindly" to that. Why not? It is in the line of degradation. As one poor devil sees another poor devil whipped will it not be very *amusing*? In portions of Africa execution day is a gala day; a day of frolic and festivities. Why not in Corbin's Russianized dominion, where 35,000 free, enlightened, christian, American citizens, working men, dare not resist decrees such as no Congo Chief ever issued for the government of his cannibal, breech-clouted subjects.

The picture is revolting beyond the power of expression. By no possibility can words do it justice. It defies hyperbole. In its presence "our flag"—

"Flag of the free heart's only home.
By angel hands to valor given".

is a "flaunting lie." Every stripe is a serpent, every star the eye of a basilisk. And this degradation of American workmen is near Valley Forge, where Washington prayed for God's help to enable his half-clad, half-starved, half-frozen Continental soldiers to win victories over tyrants, and establish freedom, independence and equality.

Here we introduce what another Philadelphia paper says:

"Give me my whiskers or give me death!"

That is the cry of brakeman William H. Welsh, of the Reading Railroad.

An edict of the company offered him the choice of having his whiskers or his official head chopped off.

The sultry winds of this winter still whistle in the desultory manner through William's hirsute appendage, but he is no longer an employé of the Reading Railroad.

Mr. Welsh has been an employé of the road for the past six years. He has been acting baggage master on the New York express that arrives at Ninth and Green streets at 10:11 o'clock. He wears a full beard that nature parts in the middle. It is dark brown in color, and graceful in cut. It was not worn, however, as an ornament. Mr. Welsh suffered with bronchial trouble, and raised the beard as a protection to his throat.

Last year the Reading officials issued an edict ordering all whiskers off the faces of their brakemen and baggage masters. The order was only partly obeyed. This year, however, the order was re-issued and has been enforced, even to discharging employés who refused to obey the order. Yardmaster Brown, on Friday, hailed Mr. Welsh and told him that he had been instructed by trainmaster George B. Whitcomb to order Mr. Welsh to remove his beard. Mr. Welsh was indignant. His beard fairly bristled. Each particular hair stood on end. He demanded to know the source of the command. He was informed that the order came from Superintendent Bonzano.

Mr. Welsh replied that he'd see Mr. Bonzano in another, and by repute, more uncomfortable place before he would shave his face at this season of the year and make himself liable to contract a cold that might cost him his life.

Last Monday afternoon Mr. Welsh saw Superintendent Bonzano, at the latter's office. He asked if he had been correctly informed in regard to the "whisker orders." He was told that he had.

Mr. Welsh thereupon resigned. Last evening he walked out of the depot, as he expressed it, a "free man." "I would not sink my independence and manhood," he said, "by trimming my hair and beard according to the fancy or whim of a superintendent." Every train man has been ordered to keep his jacket buttoned at all times on the road. The order is imperative, and has no relation to the weather.

It will be observed that a vein of levity runs through all the accounts. The press seemingly regards the matter as trivial; as something diverting, comical; to be read and thrown aside. When, in fact, such things touch the very foundations of the rights of men, and challenge not only the best thoughts of the nation to expound them, but the best courage of the nation to defend them.

The exclamation "Give me my whiskers or give me death!" has more in it than the writer thought.

The Czar of Russia, the Sultan of Turkey, the Shah of Persia, would not dare to issue such an order to their subjects as Corbin has issued to his serfs. It would cost them their heads. Corbin does it with impunity.

His seris take to it "very kindly," and are amused. Not all of them. A number have revolted, and in that is seen the one glowing ray upon which a hope may be based, that Corbin's seris will eventually revolt.

Is it to be supposed that other railroad officials are not watching Corbin's experiments in degrading his employes? If Corbin can reduce his 15,000 railroad employes to conditions that make freemen hang their heads in shame, and mantle every cheek with confusion, why can it not be done on other systems?

The question is up for debate in all the lodges and divisions of organized railroad employes in the country.

If they can not do it, it is because they can not put out the lodge fires and scatter the membership. If they can find a place where organizations will not federate to resist encroachments upon rights, then, in due time, Corbin's methods will be employed.

In view of all the facts, we say to the brotherhoods of railroad employes, federate. Be strong—be ready. Do nothing to weaken the organizations, but rather make them invincible by federation. That done, the Corbins of the period will stand back, and railroad employes will not be ordered to button their coats to their chins, nor shave off their whiskers, nor will they be subjected to any other degradation, whether it be for the purpose of robbery, or to gratify an autocratic fancy.

We have on our table No. 1, volume 1, of the *Midland Mechanic*, published at Kansas City, Mo., by Messrs. Van Herten & Worthington. In its mechanical appearance the new candidate for public favor, admits of no improvement, and its editorial matter shows that brains have found employment, and in closing a brief salutatory the editor says:

The *Mechanic* will at all times and under all circumstances advocate not only the right, but the duty of every workman to belong to the organization of his craft.

That is the right talk, and the *Magazine* welcomes the *Mechanic* to the field of journalism, and wishes it prosperity from the start.

RAND, McNALLY & Co., of Chicago, are the publishers of "A Manual of Instruction for the Economical Management of Locomotives," by George H. Baker. The work is designed for locomotive firemen and engineers and is pronounced by those in a position to know, as especially valuable. It treats of the "source of power," of "combustion of coal," of "firing" of the formation of steam and boiler feeding," of the use of steam," of friction and lubrication," and gives special instructions in various matters. It is sold for one dollar, and is worth the money.

FEDERATION OF RAILROAD EMPLOYES.

The *Locomotive Firemen's Magazine* is not required to state, as a matter of news, that it is an advocate of federation. Its readers are familiar with the position the *Magazine* has occupied upon the question for a number of years. Were we disposed to be boastful we could, without inviting ensure, refer to the attitude of the Brotherhood of Locomotive Firemen in regard to federation, and point out that the *Magazine* had earnestly advocated the initial step taken at Atlanta long before it was taken. This, however, is not required, and is mentioned *en passant* simply to impress the reader with the fact that with us federation is not a matter of sudden conversion, but a well defined conviction which we have sought for years to impress upon the readers of the *Magazine*.

We are satisfied that federation has come to stay, because it is the rational, logical outcome of organization; because, as newspaper men sometimes say, "It fills a long felt want;" because, while its power is exerted to remove the underlying causes of strikes, it will be exercised to its utmost limit to win a strike, when as a last resort a strike becomes inevitable.

Just here, we are invited to indulge in illustrations showing the possible triumph of federated power, but the intelligence of the average reader grasps the subject intuitively. He sees at a glance that organization and federation are his only hope to secure justice in the struggle for supremacy now going forward. He sees capitalists federating, he sees corporations federating. He stands amazed in the presence of colossal power of trusts and syndicates. He notes the power of these federated combines over Legislatures, Congresses and courts. He realizes that single and alone he can not more resist their power than a hummingbird can resist a cyclone. He is ready to organize for protection. He has faith in his organization, but he soon learns by sad experience that his organization, in a contest for right and justice, does not answer the demand; that it is cloven down. He is manly, independent, self-respectful. He demanded his rights, was refused and defeated and pays the penalty of idleness and all the woes that attend idleness. In addition, he is black-listed. He is hunted down because he dared assert his manhood. But he says, "Had all my fellow-workmen in the shop struck too, a victory would have been gained." He was right. He touched a key note. What was lacking in his case was federation. The employers' alliance with scabs could defeat him, but with federation the result would have been different.

We need not be told that it requires time to educate men to adopt measures for the

own well-being. Some have to be taught in the bitter school of experience, but in one way and another men are being taught, and federation is to-day on a triumphal march. Obstacles are disappearing, and those who doubt ultimate success may be factious, but they are no longer formidable.

The *Locomotive Firemen's Magazine* and the Brotherhood it represents, was inspired by no spirit of opposition to any labor organization when seeking federation with Engineers, Brakemen, Switchmen and Conductors. These organizations, being connected with the transportation service of railroads, have, in a special degree, an identity of interests which, it is quite unnecessary to remark, ought to be cogent arguments in favor of an alliance. The organizations of Switchmen and Brakemen at once admitted the force of the reasons advanced, and promptly federated. That the Engineers will eventually adopt federation is believed, and that the Brotherhood of Railway Conductors will march under the federation flag is a foregone conclusion.

Just here it should be said for the benefit of those who, from any cause are ignorant of the facts, that the Supreme Council of the federated Orders *excludes* no organization. It should be remembered, and is remembered by all fair minded men, that the Supreme Council was an initial movement. The problems submitted to the Brotherhoods disposed to federate was not of easy solution, and yet it was solved in a way that has proved satisfactory to the great and growing Orders of Brakemen and Switchmen; these Orders having fully indorsed the action of their representatives, and when our Brotherhood meets in San Francisco there need be no doubts entertained with regard to its action.

The Brotherhood of Locomotive Firemen at no time has ignored the Knights of Labor or any other organization of workingmen, and the pages of this *Magazine* bear irrefutable proof that it has always been in strict accord with the liberal sentiments of the Order of which it is the organ.

There is an expressed desire on the part of some of our brothers that the Supreme Council should revise its laws. Those who have suggestions to make in that line should put them in proper form for submission to the Supreme Council at its meeting in Chicago in June next, and we have no hesitancy in saying they will be accorded the most respectful consideration. We are in favor of revision, in some regards, which we shall have to outline as best we may.

We are in favor of the organization of all railroad employes, and when organized, we are in favor the federation of such organizations for mutual protection. That our proposition may be fully understood, we give herewith a list of the various trades or callings of railroad employes, as follows:

1. Baggage Men.	29. Flagmen.
2. Blacksmiths.	30. Freight Checkers.
3. Boiler Makers.	31. Gate Tenders.
4. Boiler Washers.	32. Grate & Pit Cleaners.
5. Bolt Cutters.	33. Hostlers.
6. Brakemen.	34. Laborers.
7. Brass Finishers.	35. Lump Cleaners.
8. Brass Moulders.	36. Machinists.
9. Bridge Carpenters.	37. Machine Hands.
10. Bridge Tenders.	38. Masons.
11. Cabinet Makers.	39. Moulders.
12. Car Checkers.	40. Painters.
13. Car Cleaners.	41. Pattern Makers.
14. Car Distributors.	42. Pumpers.
15. Car Inspectors.	43. Road Men.
16. Car Oilers.	44. Spring makers.
17. Carpenters.	45. Switchmen.
18. Car Sealers.	46. Tally Men.
19. Car Tractors.	47. Target Men.
20. Car Repairers.	48. Tinsmiths.
21. Car Wheel Drillers.	49. Trucksmiths.
22. Coal Heavers.	50. Employes Car Shops.
23. Conductors.	51. Upholsters.
24. Coopers.	52. Warehouse Men.
25. Coppermiths.	53. Watchmen.
26. Engineers.	54. Wheel Pressers.
27. Engine Wipers.	55. Wood Machinists.
28. Firemen.	56. Yard Men.

In the foregoing we have 56 different employments, 56 classes of workingmen. We would have them all organized. Some have organizations, viz: Brakemen, Firemen, Conductors, Engineers and Switchmen. Machinists and Blacksmiths are also organizing, possibly some others. Here we have fifty classes of railroad employes who are not organized. Some of them belong to the Knights of Labor. This is doubtless the case, but whether in district or mixed Assemblies we do not know. But this aside, we would have them organized as railroad employes, and when so organized we would have them, if we could, all marshaled under the banner of federation.

Our suggestion is not that there shall be 56 organizations, nor is it required. The Firemen's Brotherhood includes firemen, hostlers and engineers; the Trainmen's Brotherhood includes brakemen and conductors. We see no reason why the fifty-six classified employes might not be so organized that they could federate. The subject is eminently worthy of consideration and discussion. To some, difficulties may appear inseparable, but to our mind obstacles could be removed without great difficulty. The first question to be considered is, is it desirable? Is it in the line of prudence? Ought all workingmen, for their own protection, for their own welfare, be organized? Ought the whole army of workers to be in a position to claim their rightful share of the wealth they create? Organized labor to-day answers these questions affirmatively. That settles the question, clears the way and invites to work.

Current estimates place the number of railroad employes of the country at 1,000,000. If this is correct, at least 800,000 of them are working men, and here comes the startling fact that not more than 100,000 of them are members of labor organizations. Were all organized, and were all the organizations

federated, railroad strikes would disappear from the land as if by a decree of Jehovah, and peace would be everywhere established. To bring about organization, harmony should prevail in the ranks of organized labor. One high and holy purpose should animate all, that of increasing the efficiency of organizations already established, and of bringing all workingmen who are standing aloof from organizations under their beneficent influence. For the consummation of an end so desirable this *Magazine* will contribute to the extent of its ability.

It is a fact well understood that the organization of Knights of Labor, by virtue of its system of "mixed Assemblies," is in shape to organize the various classes of railroad employes. If that great order should seriously consider the question of federation with other organizations of railroad employes, we do not doubt that a satisfactory plan could be formulated. Its organization is peculiar, and its purposes in some respects different from all other labor organizations, but with the clear-headed and far-sighted capabilities of T. V. Powderly, the Grand Master Workman of the Order, a plan of federation might be suggested satisfactory to all parties. We are not in a position to speak advisedly upon the subject, but certainly the idea is eminently worthy of consideration, and only good results would follow discussion conducted in a spirit to promote the welfare of wage workers.

TRAINMEN'S JOURNAL FOR MARCH.

We have on our table the *Railroad Trainmen's Journal* for March, and a superb number it is, exhibiting improvement in every department, and showing that a man is at the helm who appreciates the wants of the Brotherhood in the make up of its official organ.

Commenting on the Queen & Crescent affair the *Journal* says:

There is something very striking and important in the settlement of the trouble on the Queen & Crescent at Cincinnati. It is true the men did not receive what they should have received, but that they received anything is a very important fact. Many times have corporations done what the Queen & Crescent tried to do—discharge men without cause—and seldom have they been called to account for it. That this company was fairly and squarely forced to arbitrate the question, and by the board of arbitration compelled to make some reparation for the wrong done, is a fact that marks an epoch in the history of organized labor. *A precedent has been established.* A board of arbitration, fairly chosen, has decided that the employe has a right to the position he faithfully fills, and that the company must respect it.

The skill and diplomacy with which this difficult matter was handled and which led to such a gratifying result, must be a source of much satisfaction to the Brotherhood of Railroad Trainmen and the Brotherhood of Railway Conductors. Grand Chief Arthur and Grand Master Sargent deserve great praise for their prompt action and promises of support; but to Grand Masters Wilkinson and Howard must be given the credit for an exhibition of the most adroit management of a difficult question that has marked a notable event in the labor world for

many a day. Their success in showing up the injustice of the case before the board of arbitration when taken by surprise and pitted against a great corporation lawyer, is a triumph of which the two Orders may well feel proud.

It is such victories over a policy of wrong and injustice that speak trumpet tongued for federation, and as we know are having their rightful effect upon the minds of all thinking workingmen. The *Trainmen's Journal* and the *Switchmen's Journal* are doing a grand work for federation, and the Orders which they represent take a correct view of the situation.

GRAINS OF GOLD.

The Philadelphia *List*, "grains of gold," have been burnished a little as follows:

The slow tortoise made a long journey by losing no time and by taking the shell road.

A perfectly natural man is generally a perfectly honest man. But it is perfectly natural for some men to be dishonest.

The wages of sin is death, and there's no kick for higher wages. But there is an awful sight of kicking about pay day.

It is industry more than birth that lifts a boy up in this world. Not on the Philadelphia & Reading when Austin Corbin reigns.

"All the world's a stage," and there are lots of bad actors on it. They ought to be stage struck—and knocked out.

Habit renders wrong doing of any kind, a sort of second nature. And of the baser "sort."

An evil intention perverts the best actions and makes them sins. But fortunately when the "best actions" are performed it is an unwelcome task to hunt for "evil intentions."

The up and downs of life are better than being down all the time, unless a man is following a gold lead, that pans out a cool million to the ton.

Experience is the name men give to their follies or their sorrows. Except those who having had one devil cast out of them go straightway and take in seven other devils worse than the first.

Genuine cheerfulness is an almost certain index of an honest heart. A virtue practiced largely by bunko steers.

After you have learned to think, the fewer books you read the better. And when you have fully mastered the thinking art reading may be dispensed with, and your library may be sold to the second-hand book dealer.

It is paradoxical and yet true that sickness often lurks in well-water. Jay Gould understands that when he waters his stock.

As certainly as your Master's love is for you, His work will be upon you, and some times a master work is upon you, when the master is despised, as in the case of Corbin's slaves.

APPEALING TO CÆSAR.

Mr. Blackstone, President of the Alton railroad, has issued a report relating to the affairs of his road for the year 1889, in which he discusses at length the unfriendly character of what he calls "railroad legislation" by Legislatures and by Congress during the past two years. This legislation, in the opinion of President Blackstone, has been productive of the most disastrous consequences. Commenting upon Mr. Blackstone's utterances and conclusions, a contemporary summarizes as follows:

President Blackstone, of the Alton road, in his annual report for 1889, just issued, dwells at some length upon the unfriendly railroad legislation on the part of both the national and state governments during the past few years, and the disastrous effect of such legislation upon rates and the values of railroad property. Speculative promoters and contractors who construct unnecessary or unprofitable lines abroad, state railroad commissioners who are authorized to fix reduced maximum rates, and finally the inter-state commerce law, with its long and short haul clause, have caused the loss of millions of dollars to the shareholders of the older lines. Mr. Blackstone avers that the great problem with which seven-eighths of the railroads of the country have now to struggle is not how to make a profit, but how to maintain an existence and keep out of bankruptcy. He does not see any hope of relief in legislation, because it is the business of the politicians to create popular prejudice against the management of the railroads, and the dissatisfaction of the people reflected in laws which place the roads in the position of half-starved servants who must be thankful for such crumbs as their masters may permit them to receive. The remedy which Mr. Blackstone suggests is a radical one, viz.: the ownership of all the railroads by the National government, and the organization of a corps of railroad operators who shall remain in service during good behavior and be in no degree under the influence of politicians and political parties than are the officers of the army or navy. He suggests that the government could pay for the roads by the issue of bonds bearing a rate of interest not exceeding three per cent. per annum, such bonds to be paid by the annual application of a sinking fund to be derived from the net earnings of the roads. His idea is that the principal of the bonds could be paid at the rate of about one per cent. per annum. If this could be done, in one hundred years the government would own the roads free of debt, and would be deriving therefrom a large income.

Railroad corporations, that is to say the men who control the corporations, who are watchful of railroad operations, will read with far more interest than outsiders what Mr. Blackstone says of "seven-eighths" of the railroads striving to maintain an existence rather than how to make profits. If Mr. Blackstone's views are to be accepted as correct, then of the 160,000 miles of railroads in the country, not more than 20,000 miles are making profits, and 140,000 miles are operating on the ragged edge of bankruptcy.

The estimate is, that the railroads of the country, say 160,000 miles, represent a cost of \$8,000,000,000, or \$50,000 a mile. In this estimate lies the trouble. From the date when the first wheel is turned on a railroad, we speak of the rule, the effort is to make the road earn dividends, or profits, on water, which constitutes about one-half of the es-

timated value of the roads—\$8,000,000,000 or \$4,000,000,000. Squeeze the water out of the estimated value, determine to earn dividends on *actual* values, and Mr. Blackstone's troubles all disappear.

One purpose of legislation, by states and by Congress, is, if possible, to relieve the people from paying dividends on water.

One way of building a railroad is to get a man of means to subscribe, say \$50,000. For this he receives \$50,000 in stock, \$50,000 in first mortgage bonds and \$50,000 in second mortgage bonds—or for his \$50,000 he receives obligations amounting to \$150,000—\$100,000 of which is water, so muddy that only the man who holds it knows the value of it. It is easy to see that in a great many instances the effort to operate the road so as to declare dividends on the water as well as on the money, must prove a failure. Under such circumstances the "ground floor" operators never lose anything, they simply take the road which is worth all the cash invested, and proceed with the business. This is an everyday transaction. The courts are constantly called upon to adjust such matters and the capitalists who hold the first mortgage bonds take the property and the unsuspecting gudgeons are artistically frozen out. The shorn lambs may bleat, but they may as well appeal to a blizzard on the plains of Dakota to modify its caresses.

Those who own railroads, strange to say, like a large amount of water in the stock. Changing water into wine was regarded as a notable miracle; changing water into railroad stocks and bonds, and making it pay dividends is an everyday transaction in these latter days, which, though not a miracle, is known to be financial juggling worthy of a Hindoo fakir.

It has never been the purpose of legislation, either state or national, to prevent a citizen from making profits on honest investments, it is not the purpose of the Interstate Commissioners, but it should be the purpose of legislation, state and national, to guard the people as much as possible, in all cases where the people grant the privileges, from paying dividends on water, and we think this good work once begun will be bequeathed from *blinding* sun to son, until the people will be required to pay dividends only upon cash investments, and not upon water.

As for the proposition for the Government to purchase all the railroads of the country we can see without the aid of an eye glass that the railroad owners would readily consent if the Government would buy all the water there is in their estimated value—say \$4,000,000,000—but for the present such a proposition need not be discussed.

The time may come when railroad employees will be mustered into the service as men are mustered into the army, and in so

doing become, as soldiers become, a part of a machine to silently and submissively do the bidding of superiors. That seems to be President Blackstone's idea. On the Philadelphia & Reading railroad Austin Corbin has made some headway in that direction. Men are ordered to abandon their organizations and they obey like slaves. They are ordered to shave off their whiskers to please an autocrat and they submit to shears and razor. Men are ordered to button their coats to their chins, and that too, is submissively obeyed. But notwithstanding such dark spots on the sun of labor; notwithstanding the degeneracy of some, there are millions of men who will not fall down and worship the images the Corbins set up, and will readily accept the fiery furnace rather than yield their conviction and their manhood. This Government of the people, by the people and for the people, must undergo a radical change before it will enslave the people.

SICK OF CORBIN.

The *Union*, of Philadelphia, in a late issue says:

The stockholders of the Reading Railroad Company are sick of Corbin, and on Monday last tried to bounce him from the presidency of that concern. But by a little scheme of his, called a "voting trust," he is still in the position. He is using his position to aid another railroad, in which he is a large stockholder, at the expense of the Reading. He is nearly at the end of his string, and the sooner he is kicked out the better. The misery this scoundrel has caused in the coal regions cannot be estimated, and his dastardly treatment of the men in the employ of the Reading railroad and the Reading Coal and Iron Company will cause his name to be execrated by all honest men.

To say that the stock holders of the Reading railroad are "sick of Corbin" is an extremely mild way of putting the fact, that they have made up their minds to give the disgustingly malformed wretch the grand bounce. "Sick of Corbin!" We should say. He is the only extant specimen of living carrion on the continent.

We have on our table No. 2 of the *Western Railway*, published at Denver, Colo. It is a continuation of the *Frog*, a publication justly esteemed as one of the most spicy, witty and reliable of the railroad publications of the country. Regarding the change of name, which has been made, the editor says:

The *Frog* had gained a name and welcome for himself by many a fireside, and it seemed like treason to turn him out in the cold. But then it was thought that the name was somewhat of a puzzle to the non-railroading mind. What sort of a paper could be called the *Frog*? Was it a natural history magazine, or a French cooks' journal, or what? So the change was decided upon. But we assure our kindly readers that the blood of the old amphibian will still run in the veins of the *Western Railway*.

The "new head" is exceedingly appropriate, and the illustrations life-like. We wish the *Western Railway* a success that shall meet the most sanguine expectations of the publishers.

THE RAILROAD TRAINMEN'S JOURNAL.

The January number of the *Railroad Trainmen's Journal* under the editorial management of L. W. Rogers, is on our table. It is in all regards such a publication as ought to please every member of the great Brotherhood of Railroad Trainmen. We would not be over florid, but the number of the *Journal* before us, is eloquent of a purpose fraught with incalculable good, not only to the Order of which it is the official organ, but to the great interests of organized labor in every department.

Mr. Rogers brings to the task he has assumed, great familiarity with labor questions, broad views, quick perceptions and a vigorous style of expression. He writes like one to the manor born, and the first number under his administration is satisfactory proof that the following issues will be still better.

In his "introductory" Brother Rogers refers to what he felicitously calls "the domestic relations of the *Journal*"; that is, its relations to the members of the Brotherhood." He points out a number of things of special importance, and adds:

"When elected to the position, it was undoubtedly supposed that I had firmness enough to do what appears to be best for the prosperity of the *Journal*. * * * I wish to set all controversy at rest by saying, courteously but pointedly, that during my term of office, I shall be the editor and manager of the *Journal*, answerable only to the Brotherhood in convention assembled for my policy and decisions."

These are words "fitly spoken," and we congratulate Editor Rogers upon the eminently rational view he takes of the matter. The greater the success of the *Trainmen's Journal* the more delighted will be the *Locomotive Firemen's Magazine*.

THE U. P. E.'s MAGAZINE.

We acknowledge the receipt of the March number of the *Union Pacific Employe's Magazine*, containing several allusions to the *Firemen's Magazine*, together with two or three dissertations on federation. It would be gratifying if we could say of the writer:

"He was in logic a great critic.
Profoundly skilled in analytic.
He could distinguish and divide
A hair 'twixt south and southwest side."

But that would be such an indulgence in hyberbole as would make Munchausen blush. Nevertheless, we have been amused, if not instructed, and realize that

A little nonsense now and then,
Is relished by all workingmen.

The clown and the trick mule are not to be sneezed at, not even when "LaGrippe" is epidemic; and when the circus comes 'round, and we are invited to witness the performance, there is no good reason why we should not go in and laugh with the rest of the boys. For such entertainments we acknowledge our indebtedness to the *U. P. E.'s Magazine*.

Write as we may, select as we may modern or ancient standards of beauty and purity of style, our esteemed contemporary will have it that it is "blackguardism." That motion, to the distorted vision and imagination of the *U. P. E.'s Magazine* editor, is a perpetual motion. It is the "Supreme" thing that prevents his ideas from federating. "That motion" and that "Supreme" tosses his ideas about, helter skelter, like corks, when gutters are on the rampage. The references to a "Grand Chief," "King George," a' that, are thrown in to give effect and to exhibit the prowess of the writer in the character of an iconoclast. With his acorn helmet on, and

"His cloak, of a thousand mingled dyes.

Formed of the wings of butterflies,"

with his shirt front studded with the heads of glow worms, a clam shell for a shield, and the captured sting of a dead wasp for his quivering lance, the *U. P. E.'s Magazine* editor goes forth to annihilate things, and yet "that motion," that "supreme" and that "federation," and a' that remains. In the way of fun, nothing could be more funny.

FEDERATION AND CO-OPERATION.

We have received the following communication, which explains itself:

BUCKEYE LODGE, No. 239, {
DELAWARE, OHIO, January 1, 1890. }

Editor Firemen's Magazine:

Several engineers have asked me which I wanted, Federation or Coöperation? I have told them Federation, of course. They object to it, but seem to be in fa- of coöperation. Now, will you explain through the *Magazine*, the difference in the meaning of the two words?

The terms "federation" and "coöperation," in some regards, express the same idea, as for instance, help, assistance, work together. Lexicographers, however, in defining the terms, make a broad difference in their meaning. Webster, in defining "federation," says:

"Federation—To establish by treaty or league; the act of uniting in a league; Confederation: a league; a confederacy. a federal or confederated government."

In the foregoing we have the terms "treaty" and "league;" "to establish by treaty or league." Federation can be established only by a "treaty" or a "league." What is a treaty? Webster says:

"Treaty—an agreement, league or contract, between two or more nations or sovereigns, formerly signed by commissioners properly authorized, and solemnly ratified by the several sovereigns, or the supreme power of each state; an agreement between two more independent states."

Of the word "league" Webster says:

"League, a combination or union of two or more parties for the purpose of maintaining friendship, and promoting their mutual interest, or for executing any design in concert. An alliance or confederacy between provinces or states for their mutual aid or defense; a national contract or compact."

In defining "federation" and its syn-

onyms, it is seen that whether the term "federation," "confederation," "treaty" or "league" is used, there must be a compact, a contract, a formal, written agreement, signed, sealed and approved. There must be no doubt as to stipulations and obligations. The parties to the federation must fully comprehend the extent of the guarantee, concessions and compensations. This done, the parties to the federation have a fair field before them, and doubts and embarrassment are removed.

In establishing federation the parties to the treaty, league or alliance are supposed to have certain interests in common, mutual interests, the federation is formed to guard, protect and defend their interests at any time and at all times when they are in peril. The treaty will definitely designate such interests as are mutual, and all others will be left to the control of the contracting parties.

Now for Coöperation. Webster says:

"Coöperation—the act of coöperating, or of operating together to one end; joint operation; concurrent effort of labor."

As we said in the start, the terms "federation" "coöperation," in some regards, express the same idea, but under widely different conditions. Coöperation is optional. At any time when assistance is required, under coöperation it is left to one's wish or choice whether or not such assistance shall be rendered. If the person whose help is demanded prefers not to bestow it, his preference in the matter is final, and from it there is no appeal.

This is not the case in federation. In the federated compact or union, the mutual interests are defined and the course of action to be followed is clearly expressed and the dangers and jeopardies incident to choice, with or without preference, are removed. The occasion is provided for and the course of action outlined so that there can be neither mistake or hesitancy.

It may be said that coöperation relates specially to individuals; federation to States or organizations. The former is a matter of preference; the latter, of sharply defined obligations to which the parties have subscribed.

It has been said by members of one of the organizations of railroad employes, "We can help along under coöperation." Who can help along? Is it intimated that as individuals they could do any good now were they so disposed? It is well known that such propositions are worthless. It is only when the State or the Brotherhood acts that beneficial results are accomplished. Suppose an organization of railroad employes should say, "We will coöperate with other organizations when mutual interests are in peril, when the right is being cloven down and the wrong exalted."

In response to such a proposition, suppose

it were asked, "Will you sign a contract? Will you obligate your Order to coöperate when called upon?" Suppose the reply is affirmative; that the compact is made and signed. Then a *league* is formed, a treaty is signed and federation is established. On the other hand, suppose the organization professing willingness to coöperate, will not obligate itself to coöperate, preferring to leave it to chance, to caprice, to the *way they feel about it* when their assistance is wanted? Is it not plain to every thinking man that coöperation amounts to nothing in the supreme hour, when for the lack of help the wrong triumphs and the working man suffers.

A COBRA CORBIN IN CALIFORNIA.

Men Ordered to Abandon Their Organization— The Penalty of Disobedience Being Idleness.

LOS ANGELES, February 2, 1890.

Editor *Firemen's Magazine*.

"Inclosed you will find a clipping from one of our daily papers, containing a notice of an order issued by one J. C. Robinson, Vice President and Superintendent of our cable car road, upon which we would like to have your opinion through the *Magazine*. The employes on the road mentioned are a good set of men, and we think the Vice President is a little hard on labor organizations."

The foregoing communication is signed by two members of the B. of L. F., and we take pleasure in responding to their request, in giving our opinion of the matter to which our attention has been called.

It appears that the men employed on the cable car road of Los Angeles concluded to organize for mutual protection, and that very soon thereafter an incident occurred, which they deemed it admissible to discuss in the meetings of the organization. This fact coming to the knowledge of J. C. Robinson, Vice President of the road, he at once proceeded to issue the following infamous order:

WHEREAS, It is stated that a certain Association has been formed by gripmen and conductors without having, in any way, consulted with or obtained the sanction of the Company, it is deemed that such Association is detrimental to the best interests of the men themselves, and is being used for purposes that are in direct opposition to the rules of the Company. Notice that no gripmen, conductors, or other employes being a member, or in any way connected with the Association referred to, can, after date of this notice, remain in the service of the Company. Resignations, with the usual seven days' notice, on renunciation of the Association, must be addressed to the undersigned before March 1st.

Should employes desire to become members of a proper and substantial association, a mutual sick and benevolent society, to be formed for the good of the whole staff, the company will be pleased to render every possible facility and support in the successful administration of such organization.

By order of

J. C. ROBINSON,
Vice President.

As soon as practicable, the employes of

the road met to discuss the situation, and a local paper remarks that "a majority of the men seemed to be in favor of going on a strike, but it is hard to tell what will be done, as some of the cooler-headed ones were strongly advising more pacific measures."

We are not advised as to the outcome, but it is not improbable that a large majority of the men, possibly all of them, have abandoned their organization and accepted the Robinson-brand, and the next order, *a la* Corbin, will doubtless be to "shave, cut their hair short, and button up their coats." It appears that Robinson, anticipating resistance, had provided himself with a gang of scabs to take the places of the men should they dare to assert their manhood. Our opinion is, that the fellow Robinson is a contemptible catfiff, a Bonzano No. 2, a creature who, dressed in a little brief authority, excites the abhorrence of all men of the least self-respect. It is a sort of degradation to work for such a base fellow under any circumstances, but to abandon a labor organization for the privilege, is abasement to a degree that defies prudent characterization.

THE SAILORS.

The New York *Dispatch* prints the following:

It is just barely possible that there will be a gigantic strike in this city in April. A young Englishman, named George Watson Reid, came over here recently and formed Sailors' and Firemen's Unions in this city, Brooklyn, Jersey City and Hoboken. These bodies formed a Central Organization called the Maritime Labor Exchange. The latter sent a circular to the Maritime Exchange notifying it that beginning with April, the Union scale of wages would be as follows:

Oilers	\$50.00 per month
Firemen	45.00 per month
Coal Passers	35.00 per month
Sailors (on steamships)	30.00 per month
Sailors (on sailing vessels)	25.00 per month

The Maritime Exchange has taken no action, and hence the Union proposes to hold a conference with ship-owners and representatives of steamship corporations to-morrow (Monday), with a view to inducing them to pay the scale. Some of the American Lines already pay the rates asked, but the Union threatens to strike on any line which does not agree to pay the rate by the day fixed.

This item is worthy of note, because it indicates that the work of organization among workers—wealth creators—is going steadily forward. The movement means business. Organization is the initial work, then comes federation, and with federation, victory, fair play, justice.

T. V. POWDERLY, Grand Master Workman of the Knights of Labor was arrested in January at his residence, while sick with "La Grippe," for defeating one Callahan, who was a candidate for Congress. If every defeated candidate for Congress, should follow the example of Callahan, business would be exceedingly brisk for judges, lawyers, constables, bailiffs, etc.

THE EIGHT-HOUR DAY FOR ALL GOVERNMENT WORK.

We have received the following circular which explains itself:

OAKLAND, CAL., February 3, 1890.

To All Organized Laboring Men of the U. S. Greeting: Your attention is called to the fact in addition to the enormous amounts annually and ordinarily expended by the U. S. Government for Government Buildings, River and Harbor Improvements, etc., that there are bills before Congress providing for the appropriation of some five hundred million dollars for a Navy, Coast Defenses, etc.

Now, as you are well aware, that on the first of May next, a great many of the trades unions and other labor organizations of this country intend to move for the establishment of eight hours a day's work and knowing your organization to be heartily in sympathy with all movements having for their object the improvement of the conditions of those who toil, we would call your attention to the following matter.

In 1868, twenty-two years ago, our Congress passed a law making eight hours a day's work on all government work.

After the lapse of several years public opinion became sufficiently aroused to compel the executive department of the Government to enforce the law on all work done directly by the Government. No attention has, however, been paid to this law in letting contracts for Government work and all Government contracts are let and carried out in violation of the spirit if not of the letter of the law.

We believe that a concerted move of organized labor at this time will cause the enactment of a law compelling the insertion of an eight hour clause in all contracts for Government work, and it is needless to say this would go far towards the victory or a general eight hour day, aside from the inestimable value it will be to the laboring men who will carry these contracts into execution.

Therefore we request your organization to petition Congress and also instruct or request all subordinate bodies connected with you to petition their respective members of Congress for the enactment of a law embodying the above clause. Believing that by an earnest and general effort all U. S. work can be placed on an eight hour basis, and believing that it is the duty of every labor organization to forward in every possible way, the gaining of shorter hours for those who toil, we earnestly request your assistance in this matter.

Fraternally yours,

OAKLAND UNION, No. 36,

United Brotherhood of Carpenters and Joiners of America.

[SEAL.]

S. H. TUCKER, President.
C. L. INGLER, Secretary.

We most heartily indorse the movement inaugurated by the Oakland Union of the Brotherhood of Carpenters and Joiners. There should be a united effort on the part of all labor organizations to secure the eight hour day for all government work, and for all other work, and since eight hours constitute a day in all Government shops, the law should prevail when government work is done by contract.

We acknowledge an indebtedness to Wm. E. Lockwood, Esq., of Philadelphia, for a copy of the Journal of the Franklin Institute, devoted to science and the mechanic arts. It is in all regards a superb publication, and Mr. Lockwood has our thanks for his thoughtfulness and generosity.

NEBRASKA has more railroad work actually under way, than any other state of the northwest; about 900 miles.

Literary Notes.

Marion Harland, the friend and helper of women everywhere, has taken up the work of restoring the ruined monument marking the burial place of Mary the mother of Washington.

One hundred years ago this venerable woman was interred in private grounds near Fredericksburg, Virginia. In 1823 the corner stone of an imposing memorial was laid by President Andrew Jackson. A patriotic citizen of New York assumed the pious task, single-handed, but meeting with financial disaster, was compelled to abandon it.

Marion Harland says truly—in her appeal to the mothers and daughters of America to erect a fitting monument to her who gave Our Country a Father—that “the sun shines upon no sadder ruin in the length and breadth of our land, than this unfinished structure.”

The publishers of *The Home-Maker*, of which Marion Harland is the editor, offer as their contribution to the good cause, seventy-five cents out of every annual subscription of two dollars to the Magazine sent in during the next six months. Every such subscription must be accompanied by the words, “For Mary Washington Monument.”

The offer is generous and should meet with an enthusiastic response.

A. B. Richmond, the author of “Leaves from the Diary of an Old Lawyer,” etc., has written a striking paper for the *March Arena*, entitled, “Is there a Tomorrow for the Human Race?” Judge Richmond is one of the most prominent criminal lawyers in Pennsylvania, and is accustomed to weigh evidence, and sift facts with severity born of a long life in the examination of evidences. What comes from his pen, therefore, is interesting, aside from the brilliancy of his style. In this number also, we find papers by Rabbi Solomon Schindler on “The Present Aspect of Religious Thought in Germany;” “What is Religion?” by Junius Henri Browne; “Rum and the Rum Power,” by Rev. Howard Crosby, with full page photogravure of Dr. Crosby; “Pan’s Revenge,” a poem by Rev. Minot J. Savage; “Divorce and the Proposed National Law,” by H. H. Gardner, the first of a series of papers, giving the liberal side of this great problem; “Debuts in San Francisco and London,” by Helena Modjeska, with a fine photogravure of Modjeska as Ophelia; “The Extinction of Shakespeare,” by A. C. Wheeler (Nym Crinkle); “The Alienist and the Law,” by Emily Kempin, LL. D.; “Constitutional Liberty,” A. A. Chevallier; “The Glory of To-day,” the first paper in the No-Name Series; “The Divinity of the Bible,” defended by Rev. George B. Cheever, D. D., and the first instalment of “Ungava,” the new prose-poem by W. H. H. Murray. For a variety of interesting themes, ably discussed, and for freedom and hospitality of thought, *The Arena* has no peer among our great magazines.

We acknowledge the receipt of a book bearing the title of “Judas Exposed,” from the Utility Book and Novelty Co., Chicago. The book deals with the “Spotter System,” and it is said “will be of vital import to all classes connected with operating railroads.” While it is asserted that it “is necessary for managements to use all possible safeguards towards guaranteeing the proper conduct of their business,” it is also concluded that with this “Spotter System, as it is called, many evils have arisen, and innocent parties have had to suffer. Dishonorable methods have been employed by Agencies in furthering their business. Inexperienced and negligent men are taken into service and clerks have been sent to railroad officials in which fabricated statistics of results accomplished by the Agencies stated to obtain patronage.” “Spotter System” should be thoroughly understood, and its infamies exposed. It has not one redeeming virtue, and should not be practiced outside of Russia and other despotisms. The book contains 200 pages, and can be had for 50 cents. It is well worth the price.

The Brotherhood.

Correspondence concerning the Brotherhood is solicited for these columns.

Communications should be written on one side of the paper only, and forwarded so as to reach the Editor not later than the fifteenth day of each month.

CHAPLEAU, ONT., March 1, 1890.

Editor *Locomotive Firemen's Magazine*:

I have read the *Magazine* for the past two years and as yet have not seen anything from Snow Drift Lodge, No. 321, so if you will allow me a small portion of your valuable space, I will break the ice and try to let the brothers know we still exist. Since you have last heard from us quite a number of the boys I am pleased to say, have been promoted to the right hand side. Our Lodge does not increase very much in membership, there being seventeen in good standing. The traffic on this section of the C. P. R. keeps about the same and there is never a very great demand for firemen. Nevertheless we are in a very prosperous condition otherwise. Our meetings are not as largely attended as present as they have been in the past year, owing to several of the boys being transferred eastward, as traffic is mostly on the east end at present. Among those are our worthy Master, J. D. McAdam, who is running on the Sault Ste. Marie branch; Bro. Burt, our Magazine Agent, is firing for him. Bro. Stern, our Secretary, has been firing on the east end for some time, but we are glad to see his smiling countenance amongst us again. Bro. Ernest Crier, our worthy Vice, is doing the hosting at Cartier, which is situated about one hundred and forty miles east of here. Among the promoted are: Bros. Mark Bowles, Kenneth McKee and Joseph Richardson. Bro. Kenney is doing the snow plow act on the rotary. Never mind, Kenney, only when you see fire flying, then watch wild. Bro. Dexter, our past Master, is doing the hosting here, and Bro. Nicholson is firing passenger. Bro. Patterson is spending holidays in the east. Bro. Hillard, who is firing on the North Bay Division, has been on the sick list for some time with his right hand severely scalded, but we are glad to record his recovery, and to see him at work again. And I am sure the boys here are all doing as well as can be expected. Our Locomotive Foreman, Mr. C. Kyle, is a man of high standing in the estimation of his many friends, and he never fails in giving the boys justice. We congratulate ourselves as well as the C. P. Railway Company, for having such an able and experienced man to manage the locomotive department here, and it would give us much pleasure to soon be able to record his promotion to a higher and more responsible position which never fails to come to a man of his ability. Our genial friend and brother, Chas. Unwin, of Unwin Lodge, No. 305, Chairman of our Joint Board of Adjustment of this system, paid the eastern Lodges a visit while enjoying his holidays in the vicinity of Toronto, and on his return trip was present at a Union meeting held at North Bay on February 21st, which was largely attended by engineers and firemen and in all regards was a grand success. We are always happy to meet such whole-souled Brotherhood men as Bro. Charles, and hope to soon see him amongst us again. Now a few words in regard to the leading topic, which, of course, you all know is changing the name of our Order. They say you may look Webster and the whole world over, and not find one more appropriate than the one we now bear. Now, I desire to say that I am in favor of a change of name, and have the opinion we can find a more appropriate one without the aid of Mr. Webster. I, for one, am not ashamed of our old name, but would like to have one to suit the times and which tells of what our Order is composed. Our Order is not a Brotherhood of Locomotive Firemen only; there are engineers and hostlers as well as firemen in it. Now, we will consider "Brotherhood of the Foot Board." Does it not meet every requirement? Again, they say, "I will withdraw if they change our name."

Another says he "would like to see the reasons for a change of name." A Brotherhood man who would withdraw on that account, I say, it matters not much whether he does or not. To the latter I desire to say, read a few back numbers of the *Magazine*, brother, and I am sure you will find sufficient reason for a change. Our old Brotherhood ship which has stood so many storms and battles, I think would be none the less gallant nor sea worthy with a new name painted on her bow. I don't see the reason why some say it would be hurtful to us to have a change. Did the change of name hurt the B. of L. E., or is the change of name, the "B. of R. T." made recently, injuring that Order? If it is I fail to see it. I don't say it will stop our members from joining the B. of L. E., for under the present circumstances we don't have to sacrifice our Order to join the B. of L. E. A member who wishes to join the B. of L. E., I say let him do so while he can without withdrawing from the Firemen. Of course, we are all aware it would come heavy on our member, in case of a strike, to pay the assessments on both Orders, but a man who is running an engine could, I think, pay them, as they have done it in the past. I know several engineers who were members on both Orders during the C. B. & Q. strike, and paid the assessments like men, and are to-day in as good financial condition as those who applied for a withdrawal, or dropped out when the heavy assessments were levied, and it may be many years before we experience a similar strike. I say let us have a name and federation, for in unity there is strength and if united in one compact, we can bid defiance to the world, and triumph over the greatest difficulty. Let us have more brotherly love in our ranks. If brother is an engineer and gets into trouble, or lo his job, let us lend him a helping hand, assist him out of trouble instead of fishing for a chance to get him into trouble. In order to get promotion, brothers, this is not the object of our Order, but it is. I am sorry to say, the object of some of our members. Now, let us help one another along and the thing which now exists among some of us will be a thing of the past. I remain yours,

J. D. McAdam, "321."

DENVER, COL., February 14, 1890.

MR. EDITOR:—The grand annual ball given by Lodges 77 and 273, B. of L. E., at Coliseum Hall, one of the most elegant public events of the season. Over one hundred people, including the Knights of the Scoop, their wives, sweethearts and friends filled the immense interior of the hall. Lanterns of various colors adorned the railing around the gallery, with four headlights and a transparency bearing an emblem of the Order adorning the galleys. Flags, bunting and pictures of locomotives were happily blended in various portions of the hall. The original invention to announce dances was an engine bell stationed near the orchestra. The music was furnished by Professor Breigle's orchestra. The souvenir programmes presented to the ladies were beautiful, being of a bellows and horse form, representing an album with a center picture of a locomotive made of various colored satin. The interior containing a programme of twenty dances. The date of the ball was pleasantly indicated by the following:

Bring the bride of your life's happy morning,
That tendered the red light on memory's fire.
We'll laugh at the fancy of grim danger's warning
And dance to the music of this valentine.

Too much praise cannot be given to the selection committees for the way they conducted the evening's pleasures. Lodges 77 and 273, B. of L. E., every reason to feel elated over the success that attended their efforts on this occasion.

Put out the light—the dance is done.

The gay crowd all dispersing.

With light laugh greets the morning sun.

The night's bon mots rehearsing.

Put out the lights—the dance is done.

The hall is bare and dreary.

Tho' echoes linger of music and fun.

Yet the heart is sad and weary.

And we are all busted and have no more.

Put out the lights—the dance is done.

G. H. WATSON.

TO JENNIE.

A brisk little temper
That is not always mild,
And gives her the appearance
Of a spoilt, saucy child,
Has my Jennie.

A hand that can soothe.
That can finger the keys,
Or make up the pie-crust,
And do all with ease,
Has my Jennie.

A trim little foot
That can wear out the shoes,
Or skip in the waltz
If its owner but choose,
Has my Jennie.

A flashing brown eye
That shines like a star,
And sparkles with anger
When she is at war,
Has my Jennie.

A pert little mouth,
That is saucy and neat,
As if made just for saying
Things bitter or sweet,
Has my Jennie.

A character as pure
As the white driven snow,
And a will that is able
To keep it just so,
Has my Jennie.

A heart full of sympathy
For those in distress,
Or that throbs in its rapture
At a loved one's caress,
Has my Jennie.

I pray that my love for her
May never grow less;
And that the Lord in His goodness
Will my home always bless—
With my Jennie.

East Line.

NORWALK, OHIO, February 11, 1890.

Editor of Firemen's Magazine:

Seeing that my first attempt as a scribe found a place in the *Magazine*, I thought I would try again. Business is still good here. The company received the three new engines last week that I spoke of in my last letter, and as I predicted, three of our B. of L. F. boys stepped over to the right hand side—Bro. Twist to run the night yard engine here and Bro. Burns to run the little "6" on work train. They both have served the company long and well and deserve their promotion. It has been hard work to keep track of the changes here on the road for the past two weeks. Bro. Exler first changed from freight engine "25" to passenger engine "22," then from that to night hostler in Bro. Burns' place. Bro. Fetta our bustling Magazine Agent, changed from freight engine "25" to a passenger run from here to Toledo and anyone who had seen him before the change would hardly know him now. You would take him for a dude with his clean suit of over clothes every other day and stand-up collar. When he was on the old "25," one clean suit a month was often enough. Now he has no feeling for us poor freight boys. He will go by, and seeing us laying on the side track, waiting on him and other trains, and all the regard he has for us is to say: "Be patient, boys; that is the way I got my start." There will be another change the first of the week, when another of our boys will get a passenger run. That is what we are all working for, and we are glad to see our members get there. There has been a great deal of kindness with us for the past month—"King Grippe" laid his hands on a good many of our brothers, not only that, but a sad accident occurred since my last writing, in which Bro. Herron nearly lost his life, in fact it is a miracle that all of them were not killed. They were running backward with the caboose to the mines after a train of coal and were running about forty miles an hour, when the tender jumped the track on a curve at a 10-foot fill, and the old "37" went into the ditch and turned over with the ca-

boose on top of her. All escaped with slight bruises with the exception of Bro. Herron, who was injured about the back very badly, and is just getting so he is able to get about with the aid of crutches, but it will be some time before he will handle the scoop again.

The "37" is in the back shops now for a general overhauling. There are several of our engines that need to follow her there. Engine "29" and engine "16" went in this week. I guess Bro. Clark will have to hustle freight while the "16" is in, as the boys are worked pretty hard now. The beloved "31" is on the road again and really looks as if they had jacked up the number plate and run a new engine under, and Bro. Denis (the red-headed nigger) thinks there is none like her. Well, No. 198 is still booming. The boys are still coming into the good old Order as fast as they become eligible. We have two applicants ready to ride the goat now, and I am glad to say they are all sending in their applications as fast as they can. Well, the caller is after me, so I will have to stop scribbling and go to handling the scoop instead of the pencil, so for the present I remain,

Fraternally yours,

Reuben Glue.

SPRINGFIELD, MO., February 4, 1890.

Editor Firemen's Magazine:

I have often wished some one would say something of Frisco Lodge, No. 51, and as I have, so far, been disappointed, I will try and give you an account of our second annual union ball, given by Division K. B. of L. E., and Lodge No. 51, B. of L. F., on Thursday evening, January 30th, at Sons of Veterans' hall, and as I was an eye witness, must say it was a perfect success, although Mr. "Grippe" had quite a number of the boys down, and as a consequence the attendance was rather smaller than was anticipated. There were sixty-nine couples present, and a jollier set would have been hard to find. The union ball was conclusive evidence of the harmony that exists between the Engineers and Firemen on the Frisco. If some of the boys who are always at outs with the B. of L. E. will just step in and see us we will show them how to get along nicely and have a good time at union balls. Old No. 51 still jogs along, just about holding her own with the world, and holds her meetings pretty regularly, and never fails to have a quorum. If we do have to get out and hunt 'em up sometimes. Wishing the *Magazine* and its worthy staff a long and successful career, I will step down and out.

Fraternally,

J. S. Carson.

TUCSON, ARIZONA, February 25, 1890.

MR. EDITOR: The home of our retired Magazine Agent, W. D. Anderson, of Cactus Lodge, No. 94, was the scene of much excitement this morning, by the arrival of a brain new boy baby weighing eleven pounds, who was immediately christened Eugene Debs, in honor of our worthy editor and manager. Mother and son are doing nicely, and the proud papa, although in feeble health, is still able to manipulate the scoop with greater vim than ever. In hopes of one day seeing his son following in his father's footsteps, I am,

Aunt.

[Such good fortune to Brother Anderson entitles him to felicitations, the best the language is capable of furnishing, and we readily confess our inability to do the subject justice, and we are still more embarrassed by the great honor that has come unbidden—and therefore the more prized—to us, and we send greeting:

Gene Anderson, my Eugene,

Dot little boy of mine,

Way out in Arizona.

You've just arrived in time.

And here's a health to you, Gene;

There's something in a name—

But whether there is or not,

May you get there all the same. —

ED. MAGAZINE.

BENNINGTON, VT., February 26, 1890.

Editor Firemen's Magazine:

The second annual ball of Marble City Lodge, No. 353, B. of L. F., took place at Town Hall, Rutland, Wednesday evening, February 12, and was attended by 155 couple of merry dancers, while as many more looked on from the galleries. The hall was beautifully decorated, and more than eight hundred trees were used for the purpose. Green and red lanterns were hung in and around the trees, and with two locomotive headlights, helped the illumination and produced a charming effect. On the stage, and back of the orchestra, was hung a miniature locomotive which attracted much attention. Supper was served at midnight at the Brunswick House, and at about 4 a.m. the last dance, a quadrille, was over, and with "I hope to meet you at our next annual," the weary but happy company filed out for "Home, sweet home," for rest and pleasant dreams. The boys all feel proud of the success attending their efforts, and have the best wishes of the community. Great credit is due the committees, as nothing was omitted to make the occasion one of unalloyed pleasure. The door prize, a lady's gold watch, was secured by Wm. A. Brook, of New York City.

Bro. Shuhan was married recently to a young lady of Rutland. On the 26th inst. they returned from their bridal tour, and were called upon by a large number of their friends, and the boys of 353 made the bride and groom a handsome present and smoked the matrimonial cigars. Grand Master Sargent is not forgotten, and that long delayed tub of Vermont butter may yet find him at his Western home.

W. H. M., 353.

HORNELLVILLE, N. Y., January 31, 1890.

Editor Firemen's Magazine:

The members of H. G. Brooks Lodge, No. 169, achieved a splendid success on the occasion of the seventh annual ball. A local paper refers to it as follows:

"Tuesday evening was the occasion of the seventh annual ball of H. G. Brooks Lodge, No. 169, B. of L. F., at the Metropolitan Hall. There were about 150 couples present. The hall was very tastefully decorated, a noticeable feature being the headlight in the gallery and an engine bell on a pedestal in front of the orchestra platform. The music was furnished by Jamison's orchestra of Bradford, consisting of eight pieces, and was excellent. About eighty couples partook of an elegant and bountiful supper at the Page House, after which dancing was renewed until the programme and dancers were equally exhausted. The L. F.'s had a splendid dance, and entertained their friends in the best of style."

Brother G. H. Fordyce and wife of Port Jervis and Brother Jesnie, of Bradford, were within and won special distinction by their graceful movements on the floor. The decorating committee are indebted to Supt. W. W. Maginiss for courtesies. The committee of arrangements understood their business and made no mistakes.

Fraternally.

One Who Was There.

CORNING, N. Y., March 3, 1890.

MR. EDITOR:—There was an incident came under my notice of a very pretty speech made by some of the Brotherhood not long since, and I thought perhaps your readers would like to hear of it in the *Magazine*. The 23d of February was celebrated in memory of George Washington, the Father of our country, and also as the birthday of another good man, Mr. James F. Roody, he being fifty-two years old. In the evening of that day he met a friend who said that a couple of the Brotherhood were going to meet at his house to visit a sick brother. Mr. Roody told him he should like to have them. About 7 o'clock the bell rang, and Mr. R. ushered in Mr. Walcott, who said he guessed they would have to wait some time for Bro. Everetts, as he was slow. Presently the bell rang again, and upon going to the door Mr. R. found three gentlemen instead of one, as expected. He asked them in and brought his great coat preparatory to going out with the gentlemen, who were Messrs. Everetts, Cushings, Parker

and Walcott, when Mr. Everetts stepped forward and said: "Pardon me, Brother Roody, but I should like, before we go, to present you this pin in behalf of Fellowship Lodge, as a token of our appreciation of your services as Master of our Lodge." Mr. R. stopped and looked very much as if he were struck, started, then stopped, and finally crossed the room and took the pin, saying as he did so: "Well, I declare, Bro. Everetts, this is a surprise. I see now why you were so anxious to meet here, and what occasioned your delay, and while I am more than surprised I can but admit that I feel this kindness greatly, and should like to say in return to the nice little speech that Bro. Everetts has treated us to, that while I am no speaker, I thank you all again and again, and will try as long as life lasts to wear it with honor and not dishonor, to the Lodge, and by all just means to further the cause we have at heart. Again allow me to say thank you."

The pin itself is a lovely gold one, with the initials of Lodge in pearl and gold, and must have cost no small sum, while Brother Roody wears it very much as a small boy wears his first boots.

For fear this, my first effort, might be condemned to the waste basket, I will close by signing myself,

One who was there.

MEMPHIS, TENN., March 12, 1890.

MR. EDITOR:—We cannot boast of talented writers here, nevertheless, there is a lively interest taken in all Brotherhood affairs. The new name question has been pretty thoroughly discussed; there are a few of our members who are opposed to any change, but I think the majority are in favor of it. For my part, I am thoroughly in favor of a change, and have seen some very good suggestions as to what would be appropriate, but no one has suggested anything yet that quite suits my notion. I think the most appropriate name we could adopt would be, "Brotherhood of Railway Enginemen." While this might be construed to include really more than is intended, the same could be said of other names suggested, and I think it more appropriate than any I have seen.

Memphis is quite a flourishing city and is one of the largest cotton markets in the country. It is a good wholesale market, and has ten railroads centering here. Her population is estimated at about 75,000 and while not the prettiest city I have seen, yet one cannot fail to be favorably impressed with her appearance and it is an old saying here, that "when one once gets Memphis mud on his feet, he cannot shake it off." I have been here going on three years, and like the place better every day.

There are two Lodges of the Order here: Bluff City Lodge, No. 55, has a membership of about 55 and Fort Pickering Lodge, No. 206, of which I am a member, has 38 members. Two years ago last month, it was organized with six members, and one year ago it had a membership of sixteen, and about that time it came near losing its charter, through the dishonesty of the Collector, then in office. On the 26th of February, 1889, we received notice from the Grand Lodge that we stood delinquent for four assessments, which must reach the Grand Lodge not later than March 1st. We had no funds in the treasury, and after discussing the matter concluded the only thing to be done was to borrow the money, which we did, on two months' time. April 25th of the same year, we gave a ball which netted us over \$200; this enabled us to meet all our obligations and left us a neat little surplus in the treasury. About this time we had the misfortune to get burned out, and lost everything except our books and a few of our most important papers; this loss amounted to about \$10.00, which reduced our surplus to almost nothing. But we did not get discouraged. The following August we purchased a full set of officers' regalia, from Zaiser, of Indianapolis, Ind., and from that time, have continued to prosper. We now have a neat little Lodge room, hold meetings every Tuesday evening, and seldom call a meeting to order with less than fifteen or eighteen members present. We have had some expulsions, and one or two withdrawals, but have kept up our growth, and have now several applications awaiting action.

During the past year there have been a great many traveling brothers through here, and it has

been our aim to treat them all with cordial hospitality; some of them secured work here and are with us yet.

There have been a few promotions. J. D. Franklin was the first. he withdrew about a month after his promotion to join the B. of L. E. Brother D. L. Forsyth, our Master, is pulling the throttle of a ten wheel Rhode Island on the K. C. M. & H.M. Brother Al Lawrence has control of a ten-wheel Rogers, and Brother C. A. Crane, our Secretary, is on the extra list of the same road. Our Magazine Agent, Brother Thos. Cosgrove, is running an incline engine, and Brothers Jno. Murray, Jas. G. Phillips, W. E. Owens and W. P. McKenna are running switch engines in the K. C. Ft. S. & M yard; Brothers J. C. Calhoun and Jas. Hilton are doing the extra running in the same yard. Brothers Wm. Devereux, Frank Rosson and Jno. Donuahue are running in the L., N. O. & T. yard.

We have heard it rumored, that some of our grand officers, will make a tour of this section before long, and we wish to assure them that we will be more than pleased to meet them, and will endeavor to make their stay in Memphis a pleasant one.

Brother Hannahan made us a call on the 19th of December, but was in such a rush, he only had time to shake hands with a few of the boys. We were giving a ball that night, and it was in the ball room that Brother Hannahan found us, and at the earnest request of our Master, Brother H. consented to make a short speech to our guests. He was introduced by Brother Forsyth, and in a very neat manner, explained to those present, the objects of the Brotherhood. He related several incidents calculated to impress his hearers favorably with the Order. He talked a little longer than was his intention and in consequence missed his train and was compelled to stay all night, but would not return to the ball room on account of being worn out, and left us the next morning on an early train.

I see by the quarterly report of our Grand Secretary, that the Order is increasing its membership, which fact must be very gratifying to all.

I have written more than was my intention, but cannot close without a word for the *Magazine*. I must say our worthy Editor has made a grand success of the *Magazine*; it is always full of interesting reading and it comes down about right on the "Corbins" and "Livingstons," and is by far, the ablest publication in the interest of labor I have seen.

Extra.

SPRAGUE, WASH. January 29, 1890.

Editor Firemen's Magazine:

Please do not leave out any more *excellent communications*. If the *Magazine* is not large enough, why, make it larger; and please send the *Magazine* to all the boys of Sprague Lodge, No. 133, and to subscribers. They are all finding fault because they are not getting their *Magazine*. As I have not seen anything from this Lodge in the *Magazine*, I will say this much, that we are in the go-ahead motion, and never shut her off until we have smooth rolling down hill. I can tell you that the boys here are all true blue.

Respectfully yours,

T. J. PETERSON.

P. S. Bro. Hannahan must have had a good Thanksgiving dinner. We added two more members to our Lodge last Sunday.

T. J. P.

[As for leaving out "excellent communications," it so happens that the *Magazine*, every issue, is full. There never was a time when something "excellent" did not have to be left out. As for making the *Magazine* larger, that would involve more cost, and it is now large enough for \$1.00.

As for the members of Sprague Lodge not receiving their *Magazines*, this should be said—they are promptly forwarded, and the fault for not receiving them is not due to any dereliction of duty on our part.]—Ed. MAGAZINE.

Frog Farming.

MR. EDITOR:—In perusing a recent issue of the *Scientific American* my eye fell upon the following article on the subject of frog farming which may be of interest to our worthy Grand Master:

"A new industry has sprung up latterly, which promises, we are told, profitable results. It is frog raising. A farm for this purpose at Menasha, Wis., is in full operation and stocked with 2,000 females, which are capable of producing from 600 to 1,000 eggs at a time. The owner of the farm gives some other interesting facts relative to the frog's habits which are not generally known. He says:

"In ninety-one days the eggs hatch. The thirtieth day the little animals begin to have motion. In a few days they assume the tadpole form. When ninety-two days old, two small feet are seen beginning to sprout near the tail, and the head appears to be separate from the body. In five days after this they refuse all vegetable food. Soon thereafter the animal assumes a perfect form. Next spring 25,000, at 20 cents per dozen, will be my reward. Figure it yourself, says the enthusiastic frog farmer, and see if there is any money in batrachia, *alias* frogs."

The foregoing paragraph reminds me of the report that our Grand Master once engaged in the frog culture under the most favorable auspices. In fact, if I am correctly informed, everything was tendered him gratis, the water being free and even the stock being captured and delivered from sheer good will.

That there must be some truth in the report seems evident for a number of the intimate friends of the Grand Master have in their possession his professional card, with his hand and seal attached, upon which one of these animals mounted on a bicycle, makes a conspicuous ornament. What vexes me is that this person away up in the woods of Wisconsin should thus infringe upon the discovery of our Grand Master and reap a harvest of fame and dimes to which Bro. Sargent should be entitled by virtue of priority. Could not this infringer be mulcted in heavy damages and a perpetual injunction served upon him to prevent further encroachments upon the rights of our brother?

RAT PORTAGE, ONT., February 19, 1890.

Editor Firemen's Magazine:

The B. of K. T. and the B. of L. F. held their second annual ball and supper on January 31st. The hall was well decorated with evergreens, and pictures of all kinds were hung around the walls. Lanterns of red, white and green were hanging from the ceiling; there were also two head lamps, one at each end of the hall, and hanging over the head lamps were pieces of gauze with the following painted on them—over one was "B. of R. T.," which are the initials of the Brotherhood of Railroad Trainmen, and over the other was "B. of L. F.," the initials of the Brotherhood of Locomotive Firemen. On one side of the hall was a painted locomotive and water tank which looked very natural, and on the other side was a representation of clouds, the sun, moon and stars, designed to represent day or night. From the ceiling was hanging the red, white and blue. There were several flags placed in the hall, and on each side of the stage hung a chart representing each Order. There were lace curtains on the windows hanging to the floor, and the floor was waxed. At 11:30 the dancing commenced, starting with a union circle. The supper was served at the Hilliard House. The dining room was decorated with evergreens, and looked fine. There was a headlight placed on the wall at the head of the table which illuminated the room from one end to the other. All were seated at once. There were between ninety and one hundred couples and the dance lasted until 6 a. m. The ball and supper throughout was a grand success.

S. S. W.

TO A FRIEND.

A blessing on your head descend from realms of ceaseless light,
And may your life, while here on earth, be one of pure delight;
A foretaste of that better life that to the just is given,
And when you leave this mundane sphere, may you land safe in heaven.

Edward Splaine.

NEW YORK CITY, January 22d, 1890.

Editor Firemen's Magazine:

The evening of December 16th, 1889, was quite a festive one for the officers and members of J. F. Bingham Lodge, No. 135, of this city. On that date they gave a ball at Lyric Hall, on Sixth avenue, to celebrate the anniversary of the organization of No. 135, under the able management of the committee of arrangements, which consisted of Bros. Fountaine, Tyler, McGrane, Bell and Campbell. It was a grand success both socially and financially. The fun commenced at 10 p. m., with a grand march, under the directorship of the floor manager, Bro. Baldy Greene, who conducted it in a manner that reflected great credit on himself and his assistant, Fred Smith.

The dances dedicated to our Grand Officers were danced with such energy and vim that it seemed doubtful if the building would stand the strain, and another dance, dedicated to J. J. Hannahan's "Cow," to the tune of "Down went McGinty," was entered to such an extent that it looked as though the programme would never be finished.

At intermission a supper was served in the upper hall, where all the good things that the market and the culinary art could furnish, were served, and quickly disappeared under the hearty appetites of the many present. After everybody had feasted, the fun began again, and continued until nearly daylight, when all departed for their homes, tired, but pleased and well satisfied with No. 135's ball.

Among the many present were noticed J. D. Campbell, Superintendent; E. J. Rauch, R. F. of Engines; D. and W. W. Thompson, R. F. of Engines, all of the Manhattan railway. Among other prominent persons present were Edw. Otty and lady, Mr. Shraeder and wife, Mr. John Dewald and lady, Mr. Polhemus and wife, Jimmy Ryan and wife, Mr. Doran and wife; Messrs. Van Tassel, Austin, Peterman, William and Dillon; also the Misses Dewald, Clark, Houston, Winters and Briggs.

Just-in-Time Lodge, No. 149, was represented by E. Ruland and wife, A. K. Hawley and lady, S. H. Harriott and wife, and E. Chambers and lady.

Adopted Daughter Lodge, No. 3, was represented by E. A. Leach and lady, J. Lovett and wife, J. Knight and wife, C. Fuchs and lady, J. Vallett and lady. Brothers of No. 155, who enjoyed themselves were Master Wetherbee and bride-elect, V. M. Tyler and wife, C. C. McGrane and wife, P. M. Fountaine and ladies, Secretary Campbell and wife, C. Denning and wife, F. Smith and lady, J. Corcoran and lady, R. Dewald and lady, Theo. Fry and lady, C. Winkert and wife, M. Gennoy, wife and daughter; C. Winkert and wife, J. L. McGrane and lady, W. P. Green and wife, A. K. Lasher, wife and daughter; Jockey Baines and Miss Ella May, George Emery and wife, T. F. Mulloy and wife; also many others too numerous to mention. Yours, etc.,

O. N. Looker.

POPLAR BLUFF, MO, February 25, 1890.

Editor Firemen's Magazine:

Thinking the members of our Order would like to have a few items from Pocatontas Lodge, No. 22, I take the liberty of sending the following:

Brother George Webster, our night hostler here, has been very sick with typhoid pneumonia but is recovering slowly. Hope to see him out again soon. Brother P. W. Humphrey, lately fireman on the Memphis passenger has been promoted to the right hand side, as engineer on the switch engine in the Memphis, Tenn., yards. Brother Wm. Granneman has a steady run now on the Cairo division, with the 494, which carries the horns. Bill says "he knows there is nothing the matter with the 494, but ain't she a daisy?" Brother Dick Andrews does not seem to come to his work as usual with a smile. Perhaps he will, a little later. Then we will let you know. Brother Harry M. Roush is on the Cairo passenger now. He says the "345" is a darling. His wife does not like his coming in at 2 a. m. and right back, with 40 minutes lay-over, but it can't be helped. Hope his wife will not sue for a divorce. Harry, you had better look out and don't let her get a divorce. Brother J. R. Phelps has got a regular engine on the Ark. division, after so long a time. We hope he will get there with both feet.

Pocatontas.

PINE BLUFF, ARK., February 23, 1890.

Editor Firemen's Magazine:

Once more I come with a few lines for the *Magazine*. When I wrote in October last I did not think I would be ridiculed for my opinion about the new name question. I am of the same opinion yet. There is really nothing to show in the arguments put forth in the *Magazine* why we should change our present name. It would only be an expense to the Brotherhood, for no benefit whatever, as I can see, would result from a change. If there is any benefit connected with the new name, I wish some one would take the trouble to inform me. "East Line" takes the trouble to reply to my writing in October *Magazine*, but don't give one point in favor of the change, only his opinion, and I think that is very one-sided. He says: "I have traveled on a Fireman's traveling card. Had the Brotherhood had a name embracing all classes of engineers my card would have entitled me to the courtesies of engineers, as well as firemen." And as there are so many engineers in our Brotherhood, why should we not mutually enjoy such privileges as engineers and firemen can give? I say, for instance, if a fireman is traveling would an engineer or fireman be more disposed to carry him over the road as a Locomotive Engineer or would they do more for him in the M. M.'s office towards getting him a job than they would if he was a B. of L. F. man? I think not. We are in favor of progress, forward and upward. Do we strive with such ability and power as stand at our command? If our progress is hindered through losses of any description, we should stop and consider how to make a change, but as long as we are progressing and not losing power, but gaining every day, let us see well what we are about before we think of making the changes some of the writers in the *Magazine* are in favor of.

Yours fraternally,

L. H. 163.

Why Engineers Get Fat.

BRACKENRIDGE, MINN., February 25, 1890.

MR. EDITOR:—Though I never see anything in the *Magazine* from No. 76, it is still alive, and its members all take a lively interest in the *Magazine* as you can judge by the "great roar" you hear when some of them fail to "corral" a copy. I think the December number is exceptionally good. I read an article by G. W. Furey, M. D., in regard to the "Obesity among Engineers" as a rule, and his efforts at an explanation. He tries to figure it out from a scientific point of view, as due to the "vibratory motion of the engine," or, "the essences of vibration being polarized by molecular agitation." I think it is easily explained. For an illustration. Suppose a farmer wishes to fatten a hog. He don't take the hog out and chase it all around a ten acre lot two or three hours every day to make it fat; he shuts it up in a close pen and fires at it all it can eat. (Probably you do not see any connection between this illustration and molecular agitation or vibra-rotary motion and fat engineers.) Dr. Furey says: "On the part of firemen, if there is any change in weight, we find him decreasing in weight." I don't see anything strange in this. It seems perfectly natural to me. Let any man start in firing and shovel from five to fifteen tons of coal every day to boil water for some steam expander to blow away for four or five years, and "flag" meals every day or two on account of financial difficulties combined with several other little things the fireman has to amuse him, such as shaking grates, eating hotel beef steak, hoeing out ash pans, scouring brass and sparking his intended. This does not have a tendency to collect much adipose matter around on his frame. Now, after several years of this kind of exercise, the fireman gets promoted to engineer, takes his place on the right side and tries to look pretty. All he has to do in the line of hard work, is to eat and tell his fireman how hard he used to have to work, and what a clean engine he always kept, and like the farmer's hog, gets fat. This change from hard work to comparative idleness, with the best the country affords to eat, I think explains the whole business, and a man who wouldn't flesh up a little under such circumstances, is sick or too "ornery" to get fat.

Fraternally,
Ole Olson

TO SHANDY MAGUIRE.

Dear Shandy I'm no M. D., know naught of pills and squills.
But I know something of *fevernager*, for I've had the third day chills.
And I've had "La Grippe" and other ills but yet, beyond all question,
Such things were angels' visits compared with your "indigestion."

It got you bad, dear Shandy, and as I read about its freaks,
I wonder if you eat hard boiled eggs and India rubber steaks.
Or, indulge in railroad sandwiches, fat pork and baked beans,—
I think so, since I've read your indigestible dreams.

Why make your stomach a depot for all sorts of produce?
Have you made no estimate of your stomach's gastric juice
Required to assimilate great quantities of cud,
And transform them into brains and bones, hair, cuticle and blood?

I wonder you didn't die; you had the nightmare, sure.
And before the horror comes again, you should try to find a cure.
There are numerous preventives, as there are for whooping cough,
But the one perhaps as good as any is, simply "swearing off."

While in Pluto's regions, did you observe his grid-dies?
Were there men upon them broiling, who once were fond of fiddles?
Or those who in waltz and reel, "tripped the light fantastic toe,"
Never dreaming they were on the road to realms of old Pluto?

You say you saw no engineers, or other railroad employees,—
If that news don't please the boys, they are awful hard to please,
A life of fire and steam and smoke, ought, no matter who may rule,
To give the boys, beyond the styx, "forty acres and a mule."

You visited "hell's half acre; a d—d sight it must have been.
Was it a d—d sight: such as when Corbin shaves his men?
Was it a d—d sight; worse than regions Anthracite?
If so, it must have been to you specially a d—d sight.

And you say you saw John Livingston, I guess he entered hell in *cop*.
Surely, the devil isn't mean enough to entertain a dog,—
He may have got on a cattle train, and with a stolen pass,
Traveled all the way to hell, as the railway shareholder association ass.

You saw now the Syndicates, Trust Barons and such fellows,
On the devil's gridirons, now floating on hell's billows,
Hell must surely have a suburb, where there is no extradition,
For a set of scamps, who when they die, we think are in perdition.

I would scorn the imputation, that your dream is just a "sell."—
But the hint that "hell's half acre" is all there is of hell,
Is so circumscribed, so un-Miltonish, so exceedingly small,
That some good people may doubt if you were in hell at all.

But I'm inclined to think you were, for I detect a smell,
Of brimstone in your poem that makes the reader think of hell.

But the devil of your poem is, that when your old nightmare,
Was prancing 'round the devil's camp, you saw no millionaire.

But should you go again, Shandy, please investigate,
A little more like a Pinkerton: get inside of the grate—
Interview the devil, and tell him, you'd like to know,
If apartments have been secured for Corbin and Bonzano.

Mickey the Fireman.

TAYLOR, TEXAS, February 20, 1890.

MR. EDITOR:—When an individual laborer occupies the position of another laborer without the latter's consent, the former is termed a scab, especially if the former is actuated by a revengeful motive, whether imaginary or real. If two or more laboring men concert a scheme, the object of which is to injure others in the performance of their labors, you will hardly deny that these "two or more men" are acting in a manner *akin* to scabs; particularly so if the object in so doing is to gratify a thirst for revenge. I believe that if one labor organization should desert its proper channel and trespass upon another similar organization for the purpose of avenging injuries received in the past; or if one order should enact laws, the object of which is to defeat another organization, it is far more injurious to the interest of labor at large, than a *regiment* of scabs.

That the dominant faction of the B. of L. E. did enact laws that were intended to embarrass the B. of L. E. is a well known fact and as far as it goes, they acted in a scab like manner, but the outrage was so glaringly apparent that it has had a reactionary effect and they are now purging themselves of the ideas and ways peculiar to the Arthur faction, and the future will bring to the front men who can comprehend the true meaning of the word "Brotherhood." It is with extreme satisfaction that we can review the history of the Brotherhood of Locomotive Firemen. For sixteen years it has made rapid strides in the advancement of firemen's interests without once doing aught that would detract from the success of other labor organizations. In the past no move has been made, no law enacted without a careful consideration of the effect it would have upon other labor organizations, and aggressive policies have been studiously avoided. This course has endeared the "Firemen's Brotherhood," not only to its own members but to all of the better class of laboring men. It has been only the aggressive, anarchial type and the "aristocracy of labor" that have attacked our policy. This calls to mind an incident which came under my personal observation within recent years. At a conference between the Joint Board of Adjustment and the officials of one of the largest railway systems in the West, an agreement was submitted by the officials to the J. B. of A. which included a clause assuring the firemen that *no more engineers would be employed*, but that firemen should be promoted instead. This clause was rejected by the J. B. of A. and for so doing they were complimented by Grand Master Sargent.

I would ask those who appear to be posted where our past policy has been wrong to that extent that should require the "radical" and revolutionary change that they so earnestly advanced? The B. of L. E. is more friendly disposed to us now than at any time since the "iron hand" of "Prince Arthur" has fallen upon us, and if the signs of the times do not fail we will hear, in the near future, in the camp of the B. of L. E., the cry, "The King is dead! long live the King?" Some are thrown into convulsions at the idea of others wishing to perpetrate what the former are *pleased* to call a "breeding pen." If, as they claim, the B. of L. E. has been a "breeding pen" I will assert that she has succeeded in "breeding" some "thoroughbreds" of which she may justly be proud. If to "breed" competent engineers from firemen of but limited experience is a something of which we should be ashamed, the fault

lies with Bro. Leach and his comrades, who, seventeen years ago laid the foundation of this "breeding-pen" they seem to abhor so much and with which I am so *extremely* satisfied. I would suggest that it is better that we should run a "breeding-pen" than to allow some of our hot-headed brothers to transform the B. of L. E. into a "slaughter-pen."

After I had written my article for the January *Magazine* I applied for the "advance sheets" of the number that would include it and the "necessary comments," so that I could reply in the following number, but for some unaccountable delay it did not reach me until the 15th of January, which relegated me into silence as far as the February *Magazine* was concerned. My apology and explanation of my "wrong doings" will appear in the March issue and I would like to see the "comments" before mailing this but as I am anxious to be in time for the April number I will forego this pleasure. I will state, by way of explanation and for the benefit of those that consider me an "infirmity" and a "curse of organized labor, etc.," that if I have been guilty of insubordination to my superiors or have "breathed treason against the Crown," I have done so because of my intense desire to avert the extermination of the "Firemen's great Brotherhood" and also to prove that it is not a fallacy to believe that it is yet possible for labor organizations to fraternize.

It has been the ascendancy of an antagonistic and aggressive element in the B. of L. E. that has brought about all of our "differences" and now that the power of this element is on the wane we should not permit our "injured feelings" to lead us to say or do things that will be used by the Arthur faction to regain their lost prestige, and in their Pittsburgh convention to crush those who so openly espoused our cause at Denver. We should look upon the B. of L. E. as our greatest ally but temporary "in the hands of the enemy." As conclusive proof of this I will introduce the testimony of Bro. E. V. Debs. Although Bro. Debs had just finished a "bout" with the correspondents in the *Engineer's Journal* he then believed that the B. of L. E. was greatly indebted to the B. of L. E. and that we should have "admiration and love" for the promoters of that Order. On page 529, September, 1886, he says of Mr. W. D. Robinson, who was the G. C. E. of the B. of L. E.:

"We have not the space to detail the early struggles and privations of this humble philanthropist, but we gladly pay to him the tribute of our admiration and esteem. The name of W. D. Robinson ought to be remembered with gratitude and love by every locomotive engineer and fireman in the land. He is worthy of a place among the benefactors of his race. The Great Brotherhood he conceived and brought into existence and the numerous others that have emulated its example are imperishable monuments to his genius and fame."

By reading the entire article it is evident that Mr. W. D. Robinson is loved and admired for his handiwork. He is a "tree judged by its fruits." Like Columbus, he never would have been esteemed but for the results of his labor. As the B. of L. E. has improved its laws since the above quotation was written I should not be censured for desiring a friendly alliance between the two Brotherhoods. It does not require a close observer to see the change, the complete somersault the *Magazine* has taken since the Atlanta convention. As to the manner in which the "Q" strike was settled we, of course, object, but this of itself is not sufficient to cause this "radical" change. Some one has been guilty of deceptive flattery or "a change has come o'er the scene" that has not been disclosed. If the course pursued by the *Magazine* since the last convention has been the cause of the repeal of obnoxious laws at Denver and the gain of friends in the ranks of the B. of L. E. (which theory has been advanced) it is a decided reflection against Bros. Sargent and Hannahan, for they have not done likewise, and therefore they must have prevented the repeal of the remaining objectionable laws and have lost friends for us. I mean by this that if the "ill feeling" that existed at Denver against our worthy Editor is proof that his present policy is beneficial to the B. of L. E., the "good feeling" that evidently prevailed there

for Bros. Sargent and Hannahan would indicate that our Grand Master's and Vice Grand Master's views were detrimental to us and should be corrected.

Generally speaking, the "official organ" of any party or organization adjusts its policy to the ideas of that organization's chosen leader, but it seems that the B. of L. E. is a marked exception to the rule. From the fact that we would hardly know that we had a "chosen leader" or that he had a "policy" if we depended upon our "official organ" for information. I have the *best of reasons* to believe that P. Sargent is opposed to another engineer's order and will use his influence when the proper time arrives in supporting the B. of L. E. against any and all comers. His silence upon this subject is unaccountable unless it is because he believes that the "bubble" will burst itself from excessive inflation. That Bro. Sargent is opposed to this "radical reform in change of government" of the B. of L. E. I feel positive and it is harassing to his friends to have abuse heaped upon him by our "official organ" and some of its correspondents because of his honest convictions. Come, brothers! it is high time that some of you were pausing in your extreme writings. When you venomously strike in all directions like a blind adder at the rustling grass you but disclose a malevolent disposition, and the fact that your hatred to another organization has driven you into paroxysms of rage indicative of dire results should an occasion present itself. How Corbin and Livingston must chuckle and laugh in their sleeves to see how fast we are "getting to our rope's end." How they must smirk and leer at each other and mock the vain attempts that are made by a few to demonstrate that it is yet possible for organized labor to fraternize.

Is it not the height of inconsistency for a writer to zealously advocate the ultimate federation of all railway organizations and at the same time strenuously support measures that are extremely antagonistic to one of the orders that is necessarily a component part of a *successful* federation? Is it reasonable to suppose that the engineers of this country will enter into a friendly compact with an avowed enemy, a rival whose success depends upon their own defeat? If the *proposed* new order should succeed in retaining all of its promoted firemen at the expense of the B. of L. E., which is a reason given in favor of a change, the life of the latter would become extinct for lack of fuel. History records that few nations have allowed their territory to be invaded by a foreign power without resorting to a struggle for supremacy. The manner in which our invasion would be contested can at present be only a matter of conjecture but it is very probable that it would "dance" while labor would "pay for the music." It would be a strategic move on their part if they should organize a firemen's "annex" to the B. of L. E., which would be something like "shimmy on your own side." If they should adopt this method of combating the new engineer's order no doubt they would be successful for a young fireman in selecting would naturally want to be on the side with the "eagle eyes."

While it is my desire that each and every promoted fireman should retain his place in our ranks I would have him do so through love for his parental order and not because they dislike the B. of L. E. If ever I possess the necessary qualification to affiliate with the B. of L. E. I shall certainly do so but will state now that in the "division" I will defend firemen's rights and in the "lodge" will be ever watchful of the interests of the engineer, and will use my influence at all times to defeat men and measures inimical to the prosperity of either order. If this is wrong I am a transgressor at heart. Suppose that instead of bemoaning and vilifying those of our engineers who in the past have considered it to their interest to withdraw to join the B. of L. E., we had bid them God speed! and suggest to them the propriety of putting in "good words" for us whenever an occasion presented itself! In addition to the above, suppose that the several thousands of "runners" we have left should take advantage of the new laws and join the B. of L. E., retaining their membership with us. Would this not be better than "fighting it out?" This procedure would be what I call "diplomacy," which I have said out

worthy Editor lacked, and for which statement I have duly apologized.

Now, I come to a subject that I did not intend to mention but as the *Magazine* has given prominence to it in the current number I will probably be excused for calling it up as "unfinished business." I refer to the two letters published in the January *U. P. Magazine*, written by Brotherhood firemen, from which I quote. A B. of L. E. correspondent at Salida, Cal., among other things says:

"Now, Mr. Editor, (U. P. Editor); To be frank with you I would much prefer to write this letter to the Brotherhood's (B. of L. E.) *Magazine* because it would reach the men who are mostly interested, but Bro. Debs would annihilate me in one of those wonderful notes of his that follow the remarks of his correspondents, etc."

Another fireman writes from St. Louis:

"But Bro. Debs admits of no sincerity where he is opposed. He has besmirched the columns of our *Magazine* with a vituperation that would do credit to the street arabs of New York. Shame! shame! Drop the rule or ruin policy and give us reasons, if you have any, why the Union Pacific men cannot be heard without abuse and slander heaped upon them. . . . When a man is advocating what he knows is wrong he gives abuse and slander in lieu of logic; that is, if his character will permit him to descend to it. However, he deceives no one, and only succeeds in attracting contempt and pity."

That the above language is too strong and extremely personal I am aware and do not think that men should express themselves so forcibly, but as our February *Magazine* gave these letters a considerable notice I know it will be "rich" reading for those who are so unfortunate as to not have their names enrolled upon the *U. P. Magazine's* subscription book. Our worthy Editor insinuates that they have been written by one person located at Denver. I presume he means the Editor of the *U. P. Magazine*. Now, does not this suggest that some of the letters published in our *Magazine* could possibly be of similar origin? This I certainly do not believe, because although our worthy Editor is a literary pugilist of renown he seldom hits below the belt.

W. S. Carter, No. 263.

MILWAUKEE, WIS., February 12, 1890.

Editor Firemen's Magazine:

In scanning the valuable columns of our instructive *Magazine* for the past two years, I was always disappointed at not seeing some remarks from the Lodge that has the honor of being the namesake of the gallant Phil Sheridan; a Lodge whose members work as valiantly for the good of the Order as did the immortal Sheridan for his country. We have every fireman in our locality in our Lodge and we are now working on our suburbs. At our last three meetings we brought in Janesville and Fond du Lac and we are going to work on this system until we have the grip upon all the locomotive firemen within our jurisdiction—men who six months ago would not join us are now our most interested members. Men who argue with us that they can get along without joining us are the ones we fasten our grip on and in a short time the flattery they expound in behalf of the order when they understand our objects and interests, makes the old veteran members feel proud. We do not allow the sayings of any of the old-timers to prejudice us against them, but make them feel the test worthy of remembrance after they see their folly. Changes are occurring in our ranks often now. Bro. Peter Fox is now firing between Milwaukee and Chicago, but when he meets any of the members he is the same "Pete." Bro. T. P. Tanner, our first Master, was assigned to a run that prevented his attending meetings. Not wishing to be a detriment he resigned for the purpose of giving the Lodge a Master who could attend the meetings. Bro. J. M. Grobhen (the little German) is our worthy Master now, and his methods and delivery of speech are drawing crowds to our meetings. We have also an attraction in our worthy Secretary, Bro. Maurice Collins (the Clan-na-Gael) who in reading the minutes of the previous meeting puts on as much style as a Lord in Ireland. He borrowed a quarter from

one of his brothers and the way he paid him back was an invitation to a New Year's dinner and then charged him a quarter for the dinner. Bro. Boggs is an invalid with the "grip," but was able to attend last meeting. Bro. Gabe McCosker will always be found on hand watching the members who, if they vary from the rules will hear from him. In fact, all the members of No. 388, have made a good start this year. Hoping this will attract our Lodge's attention, for the interest is not taken in our *Magazine* that it deserves; for 388 was one of the leather medal Lodges in *Magazine* interests last year, but this year we hope to rank amongst leaders by being victorious in our work for first prize. Fraternally yours,

"388."

BOSTON, MASS., February 26, 1890.

Editor Firemen's Magazine:

I am neither dead nor sleeping, on the contrary, during the last two or three months I have been keeping a very close watch upon the Brotherhood. I am not in any danger of congratulating our organization on the bare bone thrown into the "breeding pen" to keep the young pigs in good humor. I don't even believe that we should congratulate anybody except our loyal brothers, who are not to be coerced or flattered by the appearance of justice in any thing which does not contain it. I think we should demand, equality, justice and fraternity, and in demanding these things, not fail to give them.

Of what benefit would it be to the B. of L. E. to have such laws as it has had in its constitution, and has even now? Did it ever occur to the members of our Brotherhood that if they were not organized the engineers could and would demand the employment of engineers in preference to the promotion of firemen? In this, I think, we have the true solution of their unjust laws—plain selfishness is, it would seem, a standard by which to judge them. But, my brothers, a hog can't stand very well on ice, and selfishness cannot stand on any solid foundation. I hear some of the brothers say, and also the true men, our right hand neighbors, "it will all be right next year." I sincerely hope so. But I ask you all if it would not be far better to have a brotherhood of our own of all classes of engineers? We have eminently capable officers. Their success for the firemen means success for the engineers. Well, then, put our Grand Master at the helm and our Editor and Treasurer at the two places he now occupies, and surely Hannahan is all that we want in his line, and start an organization free from the selfishness of old. Is there any brother who thinks for one moment it would not be a success?

Now, Brother Debs, I would like to say, in connection with your "open letter" to Mr. Arthur, that our *Magazine* is the official organ of our Brotherhood, and pulsates the heart of our order in all its conditions and phases. It is not a one sided affair and never was, and I congratulate you upon your defense, not only of yourself, but of your official capacity in our Brotherhood, which you so ably represent.

Bro. Frank Walton, it is a long way, I know, but allow me to extend the hand for a clasp of true fraternity, for you voice the sentiments that I feel perfectly.

Stand by your colors brother; the battle is ours; success is to go to the right in this matter.

We are all on top of the earth here as usual.

Chas. H. Trenholm, of No. 57.

WATER VALLEY, MISS., January 25, 1890.

MR. EDITOR:—On Friday, the 17th inst., Mr. Hugh Dickson, firing engine 347 for Charles Hammond, met with a terrible accident, in which he lost both of his hands. He was standing in the gangway of his engine at Goodman, and while conversing with Bro. Price, fireman on engine 311, his foot slipped and he fell in such a way as to have his hands cut off between the wrists and elbows. Mr. Dickson is a gentleman, formerly a member of No. 279, and would have been balloted for at our next meeting. We all sympathize with him and with his little sister, whose sorrow over the misfortune of her brother is great.

Fraternally yours,

W. J. D.

THE BREEDING PEN.

Come brother of the brotherhood, you fearless, gallant men;

You splendid types of brain and brawn, not creatures of a pen;

By all the pagan gods at once pray tell each other when

The Lodge in which you meet to work became a "breeding pen?"

Come, brothers of the Brotherhood, from Lodge Fires burning bright,

Where you have so often met to uphold the right, By all the pagan gods at once pray tell each other when

The Lodge in which you've oft clasped hands became a "breeding pen?"

Come, brothers of the Brotherhood, with password, grip and sign,

You know the record of your craft, you know its high design;

By all the pagan gods at once, who made your Lodge a den?

Or something worse, more odious still, a revolting "breeding pen?"

Come, brothers of the Brotherhood, ye men of steam and fire,

What is your high ambition? to what do you aspire? By all the pagan gods at once, is the circuit of your ken

To see the Lodge where you were born an odious "breeding pen?"

No, no, my brothers of pick and scoop, we will not so transform;

We will not so disgrace the Lodge where as *Brothers* we were born.

By all the pagan gods at once, we have the pride of men;

We are not *swine*, and our Brotherhood is not a "breeding pen!"

Old Guard.

Labor in the West.

SANTA ROSA, CAL., February 22, 1890.

MR. EDITOR:—In *Scribner's Magazine* for January, is an article captioned, "Water storage in the West," which calls for a little comment. The article is finely illustrated, well written and very interesting, but it contains some gross misrepresentations concerning the condition of this part of the world, in labor matters. The author presents the different problems to be solved in water storage and describes several of the most important works. In picturing the difficulties met with, he begins as follows:

The engineer and his assistants must be brought together from distant places and will probably be totally unfamiliar with the region, its climate, and the class of labor employed. In the Southwest this labor must be largely Mexican, now that public opinion prevents the employment of Chinese. If not Mexican, then it must be the scarce, highly paid, independent white labor of the West.

In the first place, skilled men are by no means scarce and can be had in any of the cities of any size on the coast, which strictly speaking, are not very far distant places. It is a well known fact that the corporations and private concerns, as well as can and do employ Chinese laborers, regardless of public opinion. Every year Chinese can be seen chopping wood, picking fruit and hops, working on railroads and in factories, doing work that reliable white men would have been glad to perform for a reasonable compensation. The white labor of the west is too independent to accept degrading conditions as a feature of their employment; but it is not so independent as to be insubordinate or unreliable. The unemployed in San Francisco are so numerous as to be known as, "The army of unemployed," so no excuse can be found for employing coolie or other foreign laborers on the ground of the scarcity of labor. In the busiest seasons reliable men can be found with little trouble and at moderate rates. On another page we find the following:

"Moreover, the several hundred workmen must be well housed and fed, especially the latter, if they are Americans. Indeed the wishes and prejudices

of these laborers must be catered to in every particular."

This is a beautiful picture. One would suppose, that the corporation had to set up a restaurant on the plan of Delmonico's, to favor this band of epicures. We can imagine them taking two hours and a half at noon while they enjoyed their French wines and Key West cigars. It is true, that Americans will not be content with a bowl of rice, seasoned with a little stale fish, but reasonable treatment rarely fails to satisfy the average workingman. Again:

"The engineers are at the mercy of the laborers, for the latter are few and most offensively independent. They work when they choose and lay off in the same way. A pay day sees saloons and gambling houses in full blast, and but little work is forthcoming for a week."

Thus we reach the climax. It is a notorious fact, that Chinamen are far more unreliable and untrustworthy than any other kind of men unless it is Indians. They need a guard all of the time to keep them at work, are totally unable to appreciate good treatment and always ready to take advantage of their employers, and a little opium will cause the work to suffer, while John Chinaman dreams. Another inconsistency is for a company to establish saloon and gambling houses where they will cause their work to be neglected. The fact is, the picture is overdrawn to an alarming extent. The next paragraph says:

"Yet notwithstanding all these drawbacks, the extreme roughness of the country, the distance from the base of supplies, the lack of experienced foremen, the turbulence of the laborers, if the engineer has true American administrative ability, the work goes forward with astonishing rapidity."

A. T. P.

GLENDIVE, MONT., February 28, 1890.

Editor *Firemen's Magazine*:

Being at leisure, I can think of nothing more appropriate than to let the wide world know, through the columns of the good old *Magazine*, that Land Mark Lodge, No. 128, B. of L. F., still lives and flourishes at Glendive, a beautiful little city, situated on the banks of the Yellowstone river, and at the gate of the Yellowstone Valley, in full view of the vine-clad mountains, whose peaks are now covered with "beautiful snow."

On February 21 we gave our second annual ball, which all concede was one of the grandest affairs of the kind that ever occurred in the sage brush producing State of Montana.

The Master of Ceremonies was our Master Mechanic, August Brown, who nobly performed the duties of the position. The kindness of Mr. Brown was well calculated to inspire firemen with a desire to perform their duties with great fidelity. The ball took place in the Masonic Temple, one of the finest structures in this section of the country. Supper was served by Mr. J. T. W. DeJong, at the Yellowstone and was greatly enjoyed.

The dance began with the grand march and everything was as joyous as the chimes of wedding bells. At the conclusion of the ball Mr. Brown was heartily applauded and the cheers that rang out proved that the boys appreciated his kindness.

G. M. B.

NEW ORLEANS, LA., February 20, 1890.

Editor *Firemen's Magazine*:

I have the pleasure of announcing that Crescent City Lodge, No. 399, celebrated its first anniversary by giving a banquet at Brand's restaurant, No. 10 Gravin street.

Bro. M. H. Brown, Master of Endeavor Lodge, No. 267, responded to a toast in splendid style, and Mr. Stausbury, reporter on the New Orleans *Times Democrat*, was present, and did some excellent speech-making for the boys. Our Lodge is in good condition, and I trust will continue so. We have had a struggle with the engineers on the L. & N. regarding white firemen. I do not believe there is a white fireman on the Southern Division of that road.

Hoping you will let the boys hear from us, I remain a true Brotherhood man.

William O'Donnell

BILLY DUNN'S MARRIAGE.

Put Into Rhyme from a Recent Letter from the Mountains.

DEAR JACK:—I'm goin' ter surprize ye.
As ye ne'r war surprizzen afore—
I expect w'en I make the announcement.
You'll kerflummix right down on the floor.
I've made a bold break for the future—
Have struck an entirely new trail—
In short, just a week ago Sunday,
I war married to Mary Ann Vail.

Twadn't no suddint notion as struck me,
For I'd gone with the gal for a year;
An' she kep' growin' dearer an' dearer,
Till my heartstrings war all out o' gear.
An' Mary she showed her affection
In a manner I couldn't mistake;
So I wound up the m's'ry by makin'
A bold matrimonial break.

Wed gone for a walk in the cañon,
Way up thar by Emigrant Spring.
An' Mary hung on to my elbow
With a sort of affectionate cling.
An' somehow my heart got a thumpin'.
Like a pheasant'll thump on a log,
An' every deep sigh that I uttered
Sounded more like the grunt of a hog.

Then Mary, sez she, "What's the matter?"
Yer actin' jest like ye war sick;
If yer feelin' at all out o' kilter
We'd better go back down the creek."
But I tol' her that wouldn't relieve me,
An' we went right ahead on the walk.
Til we found a snug seat on a boulder
In the shadow of Catamount Rock.

My heart still continued onruly,
An' I sot thar as silent as death,
An' Mary stared 'way up the mountain,
Gittin' in double time with her breath.
I b'lieve she knowed w'at war a comin',
That I'd made up my mind to perpose,
For I seed she war sort o' excited,
An' she blushed like a wild mountain rose.

She finally remarked sort o' skeery,
"Twas a bootiful day for a walk."
An' axed me to please fer to tell'er
W'at I'd done with my usual talk.
Then my eyes to her face went a rollin'.
But my tongue wouldn't wobble a bit.
An' I looked so infernal unearthly
That she thought I war havin' a fit.

Wall, at last I could stand it no longer,
An' sez I, "Mary Ann, biz is biz,
An' I guess you are on to my racket,
Fer it's writ plain enough on my phiz.
I love ye mos' pow'ful intensely,
An' I want ye fer life as my mate—
Don't chaff me with chin about 'chestnuts,'
Fer I'm givin' it to ye dead straight."

I've loved ye, an' loved ye, an' loved ye,
But hadn't the courage to squeal—
To me yer more precious than dимon's,
From yer top-knot cl'ar down to yer heel.
Now don't go to hemmin' an' hawlin',
An' keepin' me here in distress,
If yer want ter transport me ter glory
Git a move on yerself an' say 'yes.'"

Wal, Jack, by the jumpin' creation,
She throwed both arms aroun' my neck.
An' I seed right away I war holdin'
The best winnin' hand in the deck.
Then I hugged'er up jus' like a baby—
My feelin's you can't analyze—
An' we sot thar a laughin' an' kissin'
Till the birds in the trees hid their eyes.

Wal, the parson's conundrums completed
The job in a sanctified way,
An' we danced till the light in the east'ard
Announced the approachment o' day.
Now happiness camps in our cabin,
We're baskin' in love's brightest sun,
An' a welcome awaits you, ol' pardner,
From MR. AND MRS. BILL DUNN.

P. S.—Don't you laugh at my ravin'
An' call me a spoony ol' pill—
Jes' cast yer thoughts back fer a minute,
Fer ye've bin through the very same mill.
I've thought o' my acts in that cañon
Again and again and again,
An' I think in such critical moments
A lover is really insane.

Captain Jack Crawford, the Poet Scout.

PADDY'S BROGUE SPOILT.

My Jennie hae two hazel e'en,
And hair to math, begorry;
Her purty feet and graceful mien
Has sthrole me heart, och worra.

Sure if me brogue be Scottish mixed,
Braid like a Burns' sonnet,
Ye will perceive how I am fixed,
When ye know it's love that's done it.

Frae Scotia fair is my colleen,
The land o' Brose and Gaelic,
Finst I'm from that Isle so green,—
Of praties and the balliff.

I call her my asthore machree,
"Faith you're the divil Paddy,"
And then she, wi' sich bewitchin' e'e,
Calls me her bonnie laddie.

She spakes about her "Scots wha hae,"
Of burnies, braes and bether;
And I discoorse on "Patrick's day,"
As we gang aft together.

Ane nicht ower muckle braw, ye ken,
As we gang wa' the gither,
"Och marry me!" says I, "swate Jen,"
Says she, "Gae ask me mither."

Sure spoilt intirely is me brogue;
Me friends and near relations
Will take me for some foreign rogue,
And quit their invitations.

John Tierney, Jr.

TORONTO, ONT.

CORBIN'S DECREE.

Mr. Editor—His Majesty, Austin Corbin, the Penn-
sylvania Czar,

Is a man of eccentricities, like any Russian
Romanoff,

And has issued a royal ukase against his serfs wear-
ing hair,
And has commanded Bouzano to have them shave
it off.

Mr. Editor—It is just what has been expected—what
right has a slave
To wear hair on his chin or wear hair on his lip?
When His Majesty, Austin Corbin, commands him
to shave,
And if he don't scrape his face gives him the Rus-
sian gripper.

Mr. Editor—His Majesty, Austin Corbin, says his
serfs must obey.
He's reducing them to cattle, and they'll soon find
it out.

And by and by he'll order them to eat cabbage
stumps or hay,
And to keep them in subjection will put a ring in
every snout.

Mr. Editor—I don't know where you've journeyed,
nor what lands you have explored,
But I'm willing to bet my New Jerusalem town lot
That here there is degradation more to be deplored
Than can be found among Digger Indians, or there
is known to Hottentot. *Razor.*

GALVESTON, TEX., February 25, 1890.

Editor Firemen's Magazine:

It is now a long time since I appeared in the correspondence columns of the *Magazine*, so I will try again to say a word or two.

First, I note a communication in the February *Magazine* signed "John Martin," which I am not going to roast, as Bro. Martin may presume; but, on the contrary, I wish to say Bro. Martin utters my sentiments to the letter, as the Editor well knows from a brief (?) missive I penned to him on the same subject in October last. I penned it to the Editor and not to the public, why? Because it seemed to me that diversities of opinions which were likely to produce discord should never be given to the public to comment on, as it has a tendency to bring on strife among our own ranks, and place us at war with those who should be our allies. We can never accomplish anything for the good of the Order if we strike a death blow at Protection. Let us be more chary of our criticisms in the future. Let us devote our energies to the building up of harmony and drive discord out of our encampment lines, for as sure as we allow him to remain with us just so surely will he eventually destroy us, a little here and a little there, until in a very short time fraternity will be dead in his tent; all fraternal feelings will be superceded by feelings of animosity, jealousy and envy, and then, indeed, will we be in a sad predicament. Now, let us devote our attention and energies to an uprooting of this plant and carry it outside of our lines before it begins to take firm root and spread, or it will do like the famous "Johnson grass," which some farmers in this State adopted some years ago. It began to spread very rapidly, and once it became implanted in a piece of ground that ended the utility of that place, as everything sown therein was choked to death by the "Johnson grass." No remedy—nothing was known by which it could be exterminated, and soon the entire farm was swallowed up by this voracious little plant. Just so with discord. Allow it to exist and every nobler sentiment will be choked out of existence as soon as it puts forth its first shoots, while harmony propagates the growth of every feeling of fraternity. Every noble sentiment expressed or thought immediately finds in Harmony a strong and faithful ally which will never flinch nor falter, but bear you on to victory every time. I would that I possessed the eloquence of Ingersoll, the expansive range of Talmage or the logical force of Dickens, that I could place before the Brothers this condition as I see it, but, alas! I possess neither, and can only speak or write of it with such words as come to me.

Now, regarding another matter. I have long pondered on the subject, and thought two years ago of writing on it, but as the Editor was calling a halt on account of space, I desisted, and with it most of my ideas were scattered broadcast, and now I can't collect them as I would, but will have to do the best I can. It is nothing more nor less than the manner in which men are taken into the Order. A candidate sends in his application and is recommended by some brother, and a committee is appointed to investigate. Do they do it? Seldom. I have known of applicants on a branch road making application and being recommended by a Brother on this branch, who would be placed as chairman of that committee, and they would never see the man at all, never investigate his standing, morally or socially, at all, but when the prescribed time came they would render a favorable report, and when the applicant came to be initiated there would not be a solitary Brother present who had ever seen the man before. Such is the investigation of the committees about seven times out of ten. It is no investigation at all. It is a crying shame to conduct affairs in such a haphazard way, but, nevertheless, it is continually done, and in the face of that can we expect to have good members? How can we have them under such a course?

The time was, when I had been firing an engine for years, but did not belong to the Order and did not know that such an Order existed, as I had been where Lodges were about as numerous as hen's teeth, and I started out with as good letters as a man ever carried, and got into a portion of the country where the Brotherhood flourished, and then came

the question, "Are you a Brotherhood man?" I would say no, and explain that my work had all been at points where the Order did not exist. Time and again I applied for jobs and was rejected by the master mechanic, and a man with a card would come along and get a job every time, and if the master mechanic had no job to give he would seem to feel bad about it, and frequently they have given letters of request to Brotherhood men to give to other master mechanics where they were likely to require the services of firemen. I began to investigate the cause of all this and found that to the Brotherhood was due the social and moral advance of locomotive firemen from the plane occupied by them, as I could well remember, about twenty years before (twenty-five years now) and I resolved that as soon as opportunity offered I would request admission, as I wanted a hand in the good work. The opportunity at last came, right where I was at home, where I had lived my boyhood years; where my parents and brothers and sisters were all known, and at this place I secured a position as extra fireman, and after a few months made application for membership. I had been home about a year and a half, though not able to fire during a larger portion of the time, but was around frequently with the boys, a number of whom were school mates. Did they depend on the one who recommended me? No, indeed! My eighteen years from infancy up, and then after a lapse of seven years, my return and a year and a half in which my every action was before them, was not sufficient. My record abroad must be searched out. The committee was given thirty days to investigate and at the close of that time requested another thirty days, which was granted. Letters were written and answers awaited, and when all came in giving me a character above reproach, the committee reported favorably, and I become a member, and from that time on I have always endeavored to sustain that record which I was given. I have always tried to fulfill to the letter that resolve I made with myself, and God as a witness, to do everything in my power for the welfare of the Order. My zeal has never slackened, and I have never been in the ranks of the indifferent and careless. That same zeal will accompany me to my grave. Any trust reposed in me is always carried out with what ability I have at my command, and frequently I long for greater powers that I might be enabled to do more.

Under this policy of admitting members without proper investigation we get men in who come only for the benefit they, as individuals, can receive from it. They never think that the Order is made up of the members, and that as much rests with one as another for the success of the Order. They never think that they have a duty to perform, a trust to fill. All they think of is that when they get out of employment they can get a card and on that card they can travel and find brothers who will help them over the road, and assist them to get a place as firemen, and see that they don't go hungry. That the Brotherhood owes them, is frequently their boast, and that embraces the entire object for which they become Brotherhood men. When you meet such men in your travels is it any wonder that you are neglected and mistreated? Is it any wonder that a brother who departed from home and took an extended tour came back and said he found coldness and lack of fraternal feeling in a certain section? Let that brother investigate his own Lodge and see if fraternity lurks in the bosom of every man in it. If his search proves all to be so, then he belongs to an exceptional Lodge. It is not confined to the South, nor the East, nor West, but is manifest in every section of the country, and when a traveling brother meets with one or two of them at a place he lays the charge to the entire Brotherhood of that section. It discourages him; it makes him long for home and the friendly greetings he receives there.

Can we do anything to eradicate this evil? I think so. All we have to do is to be more careful in our selections, and if we have any outsiders who can't fulfill their trust to the public, do not admit them, for they can't fulfill their trust to our Order any more faithfully, and will continue a drag and a blot on the Lodge of which they are a curse, and not a member, for no man can be a member of anything if his heart is not in the work. Do not be satisfied

with the fact that he is a fireman and can pass a medical examination, but place on your mind a requirement of character, of disposition to be faithful to every obligation, to fulfill every trust to his fellow man. Require him to be upright, honest, sober and industrious, and then if he runs the gauntlet and comes off victorious. If his examination in these qualifications point to him as one worthy, he can be admitted, and there need be no fear of the Receiver running away with the Lodge funds, or of the traveling brother going to another section of the country and working for a stake and then skipping out with his bills unpaid.

It is high time we commenced to reform, and as an ounce of preventive is worth not only a pound of cure, but a whole ton of it, let us commence the reform by not admitting those who can't stand the fire.

Yours fraternally,

Southern Cross.

LA JUNTA, COLO., March 3d, 1890.

Editor Firemen's Magazine:

Please allow me space to say a few words about Spanish Peaks Lodge, No. 328, as it does not often appear in the correspondence department of the *Magazine*. I desire to say that the members of No. 328 gave their first annual ball in the La Junta Opera House on the evening of February 21st. The occasion was one of ceaseless round of enjoyment, a splendid success, socially and financially; and reflected the highest credit upon the members of the Lodge.

Outsider.

TRINIDAD, COLO., February 16, 1890.

Editor Firemen's Magazine:

The Jaffa Opera House was all aglow with light the 14th, St. Valentine's night. It being the occasion of the first annual ball given by the B. of L. F. in Trinidad. It is during the past year that the railroad boys have become residents of Trinidad, in any great number, and when invitations for our first annual ball were issued those who were not posted thought the attendance would not be large, but when the guests began to arrive in quartettes and dozens and scores, not the slightest confusion ensued, and by 9 o'clock the opera house was crowded with one of the happiest parties that ever gathered in a ball room in Trinidad.

The attractiveness of the scene was heightened by the beautiful and appropriate decorations. On the stage were banners and emblems of the Order, and the headlights which were on the stage threw over the merry dancers a flood of light. On the stage was arranged an engine bell, which was used to ring the changes in the programme. Suspended across the hall, from the balconies, were numerous rows of lantern, alternating in red, white, blue and green, while around the balcony, in evergreen letters, was the motto of the Order, "Charity, Protection, Sobriety, Industry," which were handsomely arranged by the ladies. In the center of the stage was the charter of our lodge with the American flag drooped about it. The pick and scoop were leaning against the charter and immediately over the footlights was the word "Welcome," handsomely worked in evergreen.

Thirteen dances were mastered before the first call for supper, which was served by the Ladies' Relief Corps. The tables were well laden with rich cut glass and massive silver, well supplied with choice knickknacks and delicious fruits. Nothing was wanting—no luxury was missing.

Through the kindness of Mr. O. O. Winters and Mr. Linthurst we got transportation for our El Moro friends. There were guests from Haton and Pueblo and all seemed to be in a world where there was no care, no sorrow, no past, no future; only the vivid sense of the passionate, glorious present. The whole affair being a grand success, and one long to be remembered.

We are sure the annual hops of 344 will be looked forward to with pleasure. The committee did all in their power to make the occasion pleasant for all who were in attendance, and many of the tired, but delighted dancers were greeted by nature's headlight, Old Sol, on their way home.

Fraternally yours,

Committee.

THE INDIAN'S LAMENT.

The forest gone, the wild game fled,
My brethren numbered with the dead
And I alone of all my race
Am left to mourn in this sad place.

Yes, sad it is, but time has been
When this was all a joyous scene,
When glad at heart and blithe of cheer
I'd sally forth to chase the deer.

Yes I was happy, joyous, free,
Like the bird that flies from tree to tree,
But now like the bird that lost its mate,
My weary soul is desolate.

The pale face came with brand of fire;
He burned my wigwam, slew my sire,
My squaw, papoose, my kindred all,
Still yet I think I hear them call.

Can it be, although they're dead,
Their spirits hover where they bled,
And mourn for me my wayward fate,
Poor victim, I, of christian hate?

Edward Splaine.

SOMERVILLE, MASS., March 5, 1890.

Editor Firemen's Magazine:

Will you, or some of the brothers, please tell me and others like me, who have been considering the subject, why it is necessary to have, keep and maintain an insurance in a labor organization? Why should the ability to pay the insurance assessments determine the membership of the labor organization? Are we not running a labor organization? It is my belief that we are, and a good one, too, but why should I, who can only pay the assessments required by our labor laws, be expelled from the labor organization for inability to pay the assessments of the insurance? Why? We will suppose that I am already insured in some fraternal society, why should the labor organization say "to be a member you must insure your life and limb in our insurance?" Just suppose that I wanted to procure a situation on some railroad, all I want is the situation, but they tell me "certainly, we will give you employment, but you must join our insurance." I'll acknowledge that it makes nice material for a convention address, but if you or I had simply protection of labor to discuss and its ways and means do you not think it would be far better for all in railroad service? Surely, more time could be given to the actual needs of labor, and labor is in such a state of ferment now that it needs time for its consideration and education, and we need it. See the firemen who have been compelled by circumstances to give up the Order through the insurance, and what is true in our Order is true in others. They have been members, but their pay, perhaps, is small (the railroad men being the poorest paid of all workers for the service and risk run), and so much time and money has been given to the insurance, perhaps, that those already members could do nothing to increase their wages, and perhaps the true labor protectors were debarred the right to become members of the labor organization not liking to be dictated to by insurance, or, perhaps the inability to meet the demands of the labor-insurance scheme. When in the past I saw men give up their orders because the demands of insurance were too great, I thought it no wonder that railroad men are poorly paid and only partially organized, and I have arrived at the conclusion that it would be far better for the protection of labor to drop the insurance out the back window and the difference, if any, arising from ability and inability to pay quietly dropped with it.

Now, Mr. Editor and brothers, you will find that this is quite a subject. Men who cannot join your Order or cannot keep it up are not always scabs, I find, and I also find that we have missed many a shining light by our insurance. A labor organization is sufficient without drawing in a hazardous or extra hazardous class of insurance, in my opinion and others, also. I am a Brotherhood man from way back, too.

C. M. Trenholm, No. 57

HOW TO MANAGE A HUSBAND.

She first must catch him in the ties
Of love's delightful bondage.
Then on him she must keep sharp eyes
While he is in his fond age.
He mustn't feel one moment dull.
When yoked in marriage traces.
Or soon against his dear he'll pull.
And scorn her fond embraces.

If he should frown—remember this—
She must steal up beside him,
And on his mouth plant many a kiss:
'Tis better than to chide him.
Right soon she'll see a silvery smile
Float o'er his gladsome features,
Because he'll think her free from guile,
And fairest of all creatures.

'Tis not while in the honeymoon
A bride should look for danger,
For then he is a harmless loon,
And to deceive a stranger.
But when about three months have fled
In hymen's perfumed clover,
He on soft nonsense must be fed
Or he will prove a rover.

Observe him when night's glorious queen
Is down on China shining:
If he should sneak out late, unseen,
He's for another pining.
She never need one step advance
To ascertain his scheming;
He'll tell it by his nervous glance—
Abstracted like and dreaming.

But if domestic traits he loves,
And isn't given to roaming,
He and his wife, like sucking doves,
Will nestle in the gloaming.
Until about a year rolls by
On rosy wings delightful,
Then danger lurks in baby's cry.
If it is sour and spiteful.

A howling chorus made of squalls
Don't make a husband gracious.
When all night long come ceaseless bawls
From little imps pugnacious;
Most men against such sounds will kick:
We all hate babies' snarling,
And feel like rubbing with a brick
Each little pug-nosed darling.

Unless he is a patient man,
And full of human nature,
Created on a saintly plan,
Broadgauged in mind and stature,
He'll kick just like an army mule,
Or red-nosed bloated rables,
If she should prove a brainless fool
And plague him with cross babies.

A cunning wife can win reward
Through lifetime and hereafter,
If she will always greet her lord
With peals of silvery laughter
When he comes rolling home in glee,
All human ailments scorning,
And singing most uproariously,
"We'll not go home till morning."

The little chores about a house,
Too numerous to mention,
Should hourly from a faithful spouse
Have personal attention.
So that her lord can sit at ease,
When he comes in from labor,
Or straggle round where'er he'll please,
Or gossip with a neighbor.

She mustn't mind the hairs that cling
Upon his coat tail grinning,
Or at him fly on vengeful wings,
Or think that he's been sinning.
'Twill only make bad matters worse
To rail in jealous fury:
It ends too often in divorce
Before a judge and jury.

I here could sit till morning gray
O'er eastern hills comes breaking,
And still till night succeeds the day.
Such wise suggestions making:
On how a husband should be held
And worked for all that's in him,
By her who other maids excelled
When playing cards to win him.

But if she'll exercise the skill
Of courtship's days to catch him,
She'll mould him to her own sweet will
Until it's hard to match him
For tenderness through married life.
And loveliness unbounded.
Indeed, she'll be a happy wife,
With all delights surrounded.

Shandy Magnus

MITCHELL, SOUTH, DAK., March 5, 1898

Editor Firemen's Magazine:

I have not seen any mention in the *Magazine* Fergusson Lodge, and shall therefore be obliged a little space to say a few words. I have been member of this Order and a reader of the *Magazine* for six years, and have always taken great pleasure in reading the *Magazine*. I think the February number is the best I ever read, though I never was a poor one. Our Lodge is in first-class shape, though not very large. We are all hard workers. We are not getting in much time, and business is due to consequence of not having good crops last year. We are dependent upon the crops: no crops, no work. We have not had any snow to buck this winter, the weather has been like spring most of the time.

Now, about federating. I like the old name pretty well, but if we can do better by changing it, let us do it. I am for building up, not tearing down. I don't want any more C. B. & Q. strikes. The hard side wants to have something to say about as well as the right side. A great number of members are runners, but they stick to the Order. I think this is the general feeling of the Order. We had lots of the LaGrippe, but the boys kept worn it out and are as well as ever.

I remain yours fraternally.

Secretary

Personals.

THE boys at Jackson, Mich., are royal good fellows.

JOHN LESLIE, of No. 374, is on the Missouri National.

W. E. SULLIVAN holds the gavel when 43 is in session.

G. E. CHAPMAN is one of the wide awake members of No. 240.

A. J. EBERSOL is now Secretary of the River Lodge, at Denison, Tex.

F. J. KISTLER, better known as "Husky Joe," keeps his eye on the Lodge at Columbus.

CHAS. UNWIN, of Rat Portage, has been chosen Chairman of the J. B. of A. for the Canadian Pacific system.

G. W. NESPER collects the finances atledo, and keeps the boys in good standing on rolls.

It is reported that Horse C. Joe Vance is one of the most popular engineers on the Mackinac route.

THE promotion of Bro. Cobaugh, of No. 252, is hailed with special satisfaction by his numerous friends.

JAMES MARM, of No. 170, is now looking at Memphis, and is Gen'l Supt. of the Prospect Hill and Belt Ry.

A. N. DARRAGH, Master of No. 5, was recently laid up with a broken rib but is now up and around again.

D. F. WAGNER holds the office of Receiver for No. 162, and has no superior in that capacity.

E. C. GERBER, of No. 146, has been promoted to running a switch engine at Orange, Tex.

THE boys have it that Cribbet, of No. 24, makes good connection with the accommodation from Wichita.

J. D. McADAM has been elected Secretary of the Joint Board of Adjustment for the Canadian Pacific system.

B. J. ROSS handles the quill for Safety Lodge, No. 142, and does it in a manner to meet with general approval.

McFADDEN, of 154, and Scott, of 359, are reported to be "hustlers" in all the vigorous meaning the term implies.

THE boys of No. 263 say that Bro. Curtis has his shoes patched at Temple, and is making no complaint about the leather.

H. J. SWEENEY, of No. 273, has entered upon the matrimonial state and is receiving the congratulations of his many friends.

FRED R. TRAMP, of Tippecanoe Lodge, No. 36, is enjoying the fruits of his labor by his merited promotion to the right hand side.

J. CHRISTOFFEL is one of the popular members of No. 6. He has always a cordial grasp of the hand for a Brotherhood Fireman.

CHAS. WEDDLE, of 359, formerly a member of Old Post Lodge, No. 17, of Vincennes, Ind., is now running on the Santa Fe and doing well.

WHILE in Winnepeg Bro. Richie, of No. 262, saw a steer in harness and he remarked "that it was the first time he had seen a cow dressed up."

J. E. FRANKLIN, Master of the Lodge at Laredo, Tex., takes a great interest in Brotherhood affairs, and is bound to make a success of his Lodge.

Geo. CHESHIRE and E. D. Pearce, of No. 53, have been rewarded with promotion to the right hand side and are meeting with well-deserved success.

C. W. FISHER, T. E. Landen, R. L. Anderson, C. M. Rogers and W. F. Hetzel, of No. 247, have been promoted. This speaks well for the Kennesaw boys.

THE members of Charity Lodge, No. 5, report fifteen promotions and all doing well except "Grandpa" Steele, who, it is said, "dies on the hills."

VICE GRAND MASTER HANNAHAN reports a pleasant visit at the home of Bro. and Mrs. Amos, of St. Louis, whose hospitalities to Brotherhood men are proverbial.

ALEX. WILLIAMS is Secretary of Pride of the West Lodge, No. 6, at De Soto, Mo., and it is simple justice to say that for efficiency and faithfulness he can not be excelled.

J. S. SLANE, Master of the B. of R. B., of Chanute, Kan., is a poet of no mean abilities. During the C., B. & Q. strike he distinguished himself as a patriot as well as a poet.

C. G. BRITTINGHAM is among the brightest members of Hercules Lodge. He is a student of industrial problems, and is remarkably well posted in the labor literature of the times.

FRED. MYERS, of 188, who is a brother of Jack Myers, of 63, is said to be the "King of Goose Island." Fred. has lots of friends at Danville who would be pleased to hear from him.

CHAS. STEVENS, of 63, is said to be a perpetual victim of the "grip." The boys say he has three attacks daily, during which he keeps the waiters hustling for pie all along the line.

W. H. MARTIN is making an excellent record as Secretary of Lodge No. 281. He is prompt efficient and accurate and in all regards equal to the demands of the position he occupies.

E. F. McNULTY, of Fortune Lodge, No. 120, we are glad to know, after nine years service has been promoted. There is nothing like patience and stickability. In the long run they win.

THE impression of Bro. Clutterbuck of the people of Winnipeg was very favorable until his cap was stolen. Bro. C. is somewhat particular about having his name pronounced correctly.

FORTUNE Lodge, No. 120, is well named. It is fortunate. Just think, fourteen promotions since last fall. Capital prizes every week. We congratulate the boys on their good fortune.

FRED K. PERRIN, of No. 240, widely known as "Peter the tasty Fire-boy," was recently married to Miss Carrie Discendall. The boys all smoked the health and prosperity of Fred and his bride.

WARD SILLIMAN, one of 229's most active and earnest members, was united in marriage, on February 18th, to Miss Mary K. Behler, of Rome, N. Y. May they enjoy a long and happy wedded life.

DAN. BARRY, of Buffalo, is requested to send Bro. Hannahan that missing Thanksgiving ear and caudal appendage. As there is nothing small about Dan, he will no doubt respond with alacrity.

C. W. REEVES, of Enterprise Lodge, No. 75, is, so the word comes, the happy father of a beautiful baby. That's enterprise—some prefer the boys, but just think how drear the world would be without the girls.

D. DRENNAN, at one time a member of Lodge No. 1, at Port Jervis, N. Y., is now running a passenger engine with headquarters at Laredo, Tex. Dan. is a number one man and his future is bright with promise.

MICHAEL RABBITT does the collecting for Pride of the West Lodge, and keeps his accounts in good shape. Besides being an excellent officer Mike is a thorough Brotherhood man and a most companionable gentleman.

BRO. ELLENWOOD, of Dominion Lodge, No. 67, received a New Year's gift from his spouse, in the shape of a bouncing boy baby. The command "multiply and replenish," whatever else is disregarded, is obeyed to the letter.

CALVIN M. WOLCOTT is an eminent example of the influence a Master can wield over his Lodge. Under his administration Garden City Lodge, No. 50, has become one of the very best Lodges in the Order.

A. H. TUCKER, of Chillicothe, Mo., and a member of Livingstone Lodge, No. 389, is councilman at large of Chillicothe, an evidence that the people of that beautiful city appreciate ability. We congratulate Bro. Tucker.

THE boys at Winnepeg report that Bro. T. L. D. attended the opera on a recent occasion and afterwards had a nightmare and was found chasing a ghost through the stovepipe hole. The boys think it was the result of nicotine.

W. J. ENY is still "one of the boys," though he has been pulling the throttle a number of years. "Billy" is one of our old time members and his advice and counsel are always sought when difficult problems are to be solved.

BIG FLINT Lodge, No. 359, is having an exceedingly brilliant streak of luck. Recently three of its members, Bros. James Scott, Ed Hansen and Sherman Luper have been promoted and the Lodge feels, as it has a right to feel, happy.

WE are under obligations to Bro. and Mrs. M. A. Henry, Jackson, Mich., for their hospitalities while in their city. We had the pleasure of a visit at their cozy home on Quarry street, where we were made to feel that we were among friends.

Not long ago Bro. McAdan visited Winnepeg and while there was invited to take a drink. He promptly replied that he neither drank, smoked nor chewed whisky. He was anxious to get home and explained that his wife would need wood.

We had a call from Mr. H. A. Pike, of Philadelphia, who represents the United States Metallic Packing Co. of Philadelphia. We found him eminently capable of representing the interests of his company, and our interview was most agreeable.

Among those who should be recognized for their devotion to the interests of the Brotherhood at Danville, Ill., are Mrs. John Myers and Mrs. Partlow. When tickets are to be sold or other outside work is to be done they respond with commendable promptness.

We are informed that Bro. Sam Quackenbush, of No. 91, has quit railroading and entered upon the study of law. It is said that he has already been admitted to the district court in Denver and that he is now known as the Hon. Quack. Long may he quack.

JACK TIERNEY, of No. 74, is now a special detective on the staff of Chief Marsh, of Chicago. He is spoken of as a thoroughly efficient officer by Mayor Cregier and Chief Marsh. The many friends of Bro. Tierney, and the *Magazine* is among them, wish him all the success he deserves.

It affords us pleasure to say that O. K. Lodge, 239, Cincinnati, Ohio, is doing good work, and doing it all the time. It is a Lodge which under the guidance of Brother J. S. Sheehan, Master, pulls strong and all together, and when that is the case things always move in the right direction.

DURING his late visit to Kansas Bro. Sargent met Mr. John Buzwell, Chairman of the B. of L. E. Grievance Committee, on the Santa Fe system. Mr. Buzwell has the reputation of being a clear headed man with advanced opinions on the labor question, and the verdict is that he is the right man in the right place.

A. J. KOHLER wields the gavel when No. 141 is in session. He is an energetic and painstaking officer, and a princely companion. At his home, where we had the pleasure of visiting not long since, we found the ideal "sweet home" that has stirred the hearts of orators and poets, and is among the dearest words in our language.

Few Lodges in our Order are more wide awake or display greater enthusiasm than Prospect, No. 162. The members are courteous and obliging, and above all they know how to receive and entertain a Brotherhood man. With them the term brotherhood means more than a mere empty sound; it has a robust and cheering significance.

GRAND MASTER SARGENT had the pleasure recently of meeting Mr. J. L. Barnes, Supt. of the Southern Kan. Div. of the Santa Fe system, and speaks of that gentleman in eulogistic praise. Mr. Barnes is as genial a gentleman as he is a thoroughly equipped railway official, and those who are brought in contact with him universally esteem him.

WHILE at Elkhart, Ind., not long ago, we were the guests of Bro. and Mrs. W. W. Howard, and never were we more hospitably entertained. The tables were bountifully supplied and everything that comfort could suggest was provided for our delectation. Such incidents are fraught with incalculable pleasure, and bless and beautify life a thousand fold.

GRAND MASTER SARGENT is in receipt of an elegant polished brass monogram "B. of L. E." from Bro. Frank Robertson, of "Old Kentucky" Lodge, No. 101. The monogram is artistic in design and finely finished, and now adorns the desk of the Grand Master, who returns his profound thanks to Bro. Robertson for the valued memento of his friendship.

J. M. HAMM, member of Snow Fl. Lodge, No. 238, sent in twenty-two subscribers to the *Magazine*, accompanied with the cash. Bro. Hamm is simply a private member of his Lodge, but he shows what could be done for the *Magazine* members if they would only make the effort. Bro. Hamm has our thanks for his good work, which assures him is appreciated.

NO BETTER man was ever promoted to the right hand side of an engine than Bro. Motter, Secretary of Lodge No. 174, Harrisburg, Pa. He has all the qualifications necessary for a first class engineer, and that he will meet with success without saying. As Secretary of his Lodge Bro. Motter acquitted himself with the greatest credit and the *Magazine*, while felicitating him on his advancement, wishes him the fullest realization of his ambition.

THE Grand Lodge officers were honored with a call not long since from Bro. Geo. E. Kendall, Receiver of Sprague Lodge, No. 133, Sprague, Wis. who accompanied the remains of the late Bro. J. Burroughs, of Hercules Lodge, No. 63, from Washington, where he was killed on the Northern Pacific to Danville, Ill., his old home, where he was buried. Bro. Kendall made a most favorable impression on all who met him. He has all the elements of a true Brotherhood man, as all will certify who had the pleasure of grasping him by the hand.

WE are in receipt of a private letter from Bro. S. Vaughan, member of Dominion Lodge, No. 67, and a member of the Grand Executive Board, dated at Vicksburg. Bro. Vaughan went south some months ago in search of health and employment, and his hosts of friends will be glad to know that his health has greatly improved, and that he is now employed on the L. N. O. & G. R. R. (Mississippi Valley) and is doing well. He regrets that he did not get south sooner, as the climate seems to agree with him. On the L. N. O. & G., the oldest men are favored with the steady runs, but in due time Bro. Vaughan hopes to have a run out of New Orleans city which he greatly admires, and where his wife and children are now residing.

Regalia for Sale.

A full set of B. of L. E. Officers' regalia (three pieces), and seven members' regalia, in good order can be purchased at reasonable figures. Goods subject to examination. Address, W. J. Dintings, Box 347, Tamaqua, Pa.

Kinne's Time Book.

We are authorized by J. J. Lannan to state that he has given up the agency for Kinne's Guide, Pocket Book, and that anyone desiring such a book should address, G. R. Kinne, Hornellsville, N. Y.

Ft. Pickering Lodge, No. 206, has the reputation of giving the grandest balls in Memphis. They have a social standing in the community which would be hard to beat.

DURING our recent visit to a number of Lodges, we had the pleasure of riding with Mr. Mogford, of Jackson, Michigan, conductor on L. S. & M. S. R. R. from Jackson to Ft. Wayne. We found him a courteous gentleman of large intelligence, and well calculated to advance the interests of the road he represents.

AT De Soto, Mo., the several brotherhoods of way employes are in thorough alliance with each other. There is mutual confidence and mutual respect and sympathy. Our De Soto brothers set an example that is to be commended and should be universally emulated.

IN our visit to a number of our Lodges in February we had the pleasure of meeting Bro. R. F. Miller, Master of Ft. Wayne Division, No. 136, R. of R. T., and connected with the N. Y. C. & W. L. R. R. We found him a most agreeable gentleman whose acquaintance we appreciate.

We had the pleasure recently of meeting in our office, Bro. A. J. Schever, of the R. of L. E., who represents the American Brake Co. and the Westinghouse Air Brake Co., and is a member of Division No. 23, Springfield, Ill. We were glad to meet him and to know that he is meeting with success in his present position.

The meetings lately held by Grand Master Sargent in Kansas were attended with more than ordinary success. The Lodges were found in good condition and the members enthusiastic in praise of the brotherhood. A full report of the meetings was prevented on account of lack of space.

We are indebted to St. Lawrence Lodge, No. 15, for a copy of the *Montreal Star*, of its Christmas issue, and nothing superior of its kind has it been our good fortune to see. The illustrations are simply superb and reflect the highest credit upon the publishers. We are very thankful for the specimen copy secured.

WILLIAM H. HIFF, of Osage Lodge, No. 366, who sometime since lost his life while at the post of duty, was highly respected by his brothers of the Lodge. His remains were taken from Ogden City, Utah, to New Jersey, near Paterson, and, as a mark of respect, the Master of the Lodge accompanied them. The Lodge passed resolutions of a highly complimentary character, which were published in the *Ogden Standard* of January 31st.

WHILE at Danville, Ill., recently we were shown a magnificent painting of a locomotive in the Lodge room of Hercules Lodge, No. 63, of which the members are justly proud. The painting is six feet in width and eight feet in length and is a remarkably clever piece of work. The artist is F. W. Foat, master painter of the C. & E. I. shops, who presented the painting to the Lodge. It is embellished with the motto of the Order, the monogram B. L. F. and displays artistic ability of a high order.

THE D. L. & W. R. R. is certainly most fortunate in the selection of its Master Mechanics. They are the officials with whom locomotive firemen come directly in contact and for this reason are more discussed among firemen than any other officials. We have elsewhere referred to Mr. Griffith, Master Mechanic of the Buffalo Division of the D. L. & W., and in Mr. W. H. Lewis, on the Hoboken Division, the road has a Master Mechanic who has won, by his uniform kindness and high sense of justice, the respect of the men he controls and as a consequence conditions are such as it would be difficult to improve upon. Under such circumstances it affords the *Magazine* satisfaction to congratulate Brotherhood firemen on the D. L. & W. upon their great good fortune in having Master Mechanics who know when they do their duty and are generous enough to appreciate merit.

THE numerous friends of Bro. William Flanigan, member of Island City Lodge, Brockville, Ont., will be pained to hear of his death, which occurred recently. Bro. Flanigan had been in poor health for a number of years, and went to California in hopes that the climate would prove beneficial. In this he was doomed to disappointment, and returned to his home at Brockville where his earthly career came to an end in the prime of his young manhood. He was one of the oldest members of No. 69, and his death is deeply lamented by all who knew him.

MR. T. R. FREEMAN, member of Division No. 111, B. of L. E., Chicago, Ill., whose business place is corner Clinton and Fulton streets, Chicago, represents Mack's Injector, now in extensive use throughout the country. The National Tube Works Co., Boston, Mass., are the manufacturers of Mack's patent injector, or boiler feeder, and have issued a pamphlet elaborately illustrated showing the construction and working of the injector and how to connect it with the boiler outside and inside of the cab. A pamphlet in the hands of engineers readily explains matters and is calculated to be of special service.

WHEN a railroad corporation is so fortunate as to have a good Master Mechanic, a man who understands men as well as machines, as is the case with the D. L. & W., where Mr. Fred B. Griffith holds the position on the Buffalo division, things move along and friction is reduced to the minimum. Grievances are seldom heard of and are always promptly adjusted. The men realize that they are regarded as men, and work with a will to promote the interests of the road. No better Master Mechanic than Mr. Griffith holds a position on any road in the country, nor has any road a class of employes more ready to respond to any demand upon their skill and energies. This is as it should be.

THE Meadville (Pa.) *Republican* of December 30th, 1889, says:

After a good many years of faithful service at the scoop, several Nypano firemen are to receive their graduation and pass to the right side of the engine. Mr. Albert Lamb will make his first trips as an engineer to-day on train No. 82, Mr. Aaron Van Riper will make his initial run on train No. 81, and Mr. William Delo will make his baby run on some other train. In addition to these three, Firemen Clark Winegar, nephew of Engine Dispatcher Richard Winegar; P. H. Maybee and F. F. Lefever are on the list for early promotion.

Congratulations to the gentlemen named are in order for more reasons than one. In the first place, there is no more honorable, and certainly no more responsible position in life than that of a locomotive engineer. It is his hand alone which controls the rushing trains, freighted with human life, and the grave importance of such a responsibility calls for men of nerve, judgment and experience. When men serve a successful apprenticeship on the Nypano and are promoted to be engineers it is pretty good evidence that they are good men. There are few roads, if any at all, which required a longer or more severe apprenticeship, and to this fact can be credited largely the superior class of locomotive engineers with which the Nypano is to-day equipped.

All the friends of the young men named will congratulate them on their promotion, and hope they may meet the same success at the throttle as they have won at the scoop.

The engineers of the future are the men who will be taught in the Firemen's Brotherhood—most of them.

We have received a copy of a "Directory" of Atlanta Division, No. 207, and Gate City Division, No. 338, B. of L. E., containing the names and addresses of the members of these Divisions, compiled by Mr. J. D. Harris, a member of No. 207. The little book is of convenient size, and is embellished with pictures of the Grand Officers of the B. of L. E. The Directory is in many ways valuable, and shows enterprise on the part of Bro. Harris, the compiler.

WHEN the Constitution of the Brotherhood of Railroad Trainmen or of Switchmen, or other documents, relating to their Orders, are received by our Lodges, it is to be hoped that Brotherhood firemen will do all in their power to place them where they will do the most good, the idea, being, to help these Orders, in every practicable way, to extend their organizations, thereby strengthening federation. The good work is going bravely on and final triumph is assured.

P. H. KELLEY.

The outside world knows little of the Brotherhood of Locomotive Firemen, except that its members keep the fires burning on the engines that go thundering over the continent. It may be known that the Order has an insurance system, by which the heirs of a member in good standing, upon his death receive \$1,500; but outside of the charmed circle of the Lodge little is known of the ten thousand acts of friendship and sympathy performed daily by the members of the Order, acts which ought forever to silence the croaking, fault-finding tongues of those who oppose the brotherhoods of railroad employes, and labor organizations generally.

Some time since, Brother Patrick Kelley, a member of Arbitration Lodge, No. 320, East St. Paul, Minn., lost his life on the Grand Island railroad. Far away from home and a comparative stranger, he was not without friends, and when he fell at his post of duty, the members of St. Joseph Lodge, No. 43, were quick to respond to any demand, and to demonstrate that the words fraternity, fellowship, friendship, sympathy, and the like, have a meaning which adorns and glorifies the Brotherhood. The St. Joe Herald, in referring to the subject, said:

The remains of Patrick Kelley, the fireman who was killed near Troy on Saturday last, arrived at the Union depot on passenger train No. 4 of the Grand Island railroad at 6:10 last night. The casket was taken from the express car by a deputation of the St. Joseph Lodge, No. 43, of the Brotherhood of Locomotive Firemen. The Brotherhood men who assisted in bestowing the last sad honors on their late comrade were as follows: W. E. Sullivan, J. E. Shortle, M. Toohey, John O'Dowd, Philip Nagle, George Panchon and Charles Blake. A number of the Brotherhood were also present to give such assistance as might be required.

Long before the Grand Island train was due the platform of the Union depot was crowded with members of the Brotherhood. When the train, which was 40 minutes late, finally came in there was a rush of firemen toward the express car which contained the remains. The brotherhood wore their regalia and just as soon as the wheels of the cars ceased to revolve a truck was wheeled up to receive the remains of their late fellow member. A "brotherhood" regalia was thrown over the rude box and it was then taken to the transfer which was to take it to the Chicago, St. Paul and Kansas City line to Marshalltown, Ia. The devotion of the Brotherhood to their almost unknown brother is worthy of mention. In the group which honored

him by their presence was George Panchon, the engineer for whom Kelley was "firing," when the latter met his death.

Kelley's body after being received at the Union depot was transferred to the Chicago, St. Paul & Kansas City railway depot, and transferred to Marshalltown, Ia. O. R. Wainright, claim agent of the St. Joseph & Grand Island, and Charles Kicker, representing the Brotherhood, accompanying the remains to Marshalltown. The mother of the deceased lives at Marshalltown and at her request the remains were sent there. She is now confined to her bed with sickness, but did not want her son interred among strangers.

In this case it is seen how generous was the action of No. 43, which in addition, sent one of its members to accompany the remains to Marshalltown. The railroads were generous, defraying all expenses and also sent a man to take charge of the remains. We chronicle such incidents with mournful satisfaction, because they illustrate, more than anything else, the humanizing, christianizing principles inculcated by the Brotherhood, and speak to firemen more eloquently than words; that the Brotherhood is worthy of their support and ceaseless fidelity.

Addresses Wanted.

Harry Lewis—A member of Dominion Lodge, No. 67, left Toronto about a year ago where he was fired on the G. T. R. Anyone knowing of his whereabouts will please correspond with D. Bracken, King street West, Toronto, Ont.

C. D. Daymude—Is requested to correspond with Frank Vaughn, Secretary of River View Lodge, No. 330, 319 Berger avenue, Armourdale, Kan. We last heard from he was at Piedras Negras, Mexico.

Amusements.

A GRAND BALL.

The Whitehall, N. Y., *Chronicle*, of February 2 comes to us with a column article devoted to the description of a grand ball, given under the auspices of Saratoga Lodge, No. 209, B. of L. E., but which was really a federated ball of locomotive firemen, engineers, their wives, sisters, mothers and sweethearts. Beautifully illustrative of the fact that the two great Brotherhoods, whether in Lodge or cab, in the waltz or the waltz or in the grand march of the train, whether listening to the voluptuous music of strident bands or the roar of driving wheels, the scurrying steam or the clamor of bells, they are "twin Brotherhoods," the members of which share each other pleasures and perils, and alas, too often going down to death together.

We conclude the Whitehall ball was altogether lovely—a ceaseless round of enjoyment without unpleasant incident to mar the happiness of the and festive pleasure seekers. It was an occasion when

"The bright and youthful dancers meet,
With laughing lips and winged feet;
And golden locks come flashing by,
Like sudden sunshine through the sky."

The music was faultless—as Milton would say—

"Unwisting all the chains that tie
The hidden soul of harmony."

The decorations were in keeping with the mu. Exquisite taste was displayed and Dale Silk Mill was transformed into a bower, and no wonder. *Chronicle* says "all previous occasions of like character were eclipsed."

The rain, during the day, came down in torrents but the ladies were equal to the occasion, and with "fair women" go gallant men will follow.

The scene must have been one of bewildering beauty—flowers, plants, evergreens in lavish profusion, the voluptuous swell of the music, the smiles and bright eyes of the ladies. The occasion was not only

A dancing treat
Where twinkling feet

kept time as joyous pulses beat, but a musical festival, where not only the bands played, but where there were

"Voices of melting tenderness that blend
Blend with pure and gentle musings, till the soul,
Commingle with melody, is borne,
Rapt and dissolved in ecstasy, to heaven."

Nor was this all. The banquet was of the rarest viands, and the delicacies were taken in with the idea that "we will eat, drink and be merry," for after the banquet, the dance begins again.

Most heartily does the *Magazine* congratulate the engineers and firemen upon the success of their grand ball, February 14th, and may the Brotherhood often meet under auspices so well calculated to strengthen and beautify fraternity and federation.

The members of J. H. Kirk Lodge, No. 376, gave their first annual ball February 14th, at Kemper Hall, Horton, Kansas. It was in all regards a brilliant affair, and as a matter of course, the boys feel proud of their first venture. The Horton *Commercial* devotes considerable space to a description of the decorations of the hall, which must have given it the appearance of fairy land. Electric lights, head-lights, flowers in profusion, splendid music, together with emblems of the Order, combined to produce the most pleasurable emotions. The *Commercial* says: "Everything went merrily forward and at 12 o'clock supper was announced at the Magic City, where nearly all repaired for refreshments. After supper the dancing continued until about 2 a. m. and all departed for their homes, complimenting the members of the Order who had the ball in hand. It was universally pronounced the most enjoyable occasion Horton has had for some time. The Brotherhood netted a handsome sum, which goes to the treasury of the Order."

The first grand ball given by Cook Lodge, No. 358, West St. Paul, occurred on the evening of January 21st, and was all that the most sanguine had hopes for. The members of No. 358 worked harmoniously for a good time, and were amply repaid for their work and solicitude; but, as in all such cases, the responsibility rested largely with the various committees. In this case the committee of arrangements are Bros. E. Snyder, William Perrin, John Moorhouse, William Fox, P. Anderson, D. Herb and H. Penny, and they performed their duties with an eye to success, and achieved a victory. Bros. C. McKay, F. Stebbins and J. Lynch were the reception committee, and their politeness added much to the pleasure of the occasion, while Bros. M. Leahy, P. Bolton and F. Porker, as the floor committee, kept order; and under their watchful care everything proceeded in a way to win the applause of fair women and gallant men. The occasion was one of great enjoyment, eminently creditable to No. 358.

Altoona Lodge, No. 267, B. of L. F., gave its third annual ball on the morning of February 14th. But the occasion was not exclusively for the "light fantastic," on the contrary, the large assemblage at the Mountain City Theater building was permitted to listen to an address from Mayor Turner, who paid a just tribute to the firemen, referring to the perils of their calling.

The music was superb, and having rendered a selection of great beauty with charming effect, a well timed address was delivered by Grand Master F. P. Sargent. The Altoona *Tribune*, referring to the subject says:

Mr. Davis then introduced to the assemblage Mr. F. P. Sargent, of Terre Haute, Ind., Grand Master of the Order in the United States. Mr. Sargent is an exceedingly pleasant speaker and he thoroughly pleased all who heard him last evening. He spoke of the gathering being one for social enjoyment and therefore he would not enlarge upon the more serious side in the life of the engineers. Their life had much of peril in it: there were many narrow escapes and many were the accidents. Even though the engineers might not think of the perils which they might encounter, there were others who did. In their homes there were wives and children and aged parents to whom these perils were ever present and who were always fearful of some accident which

might befall their loved ones. The brotherhood protected these wives and children and aged parents so that should the loved ones meet with accidents they would not be left entirely without resources. The speaker referred to the firemen before him as being but a small band when the full strength of the organization was named. There were 18,000 members of the brotherhood in the United States and the Order was constantly growing in numbers. When Mr. Sargent closed his address he was lustily applauded.

The *Tribune*, in further reference to the delightful occasion says, that after the conclusion of Grand Master Sargent's address, the grand march was formed and was participated in by fully one hundred couples and was led by Mayor Turner and Mrs. D. A. Reagan, followed by Grand Master Sargent and Mrs. Williams, of Cincinnati. The grand march concluded the regular order of dancing was then taken up and continued until the early hours of this morning. The dancers were prompted by Mr. George Moore. The programme for the ladies were very beautiful. The ball was in the charge of the following gentlemen: Master of ceremonies, C. C. McFormick; general floor manager, J. C. Koehendörfer; assistants, A. B. McGaughey, S. D. McIntosh, C. H. Ross, W. E. Burket, E. K. Gerhardt, M. H. Bradley, John McNellis; committee, F. A. Davis, G. W. Gipple, G. W. Glasgow, William Dougherty, J. S. Stair, D. Sammel, J. Dougherty and T. D. Moore.

The *Magazine* felicitates No. 287 upon the brilliant success of their third annual ball.

According to the Rochester *Herald* of February 12th, Rochester Lodge, No. 99, B. of L. F., gave a most enjoyable entertainment at Odd Fellows Hall, that city, on the evening of February 11th. The entertainment was musical, literary and terpsichorean, and the *Herald* says:

An instrumental duet by Mr. and Mrs. W. S. Dunn opened the exercises, after which Colonel S. D. Richardson recited "Hancock at Gettysburg." Then came a vocal solo by Mr. Thomas Filmer, which won great applause. This was followed by a comedietta, "A Happy Pair," rendered in good style by Miss Gertrude E. Weaver and Mr. T. D. Stanton. Mr. William Lyons favored the audience with a concertina solo, and Mr. Sherman Randall recited "The Deacon's Mistake." The appearance of the formidable "Doc" Sturdevant on the platform was the signal for a storm of applause, which was repeated at the close of his mirth-provoking song with banjo accompaniment. Little Blanche Pruyn's recitation, which came next, was nicely done, and the railroad sketch, "Jim and Joe," given by Mr. E. E. Pruyn and Colonel Richardson, was received with marked demonstrations of approval by the audience. Following this came a song by the "M. D. T." Quartette, and a sketch by Colonel Richardson and "Doc" Sturdevant closed the programme.

The floor was then cleared, an orchestra began to discourse strains of sweet music, and the jolly firemen led out their partners for the grand march, which inaugurated a dancing programme of twenty numbers. It was long past midnight before the fun ceased and the dancers dispersed to their homes.

Such entertainments illustrate the social and educating advantages to be derived from a membership in the B. of L. F., and we hope that they will indefinitely multiply throughout the bonds of the Brotherhood.

Acknowledgments.

SALIDA, COL., February 10, 1890.

To The Brotherhood of Locomotive Firemen:

GENTLEMEN:—Through the columns of your most estimable *Magazine*, I desire to express to the Order, my heartfelt thanks for the promptness with which I received a draft for \$1,500 on the policy of my late husband, Wm. H. North, of Mount Ouray Lodge, No. 140. I also wish to sincerely thank the members of No. 140 for their kindness to me in my bereavement and for aiding many others in time of need, is the earnest wish of

MRS. KATE NORTH.

WATERLOO, IOWA, March 5, 1890.

To the Officers and Members of the Brotherhood of Locomotive Firemen:

GENTLEMEN:—Please allow me to express my sincere thanks to the brothers of Cedar Valley Lodge, No. 30, for their very kind attention shown me during our late bereavement in the death of my son and brother John Clasey, who was killed in a wreck, November 24, 1889. Also for the floral design presented to me for his casket, and for the promptness of a draft for fifteen hundred dollars, (\$1,500), in full payment for policy held by me in the B. of L. F. May God be with you all in the hour of need, is our earnest prayer.

Your truly,
Mrs. Barbara Clasey and Family.

MATTOON, ILL., March 3d, 1890.

To the Officers and Members of Beacon Lodge, No. 111, B. of L. F.:

GENTLEMEN:—I take this method of returning to you, and through you to the Brotherhood of Locomotive Firemen, my most sincere and heartfelt thanks for the payment of the insurance. (\$1,500.00) one thousand five hundred dollars, held by my late husband, Milton Shane, and with them my best wishes for your continued prosperity and welfare. It seems scarcely a day since his form was brought back to a home which he had left only a few short hours before, in all the pride and glorious strength of manhood; a home which will now know him no more forever, save in memory. With his going out went the brightest part of my life. He was a true, kind and loving husband. He had been unable to accumulate a competence and, but for his thoughtfulness in a manner provided by the organization to which this is addressed, life would have been a weary struggle, but you made his future care possible, although his remains now lie in the cold, damp ground, he has not left me empty-handed. May the great God, who holds the world in the hollow of his hand, forever bless and perpetuate the order which looks after the widow and the fatherless. Again, I return my gratitude, and may the bright sun of the order never set, or its lustre be dimmed. Thanking you again and again, I remain

Yours respectfully,
Mrs. GEORGIE SHANE.

Electrical.

1. How strong a current is used to send a message over an Atlantic cable? A. Thirty cells of battery only, equal to thirty volts.

2. What is the longest distance over which conversation by telephone is daily maintained? A. About 750 miles, from Portland, Maine, to Buffalo, New York.

3. What is the fastest time made by an electric railway? A. A mile a minute, by a small experimental car. Twenty miles an hour on street railway system.

4. How many miles of submarine cable are there in operation? A. Over 100,000 miles, or enough to girdle the earth four times.

5. What is the maximum power generated by an electric motor? A. Seventy-five horse power. Experiments indicate that 100 horse power will soon be reached.

6. How is a break on a submarine cable located? A. By measuring the electricity needed to charge the remaining unbroken part.

7. How many miles of telegraph wire in operation in the United States? A. Over a million, or enough to encircle the globe forty times.

8. How many messages can be transmitted over a wire at one time? A. Four, by the quadruplex system, in daily use.

9. How is telegraphing from a moving train accomplished? A. Through a circuit from the car roof, inducing a current in the wire on poles along the track.

10. What are the most widely separated points between which it is possible to send a telegram? A. British Columbia and New Zealand, via America and Europe.

11. How many miles of telephone wire in operation in the United States? A. More than 170,000, over which 1,055,000 messages are sent daily.

12. What is the greatest candle power of arc light used in a light house? A. Two million, in the light-house at Housholm, Denmark.

13. How many persons in the United States are engaged in business depending solely on electricity? A. Estimated 250,000.

14. How long does it take to transport a message from San Francisco to Hong Kong? A. About fifteen minutes, via New York, Canso, Penzance, Aden, Bombay, Madras, Penang, and Singapore.

15. What is the fastest time made by an operator sending messages by the Morse system? A. About forty-two words a minute.

16. How many telephones are in use in the United States? A. About 300,000.

17. What war vessel has the most complete electrical plant? A. United States man-of-war Chicago.

18. What is the average cost per mile of a trans-Atlantic submarine cable? A. About \$1,000.

19. How many miles of electric railway are there in operation in the United States? A. About 400 miles, and much more under construction.

20. What strength of current is dangerous to human life? A. Five hundred volts, but depending largely on physical conditions.—*Age of Steel.*

THE QUICKSANDS OF NEBRASKA.

Quicksand is found in nearly all parts of the country, but in very great quantity along the Platte River, in Nebraska. It is composed principally of mica, or small particles of rock disintegrated from large bodies of rock and subjected to a continuous washing process. The water removes all the raggedness or angular shape from the particles. The fragments become smooth and slimy and slip upon each other with the greatest facility, so that any heavy weight resting upon this sand causes the particles to be displaced. They separate from the center, allowing the weight to sink until a solid basis is reached. When particles of sand are ragged and angular, any weight pressing on them will crowd them together until they are compacted into a solid mass. A sand composed of mica or soapstone mixed with water seems incapable of such consolidation.—*Globe-Democrat.*

Mr. Terence V. Powderly is undeniably the foe of the grog shop. While addressing an immense audience of Knights of Labor in Central Music Hall, Chicago, he arraigned the saloon as the workingman's enemy, declared his belief that the saloon should be closed not only on Sunday, but every day in the year, and reaffirmed his determination to exclude liquor dealers from the organization. He also paid a high compliment to laboring women, exclaiming: "Many a time I have been constrained to wish that every man in the order were a woman."

The recipe for keeping young in spite of years is regular employment, participation in the activities of society and affairs, and rational pleasures. Those who engage in these with a keen relish will not grow old in the sense of losing interest in the world and its affairs. Years will accumulate and the end of human existence will come, but old and worn out in mind and spirit they never will be. It is often the case that men who have been prosperous for years retire from participation in active pursuits because they think it is due to old age, but it usually happens that such retirement is followed by invalidism and death. Having parted with what has kept them alive and vigorous, they die because they have given them up.

GRAND LODGE.

These columns are reserved as the official department of the Grand Lodge.

All Official Documents, including notices of dues and assessments and other notices, reports and statements will be published in this department.

Officers and Members of Subordinate Lodges are requested to note carefully each month the contents of this department.

APRIL, 1890.

Notice to Secretaries.

OFFICE OF THE GRAND LODGE, B. OF L. F.,
TERRE HAUTE, IND., April 1, 1890. }

To Secretaries of Subordinate Lodges:

SIRS AND BROTHERS:—Pursuant to Section 51 of the Constitution, you are required to report to the Grand Lodge as expelled all members who fail to make payment of their Quarterly dues and Protective Fund dues for the quarter ending July 31st. The names of said members must be reported to you by the Collector of your Lodge not later than May 2d, and by you reported to the Grand Lodge immediately thereafter. Failing to report the names of expelled members as herein provided, the Grand Lodge will hold Subordinate Lodges liable for their assessments, as per Section 55 of the Constitution.

Fraternally yours,

F. P. SARGENT, G. M.

EUGENE V. DEBS, G. S. AND T.

Notice to Custodians of Protective Fund.

OFFICE OF THE GRAND LODGE, B. OF L. F.,
TERRE HAUTE, IND., April 1, 1890. }

To Custodians of Protective Fund:

SIRS AND BROTHERS:—Pursuant to Section 215 of the Constitution, you are required to forward to the Grand Lodge, not later than May 1st, a report of the Protective Fund of your Lodge for the quarter ending April 30th, 1890. Two blank forms have been forwarded to your Lodge for this purpose; one copy of your report is to be filed with the Lodge, and one copy to be forwarded to the Grand Lodge, as above provided.

Yours fraternally,

F. P. SARGENT, G. M.

EUGENE V. DEBS, G. S. AND T.

Notice to Receivers.

OFFICE OF THE GRAND LODGE, B. OF L. F.,
TERRE HAUTE, IND., April 1, 1890. }

To Receivers of Subordinate Lodges:

SIRS AND BROTHERS:—You are hereby notified, as provided in Section 56 of the Constitution, that no beneficiary assessment is required for the month of April, 1890, and that therefore none has been levied for said month.

Yours fraternally,

F. P. SARGENT, G. M.

EUGENE V. DEBS, G. S. AND T.

Protective Fund Dues Notice.

OFFICE OF THE GRAND LODGE, B. OF L. F.,
TERRE HAUTE, IND., April 1st, 1890. }

To Members of Subordinate Lodges:

SIRS AND BROTHERS:—Pursuant to section 215 of the Constitution, you are hereby notified that the Protective Fund Dues for the quarter ending July 31st, 1890, amounting to seventy-five (75) cents, are now payable, and must be paid to the Collector of your Lodge on or before May 1st, 1890. All members now enrolled, and all those admitted prior to July 1st, 1890, are liable for the full amount of Protective Fund Dues for said quarter. All members admitted during the month of July (from the 1st to the 31st, inclusive,) are exempt from payment of Protective Fund Dues for said quarter, as provided in section 131 of the Constitution. Any member failing to make payment as above provided, will be expelled from the Order, as per section 51 of the Constitution, said expulsion taking effect May 2d, 1890, and the Secretary is required to make due report thereof to the Grand Lodge.

Yours fraternally,

F. P. SARGENT, G. M.

EUGENE V. DEBS, G. S. AND T.

Quarterly Dues Notice.

OFFICE OF THE GRAND LODGE, B. OF L. F.,
TERRE HAUTE, IND., April 1st, 1890. }

To Members of Subordinate Lodges:

SIRS AND BROTHERS:—Pursuant to section 50 of the Constitution, you are hereby notified that the dues for the quarter ending July 31st, 1890, (such an amount as may be determined by the several lodges, provided in no case it shall be less than five (\$5.00) dollars), are now payable, and must be paid to the Collector of your Lodge on or before May 1st, 1890. This amount will be in full payment of all Subordinate Dues and Beneficiary Assessments levied by the Grand Lodge for said quarter, as provided in section 134 of the Constitution. All beneficiary members now enrolled, and all those admitted prior to July 1st, 1890, are liable for the full amount of Quarterly Dues for said quarter. All members admitted during July (from the 1st to the 31st inclusive,) are exempt from payment of Quarterly Dues for said quarter, as provided in section 131 of the Constitution. Any member failing to make payment as above provided, will be expelled from the Order, as per section 51 of the Constitution, said expulsion taking effect May 2d, 1890, and the Secretary is required to make due report thereof to the Grand Lodge.

Yours fraternally,

F. P. SARGENT, G. M.

EUGENE V. DEBS, G. S. AND T.

THE FATHER TO HIS BOY.

Come hither, William John, my son, come hither to my knee.
We'll sit and watch the river take its journey to the sea,
And as the water rolls along I fain would talk a while,
Since I have heard thy youthful soul is lately steeped in guile;
They tell me that you want to be a humorist, and write
For papers, grinding out your jests at morning, noon and night;
To tell of candles made of clay and other jokes as dark—
Alas! my son, old Noah sprung such chestnuts in the ark.

You'll tell about the wretched man who long with stovepipes toils,
And say the mother-in-law is fit for strategems and spoils;
And to the cat that slugs at night you columns will devote,
And bubble o'er with humor when you're speaking of the goat
That breaks its fast with circus bills and scraps of rusty tin,
And boil with mirth when speaking of the tramp who's soaked with gin,
And gets a dose of thirty days—oh, William Johnnie, hark!
Old Noah rung the bell on such when sailing in the ark.

Of course, about the sitting hen you'll speak in ecstasy—
That brooding fowl has always been to humorists a glee;
And then the poet with his rhymes who climbs the printer's stair,
And lands upon the sidewalk with a look of dull despair;
And looking to the future, son, you well I can descry
Propounding such a thing as this: "What makes the bottle-fly?"
Or telling of the nurse and "cop" a-courting in the park—
Old Noah wept when gags like these were given in the ark.

We'll sit beside the river, son, and watch its rapid flow,
And if you do not change your mind we rapidly shall go
To where there hangs a beaten strap within our humble call,
And I shall gently take it down—shall take it from the wall;
And those who live within three blocks, ere we have done our quarrel,
Will think I'm simply pounding in the heading of a barrel;
And if they any questions ask I'll say it's just a lark
With one who wants to spring the gags that sounded in the ark.

—*Omaha Republican.*

GUILTY, BE JABERS!**How an Irish Judge Got Off to a Fox Hunt.**

An old Irish Judge on the Northwestern Circuit loved the hunting-field more than he did the sleepy court-room. His clerk was like-minded and a joyous pair they made. One fine morning the clerk whispered to the Judge:

"Yer Honor, old Billy Duane's meet's to-day at Ballykillmulligan; an' they've a fine dog-fox."

"How many names are on the docket?" asked the Judge excitedly.

"Twenty—for rioting and breach of peace, yer Honor."

"Tim," said the Judge, "do you think you can get the first fellow to plead guilty without a jury trial, and me to let him off with a week in jail?"

"The easiest thing in the world," answered the faithful clerk.

"Make haste, then, and bring the whole gang; an' I say, Tim, tell Jerry to saddle the mare now while."

The twenty prisoners were brought into court, defendant gang—nineteen of them prepared to fight with counsel and jury, to the bitter end. The twentieth had been interviewed by the clerk. He called.

"Guilty or not guilty of the crimes charged?" demanded the Judge, with a propitious smile.

"Guilty, yer Honor; heaven help me!" said the crafty prisoner.

"Well," said the Judge, glancing benevolently about the room, "I fancy I can let you off with a week."

The man thanked the Judge and stepped out. There was a terrific sensation among the other defendants, none of whom expected to get off with less than five years in limbo. Here was a chance profit by "his Honor's" pleasant mood. One of them manifested an earnest desire to follow the example of their comrade, and acknowledge the crime in a batch.

"Do you all plead guilty?" demanded the Judge eagerly.

"We do!" shouted the enthusiastic nineteen chorus.

"Fourteen years' transportation apiece!" claimed the Judge, with a click of the jaw. "Is the mare saddled yet?"

CLEANING TILE FLOORS.

It is important to keep anything that is gotten from tile floors, for which reason soft soaps is considered as good for cleaning them as hard soap. Soda is not recommended, and sand is to be scratched. Fuller's earth, such as you can get lumps from a paint shop, is sometimes put into water. The ordinary way of cleaning the floors have ready a bucketful of hot and one of cold water, some yellow soap, a clean scrubbing brush, a flannel and some rough towels. Scrub a small portion of the tiles with a good lather of soap; wash the soap off well, first with hot and then cold water; next rub perfectly dry with a towel. Then proceed with another portion of lather. Renew the water frequently. When all floor has been cleaned rub it over with a very milk or salad oil, using a soft, old towel, and let the milk or oil on.

WAGES IN GERMANY.

The average German laborer does not expend yearly in clothing, says the *Hartford Times*. Wages of common laborers range from 50 cents \$1 a day. A mason gets on an average of \$1 to \$1.50 a day. A carpenter the same, a plasterer \$1, a roofer \$1, a painter \$1. The stonecutter (German house mostly of stone) receives a slight advance of amount paid to the others, between \$1.50 to \$2. The hod carriers and those employed in carting not make a cent more than 50 or 75 cents a day. The mill operative (male) considers himself in good wages at 75 cents or \$1 a day. The engine on the railroads never make more than \$1.50 a day, and the blacksmith is satisfied with \$1. And these scant wages every workingman in the Empire earning over 300 marks (\$75) a year, is compelled pay annually to the State 12 marks or \$3.

WORK FOR AMATEUR ARTISTS.

Decorator and Furnisher tells how any amateur artist may do very creditable work by sketched window, draping it with ivy vines in applying it a bit of winter sky with clouds and a red set line, thin snow banks of white flock with monad dust frost work. Of course, the result not be the highest of high art, but they will do excellently well for screens, boxes that need lining, wide spaces in passage ways where there picture to break the plainness, bare looking chambers, and the many places where some decorative is demanded. It is beside most expensive practice, the bold, large work that must be done such pieces.

Beneficiary Statement.

OFFICE OF GRAND SECRETARY AND TREASURER,
TERRE HAUTE, IND., March 1, 1890.]

To Subordinate Lodges:

SIRS AND BROTHERS: The following is a statement of the Beneficiary Fund for the month ending February 28, 1890:
